These two statements would, indeed, appear to symbolize the thinking on the part of the interests concerned, the Federal agency on the one hand and the local harbor interests on the other. The attitude of the Federal representative would seem to infer that improvement is to be postponed until the port regains its former status—a condition that, as noted by Supervisor Cole, is unlikely until ships can enter and move about in complete safety.

As a matter of fact, the port at present is being passed up by deep-water craft for the simple reason that they cannot operate in the shoaled-up channels. As a case in point, the big new tankers of the oil companies cannot be sent here with a full load, an uneconomical procedure.

In the letter the chamber advises Congressman SCUDDER that "the people of Humboldt Bay area will be indebted to you if you can work out a plan that will break loose the dormant status quo and set the United States engineers on the right course with reference to the * * * project." Undoubtedly the people, for whom the chamber is speaking, concur most heartily in this expression.

Prejudices in Human Relations

EXTENSION OF REMARKS

OF

HON. GEORGE A. SMATHERS

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Friday, April 8, 1949

Mr. SMATHERS. Mr. Speaker, we have in our city a writer of a daily column. It appears in the Miami Herald. His discerning, humane, and able attributes have made of him sort of an institution, admired and respected by his fellow townsmen. This man has experienced more of life's problems and pleasures than have most of us. He has traveled all over the world many times. He has associated with those in high positions as well as those in low, and by reason of his broad experience, his understanding of human nature is equal to that of anyone I have ever known. He is a real liberal, for he protects and cherishes individual rights and liberties. He is not fooled by false liberals who advocate State control and statism. His name is Jack Bell, and I am happy to be counted as one of his many friends.

Just the other day he wrote a little story about the problem of the races getting along with each other. It was so true, down to earth and practical, I thought it would be of interest as well as of instruction to those who would read it. I attach it to these remarks and recommend it to all.

THE TOWN CRIER

(By Jack Bell)

YWCA stages its third annual festival of nations at 7:30 tonight and Saturday night in the bandshell in Bayfront Park. Fourteen groups will participate: Armenians, Poles, Czechs, Italians, Filipinos, Swedes, Ukrainians Lithuanians, Greeks, Rumanians, Hungarians, British, a Latin-American club act representing eight nations, and an American square-dance group.

It's a highly colorful show in native costumes with native dancing and singing. It's free except for a collection that goes to YWCA work in war-torn nations. Miss Kay Laverty's in charge for YW.

COLLEGIANS DISAGREE

A group of students from University of Miami came in, seeking views on human rights. Next morning I spoke to a class at Miami Jackson High School, gathered to discuss human relations.

The high-school students weren't opinionated. They were searching for truth. The college folks are certain their conception of what's best must not be questioned.

They agreed it's unfair that Negro men are kept at unskilled trades regardless of ability, and deprived of union rights. But they disagreed when I said Negro women do quite well.

A position at $30 a week, no social-security deductions, food and lodging—figure that up. Most skilled white girls in offices don't do that well.

When I said I do not think Negroes should go into white neighborhoods to build homes, and vice versa, their reaction was violently opposite. They sincerely believe, quote the Bill of Rights as authority, and they're right.

DIFFERENT MAKE-UPS

But I still don't think it a good idea. The social and cultural make-up of white and Negro people in the United States aren't yet alike enough for unrestrained community mingling.

The Negroes are more spontaneous, musical, carefree and talkative. A Negro family in a white community would be bored to death, even assuming the whites had no prejudice.

These facts are plain, and it doesn't pay to ignore them. Yes, every man has equal rights under the Christian code we profess to follow, but don't. We might as well say everybody should be motivated by Jesus and thus end wars. It's true, but the whole Christian world has been seething with war since 1914. We've even drawn the heathen nations into it.

RELIGIOUS HATREDS

Think this over. Usually your best friends don't live next door, or across the street. One lives at Miami Beach, another in Coconut Grove and so on. There's nothing wrong with the guy next door. It's just that you know others with whom you're more congenial.

When we were kids on the farm we were ostracized because we were Irish and Mother was a Catholic. So we were forced to go elsewhere for social and cultural contacts. In later years we were invited to visit our neighbors—and found we hadn't been missing anything. They weren't much fun.

The Hurricane students were interested in minority groups, and racial, but not religious hatreds.

Well durn it, the Croats and Serbs hate each other, but it's primarily a religious hatred. The Indian Moslems murder the Hindus and vice versa. The non-Jewish Germans murder the Jewish Germans. Christian Armenians are ostracized in most Christian nations of Europe.

PREJUDICES RAMPANT

And look around you at the prejudices here. Add 'em all up and what have you got—racial and religious confusion, fear and desire to hurt those you think can't retaliate. Those who start wars think they're hitting nations which can't retaliate.

Prejudices—minority persecution—fanaticism; I don't know what motivates such unfortunate thoughts. Sometimes you know, often you don't, nor do you seek the causes. You just stay unhappy, often not realizing it's merely customary, a mark of social equality to cultivate prejudices.

So the Aryan capitalist bars from his club the Jewish merchant who sneers at the Negro who comes to his store. And the aristocracy of Haiti look down coal-black noses at half-breeds and whites.

Nuts! They're all crazy. Does that answer your questions, children?

General Pulaski Memorial Day

EXTENSION OF REMARKS
OF
HON. HUGH J. ADDONIZIO
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 13, 1949

Mr. ADDONIZIO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution adopted by members of the Sigmund Szczyglinski Post, No. 7123, Veterans of Foreign Wars, of Newark, N. J., with respect to the observance of General Pulaski memorial day. General Pulaski died a hero's death on October 11, 1779, and it is only right that the day be commemorated with suitable patriotic and public exercises in his honor. Numerous States have designated October 11 of each year as General Pulaski's Memorial Day, and Sigmund Szczyglinski Post No. 7123 joins the many groups and organizations who have petitioned the Congress to enact the resolution now pending in the House and Senate:

RESOLUTION OF SIGMUND SZCZYGLINSKI POST, NO. 7123, VFW, NEWARK, N. J.

Whereas the United States of America has recognized its leaders in the days of its beginning by designating national holidays in their memory; and

Whereas in the history of the United States of America, there will always live the unbelievable and thrilling deeds of the Father of American Cavalry, Gen. Casimir Pulaski, who fought oppression in his native Poland and took up arms against those who tried to suppress liberty and freedom. He came to the United States to offer his services in our Nation's critical hours and served with honor under Gen. George Washington, organizing the Pulaski Legion; and

Whereas Gen. Casimir Pulaski on October 11, 1779, died from wounds received in action on October 9, 1779 during the siege of Savannah, Ga.: be it

Resolved, That the members of Sigmund Szczyglinski Post, No. 7123, VFW, at their March 15 meeting at the Polish Educational Club, 255 Court Street, Newark, petition the President, Harry S. Truman, and Congress to designate October 11 as Gen. Casimir Pulaski Memorial Day and a national holiday.

ALFRED KRUSZEWSKI,
Commander.
STANLEY ZDYCSKI,
Adjutant.

Shipbuilding on the Pacific Coast

EXTENSION OF REMARKS
OF
HON. RICHARD J. WELCH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 13, 1949

Mr. WELCH of California. Mr. Speaker, under leave to extend by remarks in the RECORD, I include the following editorial from the San Francisco Call-Bulletin with reference to shipbuilding on the Pacific coast.

Mr. Speaker, the security of this Nation makes it imperative that a reasonable number of shipyards be kept in operation in California, Oregon, and Washington. From the close of the First World War until 1938, shipbuilding had absolutely ceased on the Pacific coast. The Merchant Marine Act of 1936 included a 6-percent differential for west coast shipbuilding, and with the amendment of 1938 to the Merchant Marine Act, which provided for negotiated contracts, shipbuilding was resumed. This was before war was imminent in Europe and before Hitler sent his armies into Poland and Austria. These laws are still on our statute books.

Today, and for sometime past, there has not been one new ship under construction on the entire Pacific coast from San Diego to Seattle, with the result that our splendid shipyards are again going to wrack and ruin. This certainly is not in keeping with our program of national defense. It cost hundreds of millions of dollars to rehabilitate shipyards on the west coast to meet the requirements of the last war. Forty-three percent of all ships built to win the war were built on the Pacific coast. To again permit these shipyards to go into decay would be a colossal blunder for which, in an emergency, we would again pay dearly.

The Chairman of the Maritime Commission suggests that additional laws are required which is not the case. If ships were built on the Pacific coast under existing law before war broke out, they can and should be built today in the interests of the security of our Nation.

Following is the editorial:

BUILD SHIPS IN WEST—NEEDS OF NATIONAL DEFENSE REQUIRE THAT PACIFIC COAST YARDS BE MAINTAINED IN OPERATION

It's encouraging to hear from west coast Congressmen that President Truman is favorably disposed toward their plea for shipbuilding in Pacific yards.

A delegation of legislators from the West asked the President yesterday if he would direct the Maritime Commission to allocate part of its shipbuilding business to western yards.

They requested a 15-percent cost differential so that they could compete, in bidding, with eastern yards which are closer to the principal sources of supply.

This could be arranged under the Merchant Marine Act of 1936 which gives the President authority to make such a requirement of the Commission.

And, according to San Francisco's Congressman WELCH, who has been in the forefront of the fight to keep western shipyards operating, Mr. Truman said he realized the necessity for maintaining the yards.

He should.

When he was in the Senate, heading a wartime committee which investigated Government contracts, he had a chance to study first-hand the extravagant waste which results when such an industry as shipbuilding has to build up almost overnight to meet the exigencies of war.

We will be a long time paying for the haste with which shipyards had to be put into operation in World War II. We needed ships more than we needed dollars, then, and dollars just didn't count.

And what was a far graver matter, even, than the monumental waste and confusion, was the fact that we came dangerously close to losing the war for lack of ships, and the fact that thousands of Americans sacrificed their lives while waiting for the "bridge of ships" to be built.

The root of the evil was in the fact that after the first World War we permitted the American merchant marine to disintegrate. We allowed the shipbuilding industry to dwindle to nothing.

The same mistake must not be made again.

And a cardinal fact which should be borne always in mind is the geographic reality that we are a two-ocean country, and we need a two-ocean Navy and a two-ocean merchant marine and this calls for the maintenance of up to date west coast shipyards.

It is not only a matter of justice that the West should not be discriminated against in the allocation of shipbuilding business.

It is a vital matter of national security to see that western yards are kept in shape to handle any shipping necessity which might arise.

McLemore Asks How Henry Wallace Became Expert on War

EXTENSION OF REMARKS
OF
HON. GEORGE A. SMATHERS
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 13, 1949

Mr. SMATHERS. Mr. Speaker, Henry McLemore, a fellow Floridian and writer of national fame, recently devoted his syndicated column which appeared in the April 4, 1949, Evening Star, to a timely and vital subject. In a strikingly effective manner Mr. McLemore defended the preparedness measures of our Government. As a veteran of the war in the Pacific, the author was both qualified and justified in taking to task those who have condemned our every step to prepare America for an unhoped for but possible emergency.

I want to signify my endorsement of this article by having it printed in the RECORD for the benefit of all the Members of this Congress.

MCLEMORE ASKS HOW HENRY WALLACE BECAME EXPERT ON WAR

(By Henry McLemore)

For a man who knows nothing about war, Henry Wallace talks more about war than anyone I can name offhand.

Why doesn't Mr. Wallace talk about something on which he is an authority?

Like, say, double-breasted corn with a chicken in every ear, or how it feels to run for the presidency and be magnificently repudiated by the people of the United States, or how it feels to be a failure as a magazine editor, or how it feels to be thrown out of the Cabinet.

Why does he make war his chief topic of discussion?

Has the man ever been to war? Has he ever been shot at? Has he ever led a patrol when every step called for every ounce of manhood in a man? Has he ever been hungry as a soldier? Has he ever been tired as a soldier? Has he ever been hit with steel?

ASKED ABOUT EXPERIENCE

Has he ever clung to the ground and prayed and prayed and begged that he would be man enough to take what was being asked of him? Has he ever been mad at the sight of friends all torn apart?

If he hasn't, let him stop talking about war.

In his speech against the Atlantic Pact he spoke of how it moved the hearts of America right up to the muzzles of the first gun fired in Europe. I don't want to keep asking questions, but has Mr. Wallace ever looked a muzzle in the eye? Has he ever had one shoved against him? Would he know a muzzle if he saw one? Could he fire a gun

of any sort? Perhaps he could, but only after announcing over national hook-ups that he was going to.

As I have said before when speaking of Mr. Wallace, he seems to think that he is the only man who believes that war is hell and gets people nowhere. Honestly, to listen to him talk you would think that he holds a copyright on the conviction that peace is to be desired. To listen to Mr. Wallace you would think that he is the only man who knows that pacts, be they Atlantic or Pacific, are not what most men and women in the world would want, and that a world that didn't have to have pacts would be the best sort of world.

Please, Mr. Wallace, there are millions and millions of people in the world who would like nothing better than to know that peace was here forever, and that all the millions poured into planes, guns, ships, rockets, etc., would be poured into education, health, housing, and the fight against intolerance. I think there are millions who suffer just as much as you do, have just as many heartaches, but who have something deep inside of them that makes them unable to turn against their country.

FIGHTERS KNOW ABOUT WAR

You wouldn't by any chance think that any mother, be she Russian or American, did not cry in her heart when she heard that her son had been killed? You wouldn't by any chance think that any man, who in fighting for his country, lost part of his body said to the medics that he loved war and only hoped he could get back into the battle?

No, Mr. Wallace. No, no, and no. Men who have fought know the misery of it. They hate war and all that it means. But they also know a thing or two. And one of the things they know is that it is mighty nice to be prepared and hold a gun in your hand when you have to defend yourself.

Ask the guys who were on Bataan. Talk to those who survived Wake. Ask the fliers who flew in the first and pathetic B-17 formations. Ask (Mr. Wallace) any of the men who had to try to fend off death with inadequate equipment.

My guess is, Mr. Wallace, that you'll never know how it feels to be an American when the chips are down.

If I am wrong, pardon me.

From the Russian Embassy to the State Department

EXTENSION OF REMARKS
OF
HON. GEORGE A. DONDERO
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 13, 1949

Mr. DONDERO. Mr. Speaker, I desire to present to the House a record that would provide good material for Robert Ripley of Believe It or Not fame. It is a record which ought to alert every loyal American to the danger to our national security existing within a department of our Government itself.

This may seem to be an incredible case, but a verbatim report taken from a Government loyalty file is the basis for this statement.

A typist once dismissed by the White House, where she worked as a correspondence secretary, when her supervisor caught her telling lies, was able to obtain work with the Soviet Information Bulletin, published twice a month by the Embassy of the Union of Soviet Socialist Republics.

This same typist, after working a year inside the Soviet Embassy, where she had to be politically acceptable to remain, applied for and was given a position in the State Department of the United States Government. She gave as references when she applied for the State Department job two persons then employed in the Soviet Embassy.

The girl offered to work for $1,800 a year, although this was while the war still was in progress and stenographic help was extremely difficult to obtain. Her salary at the White House had been $2,760 a year.

The girl was hired on the spot and put to work in the State Department's personnel section, where she became dissatisfied within 1 month and requested a transfer to the office of one of the Department's top officials. The transfer was made as she requested, to the position of her choice, where she was placed in charge of receiving, screening, and distributing all cablegrams for the high official. She also handled important documents of international and economic significance.

All this is a matter of record in the Government's investigative agencies. It was all drawn to the attention of the men running the State Department, in a memorandum dated November 17, 1945, from the Office of Controls. The memorandum was sent to Assistant Secretary Russell. It also stated that the employee in question was a member of the Washington Bookshop, the character of which is known to most of us, and a subscriber to the Soviet Information Bulletin, even though no longer employed by that publication.

The memorandum suggested that the facts be brought to the attention of the official within the State Department for whom this girl worked; but there is no indication that any action was ever taken. It is to be presumed that this person, in spite of her background, went on blithely examining cable mail. The record indicates that she did so for approximately a year and a half after the above facts were made known.

On February 12, 1947, the Security Office of the State Department disapproved clearance for the subject to accompany the American delegation to the Moscow Conference of Foreign Ministers. Even after that she continued working at the delicate job of screening cablegrams and other vital documents.

In March 1947 the Civil Service Commission produced an investigation, 25 pages in length, pointing out a number of instances of untruthfulness on the part of the girl. This report stated that a former supervisor of the girl at the White House said he had caught her in several lies and would not recommend her for a position of trust and confidence. Other witnesses referred to her as a liar. The investigator himself remarked that—

> In the entire course of this investigation it is apparent that the subject exaggerates, deviates from truthfulness in varying degrees, and in a number of instances has made misstatements of facts so as to place herself in a more favorable position.

What happened after all of these facts had become known? Nothing—until April 9, 1947, when Assistant Secretary of State for Administration John Peurifoy reached the amazing conclusion that the girl should be transferred to other work where she would not have access to highly classified information. How long it took the Department to do this, or whether it was ever done, is not known, at least not by me.

Regardless, the fact remains that Miss Helene Yuhas—for that is the young woman's name—had all the time she needed to do this Nation irreparable harm, if such was her purpose.

Much has been said about employees being unjustly accused, particularly in the State Department, on grounds of loyalty. People write books about it; I recall one designated as "Washington Witch Hunt." Left-wingers and radicals make a great to-do about it, but we seldom hear about cases as open and shut as this one.

Is it fear of being attacked as unfair that leads responsible officials to coddle workers who lie and consort with those who are hostile to America in the present cold war? No one wants to believe that it is disloyalty in high places.

It is not comforting but greatly disturbing that the security of this Nation is treated as offhandedly as this case indicates. In my opinion, it is frightening and almost unbelievable. We might well speculate on what would happen to us in the event of a war with a nation that these radicals believe is so much greater and better than "the land of the free and the home of the brave."

This is how our internal security was guarded in the State Department only a little more than a year ago.

Jefferson's Religious Liberalism

EXTENSION OF REMARKS
OF
HON. JOSEPH R. BRYSON
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 13, 1949

Mr. BRYSON. Mr. Speaker, this being the two hundred and sixth birthday of Thomas Jefferson, it is appropriate that we take special note thereof.

Of all our founding fathers who conceived and gave form to the Government under which we live, none should receive greater credit. It would be difficult, if not impossible, to determine the greatest American who has ever lived. One would hesitate to make such a decision. To many of us, Thomas Jefferson stands out above all others in his contributions to our form of government. We should pause today and give thanks to Almighty God for such a character as the sage of Monticello. May his spirit and leadership continue to guide us as our Government ventures into uncharted realms.

I submit herewith a splendid article which appeared in the Sunday Star, April 10, 1949, entitled "Jefferson's Religious Liberalism":

JEFFERSON'S RELIGIOUS LIBERALISM—HIS BIRTHDAY ON WEDNESDAY RECALLS OUR DEBT TO A CHAMPION OF THIS BASIC FREEDOM

(By Prof. W. S. Tryon)

As April 13, the birthday of Thomas Jefferson, approaches, and as the world shudders under the assaults against freedom of religious thought and worship, the role and rank of Jefferson as a champion of religious freedom take on momentous significance.

Every living American who believes in religious toleration, the separation of church and state, and the right of the individual to follow the dictates of his conscience, owes a debt—greater perhaps than he is even aware to Thomas Jefferson.

Always the friend of mankind and the enemy of every form of tyranny over the mind of man, Jefferson devoted a lifetime to the eradication of religious bigotry and coercion whether by state or church. It was he who gave voice to, and by his labor established, the chief cornerstone of those convictions which we today call the American way.

Jefferson never set down his religious beliefs in any formal treatises but characteristically scattered them through scores of letters to his friends. The statements are necessarily disconnected, yet, when taken together, a noble and consistent pattern emerges with clarity and forcefulness.

First and foremost each individual must eschew the Gothic idea of looking to the authority of the past for his religious beliefs and instead, rely entirely upon his own reason to discover his spiritual convictions. Jefferson had an abiding faith in the ultimate ability of man to choose good over evil when permitted a free exercise of his reason. "You are answerable," he wrote in a noble sentence to his nephew, "not for the rightness, but the uprightness of your decision."

THE LEGITIMATE POWERS OF GOVERNMENT

In the operation of this rational process there must be interference by neither state nor church. The legitimate powers of government extend to such acts only as are injurious to others, and since it does me no injury for my neighbor to say there are 20 gods, or no God, there can be no rightful legislative control. Reason will support true religion by bringing every false one to its tribunal.

Jefferson likewise opposed rigid dogmatism by theologians. They had made a Babel of religion and their blasphemies had driven thinking men into infidelity. Their quarrels and their creeds had so distorted and deformed the doctrines of Jesus, so muffled them in mysticism, and falsehoods, and caricatured them into forms so monstrous and inconceivable, it were better they had never lived for had the doctrines of Jesus been preached always as pure as they came from his lips, the whole civilized world would now have been Christian.

Jefferson never sought to advertise his views since, to him, a man's religion was his private affair. Though he declared he never had had an opinion in religion which he was afraid to own, nevertheless my great wish is, to go on in strict but silent performance of my duty * * * (and) to avoid attracting notice. Yet such opinions naturally led him into trouble. His prominence made it unavoidable that his ideas should become public. His words were often distorted and it was a favorite falsehood to label him an atheist.

Such an epithet was far from the truth. Never once did Jefferson speak of Jesus or of His ethics and morals save in the highest terms, extracting from the Gospels the very words of Jesus, with all commentary omitted, he declared the result to be the most sublime and benevolent code of morals which has ever been offered to man. Though he denounced Athanasius and Calvin, he spoke highly of the Quakers and he was by preference a Unitarian, expressing the hope that there is not a young man now living in the United States who will not die a Unitarian, though revealing that because the population of my neighborhood is too slender, and is too much divided into other sects to maintain any one preacher well * * * I must therefore be contented to be a Unitarian by myself.

In his liberalism Jefferson was never illiberal, though he once confessed to more anger than is authorized by the blessed charities which he preached toward those who distorted the ethics of Jesus, yet ordinarily he maintained an objective calm toward his opponents. Two of his bitterest antagonists he referred to as zealous churchmen but honest men; for the religious program in his University of Virginia he asked that clergymen of different sects might preach to enable the students to hear all sides; and he could write that all religions, I find, make honest men, and that is the only point society has any right to look to.

It was not all theory with Jefferson. On one of the most notable occasions of his life, he translated ideas into action. As early as 1776 he introduced into the Virginia Legislature bills to obtain religious toleration. Through long and arduous battle he obtained in 1786 what he regarded as one of his three memorable achievements for mankind, the statute of Virginia for religious freedom. "No man," it stated, "shall be compelled to frequent or support any religious worship * * * whatsover. All men shall be free to profess, and by argument to maintain, their opinions in matters of religion." Thus Jefferson procured the first charter for complete religious liberty in North America, a model for other States and for the Constitution.

Jefferson was immensely popular in his own day as his long public career testifies. Author of the Declaration of Independence, Governor of Virginia, Secretary of State under Washington, and twice President of the United States, his liberal ideas carried him into the affection of the masses of the people.

Human Brotherhood

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES

Wednesday, April 13 (legislative day of Monday, April 11), 1949

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address on the subject Human Brotherhood, delivered by Myer Dorfman, national commander of the Jewish War Veterans of the United States of America, on March 22, 1948.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Nearly 200 years ago, the first President of the United States wrote these words to the Hebrew congregation of Newport, R. I.:

"The citizens of the United States have a right to applaud themselves for having given to mankind examples of an enlarged and liberal policy; a policy worthy of imitation. All profess alike liberty of conscience and immunities of citizenship. It is now no more that toleration is spoken of as if it was by the indulgence of one class of people that another enjoys the exercise of their inherent rights. For happily, the Government of the United States, which gives to bigotry no sanction; to persecution no assistance, requires only that they who live under its protection should conduct themselves as good citizens in giving it on all occasions their effectual support."

With those words, George Washington truly stamped himself as the father of a system of free government that has been a beacon of hope for mankind these last two centuries.

If the world today finds itself living in fear and tension it is because the ideals pronounced by our forefathers have not, as they hoped, been carefully observed and adopted. The bigotry and prejudice they deplored are still in tragic evidence. Despite a series of wars which have resulted in successively greater destruction and loss of life, the international peace and friendship for which they worked all through their lifetime remains a distant dream.

In their great wisdom, our country's founders knew that peace between nations depends in the main upon peace of mind and soul among the peoples that make up those nations. If, as is just, Gen. George Washington is credited with being our country's first advocate of a sound, alert national defense establishment, it is because our first President was, above all else, a realist. He knew that peace could not be had for the asking alone. As a soldier who fought for the liberty and security of a people who had the will to freedom and independence, he knew that peace would demand devotion and sacrifice as great as any that have to be given during a state of war. He knew how high a cost attached to war. And he knew that there could never be any peace that would demand as heavy and as tragic a price as the waging of war.

Because of the heritage left us by Washington and the great commanders of the Colonial Army, the American soldier has always retained a unique character. He has never been an aggressor. He has never fought to take from others by force and violence the things that were theirs. Rather, he has fought as a liberator. He has borne arms against enemies who represented forces of oppression and subjugation. Having overcome these enemies, the American soldier has asked only to be returned to his own home and his own way of life. There, he has always joined with his fellow citizens to aid in the rehabilitation of the countries on whose soil he has fought, even when some of these countries took the field of battle against America.

Veterans are especially mindful that the image of George Washington graces the Army combat medal he himself originated—the Purple Heart.

There is a special significance in the Purple Heart Medal for American veterans of the Jewish faith. Only one class of serviceman is eligible for this award. That is the man who has sustained wounds in action while serving his country. No other qualification is demanded.

It is saddening to realize that here and there among us there arises an occasional bigot who sees fit to negate the principles that motivated Washington and the great leaders who followed him by applying in peace restrictions that never would be dreamed of in war. It is this fact that resulted in the founding of the Jewish War Veterans of the United States of America more than 53 years ago. In the ranks of those who founded our organization were many veterans of the War Between the States who emerged from that tragic conflict as holders of the Purple Heart. They included men who had come to this country from European states in which they were denied the basic human and civil rights we in America have come to accept as a matter of course. They came to America because of the great promise held out to all mankind by the great architects of the American Republic. And they cherished this democracy so dearly that they flocked to its colors when this country's freedom was under assault.

It is no coincidence that in all the wars in which our country has been engaged the ratio of Jewish men in the armed force has always been greater than the proportion of their coreligionists to the population as a whole. Jews have known prejudice and persecution longer than any other people, and they have suffered a greater mortality rate than any others. The great promise held out to them by Washington and the great Presidents who followed him was that America offered to freedom-loving men much more than a haven from oppression. It offered them the privilege of defending freedom in the honorable uniform of this country, not only for themselves but for all people.

For more than a generation the Jewish War Veterans of the United States of America has been urging the adoption of legislation that would give this country a fully trained and equipped national defense establishment. We believe that the most practicable means of achieving that objective is through the adoption of a universal training law. Because we have not heeded the lessons of our past, we have been involved in two great wars in this century. Both times we had to accomplish miracles of training and preparation in brief periods of time before we sent our youth into battle. Because we had not prepared ourselves adequately, we paid a terrible price in blood and treasure.

Five times in the more than half-century of our existence as an organization we of the Jewish War Veterans have seen postwar periods of economic depression and social and political unrest. Each time we have seen a recurrence of international fear, suspicion, and distrust explode into war. We learned a long time ago that peace and security cannot be obtained at bargain rates. They have to be paid for in full, with work, with united purpose and united effort.

It is for this reason that members of the Jewish War Veterans of the United States have been among the organizers and charter members of every major American veterans' organization founded since the turn of the century. Today virtually our entire membership is on the rolls of one or more of the great general membership veterans groups. To our way of thinking, the organized veterans of America constitute one of the most effective deterrents to totalitarian land-grabbers abroad and their covetous front men in our own country.

So long as our organization is in existence—so long as it continues to maintain in peace the teamwork that marked its association in war with our fellow veterans of every faith and national origin—just so long will the enemies of America have to look elsewhere for easy conquest. For we believe firmly that a nation which cannot be divided from within is a nation that cannot successfully be assailed and subjugated from without.

We Americans have never failed to cope with our enemies in war. But too often—and at too great a cost in lives and resources—we have looked with short-sighted complacency at the military potential of regimented nations. We have paid bitterly for our unpreparedness because we have overlooked the fact that political fanaticism can produce soldiers sworn to fight and die with suicidal determination.

Because we are a Nation of freemen, America has never had to put so much as a single suicide squad into the field to overcome enemy fanaticism. Our victories have been the victories of freemen who need no dictator's order to tell them when to close ranks against oppression and injustice.

As veterans, we are deeply mindful that our obligations to our country's welfare and security did not cease when we exchanged a soldier's uniform for civilian clothes. In that, we believe we have adhered faithfully to the tradition that has come down to us from the earliest days of our existence as a Nation. In the ranks of those who fought to bring our country into being were men who survived to become the leaders of the Nation they helped to found through their military service.

A similar trend can be observed today, when the President of the United States, and many Members of the Congress and Senate, are men who have seen service in the armed forces of our country. As men who have come to grips at first hand with the most deadly of all threats to the American way of life—the waging of war against an enemy dedicated to the destruction of that way of life—veterans are specially alert to any threat to the American system. That is why these men, who have come to know and hate war on more intimate terms than any other element of the American population, are virtually united in their support of the establishment of a national defense system strong enough to guard us against any possible emergency.

But the strength of a nation lies in much more than its ability to repel attack. Our founding fathers established this country on a foundation of law and justice that has been an inspiration to all peoples down through the years. Not only their Declaration of Independence, but the Bill of Rights they wrote into our Constitution, are unassailable today as blueprints of a system on which other nations besides our own can—if they will—build a society based on the dignity of the individual and respect for human rights.

The greatest tribute that can be paid to the first elected leaders of our country is that nearly 200 years after their time we are still striving to make America the strong, secure, and united Nation of which they dreamed, and for which they worked. We are still trying to match with our law and legislation the ideals they expressed and lived throughout their lifetime. We are still groping for a path to the achievement of complete understanding and common effort against prejudice and intolerance.

Nowhere are these deficiencies more glaring than in present relationships between the nations of the world. As we in America continue to work for the reconstruction of shattered Europe and humane assistance to its war-weary peoples, we find ourselves confronted by a series of cruel negations of the ideal we pursue. In four countries of eastern and central Europe, Catholic and Protestant churchmen and Jews associated with Zionism have been subjected to shocking acts of injustice. In Hungary, a Catholic Cardinal has been sentenced to life imprisonment after a travesty that passed under the name of trial by jury. In Bulgaria, an equal mockery singled out as victims a number of Protestant ministers under circumstances open to the gravest doubt by American standards of law and justice. In neither instance were the victims accorded any recourse comparable to the rights of appeal and review that are so vital a part of our system. As evil the devices employed against the Catholic and Protestant religious leaders, the treatment of Jews in Rumania and Czechoslovakia was even more sinister. For no other crime than a belief in Zionism, these unfortunates were seized and suppressed without benefit of what passes for a legal hearing in those countries at this time. Particularly shocking was the action of the Czechs, a people whose devotion to our form of democracy has been unquestioned since the days when their government was founded with the help and encouragement of our country under the administration of President Woodrow Wilson. Obviously, the present masters of Czechoslovakia are not representative of a people whose liberalism and devotion to democratic principles have been a synonym for decency and understanding. We can only conclude that the blight which has overtaken Hungary and Bulgaria has also fallen upon Czechoslovakia. No longer will any opinion be tolerated unless it apes without question the doctrines prescribed by those in political power.

The action of these captive governments is further evidence that communism is not relaxing its total war against freedom of conscience and opinion. It was as much against these evils, as for the achievement of American independence, that the colonists worked and fought. They closed their ranks—these men of all faiths and creeds—to prove to the world that freedom is a common aspiration of all men of good will.

If we are to honor their memory, and to keep faith with the great tradition they left us, we must fulfull the obligation of bringing to our own society, and to the relationships between our country and others, the high moral standards and deep devotion to principle that marked the efforts of the great men who made us into an independent nation.

Our cities and towns are graced by hundreds of statues of these first American leaders. But the finest memorial we can build is to retain in our hearts and minds the traditions they left us and the ideals that made their names the enduring symbols of the human brotherhood and devotion to freedom that we know today by the name Americanism.

Congress Should Put on Pressure for European Unity

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 13, 1949

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Edgar Ansel Mowrer:

CONGRESS SHOULD PUT ON PRESSURE FOR EUROPEAN UNITY

(By Edgar Mowrer)

In the process of authorizing a second slice of American money for the European recovery program, the American Congress has an opportunity to do these countries, and the world, a great favor. This favor would be to issue a warning that unless the several European governments are able to move toward unity, next year's appropriations for ERP will be drastically cut.

At the time the first appropriation was voted last year it was generally understood, though not explicitly spelled out, that the United States administration would press the European countries toward real unity. Actually, the United States administration has done nothing more than advise the foreign recipients of your money and mine to come together. Of real pressure, there has been no visible sign.

American officials explain that American pressure would have been intolerable to proud European governments.

This is certainly not true of the chief continental countries. They have privately been asking for pressure to be put upon them, since without such pressure they will find it difficult to override their vested domestic interests. But it is true of Socialist Britain. The British Socialists have demonstrated that they care more for full national independence and their socialist experiment than for American aid.

In practice, the American authorities have gone along with the British who wish to avoid or postpone a real European federation, rather than with the continental countries that are ready to federate.

THE BRITISH POSITION

My British friends will consider this an unfair description of their position. They

will point to the establishment of the European Council as proof that they are willing to go some distance toward European federation. And they will point to other signs that the European recovery program is showing fruit.

Economically, they will say that finally, large sections of the British people have gone back to hard work. Sir Stafford Cripps, they believe, now realizes that Britain cannot recover alone or impose a complete reversal of the former European trade pattern upon its friends, as outlined in the recent Cripps report. They will insist that the European countries receiving American help are about ready to adopt a common plan to avoid overlapping new capital investment.

Militarily, the British are proud of the western union, the coming North Atlantic Security Pact, the plans for standardized equipment, a single command, and a single defense plan among the North Atlantic countries. Shortly, they hope, arms production will be specialized so that each country will make only what it can best produce.

Politically, they have the European Council to show.

The trouble is that even those Englishmen like Winston Churchill who talk of a European federation do not mean a single federated European state. What they mean is something like the British Commonwealth, whose members are linked by nothing stronger than common sentiment and voluntary agreements.

EUROPE MUST BE A SINGLE MARKET

But the kind of European unity that is necessary goes far beyond a common army and a common foreign policy. It goes further than a plan to avoid duplicating new investments. What Europe needs most is to become a single market, where money, goods, and services flow freely, unimpeded by customs tariffs, quota systems, currency restrictions, etc. Such unity would naturally bring about a complete rearrangement of the European economy. But such a rearrangement is vital if the European manufacturers and food growers are ever to enjoy the kind of market that has enabled American producers to prosper.

In short, the argument between the British and the European continentals comes down to this: Is western Europe viable as a mosaic of small sovereign states unless these states are ready to introduce free trade among themselves?

If not, to use Governor Dewey's phrase, they must be prodded either into free trade or into full economic and political unity.

The American administration has failed to prod them—or has failed to prod hard enough. This leaves the Congress with a second chance. To me it would not seem to be unreasonable for the American legislators to couple granting the authorization for the second year's financial aid with Europe's acceptance of a move toward unity that is in Europe's own interest.

Such a move would put the European countries in a position to resist their Communists—and to resist the Soviet Union as well.

John E. Peurifoy

EXTENSION OF REMARKS
OF

HON. OLIN D. JOHNSTON

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Wednesday, April 13 (legislative day of Monday, April 11), 1949

Mr. JOHNSTON of South Carolina. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "John E. Peurifoy Rises From State Department Ranks to New Top Post," written by Richard L. Stokes and published in the St. Louis Post-Dispatch of April 3, 1949.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

JOHN E. PEURIFOY RISES FROM STATE DEPARTMENT RANKS TO NEW TOP POST—ELEVATOR OPERATOR IN CAPITOL BEGAN HIS DIPLOMATIC CAREER AS CLERK IN STATE DEPARTMENT—CREDITED WITH THINKING OUT THE HOOVER REORGANIZATION PLAN—NOW ASSISTANT SECRETARY OF STATE FOR ADMINISTRATION

(By Richard L. Stokes)

WASHINGTON, April 2.—The State Department's prize success story is that of John Emil Peurifoy. He began his Washington career 13 years ago as an elevator boy at the Capitol, and then sold smoking accessories over a counter at a local department store. Today, at the age of 41, he is tied with Dean Rusk for third place in the Department's hierarchy, with Under Secretary James E. Webb and Secretary Dean G. Acheson as his only superiors.

The Hoover Commission's reorganization program created brand new offices for Rusk and Peurifoy. They will continue to rank officially as Assistant Secretaries, but with the respective designations, for the first time in history, of Deputy Under Secretary for Policy and Deputy Under Secretary for Administration. Peurifoy already has the latter title, by departmental order; Rusk awaits confirmation by the Senate as Assistant Secretary. Peurifoy is the pioneer employee of the Department's civil service, as distinguished from its career service, to thrust his way into its loftiest brass. More than half its total personnel of 21,800, at home and abroad, is under his immediate direction.

His control is administrative. He has, for instance, no policy control over the Foreign Service, although he is the administrative boss of that elite corps.

Peurifoy is credited with having done much of the original thinking which later found its way into the Hoover report on reorganization of the State Department.

"I used to be a State Department clerk myself, and have never forgotten it," he explains. "I know what is happening down below and that these people carry the actual load of the Department. That thought was always foremost in my mind when we were planning the reorganization."

It was largely his sense of injustices of salary and status which caused him to advocate a merger of the Department's foreign and classified services into a single Foreign Affairs Service. His own case is in point. Whatever the title and authority, his pay, unless Congress intervenes, can never be more than its present annual figure of $10,333. That is tops in the civil service. But one of his subordinates, Christian M. Ravndal, director general of the Foreign Service, draws $13,500 a year. Peurifoy has perhaps a dozen career underlings whose stipends, running from $11,000 to $13,000, exceed his own.

During the San Francisco United Nations Conference, in 1945. Peurifoy was put in charge of arrangements. That was his first big opportunity.

OBTAINS FAVORITE WINES FOR SAN FRANCISCO DELEGATES

He went to San Francisco 3 months before the opening date, April 25. The war was still on. The city was the Nation's leading embarkation port and was bursting at the seams with crowded humanity. Peurifoy's task, among other things, was to find hotel rooms for 5,600 delegates and their aides, plan their food and favorite wines, insure their safety in cooperation with the Army and Navy, and establish cable and telegraph communications with every part of the world. He equipped halls for them, including multilanguage earphones. He was even haunted by a supposition that Japanese raiders might be tempted to bomb or shell the Conference.

By all accounts, his success was complete. An admirer pays this tribute: "It was not only the largest conference this country ever put on, but the best run." His reward was an appointment as special assistant to the Under Secretary—a post held by Acheson. In March 1947, Peurifoy was appointed Assistant Secretary of State. It was a title never before held by a man so young. Peurifoy was then 39 years old.

Already he had climbed at a record pace through the civil-service grades, from the lowest, P–1, to the highest, P–8. He accomplished this course, for which most men require 20 years, in 7. During 1941 he gained two jumps in 30 days.

There remained still another world to conquer, the Foreign Service. He vanquished its appalling entrance examinations and became eligible for confirmation as an officer of career diplomacy. He has never applied for this honor, though he lost civil-service protection and could be dismissed overnight, as a result of his Presidential appointment as Assistant Secretary 2 years ago.

Peurifoy was born August 9, 1907, at Walterboro, S. C. He was christened John after his father, a Federal district attorney. His middle name, which he detests, was fashioned by lopping the final letter from his mother's name, Emily. She died when he was 6 years old. Having been graduated from the Walterboro high school, he was appointed to the United States Military Academy, in 1926. During the second year his father died and he himself was hospitalized for many weeks with pneumonia. Forlorn and discouraged, the youth resigned from West Point and struck out for Kansas City, where he landed with $200 and an impulse to become an aviator. His money vanished into the hands of a fraudulent flying company. He tried in vain to enlist in the Marines and worked for several months as a private tutor. Then he was employed at a Kansas City bank.

In 1929 he went to New York, and for two years sold insurance. During 3 years he was assistant manager and cashier for the Childs restaurant chain. But he had always felt an attraction for Government service. Strangely enough, in his dreams, the State Department was his goal. The notion of trafficking with foreign countries appealed to him as romantic. He had an instinct that the biggest administrative job waiting to be done in Washington was overhauling that antique and stodgy institution.

He arrived in the National Capital in 1935, when he was 28 years old, and while seeking a post served the first of his two terms as an elevator operator on the Hill, at $90 a month. After 3 months, he succeeded in becoming a clerk in the Procurement Division of the Treasury Department.

On October 2, 1936, he was married to a Tulsa girl, Betty Jane Cox. They have two sons, one 8 and the other 3 years old. Just a year after the wedding, the Treasury job was shot from under him. Both he and his wife found work in a department store. He was dismissed 9 weeks later when the Christmas rush was over, and returned for another 9 months to his elevator at the Capitol. "Those were rugged days," he remarks with a sigh.

ACHESON CHOOSES PEURIFOY AS SPECIAL ASSISTANT IN 1946

At last, on October 1, 1938, he found himself in the State Department as a $2,000-a-year clerk in the division handling export licenses under the Neutrality Act. In 5 months he was assistant to the chief of the division.

Acheson, who has an acute eye for merit, has been quick to recognize Peurifoy's abil-

ity. As Under Secretary of State, Acheson promoted Peurifoy to be special assistant, in 1946. A year later, on Acheson's recommendation Peurifoy was made Assistant Secretary. And now Acheson again has picked Peurifoy, as one of the four men at the apex of the Department.

Peurifoy's far-flung responsibilities generally keep him at his desk for a 7-day week. The hours of at least 5 of them are from 8:30 a. m. to 7:30 p. m. Spare moments are given to bridge, playing with his children, and mowing the lawn or weeding the flower beds at his home in Arlington. Both he and his wife loathe the peculiar Washington institution of the cocktail party, and never attend one unless obliged to.

With all his strength, Peurifoy has a gift for friendliness and popularity. His door stands open to the humblest employees, and he takes pleasure in solving their difficulties.

Reply by Norman M. Littell to Washington Post Editorial "Assurance for Investors"

EXTENSION OF REMARKS

OF

HON. JOHN J. SPARKMAN

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Wednesday, April 13 (legislative day of Monday, April 11), 1949

Mr. SPARKMAN. Mr. President, on April 8 there appeared in the Washington Post a rather lengthy communication by Mr. Norman M. Littell, formerly Assistant to the Attorney General of the United States, with reference to the guaranty clause in the ECA Act. In that same issue of the Washington Post there was an editorial entitled "Assurance for Investors." Mr. Littell has written a reply to that editorial which unfortunately cannot be published in the Washington Post, since that newspaper is not now being published. I ask unanimous consent that the statement prepared by Mr. Littell be printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

REGARDING YOUR EDITORIAL, ASSURANCE FOR INVESTORS (FRIDAY, APRIL 8, 1949)

More power to Willard Thorp's plan for bilateral agreements—so far as it goes. However, unless supplemented by the guaranty principle set forth in the Ribicoff amendment of the ECA Act, adopted by the Foreign Affairs Committee of the House, it will be just another la-de-da plan of high hopes and will fall flat on its face in respect to vital areas of the world. I can well understand anyone subscribing to this seductive plan if he is not close to the laboratory of actual experience where the following fatal difficulties lie in ambush:

1. All countries in the world (with the negligible exception of three or four) have currency regulations restricting the conversion of their money into dollars in order to prevent the flight of capital. In such circumstances no American investor putting money abroad could even get his bait back. In no bilateral agreement negotiated by the State Department will any guaranty be given by a participating country that any investment in that country can be converted back into dollars at will. Why? Because a sovereign power cannot deed away by treaty future control of its own currency and fiscal policies. It is of the essence of sovereignty that Government cannot abdicate from the power to change fiscal policy to meet any future needs of the country.

Therefore, on the threshold of Willard Thorp's plan lies the same basic obstacle which was fully understood by Congressmen and Senators when the ECA Act was drafted and no such guaranty of convertibility was required of participating countries. The problem was partially met in the ECA Act by the guaranty clause for private investments, guaranteeing the convertibility of currency for projects approved by the Administrator.

2. Under the plan which you endorse, what will happen if a bilateral treaty, unsupported by any American guaranty to its investor, is disrupted or swept aside by revolution and the investor's plant is confiscated, seized, destroyed, or eliminated from the business picture by state monopolistic practice or decree?

This question opens the door on very dark scenes in American history. At such times in the past (with or without a treaty) the pulling and hauling which has immediately taken place, even under a strong idealistic administration like that of Woodrow Wilson, made the State Department a mere pawn of powerful interests whose investments were damaged in the turmoil abroad. During the first part of this century, through successive administrations, the State Department made itself in effect a negotiator of loans in the Caribbean countries and many South American countries. Once the State Department negotiated or approved a loan, the United States in effect became a guarantor because the Government approval was promptly advertised to American investors and a very strong moral responsibility was thereby assumed by the Government which led to numerous instances of military intervention to protect or collect loans.

The most striking example is that of Haiti, where marines were landed to protect American life and property in 1915, although for 111 years, from the very origin of the Republic of Haiti in 1804 to 1915, no American life had been lost and no property destroyed of which there is any record.

American marines landed at Port-au-Prince, marched to the vaults of the National Bank of Haiti, and carried away $500,000 in gold which was taken to New York on an American battleship and deposited in American banks.

It is impossible to review here the sorry tale of increasing encroachment by sheer military power, the occupation of ports, the control of elections, the forced acceptance of a treaty, the adoption of a new constitution, but the insurrections resulted in the killing of 2,000 to 3,000 Haitians and one of the sorriest pages in American history.

There were other instances in Cuba, in Santo Domingo, in Nicaragua, where the pattern of pressure on the State Department and back-stage formation of policy to protect American interests repeated itself again and again. Not until the Roosevelt-Truman period did we emerge into a firmer area of good-neighbor policy.

The amazing thing to the American public was how much had happened behind closed doors which even Congress did not know. In Haiti strict censorship was clamped on the press, and newspaper editors were put in jail by our own military authorities for venturing to criticize. A Senate committee of investigation had to go to Haiti and hold extensive hearings before the truth was finally known—years later. See hearings on Foreign Loans (68th Cong., S. Con. Res. 22, vol. 1, Feb. 25, 1925.)

You speak of "lollipops" which the Ribicoff amendment, approved by the House Foreign Affairs Committee now proposes to give to private investors. Any well-informed taxpayer would prefer these well-defined guaranties for private investors to battleships, marines, and bluejackets which in the past have cost hundreds of millions of dollars—untold fortunes in taxpayers' money—not to mention the grimmer sacrifice of loss of life and principle in evil treatment of some of our neighbors. Such actions did not represent the will of the American people and were not approved by Congress.

If, under the amended guaranty clause, the approved investor is bailed out in the event of loss through one of the designated risks, two advantages follow: (a) The Government assumes the burden of negotiations with the defaulting country on the proper level of principle and long-range sanctions in the field of diplomatic relationships, free of the pressures for immediate satisfaction from the offending country, which in the past have too often resulted in machine-gun and battleship diplomacy. (Other countries have similarly resorted to force to collect debts during the exploitation of the twenties which we are trying to leave behind, the most famous example being that of the military occupation of Venezuela in 1901 by England, Germany, France, and Italy.) (b) Judicial determination rather than force of arms is invoked by the Ribicoff amendment in that the proposed guaranty clause would stand in the context of section 115 of the ECA act and article X of the bilateral agreements, both of which provide that the nationals of one country may proceed in the courts of another country in any case in which nationals have claims for compensation or damages, but in the final analysis each country can espouse a case of one of its nationals in the International Court or arrange for arbitration. Upon payment by the United States to a guaranteed investor, under the Ribicoff amendment, the clamor for protection stops, and the Government is subrogated to its nationals' claims to pursue diplomatic and judicial remedies.

Can anyone doubt that judicial determination of disputes is preferable to landing the marines.

3. In endorsing heartily the suggestion for negotiation of treaties, I do so in full recognition of the fact that treaties cannot work alone in much of the area of the world and, also, that guaranties cannot work alone. Even on the theory which Willard Thorp now advocates with your support, the great advantage of the proposed guaranty clause is that the negotiation of required bilateral treaties has already been completed with the principal countries of western Europe. We have a good running start. By article III, participating countries agree to respect the guaranties issued, and article X provides for submission of disputes to court procedure or arbitration. We joined with other countries in renouncing military intervention to collect debts at the Hague Convention of 1907 and again at Montevideo in 1933 in a protocol announced by Secretary Hull and President Roosevelt.

The proposal adopted by the House Foreign Affairs Committee is an implementation of these contrite statements and protocols which in our past history have been too frequently honored in the breach. Here is an escape to the juridical determination of disputes—imperfect and incomplete, but an excellent start on rounding the corner away from the inevitable temptation to intervention under the inevitable pressures at home.

4. Lastly, a fatal objection to the high-minded scheme which you endorse is that it is conceived without recognizing the point of view of hardheaded, practical-minded men whom you seek to entice into the arena of world politics to do a job of reconstruction and spread know-how of production. American private enterprise will not go abroad because we ask it please to go. It will go on the basis of incentives fitting into the pattern of business risks which it is accustomed to take with stockholders' money. It recognizes, as you very happily state in your editorial, that "the atmosphere has changed since the feverish speculation of the twenties",

and American investors "now know that they have some responsibility to the countries from which their profits will come."

Any number of examples could be given to prove this sense of responsibility, and even the most hardheaded know that the age is one of participation on a partnership or even minority basis and not exploitation abroad. We cannot explore new criteria here.

But American business has more security in the United States than in any other country in the world. To induce broader participation in aid of national policy, the guaranty of the American Government should be offered as to a limited number of risks lying on the level of foreign policy rather than on the private risk level. That is the theory of the guaranty clause amendment so wisely approved by the Foreign Affairs Committee of the House, as explained in my statement published by you on April 8.

5. In conclusion, let me deplore the great American tendency to make fresh starts in finding its way to a bright new world. President Harding, in his St. Louis address of 1923, naively suggested junking the International Court, to which many Americans objected. He said we would start one of our own.

We have ECA and its bilateral agreements. Why not go on from there? Pride of authorship in esoteric knowledge of a subject often has too much to do with advocacy of a plan. Let me suggest that both plans should be carried forward at once, using the guaranty clause in the ECA Act within its limits of $300,000,000 as a pilot plant. Let us recognize that the original intent of Congress has been defeated in that the guaranty clause, as originally drafted and as restated in the Senate Foreign Relations Committee draft of the ECA Act, has been, is, and would continue to be a complete failure because it does not offer enough protection to draw out the great untapped reservoir of American productive power for the service of our foreign policy and creation of more goods, employment, and hope for a free way of life among millions abroad.

Side by side with operations under the new guaranty clause, as recommended by the Foreign Affairs Committee of the House, let the State Department achieve what it can, where it can, by bilateral agreements which I fully recognize might well succeed alone in a limited number of countries, such as the new and healthy country of India, with unlimited raw materials, limited know-how and practically no debts to present credit risks.

President Truman has laid a cornerstone of American foreign policy for a generation to come in point IV of his inaugural address. Let us get to work on it without delay by means of whatever instrumentalities are at hand and any others which we deem it advisable to create as time goes on.

NORMAN M. LITTELL.

WASHINGTON, D. C.

Economic Recovery of Finland

EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Wednesday, April 13 (legislative day of Monday, April 11), 1949

Mr. MUNDT. Mr. President, the people of Finland have been making some remarkable economic progress in the past few years in the face of some very difficult situations. I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Finns on Their Feet Despite Two Wars," published in the New York Times of April 10, 1949.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FINNS ON THEIR FEET DESPITE TWO WARS—SUGGESTION MADE THAT LEARNED STUDY HOW THE TINY NATION RECOVERS WITHOUT HELP

HELSINKI, FINLAND, April 5.—It is high time, apparently, that somebody appointed a learned commission to prepare a report on "Finland and her troubles."

The learned commission would have a tough job.

If it stayed in Helsinki, it would be likely to get trampled under the feet of people rushing to work. If it went to Turku, it would be dodging steel plates being swung into position to make new ships. Out in the country, it would run the risk of getting crushed under falling pine trees, as a new breed of pioneers clears virgin forests to build its homes. Anywhere it goes, it would be in peril of foundering itself on Finnish hospitality, with meat and cakes and butter and eggs washed down with aquavit.

And then, if it asked Finns about their troubles, the Finns would look surprised and say, "Troubles? What troubles?"

Problems, yes. The Russians, the Communists, the price of wood pulp and paper. But troubles? No, sir.

This doesn't make sense, of course, in present-day Europe. Here is a bantam-sized country that fought two wars in 5 years, saw most of its northland burned to the ground, lost a huge chunk of its best land and richest industries to the Russians, was forced to find homes and jobs for 450,000 refugees from the lost territory, saddled with a staggering load of reparations, and injected with Moscow-trained secret police and Communist agitators.

By all rules of common sense, it ought to be wallowing in despair, its people hungry and discouraged.

But there's no accounting for Finns. Finland looks about as downhearted as a Texas county with a "watch us grow" campaign.

With no help from the Marshall plan, and nothing from Russia more helpful than a kick in the rear, Finland has done the impossible—once more.

She is over the hump, after 9 years of war and war repair, and getting ready to burn the mortgage. And how did she do it? Let a learned commission answer that one!

Helsinki, the capital, is working at recovery as hard as most cities would work on an oil boom. It is all a-bustle with a dozen new industries, built from the ground up since the war, making everything from electric motors to paper-making machinery.

Its stores, in the last 6 months, have filled up with goods as if someone had turned on a faucet. Wool has just been de-rationed; clothing, except for cotton, is coupon-free; and the stores are having sales.

Housewives have thrown away their ration cards for everything except coffee and chocolate. They can buy all the butter and eggs they want. As for meat, there's even enough to spare some for Russia, who is buying beef.

Prices are fantastic—$3.50 for a garden-variety hotel luncheon of soup, leg of lamb, boiled potatoes, ice cream, and coffee; $8.50 for a cotton shirt; $21 for a man's lamb's-wool cap—but Finns pay them without undue shrieking. Finnish workmen are among the best-paid in Europe, and money is loose.

Helsinki, however, is a small part of Finland's recovery story. In every corner of the country, new factories are smoking and new hydroelectric power stations are grinding out kilowatts.

Lapland, where every house and fencepost was burned down by the Germans in their "scorched earth" retreat in 1944 and 1945, has been rebuilt from the ground up. Most of the 450,000 refugees have been settled in new jobs, and the farmers on new acres they have cleared themselves.

The peace treaty took from Finland one-fifth of her agricultural land, and one-third of her power resources.

Replacing the lost farm land has meant clearing virgin forests, uprooting the stumps, and building homes to go with the fields. But Finland has built 30,000 acres of new land, improved production on the old, and is once again feeding herself.

Half of the lost power stations have already been replaced by new ones, work on others is booming, and by the end of this year Finland will have more power than ever.

In the northland, laid waste by the Germans, 5,000 homes were destroyed, and 5,000 have been rebuilt; 13,000 barns were destroyed, and 10,500 have been rebuilt; 3,000 miles of highway was destroyed, and 3,000 miles have been repaired; 1,034 highway bridges were wrecked, and 940 have been repaired.

The losses Finland herself suffered were only a part of what the war cost, for Finland had to pay also for the damage we did to Russia.

The reparations total was fixed at $300,000,000—to be paid in goods at 1938 prices. So, having lost 77 industrial plants in the territory ceded to Russia, Finland had to create brand-new industries to pay reparations.

Finns are the first to say that they had help. Before Russia forbade them to join in the Marshall plan, Finland had received something more than $100,000,000 in loans, not gifts, from the United States Export-Import Bank.

Finland is one country that knows no one is going to help her with her task. Russia won't help; America can't.

Finland isn't worried. She hasn't a doubt about her ability to finish the job, and pay her debts, and be living in her old modest comfort by, say, 1952.

And this, as it happens, is when other nations will stop getting aid from the Marshall plan.

American Taxpayers Have Sent $92,169,000,000 to Foreign Countries

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 13, 1949

Mr. VAN ZANDT. Mr. Speaker, with the House approving Marshall plan (ECA) funds for the fiscal year 1950 of nearly $5,500,000,000, it may be well for each Member of Congress to review the over-all cost of our foreign-aid program to the American taxpayers.

At my request, the coordinator of information of the House of Representatives compiled for me the over-all cost of foreign aid, including unpaid balances of World War I loans as well as existing programs through June 1950 as presently budgeted.

The total amount of United States Government assistance and loans abroad (including unpaid balances on World War I loans) today stands at $92,169,000,000.

This total includes all lend-lease through March 31, 1948 ($50,205,229,787), plus $15,460,248,348 presently due on World War I loans, including interest to the date of last payment under its various debt-funding agreements. These two items, therefore, make roundly $65,665,000,000 on the total of $92,169,000,000. The balance of $26,504,000,000 in overseas assistance is summarized in table I, below.

Table II indicates the cumulative national distribution of the total sum of $91,169,000,000, including balances due on World War I loans, all lend-lease, UNRRA, and all other programs of aid and assistance by the Government.

The totals for each country do not include, of course, the vast sums supplied by voluntary assistance drives in the United States, such as CARE, Red Cross, international charities, and emergency assistance campaigns for reconstruction and rehabilitation in particular countries.

While nothing is contained in the official reports of the Government program to indicate the total of loans as against the total of outright grants, we can, however, approximate that of the grand total of $92,000,000,000 approximately $70,000,000,000 is in grants and $22,000,000,000 in loans.

Tables I and II follow:

TABLE I.—*A recapitulation of United States loans and grants to foreign nations (April 1949)*

Unpaid balances due on World War I loans (January 1948)	$15,460,248,348
Lend-lease (through March 31, 1948)	50,205,229,787
Marshall plan (through June 1950)	9,254,000,000
Army relief in occupied areas (through June 1950)	[1] 3,774,000,000
Treasury loan to Britain (1947 and 1948)	3,750,000,000
UNRRA (through March 1947)	2,700,000,000
Export-Import Bank loans (through June 1950)	2,007,000,000
Treasury subscriptions to International Bank and Reconstruction Fund (1946 and 1947)	1,585,000,000
Surplus war goods (liquidation agreements)	[2] 1,148,000,000
Philippine aid and war damages (through June 1950)	682,000,000
Greek-Turkish Aid Act (through June 1950)	607,000,000
China Aid Act (through June 1950)	520,000,000
Displaced persons, International Refugee Organization, contributions to United Nations, Palestine refugees, and other assistance programs (through June 1950)	477,000,000
Total	92,169,478,135

[1] This figure does not include any part of our direct occupation costs, only the civilian relief extended through the military services.

[2] In addition, the armed services disposed of some $6,434,000,000 of surplus goods and stores overseas, for which no liquidation agreements have yet been reported. In most cases these goods were funneled directly into foreign relief and reconstruction channels; but in other cases, liquidation agreements still are in process of negotiation.

TABLE II.—*Total distribution of United States loans, grants, and aids overseas, including unpaid balances on World War I loans (includes all Marshall plan estimates for fiscal 1950, but does not include any funds for rearmament under North Atlantic Pact)*

1. Austria	$885,118,000
2. Armenia	39,942,000
3. Belgium and Luxemburg	1,744,000,000
4. British Empire	44,679,000,000
5. China	3,446,000,000
6. Czechoslovakia	17,348,000
7. Denmark	234,792,000
8. Egypt	59,700,000
9. Estonia	25,903,079
10. Ethiopia	16,447,000
11. France and possessions	13,371,000,000
12. Finland	24,600,056
13. Germany (bizonia)	3,260,000,000
14. Greece	681,000,000
15. Hungary	64,000,000
16. Iceland	20,900,000
17. Israel	63,009,000
18. Italy	4,700,000,000
19. Iran	23,100,000
20. Iraq	7,805,000
21. Ireland	142,703,000
22. Japan	1,891,000,000
23. Korea	89,469,000
24. Latvia	10,713,000
25. Liberia	14,829,000
26. Lithuania	9,603,059
27. Netherlands and possessions	979,000,000
28. Norway	345,000,000
29. Philippine Islands	708,000,000
30. Poland	373,600,000
31. Portugal	11,647,000
32. Rumania	79,435,000
33. Russia	12,793,400,000
34. Saudi Arabia	46,200,000
35. Sweden	104,100,000
36. Trieste	35,200,000
37. Turkey	305,400,000
38. Yugoslavia	117,200,000
39. American Republics (13)	1,651,392,000

Punch-Drunk Republicans

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 13, 1949

Mr. PRICE. Mr. Speaker, under leave to extend my remarks, I include herewith excerpts from an editorial which appeared in the Chicago Daily Tribune of Saturday, April 9, 1949. The title of the editorial is the Tribune's own. It follows:

PUNCH-DRUNK REPUBLICANS

* * * * *

Last Tuesday the Illinois Republicans, for the most part, fell flat on their faces.

* * * * *

The Democrats won, in two of the biggest suburbs, Berwyn and Cicero. In Cicero their task wasn't made any harder by the fact that a Republican town board stymied a Republican president in his efforts to clean up gambling.

But the State Republican organization isn't in very healthy condition when the Democrats elect a mayor in Bloomington. They won not only in Bloomington but also in Peoria, Macomb, Urbana, and Quincy, and in Freeport under a local party label. Republicans retained control in Aurora, Galesburg, and Streator.

No doubt local issues played a part in most of these campaigns. It might be hazarded, for example, that Mayor Triebel, of Peoria, lost strength, by closing down a town whose citizens prefer running wide open. Mayors are beaten for reelection for a variety of reasons, but it is hard to believe that local issues worked everywhere against Republicans, and nowhere against Democrats.

The truth is that Illinois Republicans grew lazy and incompetent from 8 years of bellying up to the State patronage trough. Governor Green took the rap for their shortcomings, but they didn't deliver for him and they didn't deliver for the party.

Their slothfulness was betrayed 2 years ago when permanent registration of voters became effective down-State. Very few county chairmen made any real effort to get their voters registered. That was one reason why traditional Republican majorities down-State proved insufficient to counteract the votes piled up by the Democrats in Chicago.

The boys aren't just punch drunk from what hit them last November. They were punch drunk when they were hit, and they are still wafted along in a wonderful haze of self-appreciation.

No sectional reflections are intended here. The Chicago Republicans weren't called into action Tuesday. Give them a chance and they may fall on their faces, too.

The Battle of Words: Voice of America Must Be Improved To Win Masses as Well as Top Strata

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 12, 1949

Mr. JUDD. Mr. Speaker, when we passed the Information and Educational Exchange Act, provision was made for an Advisory Commission on Information to be composed of distinguished American citizens experienced in this field. It has now submitted its first report. A supplementary report was prepared by Dr. Mark A. May, of the Institute of Human Relations of Yale University, based on a personal study by Dr. May in Europe of how effectively the program is operating. Under leave to extend my remarks, I include this very informative article reprinted from the Christian Science Monitor:

In the free countries of Europe excellent contacts have been established with Government officials, newspaper editors and writers, professional groups including lawyers, physicians, college and university professors, and other leaders in labor, education, art, and culture.

In short, information about the United States and its foreign policies is now being communicated fairly effectively to individuals with whom United States Information Service officers are personally acquainted, who come to our libraries for information, who read the press materials sent out from Washington, and who see our documentary and informational movies.

These people come mainly from the better educated classes. Many of them hold important positions of leadership.

MASSES NOT REACHED

Information about the United States is being communicated, but less effectively, to the middle classes who are reasonably well educated. But as one goes down to the lower

social and economic strata of the population, the communication of information thins out very fast.

We do not now have in Europe the staff and physical facilities that are necessary to reach the great masses of farmers, industrial workers, small shopkeepers, and the unemployed.

In countries that have a high percentage of illiterates (e. g., Italy, Greece, and Spain) it is certain that information about the United States is not reaching those who cannot read and have no radios.

BEHIND THE IRON CURTAIN

Behind the iron curtain the Voice of America is bringing information to a more representative cross section of the populations than in most free countries of Europe. The voice is reaching audiences that exceed the number of radio receiving sets.

In Poland, where there are fewer than 1,000,000 sets, the Voice reaches at least 2,500,000 people. Although the sets are owned mainly by upper and middle classes, who can afford them, yet important news spreads rapidly to an entire community.

The Voice is greatly appreciated not only because it brings in reliable news, but mainly because it brings hope and encouragement to freedom-loving people. It sustains morale, helps to ward off the despairing defeat, and counteracts Russian propaganda that the people of the United States are a horde of dollar-mad barbarians.

TREMENDOUS APPETITE

Effective as the Voice of America is behind the iron curtain, it does not satisfy the tremendous appetite for information about the United States. But the communication of information by press, movies, and personal contacts cannot be done as effectively in Russian-dominated countries as in free countries on account of government restrictions.

Although it varies in different countries, the restrictions are mainly censorship of press and movies, police surveillance of libraries, and the discouragement of all personal contacts with Americans, particularly USIS officers.

All Americans—in fact, all foreigners from non-Communist countries—are regarded as actual or potential spies; hence, contact with Americans by local people is considered treason. These restrictions make it exceedingly difficult to communicate information effectively to the upper and middle classes who desire it.

LIBRARIES USED

Many of them do, however, come to our libraries to read and to borrow books and magazines.

But the number of individuals who are getting information about the United States from books, magazines, movies, lectures, and personal contacts is a relatively small fraction of the populations. In some countries there are opportunities for reaching more of the educated groups that are not now being embraced.

I have first-hand information on three countries — Poland, Czechoslovakia, and Yugoslavia. The most general conclusion is that of all the existing radio sets in these three countries that are in working order at least three-fourths and perhaps more are tuned to the Voice of America broadcasts once each day.

In Poland the percent might run as high as 85 to 90. It must be remembered, however, that the number of radio sets per capita in these countries is much less than in the United States, where we have one radio for every two persons.

In Poland there are 950,000 registered sets for a population of 24,000,000, or 1 set per 25 persons. The estimated daily listening audience to the Voice is about 1,000,000.

In Czechoslovakia there are about 2,000,000 sets for a population of about 15,000,000, or 1 set per each 7 to 8 persons. The estimated average daily listening audience to the Voice is not less than 1,000,000, and on certain occasions might run to more than 2,000,000.

In Yugoslavia there are 250,000 registered sets for a total population of between 15,000,000 and 16,000,000, or 1 set for each 50 to 60 persons. No estimate was received as to the average daily listening audience to the Voice. Many of the sets are old and need replacement parts.

The relay of the Voice by BBC is heard best—yet in spite of these hardships, there is scattered evidence indicating that people listen in fairly large groups to one set.

INTEREST SHOWN

The fact that the listening audience in comparison to the number of sets is quite large is in itself evidence that these broadcasts are greatly appreciated. A young Yugoslav who recently made a trip into Bosnia reported that the "Voice of America is the only thing which sustains the people's morale."

The very fact that the United States cares enough about these people to send in daily broadcasts gives them courage and hope for ultimate liberation from their oppressors. * * *

A word will be said about Spain, which can hardly be classed as a free country. The Spanish people were well supplied with short-wave receiving sets by the Germans. The total number of sets in Spain is estimated at about 7,000,000—an average of 1 for every 4 people.

The Voice goes into Spain daily in Spanish at 11–11:30 p. m. Recently listeners were advised to write to the United States Embassy at Madrid for copies of programs of future broadcasts.

FLOOD OF REPLIES

A flood of letters came in from all over the country from as many as 50 cities.

Unfortunately, the United States officer in Madrid had no programs available in Spanish. I was unable to estimate the number of listeners to the Voice in Spain, but the USIS office estimates that it has a daily audience of from 3,000,000 to 4,000,000. * * *

The most effective American-operated radio in Europe in a foreign language is Radio RIAS in Berlin. This station occupies a large building which was formerly an office building of the I. G. Farben Co., some six or eight stories high, with probably not less than 100 rooms that are used as offices and studios.

It has a monthly pay roll of approximately 1,000 persons. It is run by the army, and has been organized to offset the effect of Radio Berlin (Goebbels' pride and joy), which is in the British sector but, oddly enough, controlled by the Russians.

LARGE NETWORK

Radio RIAS operates through a network of all the radios in Germany except those reserved for the armed forces and for relaying the Voice short wave behind the iron curtain.

In Italy there are approximately 2,500,000 radio sets, or 1 per 18 persons. A total of 135 minutes per week of VOA programs is relayed medium wave by Radio Italy. An additional 25 minutes a week is given to ERP news. Radio Italy reports events in the United States culled from Associated Press, United Press, and other news agencies. Also some of its cultural shows are devoted to American movies, sports, science, art, and culture, and several hours a week are devoted to American music.

It is estimated by the Rome office that from all these programs some 10,000,000 Italians hear something about the United States each week. Although this figure looks impressive, it must be remembered that the audience reached by radio in Italy consists of the upper and middle classes, leaving the lower classes, who are the easy victims of communism, relatively untouched.

Recently USIS officers in Florence reported to Rome:

"Radio does not reach the masses. Except for some regions in northern Italy, workers do not usually own radios. Radio listening does not occupy the important place in Italian life that it does in the United States."

In Greece, the Voice is relayed medium wave both from Athens and from Salonika. But outside the large cities the Greeks have very few radio sets.

SWEDEN ASKS BROADCASTS

At the present time the Voice of America is not sending broadcasts to the Scandinavian countries in their native languages. In Sweden I found a strong desire for medium-wave broadcasts of American news and information, both on the part of the American Embassy and on the part of the important Swedes, including those who operate the Swedish radio.

Newspapers and magazines printed in Europe get their information about the United States from several sources, including international wire services, their own foreign correspondents, American newspapers printed in Europe, and the International Press and Publications Division.

The International Press and Publications Division sends to USIS in every capital in Europe a large volume of information, including the daily Wireless News Bulletin and a wide variety of basic information such as news letters, comments, profiles, biographies, and feature stories.

PEOPLE DEFY POLICE

In the countries behind the iron curtain the press is severely censored, and little use is made of the Wireless Bulletin by newspapers. It is, nevertheless, translated and circulated to government officials, newspapers, writers, and political leaders, except in Yugoslavia where circulation of translations is forbidden. In Warsaw the Polish edition of the Bulletin is distributed from the library.

The Minister of Information objects violently to this form of public distribution. The library is watched by the secret police and visitors are intimidated in a variety of ways. The appetite for information about the United States is so great that many Poles risk imprisonment by coming to the library and taking out copies of the Bulletin, which is often done by wrapping it up in a Communist newspaper.

In Czechoslovakia the Bulletin is carefully read daily by Government censors. Five to 10 editions per month are confiscated because they carry items that are in violation of the Czech laws. In Czechoslovakia, however, the papers and magazines do use a fair amount of INP feature materials.

The USIS office in Yugoslavia has the unique honor of being the only USIS to be closed by government decree. This happened in September 1946. The office and library were reopened in November 1946 under an extremely restrictive agreement, the main features of which are that the Wireless Bulletin be distributed in English only and to the Ministers of the Government, the official news agency, and to a few other functionaries approved in advance by the Foreign Office.

It may also be distributed to other embassies. It cannot be exhibited on USIS premises nor in the library, where it is forbidden to exhibit "anything aiming against the interest of the Yugoslavian people and their laws." It is understood that the USIS is "to serve solely for giving information on the life of the people of the United States and on the development of their culture."

CIRCULATION JUMPS

By way of summary it may be said:

1. The dissemination of information concerning the United States and its foreign policy to the masses by the printed word is practically nil in the iron-curtain countries except for strictly nonpolitical feature materials that are mainly of a scientific, technical, and cultural character;

2. In the free countries satisfactory use of printed material sent out from Washington is being made by the press, particularly the provincial press and the magazines. Here, again, the greatest demand is for official documents, authentic texts of speeches, and scientific and cultural materials, including fashions, sports, movies, etc.;

3. In some countries, notably Italy, American weekly and monthly publications are gaining in circulation. The Italian edition of the Reader's Digest is now up to a circulation of more than half a million, which far outstrips any Italian magazine. The American newspapers—the Paris edition of the Herald Tribune and the Rome Daily American—both printed in English, have a fairly wide circulation among nationals who can read English.

In spite of this rather favorable picture, however, it must be remembered that in some countries the masses of the population, particularly peasants and industrial workers, are not reached by the press. In Italy, Greece, Spain, and Portugal a high percentage of the population is illiterate.

The great problem just now is to reach the people who do not receive or read newspapers or magazines, and who do not have radios.

Our China Disaster

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 12, 1949

Mr. JUDD. Mr. Speaker, under leave to extend my remarks, I include the following editorial by Kepler Davis, rear admiral, United States Navy (retired), editor of the Forest Republican, published at Tionesta, Pa.:

OUR CHINA DISASTER

During the past weeks we have learned the extent of the disaster that has befallen China and the United States. The responsibility for the failure of our foreign policy in the Far East rests squarely upon the President and the Department of State.

The continued insistence that aid would not be forthcoming, unless a coalition government with the Communists was formed, was a crippling blow to the Nationalist Government.

So concerned were our diplomats and their advisers with the imperfections of the democratic system in China after 20 years of war that they lost sight of our vital stake in keeping China beyond the grasp of Russian expansionism.

THE REAL "RED HERRINGS"

President Truman has charged, and repeated the charge, that the facts uncovered by the House Un-American Activities Committee were "red herrings" to divert attention from alleged Republican deficiencies.

To our mind the true "red herrings" of 1948, and earlier were the stories of the shortcomings and corruption of the government of Chiang Kai-shek which were so widely publicized through America. "Red herrings" spawned originally in Red Moscow to blind us to the real issue in Asia. Lacking enlightened and competent leadership at the top, we fell for these diversionary tactics.

Our policy has not made sense. It has been shot through with vacillations, uncertainties, and confusion. We will now reap the whirlwind.

We have come to our senses too late. The cost now of stopping communism in Asia is probably too much. We have suffered a stinging defeat in the cold war.

Our last defeat, Pearl Harbor, took by surprise the top foreign policy level of our Government. However, a fairly good case can be made to justify their lack of awareness of an impending disaster.

WILLFUL BLINDNESS

No such pleading can be made for the Truman administration in its censurable blindness to the realities of the Far East.

A willful blindness by individuals who preferred to believe the "red herrings" of fellow travelers and their well-meaning dupes. Individuals who brushed aside the counsel and warnings of men of the stature, experience, and China background of Dr. WALTER JUDD, a distinguished Member of Congress, our ex-Ambassador Gen. Pat Hurley, numerous missionaries, churchmen, members of the armed services, and those who had done business in Asia for years.

Under a system of parliamentary government with a cabinet responsible to parliament, the Truman administration would probably be under obligation to submit to a vote of confidence following so costly a policy blunder in foreign affairs.

The Future Development of Southern California Depends Upon Water

EXTENSION OF REMARKS

OF

HON. GORDON L. McDONOUGH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 13, 1949

Mr. McDONOUGH. Mr. Speaker, water is becoming one of the most important issues in the Nation. Our Western States are dependent upon water for continuation and expansion of their agriculture, which contributes a vital part of the Nation's food supply, and for the continued growth of many western cities.

The Colorado River is one of the most important sources of water for southern California and Arizona. The Los Angeles-San Diego area depends upon the Colorado River for part of both its domestic and industrial supply. About 1,000,000 acres of farming land are irrigated with Colorado River water in southern California.

At the present time signs of future scarcity of water are appearing in the Los Angeles area, which is one of the fastest-growing regions in the United States. Industry multiplied here during the war, people are still migrating into the area, and a doubling of population is expected.

But water is the key to the future of our Western States, and their continued progress or decline is dependent upon an adequate water supply.

California recognizes the urgent need of the other Western States for water from the Colorado River and expects to share with them. But California must receive a fair share of the Colorado River to maintain the present cultivation of land for agriculture and to supply the daily needs of our growing population and expanded industry.

The following article entitled "Why the West Fights for Water," which appeared in the April 3 issue of the United States News and World Report, is an excellent survey of the Colorado River situation, and points out the reasons why water supply is an issue of such vital importance to the Representatives from our Western States:

A river and its water are touching off a battle that apparently only Congress can decide. Yet the developing story of the Colorado is just one of a series. Battles are looming over the Columbia, the Missouri, the St. Lawrence, and the Tennessee, among others.

Water is on the way to becoming a major issue in the United State politics. In the West, water resources are to determine which regions can grow, which will be held back. Water dictates location of new industries, such as atomic installations, chemical works, steel and aluminum plants. Cheap power from water brings up on a widening scale the issues of public versus private ownership of power plants and distribution lines.

In this light the story of the Colorado and its water takes on national significance. Decisions affecting the way the river's water is distributed will determine the future of industry and agriculture in southern California and Arizona. The decisions also may become patterns for settlement of water controversies in other areas.

The Colorado situation is this:

Water of the upper Colorado Basin is to be divided among Colorado, New Mexico, Utah, and Wyoming, according to a compact just approved by Congress. These States get title to 326,700,000,000 cubic feet of water a year from the Colorado and tributaries.

Another 65,340,000,000 cubic feet a year is reserved for Mexican use by a 1945 treaty. Nevada is given 13,068,000,000 cubic feet a year. Now the big issue is how Arizona and California are to divide up the remaining 366,775,200,000 cubic feet a year.

The problem is that not enough water exists to give both Arizona and California what they figure will be needed in years ahead. Right now, none of the States is using all the water it is entitled to. California is using only about half as much water from the Colorado as it hopes and plans to get in the next 10 years or so. Arizona, the upper-basin States, and Mexico are using only part of the water they are authorized to take. Nearly half of the Colorado is flowing into the Gulf of California without going into any direct use.

Within a few years, however, irrigation and power projects will be utilizing all the available water. Arizona is trying to increase her share of the Colorado water before California can get all the present surplus. California is trying to stop what it regards as a raid by Arizona on California's future water supply. In effect it is a race between States for the last water hole in that area.

Both States regard the race as a matter of life and death. The reasons are briefly told:

In southern California, the Los Angeles-San Diego area depends on the Colorado for part of the domestic and industrial water supply. The Metropolitan Aqueduct—457 miles long—brings this water into 13 cities from the lake behind Parker Dam. About 1,000,000 acres of rich farming land is irrigated with Colorado water. Californians say 3,500,000 people use Colorado water.

At present, southern California's water is adequate for needs except in scattered locations. But signs of future scarcity increase. Los Angeles is concerned about instances of

land sinking a little in places where ground water has been pumped out. Salt water is seeping into the land, where fresh-water tables fall below sea level. Dry wells are becoming more common. In dry spells, much irrigated land lies idle.

This part of California is one of the fastest growing United States regions. Industry multiplied during the war and people still are pouring in. A doubling of population is expected. But a definite ceiling will be set on the section's growth if water supply is not expanded. And the Colorado is the only source of additional water in sight.

Arizona, by contrast with southern California, is in the midst of an acute water shortage. The trouble is worse in central Arizona, where most of Arizona's 664,000 people live. There, farmers irrigate about 500,000 acres of land.

A 20-year dry period, and unusually heavy use of water during the war, depleted river reservoirs. Farmers increased pumping of underground water. They are pumping 48,626,028,000 cubic feet of water a year—at least a third more than should be taken to maintain ground-water levels. Ground-water reserves no longer can meet the need for suplemental water. About 170,000 acres of irrigable land gradually will revert to desert unless new water is found.

Arizona's spokesmen point out that the State faces the loss of one-third of its richest land. If that happens, 150,000 people can be expected to leave the State. Banks and businesses then would fail. Arizona's growth would come to an abrupt end.

Future use of the Colorado thus is the key to growth in southern California and Arizona. Fortunes of five other States in this region are tied to the Colorado, too. The Arizona-California dispute is hurting all of these States. It holds up the comprehensive basin plan, a program for opening the whole Colorado River area to industry, farming, and mining in decades ahead.

The Colorado plan is the joint effort of the Department of Interior, which is to provide capital funds, and the seven basin States. It is river planning on a scale that dwarfs the Tennessee Valley experiment.

The Colorado Basin area comprises one-twelfth of the continental United States. About 2,600,000 acres of former desert is irrigated. Power plants, such as the Hoover Dam installations, have a capacity of about 1,320,000,000 kilowatts of hydroelectric power. This is only the beginning.

More than 130 new major irrigation, power, and flood-control structures have been laid out as possible beneficial projects. Not all can be developed fully because their peak water use, added to that of existing projects, would exceed supply by 24 percent. But, eventually, about 3,650,000 kilowatts of additional power capacity is expected to be installed along the Colorado and its tributaries. New irrigated acres will exceed 1,500,000, and another 1,120,000 acres will get additional irrigation.

The cost of all the projects planned is estimated at $2,185,442,000, in 1940 prices. Construction costs, now declining, still are almost double the 1940 level. First units of the central Arizona project, for example, would cost an estimated $738,000,000 at present prices—more than the Panama Canal. This is the project Arizona is trying to get approved at this time. It would bring 52,272,000,000 cubic feet of Colorado water into central Arizona and rescue that district from water famine. California is trying to block the program until after a Supreme Court review of the whole river case.

These cost figures show the stake the Federal Government is building up in the Colorado Basin alone. Irrigation and power projects are built largely with Federal money, though every dollar the Government spends is supposed to return to the Treasury except for a small fraction that is allocated as the Federal share of flood control. Revenues from sale of power are counted upon to pay most of the costs. Comparing investment and return another way, the official stand is that irrigation and power costs of these projects would create $1.30 in economic benefits to the Colorado region and the country for every dollar the Federal Government spends.

The Colorado Basin contains, in addition to irrigable lands, nearly one-fourth of United States coal reserves, vast deposits of oil shale, natural gas, vanadium, uranium, molybdenum, copper, gold, silver, phosphate, and other minerals. Unlocking these resources will add to basic United States wealth.

Other river-basin plans may be affected by outcome of the Colorado controversy. State water rights may be changed by a congressional decision, or by new Supreme Court interpretations of river laws. Conflicts over other rivers may be settled under rules made for the Colorado.

Texas and New Mexico have just agreed to a compact regulating use of the Pecos River, but only after a bitter fight. A fight is well-started in the Columbia River Valley, over the question of whether States or a Federal authority shall control that river system. A similar fight is under way in the Missouri Valley. There, conflicting interests threaten a battle among States as flood control and irrigation works alter the course of rivers.

There are other instances. It all shows what is to be expected as the trend to big basin-wide river programs reaches into new areas. The Federal Government is the financier. Federal agencies plan to spend about $2,382,619,000 over a 5-year period in five Western States alone, almost entirely for projects harnessing rivers. Other parts of the country, especially the Midwest, are demanding similar development of their river resources. But the Colorado case shows how the changing of rivers can touch off bitter interstate battles.

The Basing-Point Decision

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 13, 1949

Mr. O'HARA of Illinois. Mr. Speaker, under the privilege granted me to extend my remarks, I include an article on the basing point decision by William Schoenberg, president of the United Cement, Lime, and Gypsum Workers, appearing in the American Federalist, the official monthly magazine of the American Federation of Labor:

THE BASING-POINT DECISION—GHOST TOWNS ARE IN THE MAKING IF IT STANDS

(By William Schoenberg, president, United Cement, Lime, and Gypsum Workers)

(The author of this article heads a union directly affected by last year's far-reaching decision of the United States Supreme Court in what is popularly referred to as the Cement case. While Mr. Schoenberg is speaking for his own organization, the stand taken on pricing by the Federal Trade Commission, backed by the sanction of the Supreme Court, has serious implications, as the author points out, for other unions and other industries.)

It was lately demonstrated that the power to select and to elect is not the exclusive prerogative of big business or of big politics—that it belongs to, and may be powerfully used by, the working people of this country.

We the people have resumed the responsibility to see to it that the United States shall have its Government administered by able, efficient men who are responsive to the will of the people and who will act under laws made by Congress. It will be our own fault if the Government is not what it should be.

Today labor is at the crossroads. Labor may choose the hard, narrow path of self-government, the democratic way, where guided by the laws made by a Congress that we elect, we shall go on to the satisfactions of proud and glorious freedom. On the other hand, we may choose the broad, easy, low road of bureaucracy, under which we will work and live subservient to interpretations, regulations, and orders capriciously dictated from day to day by mere appointees who are never directly responsible to the voters. The second way leads to the frustrations of ignominious slavery and to the tyranny of government by force—and the end of American free enterprise.

Is this not the time for our international unions solemnly to reaffirm belief and trust in the long-honored fundamental principle that the legislative, executive, and judicial branches of the Government shall be independent?

The Constitution, in article I, provides that the legislative powers granted by the people to our Federal Government are vested in Congress. Those powers are to be exercised only by Congress. They must not be relinquished. They cannot be delegated.

By article II the executive power is vested in the President. He is to give information to Congress and to recommend such measures as he shall judge necessary and expedient. Also the duty is assigned to him to take care that the laws made by Congress are faithfully executed. He needs the assistance of administrative agencies, such as the Department of Justice headed by the Attorney General, the Department of Labor headed by the Secretary of Labor, and the various other departments of cabinet rank.

Subordinate to these there are many minor agencies designed and created to serve as aids to major departments. The Federal Trade Commission is one of the scores of such minor boards and bureaus.

By article III the judicial power of the United States is vested in a Supreme Court and such inferior courts as Congress may establish. It is the duty of the courts, thus created, to determine controverted issues of law and fact and to apply the laws that have been made by Congress.

It is necessary and proper that subordinate administrative agencies should act in aid of the various departments of the Government, but that any such agency should attempt to exercise the legislative powers of Congress, the executive powers of the President, and the judicial powers of the courts is unthinkable under our Constitution.

Yet that is the very thing which the Federal Trade Commission has done and which the Supreme Court appears to have approved. It is intolerable to expect that Congress will supinely acquiesce in such behavior by any governmental agency which Congress has the power to curb.

In our consideration of the Federal Trade Commission's long efforts to destroy delivered pricing and to prohibit free competition under the mask of eliminating what it calls the waste of cross hauling by our railroads, we are not concerned with trying to defend collusion or conspiracy, or to fix prices, or to eliminate competition.

Nor are we interested in securing legislation to legalize any so-called basing-point system or any other system of pricing.

We are interested—vitally interested—in having our duly elected representatives in Congress, at the earliest opportunity, take whatever action is necessary to curb and to

prevent the repetition of acts of the Federal Trade Commission, the courts, or any other agency of the Government which has trespassed upon the legislative power of Congress or which sets itself up as the over-all policy maker for free enterprise upon which our whole people depend.

The freedoms which are characteristics of delivered pricing are among those which were guaranteed by the Constitution, under which American business and the American standard of living developed, and flourished. Should those freedoms be destroyed, what will happen to the American standard of living, to the future of American business, to the republican form of government created under the American Constitution, and to the wage earners?

Although section 8 of article I of the Constitution enumerates powers specifically granted to the Congress, including the power "to regulate commerce * * * among the several States," the Federal Trade Commission has presumed to exercise that power. In so doing it has created confusion approaching chaos throughout American industry and it has adversely affected the welfare of the working people. That is an example of bureaucracy in action.

Labor's stake in industry should be beyond the power of any such subordinate Government bureau to interfere with it.

Thousands upon thousands of workers and their families are deeply concerned with actions of the Federal Trade Commission to outlaw and destroy delivered pricing, and to forbid a seller to make lower prices to some customers to meet in good faith the lower prices—or delivered cost—offered by a competitor.

Delivered pricing means the freedom of every man who has something to sell to take that something to any place that he chooses and there put a price upon it and offer it for sale, coupled with the freedom of every buyer to request delivered prices and to buy at the competitive prices, which include delivery at his (the buyer's) location.

That is delivered pricing, an expression of a basic freedom, an attribute of free enterprise. Any attempt to restrain such a basic freedom is a threat to a free society and an approach to despotism. Nevertheless, the Trade Commission has sought to compel industry to sell only at uniform f. o. b. plant prices. Moreover, it has seized the power to carry its intentions into effect.

If American industries are to give up the freedom to compete for business wherever a market is found and compelled to abandon delivered pricing, and to sell their products at uniform prices at the original shipping point or place of manufacture, so that those industries will be confined to selling only in the nearby areas where they have a freight-cost advantage, hundreds of thousands of workers will lose their jobs and become displaced persons who must leave their homes in rural communities and seek jobs in the already overcrowded great centers of population.

Many long-established business enterprises will be compelled to close down or to move from their present locations closer to sources of supply. Disruption in present overstrained production will be inevitable. All of this will have very bad effects upon the general cost of living and the level of living standards.

In reality, those who will be most irreparably hurt are the thousands of workers who have established, built, and put their savings into modest homes, in the small communities where they have brought up their children, established schools for their education and churches for their religious worship, and where the small-town merchants and, in fact, the whole life of these little communities depend upon the pay rolls of one or a few manufacturing plants or business enterprises long established there.

These small American towns will be made into ghost towns, and their inhabitants will be compelled to become displaced persons.

How serious is this situation? How real and immediate is the danger?

This is not intended as a complete survey of what will happen to industry and to workers as a result of the Federal Trade Commission's rulings and interpretations, and arbitrary definitions which go beyond the laws made by Congress. In this brief article we must be confined to a few examples.

Dr. Alfred C. Neal, vice president and director of research, Federal Reserve Bank of Boston, reported in Washington on December 10 upon a survey made in New England as to the effect of the Trade Commission's orders and the decisions of the courts thereon. The survey sought to ascertain the effects "of requiring a universal f. o. b. mill price system and * * * outlawing the practice of freight equalization." He said:

"Our best estimate," said Dr. Neal, "was that requiring uniform f. o. b. mill pricing would result in a loss of approximately 33,000 jobs in the region. This figure * * * takes into account only the direct short-term losses and does not take into account the loss involved in the secondary effects, which are concentrated on the transportation, service, trade, and professional lines."

Itemizing the effect on 10 specific industries, Dr. Neal reported that the direct loss of jobs was estimated as follows:

	Estimated job loss
Fabrication of iron and steel	8,800
Paper and allied products	6,350
Nonferrous metals and their products	6,000
Nonspecialized industrial machinery	3,800
Electrical machinery	3,000
Chemicals	1,800
Stone, clay, and glass	1,700
Food processing	1,650
Rubber and rubber products	450
Textiles	300
Total job loss (estimated)	33,850

New England is only one section of America. This is but an example of what will happen across the country.

H. W. Fraser, president of the Order of Railway Conductors, made a statement before the trade policies committee on December 7. In this statement he told of the plight of the Pennick and Ford Corn Products plant at Cedar Rapids, Iowa.

This plant, asserted Mr. Fraser, "is faced either with outright economic death or, at best, a difficult and perhaps hopeless struggle for survival." This would involve the closing of a plant that employs 3,500 workers, because it was estimated it would lose 90 percent of its present business to concerns having a freight-cost advantage in delivering to Eastern markets.

The bad situation of the western farmers who raise sugar beets and the evidence that, if beet sugar cannot compete in the East with the lower prices made there by cane sugar from Cuba, the beet farmers will have to turn to some other crop were also referred to.

Mr. Fraser said:

"I work in the railroad train service in Colorado. My family residence is there and I know the importance of the sugar-beet industry to the families on the land as well as to the workers in the sugar plants.

"It seems to me that, if we have to live with the idea set down in the Federal Trade Commission order, we will create our own uprooted- or displaced-persons problem.

"What of these workers, for instance, who have given their lives to the industries threatened by the order? They have made their homes, reared their families, or are doing so, in their various areas, and all of their family ties and friendships are there established.

"The workers in the railroad industry, as well as workers in other important established industries, should not be the victims of a highly experimental change which promises to produce confusion, dislocation, and economic upset that we can ill afford at this time, or at any time, if our national economic unity is to be served.

"I urge upon this committee the logic of recommending congressional action legalizing the continuance of absorption of freight charges by all producers in the same voluntary manner that this has been done throughout our industrial history."

Incidentally, the Interstate Commerce Commission, which administers railroad rates, unlike the Federal Trade Commission, encourages the equalization or absorption of cost advantages which one railroad may have over another by permitting competing railroads with the higher costs to lower their rates to meet the competition of roads having lower costs.

Telegrams were sent by the executive office of the Cement Workers International Union to 62 local cement unions in towns of 5,000 population or less. Replies from 60 of these unions showed a total of 15,674 employees in cement plants in these small towns. Dependent upon wages paid to these cement workers were 62,423 people.

Many of the replies revealed that additional workers and various small business in the community would be most adversely affected by a shut-down of the local cement plant.

It was estimated that of the total of 15,674 workers, only 1,406 would be able to get other jobs in or near their home communities. Most of the local unions reported in their replies that no other employment was available. Some stated that possibilities of getting other employment were nominal. Many pointed to the long years of seniority enjoyed by the union men and the skills developed which would be lost. Also mentioned were the adverse effects upon the local school districts, local churches, small local businesses. Many added that their towns were one-industry towns, that the men owned their own homes in these towns and that the whole community would be drastically affected.

The investigation clearly showed the danger of creating many ghost towns where cement plants are now located. Several unions representing workers in paper plants, though not solicited, also sent in telegrams telling of some 1,700 employees whose jobs were in jeopardy. Many similar towns throughout the country, dependent upon other industries, face the same fate.

Since then a large number of local unions of other industries, entirely separated from the cement workers, on their own initiative, have sent letters and telegrams to the cement workers' international office setting forth the difficulties they will experience if the rulings of the Federal Trade Commission remain permanently in effect.

Article VI of the Constitution of the United States declares:

"This Constitution and the laws of the United States which shall be made in pursuance thereof (by Congress) shall be the supreme law of the land" and "the judges shall be bound thereby."

Should this basic command be now discarded in favor of bureaucratic interpretations, regulations, and orders?

"The only way to enforce the law is the way prescribed by law," said William J. Gaynor. (Quoted in American Federationist, October 1948.) "That which cannot be done lawfully must not be done at all, by the police or any other public officials, from the President of the United States down. This is a Government of laws and not of men.

"We must be vigilant of every little approach to despotism, however little it may be. We must see to it that those whom we elect to office do not go outside of the laws, or set

themselves up above the laws, and do as they please.

"It has always been the case throughout the world that the officials who did this did it on the plea that the laws were not good enough; that they could do better than the laws prescribed.

"Beware of all such officials. We do not want officials who have any lust of power. We want officials who are very careful about exercising power. We want officials who are careful to exercise no power except that given to them by the people by their laws.

"There is no more dangerous man than an official who thinks he is better than the laws. The good man in office should be most careful not to set a bad example or precedent for his bad successor, who will come along sooner or later."

We are not interested in legalizing any so-called basing-point system of pricing or any other pricing system. Certainly, we are not interested in weakening the enforcement of the antitrust laws. We are interested only in stanchly defending the basic freedoms upon which the American Government and the American enterprise system and the well-being of our people depend.

If these rights are destroyed or invaded, then very soon some Government bureau will undertake to tell the wage earners of this country where they may and where they may not work—and for what wages. The freedom of self-government secured to labor through development of trade-unionism will thus be destroyed.

Since the workers in the mills and plants are an integral part of the industries involved, is it not incumbent upon our international unions to exert every reasonable and practical effort to bring about equitable relief from impending ill effects created by the acts and orders of any governmental commission or bureau?

Bold New Program

EXTENSION OF REMARKS

OF

HON. PAUL W. SHAFER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 12, 1949

Mr. SHAFER. Mr. Speaker, under permission to extend my remarks, I include an article by Henry Hazlitt which appeared in this week's issue of Newsweek. I commend it as "must" reading for those who vote for the ECA give-away program:

WHOSE BOLD NEW PROGRAM?

(By Henry Hazlitt)

In his inaugural address, President Truman announced what has now become the famous fourth point—"a bold new program" for "underdeveloped areas," a program to "foster capital investment in areas needing development," to "greatly increase the industrial activity in other nations," and to "raise substantially their standards of living."

No sooner was this announced than the brains of Washington bureaucrats began to bubble with grandiose schemes for giving away still more of the American taxpayer's money to foreign lands. Our Government representative put the idea before the Economic and Social Council of the United Nations, which adopted a resolution approving it. Now the ECA has set up a "colonial development division," and Deputy Administrator Bruce says that this new division is intended to carry out point 4.

Before we go farther with this idea it may be instructive to look into its origin. I do not know who sold the idea to Mr. Truman. But at least the record shows clearly where the idea came from in the first place. The following quotations are from a book published in 1944:

"America can underwrite a gigantic program of the industrialization of Africa, to be launched immediately. * * * It must initiate a general and steady rise in the standard of life of the African peoples. * * *

"Closely related socially, economically, and politically with Africa are the Near Eastern countries of Arabia, Iraq, Iran, Syria, Lebanon, Palestine, and Transjordan. * * * Here also a broad regional program of economic development is called for. * * *

"What is clearly demanded by the situation is that the United States take the lead in proposing a common program of economic development of the Latin-American countries. * * * For Latin America [such a program] opens the door for an immense leap ahead in progress. * * *

"For the United States especially it contributes a large part of the answer to that all-important question as to whether we shall be able to keep our national economy in operation. * * *

"The Government can do it, if free enterprise fails to meet the challenge and bogs down on the job.

"Our Government can create a series of giant industrial-development corporations, each in partnership with some other government or group of governments, and set them to work upon large-scale plans of railroad and highway building, agricultural and industrial development, and all-round modernization in all the devastated and undeveloped areas of the world. America has the skilled technicians capable of producing the plans for such projects, sufficient to get them under way, within a 6-month period of time after a decision is made. * * *

"On a world scale the combined projects could be self-liquidating in the period of a generation. They would become the best investments the American capitalist class had ever made in its whole history."

The book in which this proposal appeared 5 years ago was Tehran: Our Path in War and Peace (International Publishers). And the name of the author was Earl Browder, then still officially head of the American branch of the Communist Party (temporarily calling itself the Communist Political Association).

We need not point out here everything that is wrong with this proposal on political and economic grounds. We need not point out, for example, that every million dollars of capital we send abroad sets back our own capital development by just that much. And this at a time when President Truman himself insists that at least $50,000,000,000 should be invested by industry to improve and expand our [own] productive facilities over the next few years, and when he complains that our own steel, oil, and electrical industries are not being expanded fast enough to suit him.

It is enough to point out for the moment that the idea for the bold new program comes straight out of the book of the then head of the Communist Party in this country.

The Montauk Club

EXTENSION OF REMARKS

OF

HON. EUGENE J. KEOGH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 13, 1949

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by Mr. Edward T. Carvin, president of the Montauk Club of Brooklyn, N. Y., on the occasion of the club's diamond jubilee dinner. It is so seldom that an organization of its kind with a rich background and history celebrates its sixtieth anniversary that I thought it would be appropriate to insert in the RECORD the very interesting and somewhat nostalgic remarks by the club's very capable president.

Gentlemen, fellow members—you know we are all members here tonight to celebrate the sixtieth anniversary of this grand, glorious, and beloved old Montauk Club. It is my fond hope that it will have many, many anniversaries.

The dinner committee has asked me to comment on the early history of the club—that is from 1889 to 1931. On December 14, 1889, formal ceremonies were held at the laying of the cornerstone of the new Montauk Club, and the first function in the new clubhouse was 14 months later, February 21, 1891. During those 14 months, the club had its headquarters at 34 Eighth Avenue. The first president of the Montauk Club was Charles A. Moore and he served from 1889 to 1901. We owe a great debt to Mr. Moore, and his associates, and I salute them tonight. By the way, Mr. Moore was associated with Manning, Maxwell & Moore, a great railway supply house, and they established another institution—they gave Diamond Jim Brady a job as salesman. Diamond Jim afterward sold steel railroad cars, made a lot of money, became quite a prominent figure—acquired quite a fondness for diamonds, food, and Lillian Russell. Jim seemed to run second as a suitor of the beautiful Lillian. During Mr. Moore's regime, the first of the famous birthday dinners to Hon. Chauncey M. Depew was held in the club, April 23, 1892. As you know, Mr. Depew was United States Senator, president of the New York Central Railroad, and, if I remember correctly, one time Ambassador to the Court of St. James. He was also considered the best after-dinner speaker of his time. Those Depew dinners were wonderful and most lavish affairs, and they brought much fame to the Montauk Club, both here and abroad. The last one was held on Senator Depew's ninety-second birthday.

On December 15, 1894, the famous "Arctic dinner" was held, guests including Gen. Adolphus W. Greely, United States Army, commanding the Greely expedition of 1882, 1883, and 1884. Chief Engineer George W. Melville, Chief of Bureau of Steam Engineering, and engineer of the lost *Jeannette*, and of the Greely expedition of 1884, Chief Justice Charles P. Daly, of New York, president of the American Geographical Society, and many leading figures of the Peary expeditions.

Other outstanding events during the time of Mr. Moore were the dinner to Hon. William J. Gaynor, at one time mayor of New York, a member of the club, who lived right across the street, where you will still see the old lamps that marked the residence of the mayor of New York in those days; in 1895 the dinner for famous editors, the guests including Charles A. Dana, of the New York Sun; St. Clair McKelway, a famous editor of the Brooklyn Eagle; United States Senator Hawley, of the Hartford Courant; that noted Congressman, Nelson A. Dingley, author of the famous Dingley tariff bill, editor of the Lewiston Maine Journal; George Cary Eggleston, of the New York World; Charles R. Miller, of the Times; Isaac H. Bromley, of the New York Tribune; and that wonderful old fellow, "Marse Henry" Watterson, of the Louisville Courier-Journal.

When the statue of General Grant was unveiled on Bedford Avenue, Brooklyn, President Grover Cleveland was the Montauk Club's guest of honor.

On May 30, 1895, a formal reception was given to Gov. William McKinley, of Ohio, who the following year was elected President of these United States. McKinley made one of his notable speeches, supporting protective tariff, at this very dinner.

On Saturday, November 28, 1896, a dinner was given in honor of Lt. Gov.-Elect Timothy L. Woodruff, a strong member of the Montauk Club.

On March 13, 1897, a dinner to the justices of the appellate division. In addition to the justices, some of the distinguished guests were: Hon. Joseph F. Barnard, Hon. William J. Osborne, Hon. Augustus Van Wyck, Hon. William J. Gaynor, Hon. Jackson O. Dyckman, Hon. Joseph Aspinall, and Hon. Martin J. Keogh.

The tenth anniversary of the club, a half century ago, a dinner was given in honor of the president, Charles A. Moore, and Mr. Moore certainly deserved the honor. This dinner was held March 11, 1899. Also, in 1899, January 20, a dinner was given in honor of Rear Admiral Sampson, the guests, including the Secretary of the Navy, other naval dignitaries, and the commanders of the various ships which participated in the Battle of Santiago in the Spanish War.

The second president of the Montauk Club was Thomas H. Troy, a distinguished lawyer of his day, who lived right across the street on Eighth Avenue. Mr. Troy served from 1901 to 1904, and was succeeded by the colorful Timothy L. Woodruff. Mr. Woodruff was president of the club from 1904 until 1908. There is a legend, and they say it is true, that Timothy Woodruff just missed being president of the United States. In 1896, the Republican "boss" Mark Hanna of Ohio, was looking for a strong Eastern man as running mate for his presidential candidate William McKinley, and the idea was to get a man for vice president who could carry the important New York State for the ticket. The Eastern leaders suggested Tim Woodruff. Mr. Hanna said: "Isn't he the fellow who wears those loud vests?" And someone replied, "Yes, Tim does have a penchant for wearing very fancy vests." Hanna said: "Who else have you?" And they suggested Theodore Roosevelt. You know the rest of the story: McKinley was shot by an assassin in Buffalo, and Teddy Roosevelt became President of these United States. So, when the folks walked down those stairs out there and looked up at the portrait of Tim Woodruff that you will see there on the landing, the standard remark was, "there is the man who would have been president of the United States except for the vests he wore." You will note he had on a fancy vest when the portrait was made. You know about two weeks ago a writer and photographer from the Brooklyn Eagle came up here for material. After taking a shot of the directors, who were in session, they asked me to pose, looking up at the portrait of Mr. Woodruff. The photographer took a second shot, and said, "look up admiringly at Mr. Woodruff." I did the best I could but they called up in a couple of days and said the pictures were no good. I was sorry about that, as I might have had the unique distinction of being the only man actually caught looking up to a Republican since November 2.

The fourth president of the Montauk Club, and the last of the old-time era was Mr. William H. English, elected in 1908 and serving 23 years until 1931. Mr. English was a very wealthy man, head of a big printing company, a large real estate operator, particularly in the Garden City development. Mr. English loved the big dinners to Chauncey Depew and other such receptions. He entertained lavishly, spent a lot of money, and helped this club considerably. I remember a big dance we had at the Plaza Hotel in New York, and Mr. English and another member made up the deficit for the big show that was put on, which included Gertrude Lawrence and other stars. Mr. English once gave a lavish dinner in honor of some notable, and the dinner cost $4,400 for sixteen people. The table, a glass one with depth and flowers growing and blooming, birds flying around in the table, just an artistic thing that one could not forget. He had an opera star singing at this dinner. In fact, he brought over at various times many of the great Metropolitan stars, Madame Alda, wife of the great impresario, Gatti-Cazaza, Anna Case, Frieda Hempel, and I believe Mary Garden. These stars received from $1,000 to $1,500 each for appearance at this club.

Now, my good fellows, you cannot give those dinners for $4,400 today—what with inflated prices, high labor costs, confiscatory taxes, and what have you—and that places the present president of this club at a terrific disadvantage. Further, I do not think that I should attempt to eclipse Mr. English's course record for 16 people. Further if I did induce an opera prima donna to come over here and sing for a paltry thousand dollars, the opera-singers union would probably throw a picket line right around this building. So, I'll not take a chance.

Back in the early part of 1920, when it was not sure who would be the Republican presidential nominee, several of those most prominently mentioned were brought over here for dinner—Senators Warren Harding, Joe Poindexter, Hiram Johnson, and Governor Frank Lowden of Illinois. Senator Harding, who was the successful candidate, and who became President, was brough up to the club that day on an old-time fire wagon, that had been paraded that day by the famous shipbuilder William Todd. Todd brought his old-time company from Wilmington, and as I came from Wilmington, I well remember the fire company to which Todd belonged, the volunteer Reliance No. 2 Company of Wilmington.

Yes; Mr. English did wonderful things, and the members held him in great esteem. One of his memorable dinners was given to Bishop Thomas Molloy on his elevation to the head of the Brooklyn Diocese, the largest Catholic diocese, I believe, in the world. The bishop is a member of this club.

Mr. English retired in 1931 and the next president of the club was Mr. Frank C. Russell, former president of the Coffee Exchange. Our next speaker, Federal Judge Harold M. Kennedy will cover Mr. Russell's regime, but I would like to say that Mr. Russell came in during the darkest years of the club's history, and we owe the club's survival to his unswerving optimism and determination that the old Montauk Club should live.

While I have been talking only of the earlier history of the club, I would like to relate one recent incident. On the occasion of the Sunday schools anniversary day Judge Lockwood held a luncheon at the club, and the principal speaker was General Eisenhower. Other distinguished guests were Mayor O'Dwyer and former Ambassador Gerard. I had the pleasure of a little chat with General Eisenhower, and after praising the club he told me that he had read of the famous Depew birthday dinners that were held at this club over a period of many years.

Several Presidents' wives have been guests of the club, especially at the luncheons on Sunday schools anniversary days. Mrs. Hoover at one, Mrs. Franklin D. Roosevelt at another, and more.

I would like to ask a few of our distinguished old-time members—men who have been members of this club about 40 years or more—to take a bow as I name them: Here is one—member of the Port Authority, distinguished by President Wilson and President Roosevelt, and one of the best known shipping men in the world—Eugene F. Moran.

Another Brooklynite who went far in the business world, vice president of the great Bethlehem Steel Corp., associate of that master steel tycoon, Charles Schwab—who was also a member of this club, a great lover of sports and all-round popular fellow—James H. Ward.

Here is a man who has been famous in the history of our country, an outstanding lawyer, Congressman, chairman of the all-important Appropriations Committee under the Wilson administration when war was first declared on Germany—a notable judge and parliamentarian—Hon. John J. Fitzgerald.

Also, former judge of the Supreme Court of New York, and now official referee, Peter P. Smith.

In conclusion I would like to praise the vice president of the Montauk Club, Benjamin W. Blakey, perhaps the leading citizen of Brooklyn, and, if you ask me, the number one member of the Montauk Club. Mr. Blakey has done more for the Montauk Club than anyone I know, but has always declined the presidency of the club.

Yours truly will do everything in my power that this grand old Montauk Club, famous for its high traditions, shall live to celebrate many more happy anniversaries. Thank you.

Address by Count Carlo Sforza

EXTENSION OF REMARKS
OF

HON. L. GARY CLEMENTE

OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 13, 1949

Mr. CLEMENTE. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following speech made by Count Carlo Sforza, Foreign Minister of Italy, on April 11, 1949, before the United Nations Assembly:

Mr. Chairman, gentlemen, you have agreed to my coming here to state before you the views of the Government of the Italian Republic on the final disposal of those African territories which for many years, before the advent of fascism, were under Italian control.

The best way for me to show you my appreciation is to be as clear and as short as possible.

And, indeed, it would be difficult for the Foreign Minister of Italy to do otherwise. You have been most courteous, and I am grateful to you, but I cannot forget that here I am only as a guest and that the rights of a guest are limited.

While the clauses of the peace treaty were often unduly hard on a nation which has sacrificed so many lives in the war of liberation against nazism and fascism, there was one provision, one only, which offered a prospect of hope and dignity: The promise to receive Italy as an equal among you for the great task that is entrusted to the United Nations. This did not happen. Most of you regret it; knowing it, I stand today in your presence most confidently; that is why I am sure that you are impartially resolved to do justice to Italy once you come to feel that justice is on Italy's side.

If I may venture to say so, the problem today is not to punish a nation like Italy, which in spite of enormous difficulties, both political and economical, has regained its place and has been received as an ally by some of the greatest nations of the world. It would be more true to say that the problem which confronts us today is among the most complex in contemporary history: It is

the problem of the reawakening of the peoples of Asia and Africa. It is against this background, I believe, that your Assembly, which truly represents all the peoples of the earth and in a certain sense embodies the ideals which we all share, will wish to examine the question which concerns us today. We Italians have been oppressed for centuries and we arose again in the name of democracy and the principle of nationality. Our national heroes were Mazzini and Garibaldi, who appeared wherever there was a struggle for the victory of the new ideals.

It looked as if, under fascism and nazism, the tides would turn and, at a dark moment, the successful dictatorships would prevent forever the achievement of these ideals.

That is why the present leaders of the Italian Republic felt, from the very beginning of the Fascist regime, that the stubborn struggle which they undertook against it was one which concerned all nations. That is why Winston Churchill recognized that one man and one man alone was the cause of this grievous deviation. And although the Italian Republic bears no responsibility for a regime which its leaders have always fought, we feel today an even greater interest in hastening and realizing the independence of the populations of Africa. But if this action is to be a real one and not purely verbal, that help which it is our duty to grant them must be mainly economical and technical. I was very happy when I learned from Mr. Bevin, during a visit which I paid him in London in 1947, that England, with its large experience, was studying a series of detailed plans for the economic development of Africa. The United States of America also shows a growing interest in this essential problem. Indeed, the more far-seeing minds in this country begin to feel that Africa is a neighbor and a neighbor which must be treated as such.

The United States of America has already indicated in point IV of President Truman's inaugural address, its readiness to give its powerful and generous contribution to this great common task. But we must not forget that this far-reaching plan could never be executed if human skill, labor, and experience were not equally available. And this Italy is capable and fully willing to contribute.

To deny Italy her share in this task would be not only, in our opinion, unjust to her; it would do great and irretrievable harm to the common cause, and first and foremost to the interests of Africa itself and of its peoples. The Italians—being a country of peasants and artisans devoid of any racial prejudice—are most apt to bring to Africa their ancient qualities and crafts.

It would sound like a paradox if, while such vast efforts are being planned for the development of Africa, some of its territories were left to decay.

As far as we are concerned, we are ready to contribute all our efforts to the technical improvement and economic development of Africa. We are also ready to prepare for independence, within the shortest possible time, those territories which might be entrusted to us. That this is no empty promise is shown not only by the fact that the Italian Republic takes this solemn pledge before you, but also because we always thought so; the man who speaks to you today was among those who in 1920, being as now Minister of Foreign Affairs, decided the creation of the Libyan Parliament, a revolutionary act for that time, an act that shows where the real Italian tradition lies.

But let us examine separately the various territorial problems which are submitted to your consideration. Your task is made easier through the fact that the British Military Administration in Tripolitania, Eritrea, and Somaliland, as well as the French administration in a western area, has been conducted in such a way as not to prejudice your final decision. This is a fact I am ready and even glad to acknowledge.

Somaliland: As far as this region is concerned, we note that a large measure of agreement seems to exist concerning an Italian trusteeship over it. We are ready to assume this responsibility and to fulfill all duties connected with it in accordance with the principles laid down in the Charter of the United Nations. I may add, in this connection, that a small body of administrators and technical advisers have already received a full training to enable them to discharge their new duties. The first and foremost among them is to do promptly our best for the political, economical, and social progress of the populations.

Libya: On April 4 I said in my address at the signing of the Atlantic Pact: "No nation in the world can feel secure in its prosperity and peace if all its neighbors are not as safely marching toward the same goals of prosperity and security."

Now that even oceans are on the way of becoming small lakes, nowhere intimate solidarity among neighbors is a more evident necessity than in the Mediterranean. We Italians feel this so deeply that we have greeted with joy the rise of the new independent states of the Middle East. We know that their progressive development does not only revive ancient Mediterranean civilizations, but also enriches and strengthens the economic possibilities of Italy. Libya itself, in our opinion, must become one of the pivots of our friendly cooperation with the Arab peoples. That is why—if we are entrusted with the administration of Tripolitania—as I am confident we shall be, our loyalty to the duties imposed on us by the United Nations will be acknowledged to her in full accordance with the most obvious interests of our national future.

It has been objected from certain quarters that Italy would do well not to take upon herself the financial burdens which the administration of the territories would entail. May I recall, however, that Italy has for many years made in Libya conspicuous investments and that considerable numbers of Italians have worked and devoted their lives to the economic development of the country; it is on account of this, it is because of the assurance of common advantage both to the Arab and Italian communities, that Italy feels it her duty not to escape an arduous task since Italy is well aware that peace, prosperity, and fruitful development will be ensured to the territories entrusted to her care.

It is not an Italian, it is Mr. Foster Dulles, who has pointed out—I quote—that "the Italian nation has a surplus of population, of peoples who have demonstrated, in many parts of the world, their great capacity to develop vast places into productivity and we believe that the material welfare of the Italian people and of the inhabitants of Africa can be advanced by cooperation under sound administration."

Nobody can deny that Mr. Dulles' words are truth itself.

The Italian Government is of opinion that the Libyan problem should be solved at the same time in all its parts. It would be unfair to take final decision for one part of Libya, while postponing the same decision for another part.

The assertion has been made that Italy's return in Tripolitania as a trustee power might cause disturbances and even outbursts of violence. What is the basis for such an affirmation? Let us state some facts. Our settlers have always freely mixed with the local population in the towns as well as in the distant fields bordering the desert, and even now, notwithstanding the events of these last tormented years, a great many of them carry on constantly and in harmony with the Libyans their beneficial work.

There is more: Allow me to call your attention to the following facts:

1. At two different times, there were in Tripoli serious riots; in November 1945 and in February 1948. If anti-Italian feelings really existed among the Arab masses, there would have been riots directed also against Italians. In 1945, more than 100 Jews were killed and many more were wounded. In comparison with so many Jewish deaths only 1 Italian was accidentally killed and 3 wounded. The same proportions were recorded in the new uprising of 1948.

Is this evidence of hatred towards the Italians?

The masses do not reason politically; they follow uncontrolled instincts which reveal their profound tendencies.

2. Waiving aside these sad episodes, fortunately rare in the recent life of Libya, the most significant evidence of the popular Arab feeling toward us was offered last January on the occasion of the administrative elections in the city of Tripoli, the real and only political center of the territory.

On January 18, 1949, in the first free elections held in the territory under British administration, a substantial majority went to friends and sympathizers of Italy. The same has happened outside Tripoli, notably in Tarhuna.

The alleged hatred toward my country failed to materialize when frenzied crowds committed the worst acts of violence. It failed to materialize when in the secret of the ballots—assured by a democratic administration—the population said its final word.

Since it is my strong desire that a happy and serene atmosphere may prevail in the Mediterranean, and that Great Britain and Italy cooperate also on the North African coasts, allow me to quote a passage from a recent editorial published in the London Times. I quote: "Tripolitania is a desert country which needs, more than anything else, the restoration of her barren soil. It was this task which Italy had undertaken before the war with immense energy and skill and which she is now prepared to continue with all the patient labor of a peasant people. Her achievements in this work of reclamation compare with the best that has been done by the British in Africa or by the Jews in Palestine. Even now there is little or no hostility among the Arabs to the 40,000 Italians who remain there, most of them simple peasants whose way of life hardly differs from that of the Arabs themselves." So wrote the Times, creating a deep impression in England. I do not know who is the author of this article; but I want to thank him from this supreme world forum in the name of the many millions of Italians who since Mazzini's times have cherished the ideal of Anglo-Italian friendship.

ERITREA

It would certainly not be a solution to place Eritrea, that never belonged to Ethiopia, under its control. For very many reasons deep is my respect for Ethiopia, and of it I have given public proof. That is why I almost hesitate to quote again the editorial of the London Times I referred to above.

According to this article the annexation of Eritrea to Ethiopia seems—I quote—"based on exaggerated views of Ethiopian capabilities. It was illogical that a nation itself so much in need of help and education should be given control over a country of many religions and races (some of them more advanced than the Ethiopians themselves) and containing a highly civilized 'European' town like Asmara."

For my part I want only to add that the complexities of the problem seem to have been overlooked and should be reconsidered.

Of course, we want Ethiopia not only to feel secure but also to contribute her full share in the development of Africa.

She should be given an outlet to the sea, the only natural one being, for ethnical and economic reasons, Assab. On the other hand we feel confident that this committee will

acknowledge the impossibility of annexing Eritrea to Ethiopia as this would jeopardize the great advantages which in many decades of toil the Italian community has extended to the whole territory. We firmly believe that, whatever juridical guarantees might be devised to safeguard the status of the Italians in Eritrea, the inevitable decay which would follow in the steps of annexation on the part of Ethiopia would force them to leave the country.

Those who foresee the whole inevitable decay of Eritrean economy show more solicitude for the real interest of Ethiopia than those who do not hesitate to impose on her today charges beyond her actual possibilities.

It is therefore in the interest not only of Eritrea but also of Ethiopia and neighboring territories that we have requested to administer Eritrea under United Nations trusteeship and guide her toward self-government and independence.

We have always shown our readiness, however, that such a solution should take into account the interests of other powers and of Ethiopia itself. We have in this connection urged many times direct talks with Ethiopia and other countries interested in that area.

I refuse to believe that, even in the face of conflicting interests as well as of ethnical and religious differences, a fair compromise cannot be reached. A formula may be difficult to find; yet this is what diplomacy is for, and it would be indeed a strange and disheartening spectacle if we had to confess our inability to solve the problem.

I have now ended my statement; but I would like to add a few observations which apply both to Eritrea and Libya.

It seems to me that one of the main duties of the United Nations, which still remains the strongest hope for all mankind, is to avoid even the semblance of the principle of annexations or partitions based on conceptions of military security which the United Nations should guarantee in a different way. Suspicion and mistrust would arise if and when it might be contended—even falsely—that the United Nations consented to transplant to Africa certain old conceptions based on the balance of power and military requirements of which we Europeans have been the victims for centuries. On the contrary—and the present occasion is perhaps unique—we should reaffirm the principle of collective security and of the loyal cooperation of all the neighboring civilized nations for the development and welfare of Africa.

Gentlemen, the decision you are going to take is juridically independent of any treaty. But the practical reality is different; you are going to give your judgment, at least partly on the basis of the report of a Commission which was appointed by the four victorious powers in a moment when the passions aroused by war were far from being subdued.

I could give you a long list of the errors and contradictions which are to be found in the report of that Commission; still, I would rather remind you that the report itself opens at the first chapter by acknowledging—I quote—"that it had been impossible to verify the accuracy of all the information supplied."

But since moral voids mean more, to me, than statistical errors I will restrict myself to point out one lacuna which is to be found both in the report and in the more recent debates on the subject. Eritrea and Tripolitania have been transformed, not by a handful of recent immigrants, but in most cases by two or three successive generations of men and women who, of course, love Italy but are perhaps even more attached to the land they have made fertile, to the cities and villages they have built. These men are no more simply Italians, they are also Afrikanders, like their fellow-farmers and industrialists of South Africa. To chase them out of Africa after a toil of generations would result in an act of racial discrimination. I know very well that none of you would will it; it would just happen as a consequence of dealing with the whole question in diplomatic and not in human terms. But the fact would remain, and like all things unjust it would bear in due time its unhealthy fruits.

The first result would be this: half the world would believe that the most authoritative of all existing organizations working for peace, would have discussed, I will not say decided upon, a number of punitive measures, and these directed against the first nation which unanimously revolted against the dictator who had led her into an unjust war.

Remember that the peace of the world may still be in danger—in danger in the world of Jesus and in the world of Allah. Remember that one of the most difficult things to achieve, after a long and cruel war, is to think with a new mind and without old passions. Remember the best way to give force to a pact is to create the impression that we are inspired by generosity and justice.

Spence Bill Means Planned Economy

EXTENSION OF REMARKS
OF
HON. PAUL W. SHAFER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 12, 1949

Mr. SHAFER. Mr. Speaker, the so-called Spence bill, H. R. 2756, has been well analyzed in an excellent article by Felix Morley in the current issue of Nation's Business. Under permission to extend my remarks I include this editorial so that it will be available for all Members of Congress to read. The article follows:

THE STATE OF THE NATION
(By Felix Morley)

The so-called Economic Stability Act of 1949 is at present only a bill resting in the Committee on Banking and Currency of the House of Representatives. Nevertheless, close examination of this truly extraordinary legislation is in no way premature. The political philosophy that it represents should be understood before the measure comes to a vote. Afterward, if the bill should be enacted into law, would be too late.

The code number of this economic stability measure is H. R. 2756. It was introduced, on February 15, by Representative BRENT SPENCE, of the Fifth Kentucky District, a veteran legislator now serving his tenth term in Congress and, by virtue of seniority, chairman of the committee which has his bill in charge.

Actual authorship of the Spence bill, however, is attributed to a small White House coterie, headed by Secretary of Agriculture Brannan, in which spokesmen for the CIO and the leftist Farmers' Union are dominant. The proposed legislation certainly bears on its face the stamp of having been drafted by special interests. For in establishing a planned economy it would bear down on business, at least in the first instance, far more heavily than on either agriculture or labor.

Although it is to be given an inside track on the legislative calendar of the Eighty-first Congress, the Spence bill is not regarded as an essential part of the Truman program. Paradoxically, this makes the measure the more significant. It is in the nature of a trial balloon, which can be withdrawn without prejudice to the President if the public reaction is adverse; but which could alternatively be pushed through to passage if the opposition exhausts itself on more obviously controversial issues, like repeal of the Taft-Hartley Act and civil-rights legislation.

The Spence bill, in other words, is in the nature of a surreptitious but determined flank attack on the defenses of free enterprise. Precisely because unheralded and surprising, it recalls the adage that "eternal vigilance is the price of liberty."

In one respect the Spence bill was foreshadowed. President Truman served notice, in the election campaign and in his message at the opening of Congress, that he wants restoration of "stand-by" price controls. H. R. 2756 provides these controls, and indeed would automatically reenact many of the provisions of the Emergency Price Control Act of 1942. But the proposed legislation goes much further than price-fixing and indeed says frankly that:

"It is the purpose of this act to utilize the powers and resources of the Federal Government to assist in overcoming certain adverse conditions resulting in part from World War II."

The nature of these adverse conditions is never clearly defined, but there is no uncertainty about the remedy proposed for the undiagnosed disease. That remedy is a grandiose program of governmental planning in many respects strikingly similar to the great Stalin 5-year plan, authorized by the Supreme Soviet of the U. S. S. R. on March 18, 1946. Even in Russia an enabling act had to be adopted before centralized planning could really take over. The Spence bill is clearly that sort of preparatory legislation.

In his speech inaugurating the current Russian plan, Premier Stalin said that "special attention will be devoted to extending the production of consumer goods [and] to raising the living standard of the working people by steadily lowering the prices of all goods." Section 101 (c) of our proposed Economic Stability Act says similarly that it will "encourage maximum production and supply [and] discourage and prevent price movements which inflict serious hardships or impede economic stability."

Not merely the stated objective, but also the actual phraseology of the Spence bill gives more than a little evidence of having been modeled from the Soviet prototype. Both the Russian and the American legislation emphasize that—in each case—national security will be promoted, and the similarity does not stop there.

The Soviet law establishing the current 5-year plan places its administration in the hands of Stalin, for which reason it is known in Russia as the great Stalin 5-year plan. But the Soviet law authorizes Stalin to delegate authority for the administration of the undertaking to all or any of a council of 52 ministers. These are often highly specialized; thus there is a special Minister of the Agricultural Machine-Building Industry and another Minister of Electric Power Stations.

The Spence bill paves the way for the establishment of such ministries here. It provides (sec. 104, a) that:

"The administration of this act is vested in the President, who may delegate any and all authority hereunder to such department, agencies, or officials of the Government as he may deem appropriate."

Noteworthy is the fact that throughout this bill the word "Government" is used where "administration" is meant. Government, to the authors of the Spence bill, means the executive branch of Government and that branch only. Time was when the Government, in this country, meant collectively the Executive, the legislative, and the judiciary, with no one arm dominating the other two. Now Government is coming to mean the White House alone—as in Russia it means the Kremlin.

The powers which this legislation would place in the President are truly extraordinary—by traditional American standards. Under section 205 the Government would be empowered to construct new plant facilities, or expand or rehabilitate existing plant facilities whenever deemed desirable in the judgment of the President. And then comes a clause broader than the proverbial barn door:

"For the purposes of this section, the President is authorized to acquire real property and any right, title, or interest therein by purchase, lease, or otherwise, as he deems necessary."

It is a general principle that the more drastic the law, the more drastic must be the penalties by which it may be enforced. The Spence bill conforms to that principle. It would empower the President (sec. 302e) to make inspection of the books, records, and other writings, premises or property of any person * * * as may be necessary or appropriate in his discretion. Fines of $10,000 or imprisonment for a year, or both, are provided in the case of contumacy by any person.

In spots the Spence bill is cleverly—perhaps too cleverly—drafted. It seeks to exempt farmers from the proposed price controls. It further says (sec. 406, c) that "an increase in wages * * * may not be considered as an increase in cost of production * * * until 6 months after the effective date of the wage increase." And the bill makes a great play of assisting small business at the expense of big corporations. But this attempt to ride herd on the sheep, with no coercion except for the goats, is not very impressive.

The objective of a completely managed economy, planned by appointed bureaucrats in the Russian manner, breaks through all attempts at concealment. And the provision that the act shall be entirely wound up by June 30, 1954, is not a particularly happy assurance. Another 5-year plan could easily follow the first one here, as has been the sequence in Russia.

Indeed this attempt to classify the Spence bill as emergency legislation gives the game away. It was drafted when insufficient production and rising prices could be used as an excuse for the regimentation proposed. Then the bill was introduced, recklessly it would seem, when heavy inventories and falling prices had come to the fore in the public mind.

This utter indifference to actual business conditions serves to emphasize the underlying objective of those who drafted the Spence bill. Clearly, this objective is to obtain legislative authorization for the establishment of a planned economy on the Russian model, wholly regardless of whether the economic arguments for such a dubious development will hold water.

Universal Military Training

EXTENSION OF REMARKS

OF

HON. CHARLES A. PLUMLEY

OF VERMONT

IN THE HOUSE OF REPRESENTATIVES

Friday, April 8, 1949

Mr. PLUMLEY. Mr. Speaker, I am much concerned with the matter of universal military training and the manner in which such an obviously necessary defense is being batted from pillar to post.

So sure as I live and breathe, after every anesthetic has been tried to obviate the pain of being a patriot, there will come a day when every able-bodied citizen of the United States will have been trained also as a soldier.

I do not forget that "the liberties of Rome were safe while military information was generally diffused and every Roman citizen considered and felt himself a soldier." So, while temporarily supporting what looks like immediate necessities, I am for a program of universal military training, and go on record to that effect:

UNIVERSAL MILITARY TRAINING

Three hundred and twenty-nine years ago a small group of people, some of them your ancestors, landed on the shores of this continent in the search for freedom from tyranny, oppression, and fear. They were a tired and weary group who had braved the unknown dangers of a long sea voyage fraught with peril, storm, and pestilence in the hope that in this land there would be a life worth living, a land yet unknown, but full of promise and hope that here man could raise his eyes to the skies and see his God in his own image and breathe into his lungs the freedom that man has, since time began, dreamed of. The landing here was not the end of the quest, but only the beginning. Through many years of hard work, sacrifice, starvation, death, and new life these people opened up a new world for others who followed, others who were seeking the same goal. Tyranny and oppression followed but did not stay in this bright, new land. Soon this way of life began to become apparent to all and suddenly a new Nation was born, a Nation of free people who understood the meaning of freedom and opportunity and individuality—and the sanctity of man.

Today that nation has almost reached greatness. It did not acquire this quality easily. Wars were fought, people died, man sacrificed again and again in order that his children would be able to enjoy the fruits and privileges that are inherent in a democratic world. The principles of freedom and democracy have been challenged over and over again, twice within our own lifetime. We, who today are responsible for the continuance of those freedoms and democratic principles, have witnessed the two greatest wars in the history of mankind. Each conflict was increasingly more devastating than the one preceding, each more costly in life and material wealth than the one before.

Today, we are again engaged in a struggle against tyranny, oppression, and fear. The eyes of the world, the hopes of the countless millions, rest upon us, beseeching us to provide not a haven but a bulwark against the force of communism which threatens to overrun them. There are some in this country who claim that we should not supply such a bulwark, that it is a thankless task to lend a helping hand. It amazes me how short-sighted these people are. They apparently cannot see that the real basis of America's greatness are the ideals which she stands for and fights for. Our democracy is and must continue to be a dynamic one.

Fortunately, the opponents of constructive action while highly vocal are relatively few in number. Our Nation has been able to proceed positively in its efforts for peace. Your Representatives in Congress have had your backing in proposing and adopting economic, technical, and military measures which would make the United States a dynamic force for world peace. In dollar magnitude, our greatest efforts have been along military lines. And for this reason I would like to discuss these military measures with you today.

The United States is confronted with the decision of how strong it must be in order to defend itself against its announced aggressor. In reaching this decision, we are confronted with the problems of method of maintaining our strength, what weapons to use, what strategic concept to adopt, and what will it cost. My thinking on these problems has been guided by the adoption of a set of principles, or truisms. Let us consider a few of them:

First, whatever warfare we can foresee, it is quite impossible to foresee any kind in which the citizens of the United States quit without fighting back. Agreeing on this, then, it is utterly impossible to foresee any warfare in which every citizen will not need every possible advantage we can give him, and it is equally impossible to foresee any warfare in which the able-bodied young men will not be needed in military organizations capable of performing known military duties in known jobs as parts of known teams, under organized direction.

Second, the oceans no longer promise us 2 years after war breaks out in which to get ready to fight, because the complexity of modern war requires a degree of teamwork training which was never dreamed of until quite recently; because the air age and the electronic age and the atomic age and the threat of bacteriological warfare carries a need for well-trained citizen forces-in-being everywhere to grapple with the paralysis of utter horror and terrific destruction no matter what the grisly details are when they are finally visited upon us.

Third, that our forces must be capable of swift and sufficient retaliation upon a common aggressor to deter him from war or to retard his advance until our citizen forces can be brought to bear upon him.

Fourth, that these forces must be citizen forces for military service in the common defense is a recognized obligation of citizenship. If we should attempt to keep a standing army in order to avoid this obligation its costs could not but have a crippling effect on our economy.

Let me repeat these principles chiefly:

1. America will fight back in any future war.

2. We will no longer have 2 years to prepare for war.

3. We must have regular armed forces, an air force in particular, ready to strike back against any aggressor, but that

4. Our real strength lies in a trained citizenry and not in large standing forces.

The military program now under consideration by your Congress is a comprehensive one and conforms in all but one respect to the principles I have previously mentioned. As you know, the over-all budget allotted to the National Military Establishment is approximately $14,000,000,000, about a third of the total national budget for 1950. From this fourteen billions each of the three services has been allotted about four and one-half billions.

This allocation of funds will permit the Army to maintain a regular strength of about 677,000 men, a National Guard strength of 325,000 to 350,000—a Reserve Corps strength of 230,000 and an ROTC of 134,500.

The Regular Army strength will enable us to retain our occupation forces at about the same relative strength and the over-all establishment will be so organized as to give us 10 Regular Army divisions. The National Guard will remain organized on a 27-division basis and greater emphasis will be placed on all our civilian components.

The Regular Navy and Marine Corps will have a strength of 527,000 officers and men. There will also be 281,000 reservists, 14,632 ROTC, and 4,311 other officer candidates.

The active fleet will consist of 731 ships, of which 288 will be combat. Five hundred and forty-nine vessels will be kept in reserve. Greater emphasis also will be placed on antisubmarine activities.

In addition to ships, the Navy plans to maintain 7,650 naval planes active. About

40 percent of the naval appropriations, or about $2,000,000,000, are budgeted for aviation.

The Air Force gets the largest share of the funds, and with it will provide 412,000 Regular officers and men, and 9,200 active aircraft.

With these men and planes the Air Force has decided to organize only 48 air groups, but they will be fully manned and equipped groups. Twenty-seven National Guard air groups will be maintained, consisting of some 50,000 men and officers. Plans for about 67,000 air reservists have also been included.

In addition to these three separate programs, funds have been allotted for industrial mobilization, and research and development.

Since military and naval strengths are best seen in a comparative light, it might be interesting to combine and compare these figures. Our naval strength of 731 ships, 288 combat, is larger than the combined navies of the world.

Our air strength of 7,450 naval and 9,200 Air Force planes totals 16,650. This strength will compare favorably with any other nation of the world and, if combined, for example, with Great Britain's air strength, is probably sufficient to give us air superiority in any area of the world in which we can support our Air Force.

Our Army strength of 10 divisions does not approach the Army strength of several other nations.

However, after appraising this whole program, I am forced to repeat that one vital element is lacking. That element is a trained reserve of citizens. Our Air Force and our Army is a one-shot military force and will continue to be a one-shot force until a sound program for building up our Reserve is adopted. Even with a $14,000,000,000 military budget, we cannot hope for anything better unless and until we have a system of training our citizens. Such a system has been proposed in the form of universal military training.

Everyone is familiar with the heated arguments that are being made right now by our Air Force for additional funds, additional planes and additional men. These Air Force leaders recognize that their present force is insufficiently backed up to provide even air security. And unless UMT is adopted to provide a trained citizenry and a trained air reserve, the Air Force will always be forced to ask for more money, more planes, and more men. I am myself a strong advocate of air power, a strong proponent of better weapons and better planes, but both better planes and better weapons require more men and better-trained men.

As we try to look into the future of our national security we cannot but realize that this period of international tension may continue for a period years. And we cannot afford to weaken our armed forces during this period. Yet, if we attempt to maintain the necessary strength in our regular forces alone during such an extended period of time, we will be courting national economic distress. From a viewpoint of costs alone the program of UMT is a vital one.

Many of you may wonder if a repetition of these reasons for UMT isn't passe since there is a Selective Service Act currently in effect. Actually, I feel just the reverse to be true. The best time to discuss and pass on such a proposal is when the immediate heat is off when we can dispassionately consider the aims and goals of our military programs. And I feel that the aims and goals of this program are sound ones. And they continue to be sound until the day that real world peace has been secured.

However, the overriding argument for universal military training has always been that it is the best manifestation to the world, friend and foe alike, of the will of the American people to resist aggression. We are on the verge of entering into a North Atlantic Pact. Plans are being made for the provision of arms to many of the signatory nations. The arguments as to how much arms are to be delivered and how many countries are to join, are not half so expressive of the American determination to secure peace as would be the enactment of the UMT law. The best expression of the will of the American people to obtain and maintain world peace is participation of our youth in such a training program. All the communistic propaganda which infers that Americans are willing to give of their dollars but not of themselves would have a positive refutation by such an enactment. In this way we would all be particpating in, as well as insuring national security.

Arms and Taxes

EXTENSION OF REMARKS
OF
HON. CARL T. DURHAM
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 13, 1949

Mr. DURHAM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial:

ARMS AND TAXES

The problem of how much the Nation should spend on its armed services is one which is complicated by many factors, known and unknown, on a world-wide scale. It is not surprising therefore that Washington is of two minds concerning it.

Dr. Edwin G. Nourse, the administration's chief economic adviser, thinks the cost of rearming Europe should be squeezed out of our national military budget, otherwise we shall have to pay higher taxes with the discomforts and dangers incident thereto. Specifically Dr. Nourse thinks that we ought to make $15,000,000,000 cover our armed needs and Europe's too. He favors a tax set-up which can exist over a long period of cold war, if necessary, and which will "combine military preparedness with economic and financial preparedness, and last but not least, conditions of life that give the citizenry a deep conviction that theirs is a political, social and economic system that is worth defending."

The House Appropriations Committee, on the other hand, has aproved a national defense budget of $15,905,000,000 which is some $600,000,000 more than the President asked for about three months ago. It arrived at these figures by cutting the Army and Navy slightly and raising the Air Force appropriations considerably. And as we understand it, this recommended appropriation which approximates $16,000,000,000 does not cover arms to Europe.

Meantime the Soviet Union has been careful not to do anything drastic as retaliation against the signing of the Atlantic Pact.

The problem is so complicated that only those in highest authority with the most extraordinary facilities for surveying the world situation stand much chance of evaluating it properly. It seems to us that we should do what we can reasonably do toward rearming Europe without weakening ourselves, and furthermore that in our own National Military Establishment we should give priority to the air arm. Safety rather than taxes should, we think, be the determining factor, but we don't want to go broke in the process of playing it safe.

On the Two Hundred and Sixth Birthday of Thomas Jefferson

EXTENSION OF REMARKS
OF
HON. ADOLPH J. SABATH
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 13, 1949

Mr. SABATH. Mr. Speaker, Thomas Jefferson, the foremost interpreter of the Democratic ideal, was born two hundred and six years ago. The name of Jefferson is attached to memorials in the form of monuments, cities, roads, schools, educational institutions, and organizations of all kinds and characters.

I feel, however, that the political beliefs of Jefferson are even more enduring than all these memorials and monuments; they are as true, firm, and constant today as when first enunciated. He stood for the dignity of man, protection for all under the laws, and education for the masses. He believed in equal rights for all and special privilege for none. Jefferson's views on royalty are epitomized in the following: "There is not a crowned head in Europe whose talents or merits would entitle him to be elected vestryman by the people of America." He recognized that everyone is born with a desire for liberty and freedom, which desire only is obtainable when the government has the consent of the governed. His life was one of service to the community, State, and Nation. Like all great men he was simple in his tastes, honest in his appraisals, forthright in his declarations and courageous in his espousal of democratic principles.

This age of ours sorely needs the counsel and advice of a man such as Jefferson, the distinguished scholar, patriot, and statesman. Our many problems which cry out for solution need his kind of treatment, deft touch and deep thought. I believe that he would make great and profound contributions to the settlement of the many controversies which confront us and the world and am certain that they would be as enduring and lasting as have been his other accomplishments.

Like all great leaders, he was the object of attack from the Tories of his day. There were too many Americans who were more steadfast to the recently defeated enemy, England, than they were loyal to their own country. They besought him to declare war against Napoleon Bonaparte who was at that time engaged in large military operations in Europe, but he held his ground and refused to yield in his neutrality.

The gentlemen in this Congress serving the great sovereign States of Louisiana, Arkansas, Oklahoma, Kansas, Missouri, Nebraska, Iowa, the Dakotas, Montana, most of Minnesota, and portions of Colorado and Wyoming are here by virtue of his sagacity and foresight when, in 1803, he negotiated with Napoleon Bonaparte the Louisiana Purchase, comprising 828,000 square miles for $11,250,000 plus the cost of the French spoliation claims amounting to a total

final cost of about $27,250,000—about 4 cents an acre.

The America of his day needed a Jefferson who met the exigencies of the time. The huge part he played in the writing of the Declaration of Independence, his resourceful diplomatic efforts abroad in search of assistance to the cause of the Revolution and maintaining friendly relations with the French, his contributions to the Constitution of the United States—although he was in France at the moment of its consideration—the Bill of Rights, his stern opposition to the alien and sedition laws, and his remarkable works while Secretary of State were signposts and milestones in a distinguished career which was to be further heightened by two illustrious terms as President of a young and growing nation which needed, in positions of authority, high-minded men who possessed the great ability and determination which was his.

As a Democrat and a follower of Jeffersonian principles throughout my life's service, it is my fervent hope, on his two hundred and sixth natal day observance, that all those elected as Democrats and claiming loyalty to his principles—under their self-designated title—should actually follow his teachings. With his ideals in mind, our deliberations will be fortified by the judgment and spirit of one of the immortals, enabling us to make impartial decisions of benefit to mankind and our Nation.

Common Sense and the Interests of National Security Dictate West Coast Shipping and Shipyards Essential to National Best Interests

EXTENSION OF REMARKS
OF

HON. CLYDE DOYLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Saturday, April 9, 1949

Mr. DOYLE. Mr. Speaker, the other day when I was honored to call in person for conference with the President of the United States about the subject of the condition of the tragic lack of west coast shipbuilding, I was a member of a committee of Representatives from the three Pacific Coast States.

Upon hearing our preliminary statement of our case in support of the need and necessity of immediate commencement of ship repair and shipbuilding on the Pacific coast, the President immediately replied to us, in substance, as follows, and said to us that we did not need to make effort to sell him on our case for he already realized that just plain common sense and the best interests of our Nation in the field of national defense, both dictated that west coast shipbuilding and the important know-how of shipbuilding must be preserved.

And the President is well aware of the facts and is manifestly in a better position to know the relative value of shipbuilding on the Pacific coast and the retention out there of the know-how in connection therewith than I am or you are. Furthermore, he forthwith assigned to our help and cooperation Mr. John Steelman, of his official staff. All this is very encouraging and is also concrete evidence that definite progress is being made.

I take pleasure in directing your careful attention to the accompanying statement by John Green, president of Industrial Union of Marine and Shipbuilding Workers of America, CIO, for your information.

My home is the great world-famous port of Long Beach, Los Angeles County, Calif. It has earned the place of being the busiest hand-made port in the world. Long Beach and Los Angeles harbors are contiguous harbors, and together make a rapidly growing and vital harbor area; vital to both commercial and naval uses and needs.

The statement follows:

TESTIMONY OF THE INDUSTRIAL UNION OF MARINE AND SHIPBUILDING WORKERS OF AMERICA, CIO, WITH REGARD TO THE BUDGETARY NEEDS OF THE AMERICAN MERCHANT MARINE; AND WITH SPECIFIC ATTENTION TO SHIP CONSTRUCTION, SHIP REPAIR, AND THE USE OF NAVAL DRYDOCKS AT THE MARITIME COMMISSION'S RESERVE FLEET SITES

The problem of a presentation of the requirements of the United States Maritime Commission for the fiscal year ending June 1950 is not a new one to this union. We have testified many times, before many committees of the Congress of the United States, regarding the problems involved in keeping the American merchant marine alive.

The problems of the American merchant marine are much more than those of a small segment of American industry. Unfortunately, these problems embrace questions underlying our entire economy. We first have to decide if we want an American merchant marine; and—if we do so decide—whether we are willing to foster the development of such American merchant marine.

Unfortunately for the deliberations of this committee, we feel that the question of the merchant marine has been bandied around too long since the end of the Second World War. The question has now become an urgent one, and the consideration of the budget of the United States Maritime Commission (in the last analysis, the budget of the merchant marine) for the fiscal year ending June 30, 1950, will mean the difference between life and death to the ship-repair and ship-construction industries.

We have no desire to testify concerning the administrative expenses of the Maritime Commission. We know little about such expenses. We cannot testify, therefore, concerning the purely administrative budget of the Maritime Commission.

However, we do know something, and desire to testify, concerning the allocation of funds to the Maritime Commission for—

1. Ship construction in fiscal 1950.
2. Repair of the Reserve fleet.
3. Installation of Navy surplus floating drydocks at the Maritime Commission's Reserve fleet sites.

Before we go on to the above three specific points, however, we would like to give you a little background as to the necessity for a merchant marine in the American economy.

As early as 1943, the national convention of this union issued a little booklet called "After the War—A World of Plenty" which was a postwar planning program for the shipbuilding and ship-repair industries. In this booklet, we pointed out that the future of those industries was uncertain, to say the least, and that the future of these industries depended, in the last analysis, on a progressive American foreign policy; we pointed out that, if we again allowed these industries to sink into the slump they were in prior to the Second World War, we would lose investments of over $17,000,000,000 made during the war, and countless untold further investments for training and utilizing skills of workers.

Two years after the issuance of this postwar planning report this union prepared and published a booklet called The Nation That Invented the Steamship Must Now Use It, which was sent to all the Members of the Seventy-ninth Congress. In this booklet, we pointed out that our wartime fleet was designed for war and not for peace; that the vast majority of its ships were slow, uneconomical in their facilities for handling cargo, and wholly unbalanced for our needs in postwar trade; that America, in 10 years (if it did not balance its merchant-marine program) would be the only nation in the world with an old fleet, while all the other shipping countries would have fast, efficient, modern fleets; that turning the oceans over to foreign domination would mean iron curtains, not only for ideas, but for goods; that, if there were any further delay in America's shipbuilding program, the small corps of trained men we still had left in the industry would disappear.

We pointed out, in this program of ours, that world trade, which has been a major industry even larger than building or automotive sales, depends specifically upon our shipping; that we cannot count on foreign shippers and shipping to expand our world trade, particularly since "controlled" economies would use their ships as instruments of foreign policy, rather than as neutral carriers of our goods; that we required American ships to combat unfair trade practices of other flags (for example, look at the South African situation) and that we needed to keep up healthy competition in ocean-going trade.

We have no argument against the restrictive shipping policies of other nations without a merchant marine of our own.

We pointed out in this volume that no nation can operate a shipping or shipbuilding industry on a feast and famine basis, without an extreme waste of money and resources; that costs are increased by lack of continuous production in the yards; that investment is curtailed; that technological progress is blocked; and most important, that a steady pace of American shipbuilding would prevent us ever again from having to build up a merchant shipbuilding industry, in the event of another emergency, at the excessive cost of over $10,000,000,000.

We pointed out that the subsidies necessary to maintain a modern American merchant marine were infinitesimal for what they bought; that the Government recaptured the money on most of the operating subsidies; that the subsidies, at the very largest estimate that could be given, would amount to no more than one-third of 1 percent of United States world trade; and that, most important, these subsidies were not a tariff—they were not a concealed operation—they simply put American shipbuilders and operators on a par with the shipbuilders of other nations, where the standards of living were lower than ours.

The President of the United States has twice appointed committees to look into this problem of keeping the American merchant marine in operation. These committees have issued reports which, in the last analysis, have never disagreed with our claims. Innumerable bodies of unbiased representatives of American citizens, including the American Legion, chambers of commerce, the great majority of the American press—all are in favor of this program.

And yet we are now being forced to come before the Congress and to say to you that the American merchant marine and the American shipbuilding and ship repair industries are being put on a starvation diet; that the American shipbuilding and ship repair industry, to all intents and purposes, may practically go out of existence within this next year, except for a few isolated yards; that there will be one ship on the ways in 1951, if there are no further contracts let; that the ship-repair industry has lost over 20,000 men within this last month because of lay-offs due to lack of work, and that the shipbuilding industry has less employees than the minimum required for national defense purposes.

This union has no desire to keep appearing before the Congress like Cassandra, but we have no alternative.

I. THE BUDGET FOR SHIP CONSTRUCTION FOR FISCAL 1950

The Maritime Commission proposed a total of $299,000,000 for ship construction from June 1949 to June 1950. The Bureau of the Budget cut this request to $100,000,000, which is the amount which is presently before you for consideration. This is exactly the same as the budget for the present year—fiscal 1949.

The Bureau of the Budget suggested that the Maritime Commission give favorable consideration to the following projects out of the budget for fiscal 1950.

1. Construction of two passenger vessels for the Grace Line at a total cost of approximately $32,000,000.

2. Construction of two refrigerated fruit vessels of the yaque class for Standard Fruit & Steamship Co. for the New Orleans to Central American run at a total cost of $9,000,000.

3. Payment of the national defense features on 10 new tankers at a total cost of $23,000,000.

4. Construction of a flag liner for the Mississippi Steamship Co. for the Gulf-east coast of South America passenger trade at a total cost of approximately $14,000,000.

5. Construction of a cargo prototype at $5,000,000 and a naval auxiliary prototype at $10,000,000.

6. Allocation of approximately $7,000,000 for ship betterment, possibly on the Matson Lines *Monterey* if a buyer is secured, or possibly on passenger vessels for the Arnold Bernstein proposed service to Holland and Belgium.

The reduction of the requested appropriation by $199,000,000 meant that the following vessels would not be built, or even have their contracts let, in fiscal 1950:

1. Two vessels for Moore-McCormick for the North Atlantic-east coast of South America run at $31,500,000 each.

2. Two vessels for the Farrell Lines from the North Atlantic to South Africa at $11,000,000 apiece.

3. Three passenger vessels for the Agwilines for the New York to Cuba run at $13,000,000 each.

The current fiscal 1949 budget of $100,000,000 is expected to be allocated for the construction of the *New America* for the United States Lines on the North Atlantic route, for a number of national-defense tankers, and for the two Alexander Line experimental combination coastal passenger-freight vessels, as well as the authorizations already given on the American President Line vessels and on the American Export Line vessels. It is interesting to note that this proposal for fiscal 1950 certainly does not come anywhere near the proposal given by the President's Advisory Committee on the Merchant Marine, nor does it come anywhere near the proposal necessary, we believe, for national-defense purposes.

The vessels eliminated would be seven passenger vessels, or vessels which could be converted to passenger carriers in an emergency. The vessels built, exclusive of tankers (for which only the national-defense features would be paid) would be three passenger vessels, two refrigerated cargo vessels, and two prototypes.

In its report, in November of 1947, the President's Advisory Committee on the Merchant Marine stated the following program was required for construction of passenger-cargo vessels, alone, for fiscal 1948, 1949, and 1950:

Year and route of service	Number of ships	Approximate gross tons per vessel	Approximate passengers per vessel
FISCAL 1948			
New York to Mediterranean	3	21,000	675
Round the world	5	13,500	180
Total 1948	8		
FISCAL 1949			
New York to Channel ports	1	50,000	2,000
New York to east coast of South America	2	18–20,000	600
Gulf coast to east coast of South America	1	12,000	230
Seattle to Alaska	2	6,000	300
East coast of United States to South Africa	2	8,000	300
Pacific coastwise (Los Angeles to San Francisco)	2	18,000	350
Total 1949	10		
FISCAL 1950			
New York, Boston to London	4	10,000	160
New York to Baltic ports	2	13,000	150
West coast to Pacific	2	18–20,000	600
New York to Puerto Rico	2	7,500	350
Atlantic coastwise	3	18,000	350
Total 1950	13		

We are nowhere near, in the proposal for fiscal 1950, even one-third of the requirements set forth by the President's committee. This union estimates that for national defense purposes alone, in the event of another emergency situation, we would need to build, for the fiscal year 1948, 20 passenger vessels; fiscal 1949, 5 passenger vessels; fiscal 1950, 15 passenger vessels; and in fiscal 1951, finish the construction job and start replacement. The passenger vessels to be built, necessary for national defense, should have a cruising range well above that of any present vessel in operation. They should be able to be converted immediately to defense purposes.

We do not see how the United States can expect its defense situation to be in a state of readiness without construction, within the next few years, of 50 new passenger vessels.

Unless the shipbuilding industry obtains new orders, some of the yards will be without work, starting as early as 1950. This estimate was given by the president of the American Bureau of Shipping.

As you will see from our subsequent discussion of the ship-repair industry, we cannot think that just because we have over 2,000 ships tied up in the reserve fleet, that these vessels, if allowed to rot away as they have been doing, will be any help at all in time of emergency.

Even if the cargo vessels in the reserve fleet are placed in perfect condition, the Congress must not forget that these vessels are totally inadequate to meet any emergency. The great majority of our reserve fleet is incapable of speeds greater than from 7 to 10 knots per hour. At a time when even commercial tankers are being constructed with 27-knot speeds, how useful can a 7-knot vessel be in time of crisis?

Congress is faced with two courses of action. Both of which, if this Nation is to have an adequate merchant marine, must be taken simultaneously and immediately. First, the preservation and repair of the reserve fleet; secondly, the construction of an adequate, more modern, and efficient merchant marine, and the eventual scrapping, as they are replaced, of the obsolete vessels.

The steel industry is still complaining about the shortage of available scrap of good quality. If Congress were to allow an adequate ship-construction program, we would be able to scrap, in time, the 1,000 obsolete Liberty ships in the reserve fleet. Peculiarly enough, no other government in the world seems to be as slow as this country in making sure that its emergency fleet is in a good stand-by condition. Great Britain is replacing its fleet with the best and most modern vessels possible. It is building over one-half the total tonnage under construction in the entire world. Sweden is outstripping this country. Even Switzerland is starting to have a merchant fleet, while we are neglecting our passenger fleet, our coastal fleet, and our reserve fleet.

The shipbuilding industry in this country today does not have one-half the skilled mechanics necessary to train other shipbuilding mechanics if any emergency should arise.

There are some people we know who have blamed the shipbuilding industry for the cost of shipbuilding in this country. This union has sometimes wondered how much an automobile would cost if the Ford Motor Co. today had a contract for 60 cars, and could see no prospect of building any more for another 10 years. Who is to pay the cost of overhead for the shipyards of this country? How can materials be scheduled, or the full skills of workers utilized, when today there is work and tomorrow there may be none? What incentive is there for technological progress?

We think the request made for the ship construction budget of the Maritime Commission is woefully inadequate both for national defense purposes and for the purpose of keeping this industry on an even keel.

II. THE SHIP-REPAIR INDUSTRY IN THE UNITED STATES

When we were speaking before the Congress of the United States in 1943, 1945, 1946, 1947, and 1948, we were never quite as urgent in our worry concerning the ship-repair industry as we were concerning the shipbuilding industry. The reason for this was simple. Ship repair was helping to preserve the skills of mechanics in this country. The industry was operating at a normal level.

We felt that, because the ship-repair industry (inclusive of ship conversion) was operating at a normal level, it would help to keep in steady employment a number of major shipyard skills. It is true, and was proven in the last emergency, that ship-repair mechanics can be transferred to ship construction operations with no loss of efficiency. After all, the ship-repair mechanics of Alabama Drydock operated the shipbuilding yard, when that was built. The ship-repair mechanics of Bethlehem-Staten Island proved their skills on ship construction.

However, within the past month, the ship-repair industry in this country has been riddled with lay-offs, uncertainty, unemployment, and rumors of greater unemployment. Over 20,000 ship-repair workers have been laid off in the last month, with no prospect of getting back to work again.

We could understand this lay-off if there were no work, but we confess we are in a complete quandary. According to the report of the United States Maritime Commission, over one-third of our reserve fleet requires repair immediately. So we find ourselves in the peculiar position of having a ship-repair industry lay off workmen vital to national defense, while, if an emergency were to arise, the fleet would not be able to be used, because the work which would have kept these

workmen on the job was not done. We will admit that this sentence reads like a merry-go-round, but, at this point, we are beginning to feel that the entire planning for the merchant marine in the United States has more of the characteristics of the famous "Labyrinth." On page 16 of the statement issued by the House of Representatives' Committee on Merchant Marine and Fisheries concerning "correspondence between Hon. Schuyler Otis Bland, chairman, Committee on Merchant Marine and Fisheries, and Admiral W. W. Smith, Chairman, United States Maritime Commission, concerning the installation of Navy surplus floating drydocks of Maritime Commission reserve-fleet sites," the following statement appears:

"Of the 1,900 permanent reserve Commission vessels now in the reserve fleets, approximately 1,000 require repair. For the most part these are vessels that were withdrawn from service shortly after the end of hostilities. At that time it was deemed not advisable to make the repairs, inasmuch as it appeared that the Commission would have at least 1,000 vessels more than the total specified by the Joint Chiefs of Staff as necessary to be held for a national emergency. If such had been the case, the 1,000 surplus vessels would undoubtedly have been scrapped. An unanticipated demand from abroad resulted, however, in sales for foreign-flag operation of hundreds of vessels more than was anticipated. Consequently, these vessels at the reserve fleets which are in need of repairs now form a vital part of the necessary number of ships to meet the requirements of the Joint Chiefs of Staff.

"A study of information on the physical condition of these 1,000 at the time they were taken out of service indicates that there is a need for repairs averaging $180,000 per vessel to place the hulls and machinery in sound condition. It should be understood that such repairs to 1,000 vessels constitute a huge block of work and that if the work were to be undertaken at the present time it would require about 1 year, fully utilizing all drydock time that commercial facilities would have available after giving priority to the use of their drydocks for normal servicing of the operating merchant marine. It is the Commission's point of view that the repair of these vessels should be undertaken at an early date in order that in these unsettled times the Nation may be assured that all of the vessels held in permanent reserve for national defense purposes will be readily available for use in the event of an emergency. It is emphasized that the word "repairs" refers to actual damage and wear resulting from operation of the vessels, and in no manner refers to deterioration. "Deterioration" as used throughout this report refers specifically to a condition that will develop if for any reason the vessels are not properly cared for after they are laid up.

"In April 1948 the Commission requested that $165,000,000 be made available to undertake the work of placing all vessels in the reserve fleets in sound condition. This sum was deemed sufficient to cover all costs in connection with the repairs, including towage from the reserve fleets to the commercial yards and return. It was proposed that every item of repairs would be accomplished at commercial facilities, since the Commission has not, and never has had, any desire or intention of entering the repair business.

"In July 1948 the Commission was advised by the Bureau of the Budget that its request for $165,000,000 had been carefully considered in relation to the total defense program, but that the repair of these vessels was considered to be of insufficient priority to warrant action at that time.

"In its designation of vessels for inclusion in the permanent reserve for national defense, the Maritime Commission consults with the Departments of the Army and Navy, and all nominations are considered also by the Joint Army-Navy-Maritime Commission Plans Committee. That committee, being directly interested in the condition of vessels in the permanent reserve fleets, has recently urged that funds be requested for the repair of some 258 reserve-fleet vessels of types that would be in first priority demand in case of an emergency. The estimated cost of the repair of these vessels is $50,000,000. The Commission proposes to request such funds as soon as it assembles data with respect to the specific condition of the vessels.

"This information with respect to the repair status of vessels in the permanent reserve fleets is included for the purpose of giving a clear picture of the program for the preservation of vessels in the reserve fleets as differentiated from a repair program. While the two are related in a broad sense, they are separate and distinct in actuality."

Please note the first underscoring—1,000 vessels in the reserve fleet that we now think necessary to meet the requirements of the Joint Chiefs of Staff are in vital need of repairs and are not going to obtain them. Even the Commission itself has estimated that these repairs would take an entire year to make.

Not even the 258 vessels, of types that would be in first priority and would be demanded in case of emergency, have been repaired, nor has there been any request made for moneys for such work, nor has the Bureau of the Budget included any estimate of funds required for repair—something over $50,000,000.

The United States should not feel very safe with this condition presently prevailing within the reserve fleet. We would like to point out that, as time goes on, this condition is going to prevail concerning more and more of this reserve fleet.

We are evidently pursuing a policy of not building ships because we are dependent on our reserve fleet; and then allowing the reserve fleet to sink into a condition where it could not be used.

Need we point out that the facilities and the labor are available for taking care of the vessels in the reserve fleet? A layoff of 20,000 men in 1 month presumes labor available. Empty ways presume facilities available. We are going to pay out in unemployment insurance about one-half the cost of preserving the reserve fleet. We might just as well go ahead and do the job while we are at it.

We presume the Congress does not again want to be placed in the position of depending on a reserve fleet which the Joint Chiefs of Staff will have to certify as unsafe in a time of national emergency.

III. INSTALLATION OF NAVY SURPLUS FLOATING DRYDOCKS AT MARITIME COMMISSION RESERVE FLEET SITES

In addition to the moneys requested for the ship construction fund of the Maritime Commission, and the moneys not requested for the ship-repair operations necessary to repair the reserve fleet, the Maritime Commission will request a total of over some $50,000,000,000 to install floating drydocks, which are surplus to the Navy Department, at reserve fleet sites. The Commission will utilize these drydocks to carry on the bottom hull preservation work of reserve fleet vessels at the sites themselves, instead of doing such work in commercial ship repair yards.

This Union has no quarrel with any real attempt by the Maritime Commission to save money in the hull preservation of reserve fleet vessels. However, we do question whether money will be saved—whether this might not be the beginning of a partial governmentalization of the ship-repair industry—and whether this entire problem might not lead eventually to nationalization of the industry.

The Martime Commission claims that the difference between the hull preservation of the reserve fleet vesels at its own sites and in commercial yards will be close to $48,000,000 in 20 years—or an average of $2,400,000 a year.

First of all, we would like to point out that a saving of $2,400,000 a year is very small when compared with the cost that would ensue if the ship-repair industry were allowed to fall into the doldrums, and we would have to build it up again in time of emergency. Although faced with a lack of data, this union has estimated that to build up the ship-repair industry in time of emergency would cost close to $5,000,000,000. It cost the United States over $17,000,000,000 to build up the shipbuilding and repair facilities at the time of the last emergency. If we had another emergency in 4 or 5 years this cost would be raised immeasurably because of the rise in prices. If facilities are again allowed to rust away in idleness the restoration of total facilities would probably cost close to $25,000,000,000, and repair would probably require one-fifth of that amount. Therefore, if $48,000,000 in 20 years, or $2,400,000 a year, would serve to keep the private repair industry going, it is little enough money compared to $5,000,000,000.

We further question whether hull preservation of reserve-fleet vessels at the site is going to prove possible without a tremendous expenditure of moneys which the Maritime Commission has not envisaged.

At present there are the following permanent reserve fleet sites in this country, and the number of vessels therein:

James River reserve fleet, Lee Hall, Va.	450
Wilmington, N. C., reserve fleet	425
Mobile reserve fleet, Bay Minette, Ala.	465
Astoria, Oreg., reserve fleet	220
Beaumont, Tex., reserve fleet	415
Suisun Bay, Calif., reserve fleet, Benicia, Calif.	367

At present there are the following temporary reserve fleet sites in operation: Tomkins Cove, N. Y.; Baltimore, Md.; Cathlamet Bay, Oreg.; Olympia, Wash.

It should be noted that the temporary reserve fleet sites are very near large ship repair centers. In order to get the vessels from the temporary reserve fleet sites to the permanent reserve sites, one would have to tow the vessels all the way down to the permanent sites through the port areas. I think we can very readily maintain that where ships are taken out of the temporary sites to be placed in permanent reserve, the Maritime Commission would save a good deal of money by having the ships examined, their hull bottoms cared for and necessary repairs made in the ports where they are already stationed.

The reason for this is the following: If the Commission waits until the vessels reach the permanent site, and the vessels' hull bottoms are then scraped and damage is found, the Commission will have to tow the ships back again to a port area to be repaired. To us, this seems like paying double towage. Therefore, money would be saved by having the vessels in Tomkins Cove have their hull bottoms preserved in the port of New York; by having the vessels in Baltimore have their hulls preserved in Baltimore, etc.

Further, we are very much concerned by the Commission's statement on page 19 of the report mentioned in section 2 hereof that—

"In an earlier part of this report the subject of repairs to reserve fleet vessels was discussed. It may be stated again, however, that a sizable number of vessels now in the reserve fleets are known to require bottom repairs, and it is expected that others will be revealed at the first bottom inspection. Except in cases where bottom damage so re-

vealed is of a trivial nature, it will be definitely to the Government's advantage carefully to draw up specifications for the bottom repair work and to obtain the greatest amount of competition possible for the accomplishment of the work."

Our knowledge of the industry leads us to believe that it is precisely in cases where bottom damage is perceived to be of a disastrous nature—such as sprung plates—that the ship would have to be repaired on the drydock. The reason is that the safety regulations of the United States Coast Guard would never allow a vessel having extensive damage to be towed on the high seas, for example, from North Carolina to Virginia, or from Alabama to Louisiana or Mississippi. Would it not be safer for the Commission to have both the restoration work and preservation work done in commercial shipyards in a port area, then survey of the vessel while it is standing in the yard where it has been cleaned, and then obtain competitive bids from the yards in the port area, if the vessels need repairs?

Certainly, the Commission's own estimate that 1,000 of the reserve fleet vessels need repair now would lead us to believe that the Commission will be forced by Coast Guard safety regulations, if not by anything else, to go into the repair industry at the reserve fleet sites, because the ships will not be able to be towed on the high seas. Towing a ship from one repair yard to another in the same port is not towing a ship for 97 miles. The Commission will have to make the major repairs at the drydock sites in order to render the vessel sufficiently seaworthy to go to a repair yard.

In view of the above, it would seem that the Commission's estimate of the employment of 360 men at all reserve fleet sites is extremely low. There will have to be a crew of repair workers present to render vessels needing repair, seaworthy enough to be towed to repair yards.

We have absolutely no quarrel with the method which the Commission wants to use to preserve these vessels. We merely question the labor force it thinks necessary.

We are forced to question many other statements made by the Commission.

Despite the fact that Mobile, Ala., has two ship-repair yards, or yards which can be used for repair yards—Alabama Drydock Corporation and Gulf Shipbuilding Corporation—the Commission seems to indicate on page 32 of its report that it has figured towing charges from the Mobile reserve fleet to New Orleans, La., a distance of 220 miles.

Further, the commission seems to indicate, on page 34, that the reserve fleet presently located in Beaumont, Tex., might have to be towed to Galveston, instead of to Beaumont itself, which has a ship repair yard. The commission nowhere seems to indicate that the vessels in the temporary sites could easily be taken care of in the port areas right near these sites.

We are also at a loss to know how the commission arrived at its estimate of cost for the hull preservation in commercial yards. This estimate seems to be quite high. The commission has not entered into the costs to itself, the cost of the drydocks, or the cost of moving the drydocks to the reserve fleet sites, through the Panama Canal. We can understand the commission's not entering the costs of the drydocks in its estimates of commission costs, but we have received an indication from the Navy that the costs of moving three of the drydocks through the canal would not be paid for by the Navy.

This entire problem of costs is highlighted by the difference which the commission is assigning to costs of labor and materials in favor of its own operations, as against those of commercial ship repair yards. We know that Government agencies have to pay going rates for work to Government workers. The difference in cost seems to be quite high—a bit too high to be counted as a difference in cost of materials and of overhead alone.

We do not think it possible that the commission is proposing to cut rates, but the figures would seem to stand careful scrutiny. It does not seem probable that the cost of materials to the commission is so much less than the cost of materials to private yards that there can be as much of a difference as $3,500 between the cost of sandblasting in the Norfolk area by commercial ship repair yards, and the cost of the same sandblasting at the commission's reserve fleet site in Wilmington.

The commission has made one more statement which causes us great alarm. This is contained on page 13 of the booklet referred to.

"Furthermore, it is believed that the Commission can more closely control the standard of performance of the work as a Government activity than under a commercial contract."

A statement such as this is quite unbelievable when coming from a Government agency. Is it that the Commission is herewith accusing its inspection staff of laxity in favor of the commercial yards? Does the Commssion trust its own inspection staff? Has the Commission had experience of dereliction from duty on the part of its inspection staff? All these things would seem to be indicated by the Commission's statement. We should infer, in all seriousness, that the statement urges that an investigation should be quickly made of the actions of the inspection staff of the Maritime Commission. This statement on the part of the agency is truly shocking.

If the repair yards of this country have been guilty of improper workmanship, the union representing the workers in these yards wants to know it—and know it soon. There is no desire on the part of organized labor to defraud the Government of the United States of its just and rightful due, particularly in matters concerning the national defense as closely as these.

The above are some questions which have come to our minds in viewing this problem of transfer of the floating drydocks to the reserve fleet sites. We cannot risk any danger of damage or loss to our reserve fleet. We are already risking this danger because of the known nonrepair status of most of the fleet.

We believe truly if the Commission should undertake the bottom preservation of its own vessels, the repair damage found—once these hulls have been scraped—will be so extensive that the vessels will have to be repaired at the reserve sites in order to be made sufficiently seaworthy to be towed. Therefore, we say tow the vessels to the yards, and have the hull preservation done in the port where the vessel will be repaired.

This may sound to the Congress very much as if we are advocating monopoly. We clearly recognize the fact that it will be extremely difficult for a yard in another port to underbid a yard in the port in which the vessel is already laid up—because of the towing charges. However, in the ports where this work would be done, with the exception of the Port of Norfolk, there is sufficient competition between two or more repair yards to make for a competitive bid. We know that Alabama Drydock Corp. and Gulf Shipbuilding Corp. would bid against each other.

However, in order to guard against any possibility of collusion on these types of bids, we would respectfully suggest that the Commission be instructed to fix a standard maximum price, beyond which it will not go for the hull bottom preservation. This would definitely serve to put the commercial yards under notice that, just because the ships are in the port, is no indication that they will obtain the work if they think they can charge what the traffic will bear. We think that the fixing of a standard maximum for the hull preservation can easily be done by the Commission. The Commissioners claim that they have already made cost estimates from these ports. Surely they can establish a price based on going wages in these parts.

The saving of $2,400,000 a year might well be carefully balanced by the Congress, as against the cost of paying unemployment insurance to ship repair workers, and as against the cost of rebuilding the ship-repair industry, if it is allowed to go into another slump.

Respectfully submitted.

JOHN GREEN,
President, Industrial Union of Marine and Shipbuilding Workers of America, CIO.

Four Years

EXTENSION OF REMARKS
OF
HON. EARL CHUDOFF
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 13, 1949

Mr. CHUDOFF. Mr. Speaker, the Newark Evening News, the newspaper published in Newark, N. J., the home of my distinguished colleagues from New Jersey, Mr. RODINO and Mr. ADDONIZIO, on Tuesday, April 12, 1949, carried an editorial on President Harry S. Truman—"the modest man in the White House." It is not for me to speak words of praise in behalf of our great leader. His accomplishments in the face of what seemed insurmountable obstacles are matters of record. But it would be ill-fitting indeed if I did not add that the clay out of which he is fashioned is such that no man can deny him a place in their hearts—as an apostle of peace.

The editorial follows:

FOUR YEARS

Four years ago this afternoon President Roosevelt died. Four years ago this evening at 7:09 o'clock, Vice President Truman was sworn into the office of President. Dazed, fearful and uncertain, he felt that the burden of unimaginable responsibilities had fallen upon his humble shoulders, for the war, although drawing to a close, had not been won, and there was still peace to be made.

But now Mr. Truman has completed four years in the Presidential office—as time goes, a normal Presidential term. Since that fateful afternoon and evening of April 12, 1945, the American people and most of the world have followed the dual and parallel development of his policies and of his varied personal phases as an individual in dealing with the tasks of statesmanship.

This is not the occasion for a detailed review of Mr. Truman's stewardship. Like most Presidents, at least since World War I, Mr. Truman is described as placing special emphasis upon the accomplishments of his administration in the field of foreign affairs, which, as here applied, means accomplishments toward peace.

He is said to regard the announcement of the Truman doctrine (he himself calls it Greek-Turkish aid) on March 12, 1947, as the critical moment in the relation of the western countries to the Soviet Union. At that point there was initiated a program of resisting Soviet expansion with a counterbalance of force and economic recuperation. This found large expression, on the economic side, in the Marshall plan. On the side of defense, what began as resistance to Soviet threats in the eastern Mediterranean has been enlarged into the great regional arrangement of the Atlantic Pact.

All of this represents a profound departure from earlier American traditions. That its sponsor was himself a midwesterner, a region supposed to have strong isolationist tendencies, is a sign of the general acceptance of American responsibilities in an unstable, threatened world. That both parties support those policies does them honor and gives the Presidential voice great weight in the councils of the western countries.

If these are the lines of Mr. Truman's thought, on the anniversary of his predecessor's death and his own assumption of office, the Nation will be content to have it so. There is cause for optimism about peace, and this must bring true, inner satisfaction to the heart and purpose of the modest man in the White House.

Social Security

EXTENSION OF REMARKS
OF
HON. W. KINGSLAND MACY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 13, 1949

Mr. MACY. Mr. Speaker, what I know we have all had some misgivings about, the distinguished radio commentator, Fulton Lewis, Jr., rendered signal service in calling to public attention night before last; namely, the continuing status of the Federal social security fund. I am aware that the United States Government has an obligation of $8,500,000,000 set up currently, but this is not the kind of arrangement that any of us would favor, say in respect to any personal insurance funds upon which we were relying. As I understand it, this fund is virtually based upon a Government IOU, which posterity will be called upon to make good through taxes. There is some limit to taxation. While we are engaged in shoring up the finances of other governments, I would like to feel that this social security fund upon which so many of our citizens are depending to protect the twilight zone of their lives is also shored up adequately.

Let's End Defense Waste Now

EXTENSION OF REMARKS
OF
HON. LEONARD IRVING
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 13, 1949

Mr. IRVING. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to call the attention of the Members of the House to an exceptional editorial which appeared in the Philadelphia Inquirer on Tuesday, morning, April 12, 1949, commenting upon the real and urgent need for screening every appropriation request by the National Military Establishment and its related branches of the armed forces.

Several weeks ago I called to your attention the great economy in Government expenses which could be effected by adoption of the recommendations of the Hoover Commission. At that time I was not aware that the Commission had unearthed the facts reported in the following editorial.

It is my frank opinion that the committees of Congress which are responsible for recommending methods and means for economizing in Government expenditures should recognize these revelations as proper justification for investigating thoroughly every proposal made for money to be expended by the armed forces. If these few facts are correct, as I presume them to be, there must be other glaring examples where substantial savings can be made.

During the war my fellow townsman, now President of the United States, contributed much to the progress of the war effort, saving countless millions of dollars, and making our national efforts more effective and efficient. I am certain that the great work of the Truman committee could well be continued in this Congress and succeeding Congresses for the plain and simple reason that we do need the most adequate defenses possible but at the same time must exercise every precaution to see that the civilian population is not left feeble and bankrupt in the process.

The editorial to which I referred a moment ago is as follows:

NO EXCUSE FOR SERVICE WASTE—END IT

At the moment when Congress and the Nation are called upon to deal with the momentous question of rearming western Europe it is shocking to hear from former President Hoover charges of heavily padded budget estimates of the armed forces.

Preliminary congressional approval has been given to proposed outlays for a single year in excess of $16,000,000,000 for the Army, Navy, and Air Force.

For just what purposes? In a broad sense, apparently, nobody knows. The nubbin of Mr. Hoover's testimony before a Senate committee yesterday was that budgeting and accounting methods of the services are so cloudy and confused—so uncoordinated—that no clear, understandable picture of proposed service expenditures is possible.

He said emphatically that neither Congress nor the American people are in a position to analyze these budget proposals.

The crying needs of national defense and the vast problems imposed upon the United States to bolster a stumbling, weakened world, imperatively prescribe that the billions we spend be related to exact needs, by no means excluding the need to protect the economic resources of our country.

There should be no disposition to slash defense expenditures without rhyme or reason. On the contrary, the necessity for the strongest defense organization we can provide is plain. But this certainly does not justify waste and extravagance.

Mr. Hoover isn't speaking out against defense, but against waste, whether intentional or otherwise; whether due to overweening service ideas or the loose system under which budgets are devised.

His Commission has pursued tangled and obscure trails through the huge network of Government agencies and departments. It has urged general reforms and reorganizations over which Congress is dawdling.

It is estimated that several billion dollars could be lopped off Federal outlays annually if these economies and reforms were adopted.

Why shouldn't they be adopted? We need those billions for European recovery and for a strong, adequate defense team. The North Atlantic Security Pact poses a possible requirement of close to $2,000,000,000—as a starter—toward rearming western Europe.

We can't turn our backs on these requirements. But we should set our faces against sheer waste and foolishness. Economies that might be effected—in billions—could make our tasks more certain of success and probably remove any need for higher taxes.

The Hoover Commission brought to light some significant things as a result of a Defense Department survey conducted by a task force headed by Frederick Eberstadt. Mr. Hoover mentioned some of them yesterday.

He cited Air Force plans to build houses in Alaska at $58,350 each; more on Guam at $48,000 apiece. He mentioned a "clerical error" that listed a National Guard appropriation for sixty-nine 155-millimeter howitzers at $39,000,000, instead of $9,000,000. He noted an original budgetary request for 1950 of $108,290,858 for "tropical worsted uniforms" which would purchase 838,000 such uniforms at $129 apiece—far more than enough for all the Army's enlisted men. And Mr. Hoover again called attention to an Army request of $100,000 per tank to modernize 1,215 M–6 tanks, of which 102 had already been turned over to the Marine Corps.

That list alone ought to stir up plenty of action, both in the Defense Department and in Congress, to put service budgeting on a sound basis and keep it there.

There should be no skimping of genuine defense needs. But overlapping of defense measures, excessive administration costs, outrageous waste, and mere mistakes must be eliminated. That is essential both for the security of the Nation and for its economic stability.

Spending Rises

EXTENSION OF REMARKS
OF
HON. WILLIAM M. McCULLOCH
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 13, 1949

Mr. McCULLOCH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Columbus (Ohio) Evening Dispatch of April 5, 1949:

SPENDING RISES

An indication of what the country faces in the way of increased expenditures for the fiscal year 1950 is clearly seen in the first five appropriation bills reported out by the House committees considering them.

The total recommended in these initial bills is almost $1,000,000,000 more than was actually appropriated for them for the fiscal year 1949. It is an increase of 18 percent over the needs of these departments for the current year.

If there is any place that expenses must and can be cut it is in what are usually referred to as the ordinary functions of government. The five agencies included in the first recommendations to be made are included in this ordinary functioning.

Prices—the Government as well as individuals certainly must be aware of this—are tending to stabilize and even to come down in many instances. Thus it is not a time to increase appropriations. It is a time to hold them at current levels, or even to cut them back. The shooting wars are over for a while. The cold wars are being considered in separate appropriations. Why, then, do agencies such as the Treasury, the Interior

Department, and so on need to increase their demands and why do these demands need to be met?

There is no desire by any informed or interested American to skimp his Government where any legitimate need is demonstrated. The Hoover reports, however, have revealed mountains of waste through the great, huge governmental structure that some day must be eliminiated. Why not begin now?

Of course, with the President having in these times reversed his traditional function as watchdog of Government waste to become the foremost advocate of increased spending and squandering, perhaps Congress cannot be expected to be too efficient in cutting back expenses. But if it doesn't, then there is no one left to protect the American taxpayer against the patent evils of spending. It is clearly up to Congress if any economies worth the name are to be effected.

GI Benefits for Personnel Who Remained on Active Duty

EXTENSION OF REMARKS
OF
HON. A. S. J. CARNAHAN
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 13, 1949

Mr. CARNAHAN. Mr. Speaker, under leave to extend my remarks I wish to call attention of the Members of Congress to the lack of educational benefits for officers who have elected to remain on extended active duty, as provided by Public Law 346, Seventy-eighth Congress, the Servicemen's Readjustment Act of 1944.

Letters of inquiry have been received from many officers of the armed forces who are not considered to be eligible for educational benefits as now provided by title II of Public Law 346, because they have not been discharged or relieved from active duty. After having received a number of inquiries, the Veterans' Administration was asked to furnish an interpretation of this matter. This interpretation agreed with the statements given in the letters of various officers.

Under present military regulations it is possible for Reserve Officers to remain on active duty, without separation, for an indefinite period. This service, in many cases, would continue longer than some of the benefits under the GI bill. Therefore, the individual would never be eligible regardless of service.

An officer who was integrated into the Regular personnel of the armed forces is considered eligible for educational benefits under the GI bill because of his momentary separation from the service.

It is apparent that it should definitely be determined what makes an individual a veteran. Is it the possession of a piece of paper showing complete separation from the service, or is it the service he rendered to his country?

H. R. 3871, introduced in the Eighty-first Congress by the gentleman from New York [Mr. LYNCH], to amend the Servicemen's Readjustment Act of 1944 by extending benefits of titles II and III to certain persons who have continued on active duty would remedy this situation by allowing benefits under the GI bill to go to persons who have remained on active duty. I invite the attention of the Members of Congress to this injustice and hope that legislation correcting this unwarranted discrimination will be enacted.

Federal Aid to Education

EXTENSION OF REMARKS
OF
HON. FRED MARSHALL
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 13, 1949

Mr. MARSHALL. Mr. Speaker, I have introduced a bill, H. R. 4230, authorizing appropriation of funds to assist parents in discharging the serious responsibility of educating their children. In considering so-called Federal aid to education, I believe we have become victims of terminology and have lost sight of the real basis for such assistance; we have let language cloud the principles which have always been an integral part of the American democratic system. We have lost sight of the human person in following the trend toward institutionalism. We talk about schools rather than children, the State rather than parents.

I think we need to carefully reexamine our philosophy of education and return to the basic truths upon which the education of our children is based. Education is for the child, first and foremost. If this is true then it is comon sense that the first right in the education of children is the right of parents. This is a right older and prior to any government, and it is a sacred right that must be protected and fostered by our Government, whether it be local, State, or Federal. Since right always imposes responsibility, parents have the first responsibility in the education of their children. It is our work as lawmakers to assist and encourage parents in fulfilling their responsibility. It is not our function, nor must it be our intention, to relieve parents of that obligation entirely—to make education solely a function of government. This is the very real danger many opponents of Federal assistance rightly call our attention to. Assistance must not mean control.

At the same time, we must assume our responsibility of assisting parents in providing for the education of their children. This is the true function of any government in education—to protect and encourage the prior right of parents. Parents are handicapped in discharging their duties today because of social and economic conditions beyond their immediate control. This is a time of crisis in education and we must accept our responsibility in the matter; we must provide the assistance necessary if parents are to insure at least minimum tools essential to an educational system.

Every bill dropped into the hopper of this House should have as its ultimate object the common welfare of the people of the United States. But always the common interest is aided only as the individual interest is safeguarded. So too, in the matter of education, we will all benefit to that degree in which our children are benefited through Federal assistance. Our first concern in education cannot be the school as an institution, but it must rather be the child as a person. We assist the school only as we assist the child. In helping our children we then serve the greater good of our Nation because our greatest asset is an educated and informed citizenry, intellectually and morally equipped to face the grave problems confronting each of us in these times.

This bill, providing for auxiliary aids, only gives assistance where it should be given and still leaves the major responsibility to parents to whom it rightly belongs. It minimizes the danger of Federal control by providing only the tools to which all children are entitled. It would provide every child in the United States with the minimum material essentials of an educational system, and it leaves to parents the basic responsibility of controlling and providing for that system as such. Here too, it offers a secondary assistance that cannot be discounted. In making educational material assistance available to all it releases funds expended from regular revenues for the operation and maintainence of the basic school system. This is a secondary benefit resulting from the primary purpose of the bill—to assist parents in discharging their educational responsibilities. To keep the first responsibility where it belongs we must insist that the same amount of funds now spent on local education continue to be spent under the provisions of this bill or we nullify our primary intention of benefiting the child through assisting the parents.

This bill would insure equal opportunities for all children in the United States in providing transportation for educational purposes, library facilities, textbooks, and other reading materials, visual aids and other instructional materials, school-health programs and facilities. The purpose of this bill is broad and fully meets the responsibility of the Federal Government in assisting parents to provide such services and facilities as are vital to an adequate educational program. I think it is a realistic and practical solution to a problem that has harassed this Congress for a number of years.

As comprehensive as it is in method, it scrupulously avoids any interference or violation of the rights of parents and the individual States. Furthermore, this bill does not create any new agencies nor does it expand or limit the functions of existing agencies. Its simplified administration is designed for utmost efficiency and economy through direct payment to participating schools on the basis of certified average daily attendance records. This is in keeping with the avowed principle of assisting parents rather than assuming or usurping the rights and duties of lower units of government in the realm of education.

Basically, this bill is a simple and clear statement of Federal policy and its mechanics are administratively feasible

without a legion of interpreters and bookkeepers. Simply, it would provide $10 per pupil for all schools, to be spent exclusively for auxiliary aids as they are defined in this bill. The total appropriation of $300,000,000 would be more than sufficient if we accept the estimated enrollment of 26,635,000 children in all American elementary and secondary schools in 1950. According to Census Bureau forecasts the enrollment will continue to climb each year until it reaches the thirty-four-million mark in 1960. Under the provisions of this bill the annual appropriation would remain at its present amount while the per pupil payments would be proportionately lowered in years in which the average daily attendance exceeds the thirty-million mark which would require the full appropriation.

There is no need to go into the sad facts of the education problem again. We have seen the problem face to face in our cities, towns, and rural schools. The time for a flattering word or a noble gesture is past; we must fulfill the grave responsibility we have to the parents and children of this Nation.

Trusteeship of Former Italian Colonies

EXTENSION OF REMARKS
OF
HON. HUGH J. ADDONIZIO
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 13, 1949

Mr. ADDONIZIO. Mr. Speaker, under leave to extend my remarks in the RECORD, I take great pleasure in including a timely resolution adopted by the Board of Commissioners of the City of Newark, N. J., with respect to the trusteeship of the former Italian Colonies and for Italy's admission to the United Nations. There has always been a great spiritual and physical kinship between Italy and the United States, and Italy looks to our great country, the hope and protector of human decency and freedom, to support her cause. This resolution sets forth the compelling reasons for awarding to Italy the trusteeship of her former colonies, and it is earnestly hoped the United Nations will recognize the justice of her claim:

Whereas the UN Assembly, at its present session, will take under consideration the trusteeship of the former Italian colonies; and

Whereas the development of the African continent will be a great contributing factor toward the social progress and economic rehabilitation of western Europe; and

Whereas Italy, prompted, not by selfish gain, but to relieve the sad state of her overpopulation, made great contributions in the development of her colonies, by the construction of railroads, airports and seaports, by converting arid lands into rich farms, by transforming unknown places into industrial centers and, through the application of scientific knowledge, methods and skills, raising the standard of living far above that which had been enjoyed by the natives and hundreds of thousands of Italians who settled there; and

Whereas by virtue of her enormous efforts and sacrifices in their development, and her proximity to her former colonies, and her technique, and her excessive population and manpower, Italy is deserving and qualified to undertake their further development; and

Whereas the awarding to Italy of the trusteeship of her former colonies will be a great step in her economic rehabilitation and will further solidify the western nations against the common enemy; and

Whereas the city of Newark numbers among its population 125,000 loyal American citizens whose sense of fairness, and natural sympathy for Italy, recognizes her pressing need for additional territory and the opportunity for useful and peaceful expansion: Therefore be it

Resolved by the Board of Commissioners of the City of Newark, That—

1. Italy has every moral right to the trusteeship of her former colonies.

2. The UN would perform an act of supreme justice by awarding to Italy the trusteeship of her former colonies.

3. Italy's friendship to America and her many contributions toward the culture and way of life now enjoyed by our country has earned for her the sincere support of our delegates to the UN for the trusteeship of her former colonies.

4. Justice also requires that Italy be admitted as a member of the UN, so that her hopes and aspirations for her own future and for the peace of the world may be advocated by her own delegates.

5. A copy of this resolution be sent to His Excellency Harry S. Truman, President of the United States.

6. A copy of this resolution be sent to the elected representatives of our State in Congress.

Legislation Needed To Improve Intergovernmental Relations

EXTENSION OF REMARKS
OF
HON. RALPH HARVEY
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 13, 1949

Mr. HARVEY. Mr. Speaker, there is ever increasing evidence of the need for improving intergovernmental relations—that is, the fiscal and other relations between and among the Federal Government, State governments, and county and municipal units. These relationships have become increasingly important and more and more complex. Involved are such fundamental matters as tax revenue sources, grants-in-aid, duplication of activities, overlapping authority, and costly, inefficient governmental operation at the various levels.

Recognizing the need for a thoroughgoing study of these problems so that adequate legislative solutions might later be found, there was introduced into this House on February 7, 1949, by the distinguished gentleman from Delaware [Mr. BOGGS], H. R. 2389. This bill by Mr. BOGGS provides for the establishment of a temporary national bipartisan commission to study all phases and aspects of intergovernmental relations and to submit recommendations to the President and the Congress for improving the existing patternless situation.

Interest in this vitally important problem is sufficiently great in both Chambers of the Congress that on the same day Mr. BOGGS introduced H. R. 2389 an identical bill, S. 810, was introduced into the other body by eight distinguished Senators, representing both major parties. Furthermore, Mr. Speaker, I introduced into this House on March 3, 1949, H. R. 3184, which is identical with H. R. 2389 and S. 810, and H. R. 3944, which is also an identical bill, was introduced on March 31, 1949, by the distinguished Representative from Ohio [Mr. SECREST].

It is my sincere hope, Mr. Speaker, that arrangements may soon be completed by the respective committees for adequate hearings at an early date on these measures. It is also my hope that this legislation will be enacted so that the Nation, the States, and the other political subdivisions of government, as well as the people themselves, may be enabled to enjoy the benefits which I am wholly confident will be forthcoming if the proposed National Commission on Intergovernmental Relations is established.

This proposed legislation is attracting more and more attention and interest. In that connection and as a part of my remarks I include an article by the able Washington correspondent, Mr. Holmes Alexander, which appeared in the April 8, 1949, issue of the Philadelphia Evening Bulletin. I may also say, Mr. Speaker, that this same article by Mr. Alexander appeared in numerous other newspapers throughout the Nation.

BOGGS WOULD SIMPLIFY TAXES

(By Holmes Alexander)

WASHINGTON, April 8.—Staff members of the Hoover Commission say they will have done well if between 10 to 20 percent of the group's recommendations ever get put into practice. Yet such is the capital's fondness for appointing commissons that the Eighty-first Congress may give us another fact-finding group of similar scope.

This possibility lies in H. R. 2389 by Representative BOGGS, lone Member of the House from Delaware. The Boggs bill is a preliminary effort to unscramble the prodigious omelette of intergovernment affairs—the indescribable mix-up of Federal, State, county, and municipal responsibilities.

Nobody really knows how many millions of dollars and miles of red tape are involved in the overlap of taxing and spending under our multigovernment system. The Hoover Commission made a tentative pass at this enormous subject, but did not publish its task group report.

FOURTEEN DETECTIVES

BOGGS, who was brooding over the problem before the Hoover Commission touched it, wants to take it from there. His bill calls for a 14-member group which would report its findings to Congress by February 1952.

The unsuspecting founding fathers, who innocently preserved home rule in the Constitution, never dreamed how many "home" governments would be developed. There are now 155,000 government units within the United States, of which 108,000 are school districts.

Education was the beginning of this confusion. Early last century the Federal Government began making land grants to schools. Monetary grants followed, and the great game of put-and-take was on. In 1913–14 the game got its biggest boost. The Federal Treasury began to collect income taxes, and the Agriculture Department began its extension service. From then on things moved fast. Bills for grants-in-aid to States and localities now run about 300 per con-

gressional session. There are three types of grants for education, three or more for public assistance, and over a dozen types for public health. About 40 percent of all funds spent by the States comes from Washington.

PENNSYLVANIA'S LAW

Meanwhile the local governments also reach directly for the taxpayer's pocket. Pennsylvania has a law which allows 3,591 subdivisions to levy taxes—cities, boroughs, townships, and even school districts get a whack at the miserable citizen. Not long ago a group of corporations reported that it cost them 9.5 cents to figure out every dollar owed to the State, and 4.7 cents to make up an account of their Federal tax dollar.

The Boggs bill doesn't blame anybody for this baffling state of the Nation. Such things just happen to a country which demands both Federal unity and local rights. But competition for the taxpayer's dollar has become a free-for-all. The brokerage fee extracted by the various taxing agencies is eating up the capital. Something has to be done. A few days after Representative Boggs dropped his bill in the hopper, a group of eight Senators sponsored a companion measure.

All This and Taxes, Too

EXTENSION OF REMARKS
OF
HON. J. HARRY McGREGOR
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 13, 1949

Mr. McGREGOR. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Cleveland Plain Dealer for April 8, 1949:

ALL THIS AND TAXES, TOO

No one can accuse Sir Stafford Cripps of being soft, or of attempting to conceal the harsh facts of economic life from the British people.

In his presentation to the House of Commons of a budget which continues for another year the bleak austerities of the past, the Chancelor of the Exchequer said that as long as Britain continues its expenditures for defense and social services at the existing levels, a very high rate of taxation will continue to be necessary, regardless of what government is in power.

Thus the cost of the Labor Party's version of the more abundant life will continue to be a heavy burden on Britain's taxpayers, and it may become heavier in the future, Sir Stafford warned, because defense expenditures may rise, and the social services, including socialized medicine, constitute a permanent and continuing obligation, the costs of which are constantly increasing.

Under the new budget the very high income and purchase taxes are to be continued, the surcharge on local telephone calls has been increased from 15 to 50 percent, the tax rate on football betting pools has been advanced from 20 to 30 percent and a halfpenny has been added to the tax on a box of matches.

Moreover, a reduction in food subsidies will be reflected by increases in the cost of meat, cheese, butter, and margarine.

The only tax relief immediately affecting consumers is the reduction by 1 penny in the cost of a pint of beer, but this reduction was so slight that brewery stocks dropped as much as 5 shillings 6 pence a share.

A dispatch to the New York Times reports that Sir Stafford's budget caused dismay, anger, and alarm among various segments of the British people, many of whom apparently had anticipated that it was time for the various socialistic measures of the Labor Government to begin paying off in the form of a higher standard of living.

There was considerable speculation as to the reaction in the trade-union movement, some leaders of which said it would be difficult to hold off any longer demands for wage increases which would be inflationary.

Obviously, a general wage increase in Britain not only would wreck the austerity program, but would jeopardize the social services in which the Labor Government takes such great pride.

The time is coming eventually, and this may be the time, when there will have to be a show-down between British labor and the Labor Government. So far the two have cooperated, since the Labor Government's greatest mainstay has been the trade-union movement. But if the unions were to insist on wage increases which would wreck the socialist program of the Government, the latter would be compelled to choose between using force to obtain compliance or abandoning its socialistic experiments.

The chances are that as long as the British economy is being bolstered through American aid, some way will be found to keep the trade-unions in line and to continue the socialization of Britain. But when American aid is finally terminated, Britons will have an opportunity to determine whether their own resources are adequate to support a controlled economy without resortinng to police-state methods.

Cooperative Research Program in the Field of Stream Pollution

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Wednesday, April 13 (legislative day of Monday, April 11), 1949

Mr. WILEY. Mr. President, I ask unanimous consent to have printed in the RECORD a statement I have prepared entitled "A Cooperative Research Program in the Field of Stream Pollution," together with correspondence passing between me and the Department of Agriculture on the same subject.

There being no objection, the statement and correspondence were ordered to be printed in the RECORD, as follows:

STATEMENT BY HON. ALEXANDER WILEY, OF WISCONSIN

A COOPERATIVE RESEARCH PROGRAM IN THE FIELD OF STREAM POLLUTION

Mr. President, I should like to take the time of the Senate for just a few moments to discuss one of the most critical problems facing our Nation today, but one which has in the past received all too little of the attention of the Congress. I refer to the stream-pollution problem.

In this field, as in many other fields, we on this blessed continent have acted like a prodigal. We have dissipated the heritage which our forefathers gave us. We have befouled the waters of our Nation. We have stripped our forests. We have ravaged our soil. The stream-pollution problem which plagues Wisconsin and virtually every other State of the Union is one aspect of the over-all conservation problem facing the Nation.

This problem is not one for mere talks or for letters or for repetition of empty platitudes. It is a problem requiring constructive and decisive action.

In the last Congress, preliminary action was taken to help States and localities meet the pollution menace. But this is only a beginning.

Along the line of further constructive action, I have been in correspondence with the Department of Agriculture regarding the launching of a Government-industry cooperative program for research into the utilization of industrial wastes in order to end stream pollution. In a letter of April 1, 1949, Secretary Brannan wrote to me that in accordance with my suggestion to the Department, he (Secretary Brannan) "asked the Office of the Administrator, Agricultural Research Administration, to initiate interbureau discussions along the lines" indicated in my correspondence with the Department.

I ask unanimous consent that following these brief remarks there be included the principal letter which I wrote to the Department regarding this cooperative research program and the Department's previous answer to me.

There have been many excellent treatises written on the stream-pollution problem. The Izaak Walton League in Wisconsin and throughout the Nation has been among the leading organizations fighting a valiant battle to cope with this menace. The famous magazine, Sports Afield, has carried a series of vital articles entitled "Running Sores on Our Land," by Bill Wolf, which has discussed the pollution problem and constructive answers to it.

Recently I received a communication from William Cook, of Stevens Point, Wis., a former president of the Wisconsin division of the Izaak Walton League. He in turn enclosed a letter which had been written by A. D. Sutherland, present president of the Wisconsin division of the league. I should like to quote a few excerpts from Mr. Sutherland's letter:

"The Izaak Walton League is dedicated to a defense of our resources. We believe life itself is dependent upon forests, clean waters, and soil. The destruction of the forests of Wisconsin and generally throughout the United States gave birth to the Izaak Walton League. * * * The pollution problem is of great importance. The health of our people is involved. (Polluted) water causes many dreaded diseases. * * * Even though injunctions and criminal prosecutions (against pollution) are a remedy, the Izaak Walton League believes the rule of reason should still apply. We have presidents of two corporations on our committee on water pollution. One is the father of two boys stricken with polio after bathing in polluted waters. * * * We have many manufacturing members on our league, and they have given their time and attention to this problem. They want pollution stopped."

I could proceed and quote from many other sources, pointing out the menace of pollution. I could quote at length from various editorials in Wisconsin newspapers—from the Milwaukee Journal, the Waukesha Freeman, the Fon du Lac Commonwealth Reporter, the Green Bay Press Gazette, and many other papers in my own and other States, on this grave threat which we have tolerated for so long. I could point out facts such as that 57 communities in my own State have no sewage treatment whatsoever. Fortunately, they represent only 9.3 percent of the total urban population of Wisconsin. Yet, Wisconsin has an excellent committee on water pollution and has made splendid progress in this field.

This is not a suggestion calling for recriminations or cheap accusations. As the previous excerpts I have read indicated, farsighted leaders of agriculture, industry,

municipalities, are working with conservation groups to meet this problem. The Wisconsin Cheesemakers Association, for example, recently wrote to me of its efforts along this line, and I have had communications from paper manufacturers and others pointing out their efforts toward cooperation.

Here is a vital Federal interest which I believe can be supplemented by the cooperative research program, which I hope we of the Eighty-first Congress can launch. It is my plan to introduce legislation for such cooperative research as soon as all of the technical problems involved in drafting can be worked out. It is my hope that the world-famous Forest Products Laboratory at Madison can spearhead the research to which I am referring. But the finest engineering branch of Wisconsin and the Nation will be challenged to assist us.

I have confined my remarks principally to the Wisconsin situation because I am naturally most familiar with the facts in my own State rather than other States of the Union. But I am sure that other Senators could point out similar facts, particularly our able colleague, the junior Senator from South Dakota [Mr. MUNDT], who has worked valiantly in this field.

I earnestly trust that those Senators and Congressmen who will have close contact in their committee work with conservation work—that they will give their particular attention to the stream-pollution problem. Adequate funds will, of course, be necessary to implement legislation already enacted. Recently Mr. Carl Shoemaker (one of the most expertly qualified individuals in this country in the field of fish and wildlife conservation and director of the National Wildlife Federation) was appointed to the Water Pollution Control Advisory Board, representing the conservation groups. He has reported to me that this pollution problem is going to take a tremendous amount of special understanding, time, energy, and labor. Yes, funds if it is to be met adequately. Right now a deficiency appropriation is called for to aid the Public Health Service fulfill its responsibilities.

Future generations will rise up to curse us or to bless us, depending upon how we act. It is my prayer that we will act with foresight, with vision, with constructive deeds and not mere empty words.

EXCHANGE OF CORRESPONDENCE BETWEEN HON. ALEXANDER WILEY, OF WISCONSIN, AND UNITED STATES DEPARTMENT OF AGRICULTURE

PART A—LETTER FROM DEPARTMENT OF AGRICULTURE IN RESPONSE TO SENATOR'S ORIGINAL SUGGESTION FOR RESEARCH PROGRAM PARTICULARLY THROUGH FOREST PRODUCTS LABORATORY AT MADISON

MARCH 14, 1949.

DEAR SENATOR: Reference is again made to your letter of February 14 and our acknowledgment of February 28. The Bureau of Agricultural and Industrial Chemistry has long recognized the importance of developing means of utilization of agricultural residues and wastes. Such residues and wastes vary widely in character—corn stalks, corn cobs, cereal straw, and food-processing wastes are but a few. Many of these wastes are involved in stream pollution.

Wherever possible attempts are made to convert these wastes into a product of value to at least return the cost of disposal. Where this is not possible we at least attempt to eliminate the nuisance or health-hazard elements.

Among the investigations of the Bureau of Agricultural and Industrial Chemistry might be mentioned: Development of method for use of citrus processing plant waste liquors to produce feed yeast; elimination of stream pollution through dairy products plants; investigation of effluents from potato starch factories; utilization of wastes from pear canneries, cannery plant effluents, sweetpotato starch, and waste waters. Other types of wastes connected with commodities upon which work is being done by the Bureau of Agricultural and Industrial Chemistry and upon which wastes investigations are not but should be carried on are: Tannery wastes, wastes resulting from cotton mercerization and cotton dyeing, waste waters resulting from stabilization of soybean oil by use of citric acid, poultry eviscerating plant wastes, and wool scouring.

Pulp mill wastes

With regard to the pollution of streams by the effluent of pulp mills it is assumed that you are principally interested in the sulfite mills to which the greatest problem attaches. There are two ways in which this problem can be attacked. First through the recovery of the byproducts and their use in the pulp plant itself such as the reuse of the chemicals and the use of other solid materials for fuel. Second, the recovery of the byproducts and their sale to outside parties. The first would seem to hinge upon a modification of the usual process involving a switch from the present lime base to a soda, magnesia or other base. Considerable work has been done upon this by the Forest Products Laboratory and a great deal has been done by the industry itself. The research work is very costly and the change-over of existing mills to a new process is very high in the way of capital investment. The industry has a large stake in this because many of the mills could be closed down and communities impoverished if the laws now on the statute books relating to stream pollution are enforced. The solution of the problem cannot be worked out at the Forest Products Laboratory alone but needs the best cooperation of the chemical engineering brains in the industry and the try-out of various proposals on mill scale.

If this approach were to be made it would seem to us a matter of national action under some cooperative arrangement between industry and Government for which a very large sum of money would be required over a number of years. It is a project in which the Forest Products Laboratory might be a logical central agency and directive research organization.

Yeast production

Referring now to the second alternative the waste sulfite liquor contains essentially all of the lignin orginally present in the wood combined with calcium bisulfite, sugars, and small amounts of certain acids derived from sugars, as well as furfural, volatile aldehydes and venillin and terpenelike compounds. There is at present some optimism as to the recovery of the sugars for the production of feeding yeast for livestock and poultry. A group of pulp makers in Wisconsin, as you may know, have placed in operation of $500,000 experimental plant to transform sugar from sulfite pulp liquor to yeast. So far the cost has been greater than the return for the product. There has been some minor recovery of lignin. The removal of such materials means a reduced biological oxygen demand in the streams in which the effluent is discharged. It would seem to us that work on the production of yeast, molasses, or alcohol from such sugars, and basic work on the chemical make-up of lignin, all are important in creating a profitable outlet for these byproducts of the sulfite mill. Once conversion processes to useful goods needed in quantity are worked out it would seem logical that recovery for such markets would follow. The Forest Products Laboratory is doing work along these lines. Its funds for the purpose are limited, however. Incidentally the approach to an understanding of the character of lignin and its conversion to useful products alone represents costly research on which might profitably be spent as much as the laboratory has available now for the entire chemical field.

If we can be of further assistance to you in this or other matters, please let us know.

Sincerely,

A. J. LOVELAND,
Under Secretary.

PART B—LETTER TO DEPARTMENT OF AGRICULTURE IN RESPONSE

MARCH 15, 1949.

DEAR MR. LOVELAND: Thank you for your letter of March 14 in response to my inquiry regarding work of the Department of Agriculture on the utilization of agricultural residues and wastes and industrial wastes which are polluting the Nation's streams. I appreciate your report on this matter and I would like to follow it through to the greatest possible extent.

As I have previously indicated (when I introduced Senate bill 1118 to give business tax advantages if they develop facilities to treat industrial wastes), I have been appalled at the terrific pollution of the Nation's waters because of these waste products and I am afraid that we, as a people, are "missing the boat" in meeting this problem adequately, notwithstanding the antipollution legislation that we have already adopted.

It is not a subject for speeches or letters or talks, but a subject which I am sure you will agree, for constructive action in order that we can preserve the Nation's wildlife and water heritage.

I am particularly interested in that phase of your letter in which you indicate that a program of national action under some cooperative arrangement between industry and Government should be worked out. For example, utilizing the Forest Products Laboratory at Madison as a central agency and directive research organization. I am interested, too, in your comment that a vast amount of Federal funds would be involved for the Forest Products Laboratory and similar vital research institutions.

I should like to introduce specific legislation

My question is, therefore: What specific cooperative arrangements between industry and Government does the Department of Agriculture feel should be worked out in specific legislation and how much specific funds would you initially propose be spent? In other words, I should like to introduce specific legislation for research funds and organization.

Research serves economy

I assure you, of course, that I do not make this comment without due consideration of the fact that our national budget is already at a staggering level and I, for one, have urged and will continue to urge economical reduction of Federal appropriations. It seems to me, however, that the record of the Forest Products Laboratory, for example, has proven that research funds of this type repay themselves many times to the American taxpayer and thus instead of continuing drains on the Federal Treasury, actually result ultimately in an increase of revenue for the Treasury because research of this type creates jobs, creates wealth, creates Federal revenue. In addition, no one could put a dollar sign on the value of preserving the Nation's streams unpolluted and preventing the further mass death of wildlife.

With all of this I am sure you agree and I mention it only as a clarification of the fact that I, as a United States Senator interested in economy, am prepared to support you to the fullest extent on any sound suggestion that you may care to make for specific cooperative action between industry, agriculture, and Government on this problem.

Research has contributed to a tremendous extent for the amazing standard of living

which we as a people have achieved and research will help us to maintain that standard.

Let us plan for specific program

I would appreciate, therefore, if your Department could initiate a series of discussions within and between its bureaus and with my office so that we can plan for specific rsearch legislation with an adequate but not extravagant amount of funds in which we could tap the finest engineering brains of the Nation both in Government and private industry toward the solution of this critical problem.

With every good wish, I am

Sincerely yours,

ALEXANDER WILEY.

Thirty-ninth Anniversary of Approval of Esperanto Language by Maryland Legislature

EXTENSION OF REMARKS

OF

HON. MILLARD E. TYDINGS

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Wednesday, April 13 (legislative day of Monday, April 11), 1949

Mr. TYDINGS. Mr. President, I ask unanimous consent to have printed in the RECORD a statement by Mr. Maximiano Marmito Villareal paying tribute to the Maryland State Legislature on the thirty-ninth anniversary of the approval of the Esperanto language by the Legislature of the State of Maryland; and I also ask unanimous consent that a clipping from the Baltimore Sun of April 12 on the same subject be printed in the RECORD.

There being no objection, the statement and clipping were ordered to be printed in the RECORD, as follows:

THIRTY-NINTH ANNIVERSARY OF THE APPROVAL OF ESPERANTO LANGUAGE BY MARYLAND STATE LEGISLATURE

Mr. Maximiano Marmito Villareal, of the Philippines, pays tribute to Maryland State Legislature on the thirty-ninth anniversary (April 11, 1949) of the enactment and approval by that legislative body of the international language Esperanto, on April 11, 1910. Mr. Villareal is former director of publicity of the Esperanto Association of North America and a life member of the Little Congress of the United States, whose membership is composed of officials and employees of the legislative branch of the United States Government.

Mr. Villareal's statement follows:

"This thirty-ninth anniversary of the enactment into law by the Maryland State Legislature of the international language known as Esperanto, on April 11, 1910, marks one of the greatest achievements and most brilliant pieces of legislation that any legislative body has ever enacted in the history of the world. Esperanto is the successful creation of Dr. Lazaro Ludoviko Zamenhof, of Poland. It was purposely invented for the use of the people of the world as their second language, which they may communicate with one another with facility. This pioneering action of Maryland State Legislature should serve as a most inspiring example and a challange to parliaments and legislatures of the world, particularly to the states which are members of the United Nations and whose delegates daily encounter problems of language difficulty.

"The wisdom of the action taken by the Maryland State Legislature nearly 4 decades ago should serve also as a guiding light leading the way toward reaching the goal of world understanding between different people of different languages who want to achieve a lasting world peace. This was the ultimate objective of the genius inventor of Esperanto.

"On this thirty-ninth anniversary of the enactment and approval by the Maryland State Legislature of the Esperanto international language, all men of good will in the world should take this opportunity to pay tribute to Maryland State Legislature for its brilliant pioneering action taken for the benefit of mankind. It would be also an honor if Marylanders were added to the over 10,000,000 signers of a petition recently received by United Nations authorities urging the adoption of the Esperanto international language as the second language of the world."

[From the Baltimore Sun of April 12, 1949]

MARYLAND COMMENDED FOR O. K. ON ESPERANTO

WASHINGTON, April 11.—Maryland was commended today by Maximiano M. Villareal for its action in 1910 officially approving the Esperanto international language.

Villareal is former director of publicity of the Esperanto Association of North America.

Recalling that the Maryland Legislature acted on April 11, 1910, Villareal said:

"All men of good will in the world should take this opportunity to pay tribute to the Maryland State Legislature for its brilliant pioneering action taken for the benefit of mankind."

"It would be also an honor if Marylanders were added to the over 10,000,000 signers of a petition recently received by United Nations authorities urging the adoption of the Esperanto international language as the second langauge of the world," Villareal said.

Esperanto was created by Dr. Lazaro Ludoviko Zamenhof, of Poland, as an international language.

North Atlantic Pact

EXTENSION OF REMARKS

OF

HON. RALPH HARVEY

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 13, 1949

Mr. HARVEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following Washington news letter of Hon. EARL WILSON:

WASHINGTON NEWS LETTER

(From your Congressman, EARL WILSON)

For better or for worse, the United States is now married to the North Atlantic Mutual Aid Pact. When the United States Senate has approved the pact, the marriage will have been consummated, and we will be entitled to all of the doubtful privileges as well as the tremendous responsibilities of a full-fledged military alliance with the other nations of the North Atlantic community.

The pact has just been signed here in Washington by the United States Secretary of State and by the foreign ministers of 10 other nations. The only thing remaining to make the pact official and binding is ratification by the United States Senate. Favorable action by the Senate is doubted by no one on Capitol Hill, but ratification will come only after a rough and rocky debate. As I stated in this column last week the signing of this pact launches this Nation upon a new and bold departure from our traditional foreign policy. The wisdom of this venture will be questioned carefully by Members of the Senate who will be responsible for making official this far-reaching commitment.

When the pact is stripped of its diplomatic phraseology and boiled down to its essence, it emerges as a peacetime adaptation of the lend-lease idea with Marshall plan refinements. When this definition is translated into "hill talk", it means that you, you, and you—the American taxpayers—are going to pay for the rearming of most of our wartime friends in Europe. Why? Because our Government fears a war with Soviet Russia and wants some friends on the Continent ready to absorb the shock of the first blows.

Really, our hopes for the pact are twofold. First, we hope it will preserve at least the synthetic peace, or armistice, which we now enjoy by confronting Russia with the unified strength—political, economic, and military—of the 11 nations which have signed it. The signers of the pact hope to convince Russia that together they are bigger and tougher and thereby prevent Russia from starting world war three. Our second hope for the pact is that should Russia start a war, the signers of the pact will be ready and able to overcome the armies of the Kremlin and prevent the Communist hordes of Asia from consuming the Western World.

Capitol Hill opinion on the merits of the pact is divided into two camps. Those who favor the pact say it is a treaty to preserve the peace; that it will prevent war because it serves notice on any would-be aggressor that Uncle Sam will fight if any of our pact partners are attacked. It is pointed out by those who think the pact should be approved that World Wars I and II might have been prevented had Germany been convinced, prior to the outbreak of hostilities, that the United States would fight on the side of France and England. It is further contended that, unless we offer moral support and financial aid to our friends in Europe, they will be forced to go over to the side of Russia or at least compromise with the Kremlin, and, therefore, their military assistance to us would be lost in the event of war.

Those who oppose the pact claim that it is an out-and-out military alliance aimed directly at the Russians; that it will offend the Russians and force them to speed up military preparations; that it divides the world into two military camps and will result in unleashing the dogs of war once again. Those in opposition contend further that the provisions of the pact entangle us forever in the old quarrels and hatreds of Europe; that we are saddling ourselves with a bunch of poor relations who will ride us down the road of economic destruction, and that the pact is a one-sided deal in which we trade hams for wieners.

It is not within the scope of any individual to predict the end result of this new policy, for no one knows just what effect it will have upon unpredictable Soviet Russia. It is hoped that it will deter the Kremlin's warlike activities and preserve the peace. That is the better part of the new plan. The worse part is that it will turn the cold war into a hot war between the East and the West. At best, this new North Atlantic Military Pact is the latest effort in the trial-and-error method of stopping war and dispelling rumors of war.

Without wishing to be too pessimistic, it is well for us to remember that peace treaties, pacts, and alliances have not prevented man from participating in the bloody sport of war in the past. Someone has said, "The past is prologue." Unless and until human nature undergoes a change of heart, man will probably continue to throw stones and wield clubs against his enemies, both real and

imaginary. Nevertheless, we hope this new North Atlantic Pact works. God knows it had better work or man, the biped ruler of this earth, may find himself stripped of all semblance of modern civilization. Time, the arbiter of all things man-made, must be the judge.

ECA's Big Decision

EXTENSION OF REMARKS

OF

HON. LEON H. GAVIN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 13, 1949

Mr. GAVIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following articles from the New York Journal of Commerce:

[From the New York Journal of Commerce of March 9, 1949]

ANGLO-UNITED STATES FIGHT FOR OIL OUTLETS IN EUROPE BARED—ECA AIDE BARS USE OF AID FUNDS TO BUILD UP RIVAL PLANTS ABROAD

(By W. M. Jablonski)

An intensive battle shaping up between British and American oil companies for marketing outlets in Europe was brought out into the open here yesterday by an ECA official.

Walter J. Levy, consultant for ECA's petroleum branch, declared that his agency was fully aware of the "grave and serious problem" confronting American oil companies as a result of the European dollar shortage and the huge expansion program mapped by British companies for their sterling oil.

HAILED BY INDUSTRY

He assured oilmen, however, that ECA did not intend to use its funds to "duplicate existing (American) facilities unnecessarily."

His statement, made at a meeting of the National Federation of Financial Analysts Societies, was hailed by oil-company officials here, many of whom had been growing increasingly concerned whether American taxpayers' money would be used to help drive American oil investments out of Europe.

ECA's belief, Mr. Levy stated, is that "it is in the economic, political, and strategic interest of the United States that these (American) companies maintain their oil interests world-wide and obtain fair and equitable treatment in the oil markets of Europe."

REFINING PLAN TOO OPTIMISTIC

He added:

"In this process of making Europe self-sustaining somebody may well get hurt, but I believe it is imperative that no vital interests of the United States be sacrificed and that no legitimate business interests be hurt unnecessarily."

Describing the original refinery-construction program submitted by individual European countries last fall as too optimistic, Mr. Levy said ECA has asked OEEC (Organization for European Economic Cooperation) to scale down the individual programs more in line with the future needs of the world oil economy.

The original program, he said, called for a refining capacity of nearly 66,000,000 tons in Europe and an expansion of European-owned overseas refining capacity from 54,000,000 tons to 72,000,000 and their crude-oil production outside Europe from 75,000,000 tons to 114,000,000 by 1953.

OVEREXPANSION SEEN

Such a program would obviously result in overexpansion of facilities, the ECA officials said, since it presupposes an increase of 14 percent in world oil demand during this period as against only 6 percent forecast for Europe and the United States. European consumption, he said, is expected to rise from the prewar 30,000,000 tons annually to 46,000,000 by fiscal 1949 and only 60,000,000 by fiscal 1953.

"We think it would make very little sense to duplicate existing facilities unnecessarily," Mr. Levy declared.

"Nor does it appear economically sound to expand nondollar oil production to such an extent that it would drive most of the dollar oil out of European markets if such displaced dollar oil would in turn drive nondollar oil out of dollar markets. In the end nobody would gain, certainly not the United States taxpayer, and trade chaos would be superimposed on world-wide confusion."

OIL VITAL IN RECOVERY

On the other hand, the ECA official stressed that expansion of refineries in Europe and of crude-oil production controlled by British companies outside of Europe remains "one of the most effective means of reducing Europe's dollar deficit." Oil alone accounts for 20 percent of the $4,200,000,000 deficit estimated by ECA for fiscal 1950.

Mr. Levy pointed out that even though ECA does not believe that the original plans of the OEEC countries will completely materialize, oil refining in Europe and oil production outside of Europe will still make an extraordinary contribution to recovery.

He said the British estimate that an investment of about $2,000,000,000, perhaps 40 percent in dollars and 60 percent in sterling and other countries, will result in an increase in the annual value of crude oil and refining products output by British companies of nearly a billion dollars by fiscal 1953.

Noting that Europe will probably still have a dollar shortage when the ECA program is ended in 1953, Mr. Levy said that the problem facing American companies, thus, is one of "maintaining outlets for dollar oil in Europe even though the dollar resources of the importing countries are severely limited and even though sterling oil will compete with dollar oil for such outlets."

CHIDES OILMEN

He offered no concrete proposal to solve the dilemma, but expressed conviction that a combination of "skillful planning" by the oil companies in the next few years and cooperation between Government and industry should help "solve the problem confronting the American exporter in general and the American oil industry in particular."

Mr. Levy chided those oilmen who say they would be better off without ECA.

Without ECA, he pointed out, the "obvious thing for a country like Great Britain to have done would have been to develop its one great imperial asset, and that is oil, for all it was worth.

"Without ECA, therefore, the European countries would have had no alternative but to buy British oil to the limit of its possibilities, and those possibilities are great, indeed," he continued.

"There would have been no chance to work out a solution in good time which would permit the American oil industry, with foresight and judgment, to maintain its important and vital role in the oil production and marketing centers overseas.

"Without ECA, we would have had not only political chaos in Europe of an unheard of magnitude but the dollars already spent—and what we have spent on oil up to now is a very sizable amount—would not have been spent; the American oil industry would already have lost a major share of its present exports with serious repercussions on our foreign and domestic production and, I believe, on prices."

[From the New York Journal of Commerce of March 16, 1949]

PETROLEUM COMMENTS

(By W. M. Jablonski, petroleum editor)

ECA'S BIG DECISION

How far should American taxpayers help finance expansion of European oil facilities at the expense of existing American oil investments abroad?

That is the question now confronting ECA.

Complex and far-reaching in its implications, the ECA petroleum issue presents something of a dilemma:

1. Europe wants to expand its own oil-refining facilities at home and European-controlled production of "sterling" oil (principally British and Dutch) in the Middle East and Caribbean. This would eliminate need for importing dollar oil and make it possible to export sterling oil into dollar markets.

2. It wants ECA to help finance at least part of this expansion program (estimated at $1,500,000,000).

3. Expansion of such "sterling" oil facilities to replace dollar oil imports undoubtedly offers one of the easiest ways of aiding Europe's recovery oil accounts for a large proportion (20 percent) of the present dollar deficit, and a dollar shortage is expected to continue even after the ECA program is ended.

4. However, expansion of such sterling oil facilities will tend to freeze out dollar oil from European markets, displace large existing American investments there as well as the big dollar oil investments built up in the Middle East to supply these European markets.

The program presented to ECA by individual European countries call for tripling Europe's refining capacity by 1953, plus boosting European-owned refineries abroad by about 33 percent and expanding European-owned foreign crude oil production by 52 percent in the same period—far exceeding anticipated European consumption.

ECA recently asked these countries to revise their programs more in line with their future needs. It is obvious, however, that even if the program is only partially carried out, it would still have a far-reaching effect on American dollar oil investments in Europe and the Middle East—and, incidentally, tend to encourage a monopoly of a few big "sterling" oil companies in large areas of the world.

Indirectly, too, this program would also help finance expansion of these sterling oil companies in other markets such as South American, since the dollars supplied by the United States to such companies in Europe will release funds for further expansion in other areas.

If carried out to its extreme, the program could also have repercussions on the domestic American oil industry as overexpansion of facilities in the Eastern Hemisphere would tend to depress world oil markets.

That ECA is aware of the gravity of this outlook was made clear here in a recent talk by Walter J. Levy, chief of ECA's petroleum branch. His speech was refreshing in its frankness and realistic appraisal of the "grave and very serious problem" facing American oil companies as a result of the "expansion program * * * of the British oil industry".

"In this process of making Europe self-sustaining," Mr. Levy declared, "somebody may well get hurt, but I believe it is imperative that no vital interests of the United States be sacrificed and that no legitimate business interests be hurt unnecessarily."

While Mr. Levy outlined the problem, he left unanswered what is to be done.

Certainly Congress never intended ECA to use taxpayer money to sacrifice private American investments abroad and build up their foreign competitors. On the other hand, the ECA program, designed to halt the trend to

communism in Europe, is an important instrument of American foreign policy, and oil is an important part of that instrument.

There is no easy, ready solution. There should be some area, however, within which the over-all policy of fulfilling ECA's aims could be reconciled with important American investments abroad, without sacrificing either. It is a problem that should command the careful attention and cooperation of top level leaders in both industry and government.

Civil Rights in New Jersey

EXTENSION OF REMARKS
OF
HON. PETER W. RODINO, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 13, 1949

Mr. RODINO. Mr. Speaker, it is with a humble pride that I point out that I am a life-long resident of the State of New Jersey. And, justifiably, I am proud of its great citizenry as a forward-looking people. They are a people who in the spirit of our Declaration of Independence sincerly believe that all men are created equal and that preserved to them are certain inalienable rights regardless of race, color, or creed. This is the spirit which has made America great. This is the spirit which will preserve for us a solid Union, a prosperous and peaceful America. And, it is hoped that this great lesson will be learned by the peoples of all the world, so that one day, fear hatred, and insecurity will disappear like clouds from the face of the earth and the hopes of man will have been realized.

Some weeks ago, the legislature of my State enacted a civil-rights bill. Partisan politics or sectional differences did not prevent passage of this necessary legislation. Republicans and Democrats alike saw the need for passage of legislation which would make possible that free Americans—regardless of race, color, or creed and station in life—be permitted to live in harmony with one another and each one in his way to pursue happiness. The great city of Newark, which is a melting pot of peoples of all races, creeds, and colors, where there are rich and poor, through its duly elected commissioners, adopted the following resolution. It is fitting it be included herein under leave already granted:

Whereas our founding fathers adopted the principles of equal rights and personal liberty as basic ideals of our democracy; and

Whereas a great Civil War was fought to perpetuate these principles; and

Whereas discrimination of any kind has no place in our way of life and, for the future welfare of our people, must be attacked wherever and whenever it is found; and

Whereas the legislature of our State has adopted the civil-rights bill which pronounces and supports these principles; and

Whereas the people of the city of Newark, who come from every race, color, creed, and station in life, have always demonstrated that free Americans, no matter what their belief, can live in harmony with one another; and

Whereas in various sections of our country there is a strong tendency to violate the fundamental rights of our citizens, and it is necessary that Congress also adopt measures by way of safeguarding all of the people in the pursuit of the way of life guaranteed by our Constitution: Therefore be it

Resolved—

1. That the Board of Commissioners of the City of Newark commend the Governor and Legislature of the State of New Jersey for having passed the civil-rights bill.

2. That Congress, through its recognized leaders, be urged to adopt a like measure.

3. That a copy of this resolution be forwarded to His Excellency, Harry S. Truman, President of the United States of America.

4. That a copy of this resolution also be forwarded to the United States Senators and Congressmen from New Jersey.

RALPH A. VILLANI,
VINCENT J. MURPHY,
MEYER ELLENSTEIN,
JOHN B. KEENAN,
Board of Commissioners of the City of Newark, N. J.

Adopted at a meeting of the Board of Commissioners of the City of Newark, N. J., April 6, 1948.

Certified to by me this 6th day of April 1949.

H. J. REICHENSTEIN,
City Clerk.

The Grand Old Party

EXTENSION OF REMARKS
OF
HON. EUGENE D. O'SULLIVAN
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 13, 1949

Mr. O'SULLIVAN. Mr. Speaker, with the idea in mind that everyone, regardless of politics, should strive to get the Republican Party back on its true political course, so that it can again take its helpful place in American politics, I have responded to the urge to suggest the following thoughts for the serious consideration of the unselfish party leadership, and the innocent rank and file of that formerly great and formerly respected and respectable party.

The control of the minority party, in my opinion, is in the selfish clutches of men who are operating none too cleverly behind the scenes. There was nothing wrong, as I see it, with the Republican Party, as a party, in the early years of its political life. It had a great founder in the person of Abraham Lincoln. At that time it was the true party of freedom in these United States. Its founder gave to this Nation and to the world a great document of human freedom, the Emancipation Proclamation, and he also summoned up all of the necessary courage to make his daring proclamation, during his short political leadership a reality instead of a dream. Also in those bygone days it was the party of all patriotic, just, and freedom-loving people. As time wore on the high purposes of the founder of the party seem to have been buried and forgotten as the years rolled on, each passing year being worse than the preceding year, until now in its present hands it is the party of the classes instead of the party of the masses, and it is now squeamishly flirting with civil-rights slavery and industrial slavery.

The Grand Old Party has ceased to be grand in its present-day doings and sayings. It is grand only in ancient and almost forgotten retrospect.

Cannot the good and the true members of the Republican Party dispossess the present-day usurpers of their vote-blasting control, and return party control into cleaner, better, and more deserving hands? I certainly hope so, because our Republic contemplates the existence of two strong, well-meaning and well-doing political parties, so that if one party does not act in the interests of the Republic the people may look to and select the candidates of the other party as their public servants. Two such strong parties would do much to discourage splinter political parties who flourish most when there is only one strong political party.

For the purpose of showing the discouraged viewpoint of a Republican newspaperman, and not for the purpose of agreeing to everything appearing in the proffered item, I now set forth an editorial by Harold G. Stagg, which appeared in a Washington newspaper, the Vet Times, on April 9, 1949, at page 5 thereof:

GRAND OLD PARTY
(By Harold G. Stagg)

It seems that almost everyone is writing a book, a magazine article, or making a speech these days on that fascinating subject, What's wrong with the Republican Party.

By birthright, my allegiance belongs to the Republican Party, but I must confess that when I get in a voting booth I'm the greatest little ticket-splitter you ever saw. I haven't voted for a Republican presidential candidate since Wendell Willkie ran in 1940 and the last Republican Congressman to get my vote was a personal friend.

I've known for years what's wrong with the Republican Party, but if I wrote a book no one would read it. I've told a lot of Republicans what I think is wrong, but do they listen? Not on your life.

The April issue of Fortune magazine announces that it plans to hold periodic open hearings on the future of the Republican Party. What future?

Senator ROBERT A. TAFT, the Ohio Republican, is the first witness called by Fortune to keynote GOP planning for 1952. TAFT starts right off by admitting that the Republicans lost the last three national elections because of poor presentation to the electorate.

"The Republican Party has not done a very good job of explaining its principles of American history and Government," says the Ohio Senator who—love him or hate him—is still one of the few bright lights in the GOP.

That statement, however, is the understatement of the year—bar none.

The Republican Party is consistent in doing a fantastically lousy job of selling itself to the public. There is no excuse for the ineptness, the incompetence, the downright stupidity of the public relations division of the Republican National Committee.

But even those fellows have an alibi.

It's a pretty tough thing to sell the politically wise American people a bill of goods—particularly when it doesn't carry a price tag and when most of the visible samples offer the people something they don't want.

I'll never be invited to testify in Fortune's open hearings, but unless the Republican officeholders and spokesmen change their tactics pronto I can predict the outcome of the 1952 election right now—a sixth consecutive term of office for the Democrats.

There are few men of vision active in the councils of the Republican Party today. A few who show evidences of vision are too often blinded by party politics, by lack of courage, and by lack of a cause celebre.

Yet there is a cause celebre made to order for all good Republicans. That is to rid the party of the stuffed shirts, the poisonous reactionaries, the bitter-end obstructionists, the mental lightweights, the financial heavyweights, and the host of incompetents who issue statements from Republican National Committee headquarters that send shivers up the spines of the intelligent.

How can the Republicans expect to win elections when they keep trying to jam down the throats of the American people candidates who have been rejected time and time again?

How can the Republicans expect to win elections when the men in public office who are symbolic of Republicanism make the headlines only as obstructionists—obstructing not necessarily the opposition Democrats, but obstructing the American people in their normal progressive march toward a better life?

If the American people say they want more and cheaper houses—the Republicans block housing legislation.

If the American people say they want more and better educational facilities for their children—the Republicans block Federal aid to education.

If the American people say they want fair working conditions for organized labor—the Republicans block labor reforms.

If the American people say they want more and better social security—the Republicans block social-security legislation.

If the American people say they want lower prices and better products—the Republicans block anti-inflationary legislation.

You'd think to hear the Republicans rant in Congress that this country was populated entirely by a mixture of high-minded millionaires, real-estate lobbyists, and Treasury-raiding Socialists. Instead, it's populated by people who vote for the things they want and the things the Republican Party won't give them even when its platform pledges that it will.

What the Republican Party needs—if it wants a future in the United States—is a modern-day Charlie Michelson with a feel of the public pulse. Smart politicians don't hire ex-generals to woo the affections of ex-GIs, but the Republicans did.

And what the Republican Party needs—if it wants a future in the United States—is to put a damper on the loud-mouths in Congress who too often aline the GOP against the people in favor of the few—and give some of the more promising newcomers like BALDWIN of Connecticut, IVES of New York, and LODGE of Massachusetts, a chance to be heard.

Until then, the one thing really wrong with the Republican Party would seem to be the Republicans.

I do not and cannot rejoice at the present hopeless plight of the Republican Party. It has my sincere sympathy, and I extend to it my best wishes, and express my fondest hopes that it will soon be resurrected from the tomb or hide-out of selfishness, where it has been imprisoned and held for ransom by antisocial men and interests entirely too long for its own good, and for the well-being of the Nation as a whole.

In conclusion I earnestly say that the grip of bad big business and bad big men must be disengaged from the leadership of the present-day Republican Party.

Our Economic Problems Require Study

EXTENSION OF REMARKS
OF
HON. GORDON CANFIELD
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 13, 1949

Mr. CANFIELD. Mr. Speaker, under leave to extend my remarks, I present the following timely and challenging editorial from the Paterson (N. J.) Morning Call:

OUR ECONOMIC PROBLEMS REQUIRE STUDY

Some economists who watch the international situation very carefully are of the opinion that in the next few years more and more American industries will establish branch manufacturing establishments abroad, as some have already done, and managers of American-owned factories in Europe and Asia will in increasing quantities be sending their goods into the United States, where they will come into competition with consumer goods made by American workmen. The reason for this alien-branch idea is said to be the increasing cost of living in the United States, with higher taxes, higher manufacturing costs and higher wages, and that manufacturers who build abroad will be seeking to get away from the conditions which handicap them here.

It will be too bad indeed if conditions in the United States should make it better for our producers to make their goods abroad and then send them back to the United States. Such a procedure would be unhealthy to the Nation and could not last long for several reasons. In the first place, if too many goods of this kind come from abroad we can expect remedial legislation in the way of tariffs or other restrictions. In view of this it will be well for our industrial and labor leaders to give this subject serious study, and our economic experts at Washington should cooperate with them in seeking to bring about conditions which will not seriously affect our industries.

Another thing to be considered by our industrialists is the fact that many of the European countries are steadily becoming more socialistic, and the day may not be far distant when a privately owned industry will not be safe in one of these countries. As far as the administration and Congress are concerned, it would be most helpful if real governmental economy was brought about, our tax burdens become less heavy, and the cost of living is reduced, so that production in the United States can be increased and provide employment for our rapidly growing population.

National Health Insurance

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES

Thursday, April 14 (legislative day of Monday, April 11), 1949

Mr. HUMPHREY. Mr. President, one of the most significant indications of popular support for President Truman's national health-insurance legislation was a poll of leaders of citizens' organizations published in the current American Druggist. It showed that 67 percent of these leaders favor the President's program.

Perhaps the most significant thing about the poll is that it comes from a trade magazine which is opposed to the President's health program and carries in the current issue an editorial urging druggists to campaign against that program. But the magazine does not discount the importance of its poll. On the contrary, it says the poll "foreshadows the possibility of broad grass-roots support for the Truman program."

Mr. President, I ask unanimous consent to include this story from the March issue of the American Druggist in the CONGRESSIONAL RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

OPINION LEADERS STRONGLY FAVOR TRUMAN HEALTH PLAN—67 PERCENT OF EXECUTIVES OF CITIZEN GROUPS, REPRESENTING 40,000,000 PEOPLE, FAVOR PLAN—QUESTIONNAIRE WAS SIMILAR TO THAT SENT TO PHARMACISTS BY AMERICAN DRUGGISTS

(By Maurice Mermey)

As of today, national health insurance is regarded with favor by a majority of citizen organization leaders in the United States. Characterized as opinion factors, because they are an effective force in molding opinion and influencing action on public issues, these organizations comprise thousands of national, State, regional, and local groups. They have a combined membership of approximately 100,000,000; and, even after eliminating duplicate memberships, their rolls include between 30,000,000 and 40,000,000 individual citizens.

In order to learn what these leaders know and think of national health insurance, American Druggist turned for cooperation to Resolved, a monthly newsletter of the citizen-organization field published by Baldwin and Mermey. The 1,500 presidents and program chairmen of citizen organizations on the Resolved mailing list were sent precisely the same questionnaire which American Druggist previously distributed to retail druggists. Responses were received from 360, or 24 percent, of these leaders. Here are the high-light results of the citizen-organization survey:

Of those leaders who expressed an opinion, 2 out of 3 favor national health insurance, while 1 out of 3 either favors the present system or considers the Truman proposal dangerous.

Of those who respond, 1 out of 8 expressed no opinion.

Of those who responded, 4 out of 5 gave the correct answer as to how national health insurance would operate.

Of those who gave the correct answer, 7 out of 10 favor national health insurance.

Of the organizations with which the 1,500 leaders are affiliated, 650 are national, 475 State, 325 local, and 50 are regional groups. As compared with the fact that 79 percent of the valid responses gave the correct answer as to how the program would operate, 67 percent of the leaders polled should have been familiar with the subject because they belong to organizations which deal with social, economic, or health and welfare issues, or have general programs of which national health insurance should be a part. On the other hand, 500 organizations, or 33 percent, deal exclusively with international, interracial, and similar issues, and not with matters related to national health insurance.

The significance of these organizations' support for or opposition to the Truman program lies in the fact that they include such

groups as the National Board of YWCA's, National Council of YMCA's, National Federation of Business and Professional Women's Clubs, American Association of University Women, Congress of Parents and Teachers, League of Women Voters of the United States, National Education Association, Federal Council of Churches of Christ in America, American Legion, American Jewish Congress, National Catholic Welfare Conference, and National Association of Consumers. State, local, and regional groups are, in large part, branches of these and other national groups; those which are not concerned primarily with local issues.

Encouragement will be found by those advocating the Truman program in the fact that 182 leaders, or 67 percent of those who took a position, favored national health insurance. This is, indeed, a significant figure, for it foreshadows the possibility of broad grass-roots support for the Truman program. Advocates will also be heartened by the fact that leaders with knowledge of the program favor it more than do other leaders, as witness the statistics shown below.

Of the 242, or 79 percent, who answered question 1 correctly: 166, or 69 percent, favor the Truman proposal; 68, or 28 percent, favor the present system; 8, or 3 percent, take other positions.

Of the 25, or 8 percent, who answered question 1 incorrectly: 13, or 52 percent, favor the Truman proposal; 10, or 40 percent, favor the present system; 2, or 8 percent, take other positions.

Of the 41, or 13 percent, who didn't know enough about national health insurance: 3, or 7 percent, favor the Truman proposal; 5, or 12 percent, favor the present system; 33, or 81 percent, have no opinion.

Opponents of the Truman program may also find rays of light in the survey's findings. A pattern o fstrong citizen-organization support for social issues is reflected in our Catalog of Attitudes which lists the positions these groups have taken on 200 national issues. In respect of national health insurance, the catalog lists support by 37 groups (excluding farm, labor, business, and professional) and opposition by only 4. The survey, on the other hand, shows a less decisive pattern, with one leader opposing the Truman program for every two favoring it. Also, of 52 questionnaire replies which were invalidated (incomplete, more than one answer per question, etc.) 30 leaders favor the present system and only two favor the Truman proposal. Let it be understood, however, that these are merely rays; for, by a very substantial majority, citizen organization leaders beam on the Truman program.

Significant of the interest in the subject and in the questionnaire is the fact that comments accompanied 124, or 34 percent of the replies. Twenty-four leaders commented unfavorably on the questionnaire, some criticizing the word "compulsory," others criticizing what they regarded as inadequacy of alternatives offered in both questions, still others questioning the survey itself as being premature. Another 25 commented unfavorably on the socialized-medicine aspects of the national health insurance proposal, while 28 commented unfavorably on the campaign of the American Medical Association or of organized medicine in general. Of this latter group, 12 favor the Truman proposal and 6 favor the present system.

The opinions which citizen-organization leaders express respecting national health insurance, or any other public issue, does not necessarily coincide with the positions which may be taken by their groups. On the other hand, our experience in this field indicates that views and positions will coincide in the overwhelming majority of cases. Accordingly, advocates of the Truman program can be satisfied with their score among citizen organizations, while opponents have much work and soul-searching ahead as regards this large and important area of public interest.

Winning Theme Song of United States Treasury's Peacetime Savings Bond Drive

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES

Thursday, April 14 (legislative day of Monday, April 11), 1949

Mr. WILEY. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD a statement by me regarding the announcement of the winning theme song of the United States Treasury's peacetime savings-bond drive.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

ANNOUNCEMENT OF WINNING THEME SONG OF UNITED STATES TREASURY'S PEACETIME SAVINGS-BOND DRIVE

Mr. President, I should like to take just a few moments of the time of the Senate. It is my pleasure to announce the winning theme song for the new peacetime savings-bond drive of the United States Treasury Department. This drive will open on May 16, and it will extend through June 30. The previous bond song Any Bonds Today by the great composer, Irving Berlin, was, as we all recall, written especially for wartime use.

Now the new song will be entitled "Keep America Saving." This song was written by Frank H. Thorne, a Chicago industrialist. Mr. Thorne is a member of the Chicago chapter of the fascinating organization known as the Society for the Preservation and Encouragement of Barber Shop Quartet Singing in America. Mr. Thorne is past international president of this society and currently a member of the society's executive committee. He sings bass with the Elastic Four, international barber-shop quartet champions of 1942.

I want to extend my heartiest congratulations to Mr. Thorne, and I am sure that Members of the Senate join me.

Incidentally, Mr. Thorne is author of the society's theme song, Keep America Singing, something which his organization of over 26,000 members, including the President of the United States, strives to do.

I have a particular pride in this organization, because its international president is O. H. King Cole, president of a Manitowoc, Wis., company. My own State of Wisconsin has 32 of the society's 565 chapters. Wiscousin contributed 2 of the 43 bond-song entries, and I hope that I will have an opportunity to hear them at many bond rallies in the Badger State. These songs are Buy a Bond, by Cleve N. Akey, of Wisconsin Rapids, and Buy Bonds Today, by Edward Berg, of Milwaukee.

I will not presume to take the further time of the Senate in describing more of the details of this intriguing subject. I do, however, want to say that the society's approach in preserving this wonderful heritage of American barber shop quartet singing is certainly to be congratulated, particularly as it contributes to a wonderful effort like the Treasury Department's Opportunity Drive in selling savings bonds to our people.

I ask unanimous consent that there be printed in the RECORD at this point some supplementary facts on this fine work.

ADDITIONAL COMMENT ON SPEBSQSA

Here are the winning lyrics of Frank Thorne's theme song:

"Let's keep America saving
Let's be fair, do our share
Buy a Bond!
Keep America saving
Three gets four, who wants more?
Buy a Bond!
Far and near, throughout the year
We can help Uncle Sam
Do the things he's planned.
Let's keep America saving
If we save, we'll be strong
So let's all come along
We just can't go wrong."

I should like to mention that over 2,000 quartets have volunteered their services to the United States Savings Bonds Division to sing at savings bonds rallies and functions of all kinds during the opportunity drive to sell $1,040,000,000 worth of Series E Bonds.

International President O. H. King Cole of SPEBSQSA assured National Savings Bonds Director Vernon L. Clark last January that his barbershoppers would produce a theme song for the spring bond drive. King Cole appointed able Ed Place, of Washington, D. C., to direct a bond song contest for the society in cooperation with the Treasury Department. The result was that 43 songs were turned over to Mr. Clark on February 23, on the occasion of a savings bonds dinner at the Mayflower Hotel attended by both President Truman and Secretary Snyder.

On February 28, Congressman LESLIE ARENDS, of Illinois, member of the society's Bloomington, Ill., chapter listed the entries in the CONGRESSIONAL RECORD.

Ed Place's own composition, Bonds for Happiness, which received honorable mention in the contest from the judging committee, headed by the popular Fred Waring, was sung for the President on that evening by the Treble Shooters Quartet of the District of Columbia chapter of SPE3SQSA.

Waring, a member, by the way, of Manitowoc and Sheboygan, Wis., chapters was assisted by Oscar Hammerstein II and Perry Como, both well known to America's music lovers.

It is my pleasure to announce additional awards of the judges, as follows: Second-place, Buy a U. S. Bond Today, by Howard Liffick and Joseph E. Martin, Benton Harbor-St. Joe, Mich.; five other honorable mentions: Brother, Sign Up for Bonds, by Willis A. Diekema, Holland, Mich.; Buy, Buy, Buy A Bond Today, by Alfred F. Girard, Providence, R. I.: Freedom Rings, by Pat Sands and Ed Cronin, Boston, Mass.; If You Want Four Dollars, Francis Stroup, Laramie, Wyo.; and Buy, Buy Another U. S. Savings Bond, by R. H. (Dick) Sturges, Atlanta, Ga.

The savings bond campaign is a great volunteer program operating in every community in the land. The whole heart of this program is volunteer service. I am sure that the Nation appreciates the efforts of the barber shop quartet singers to compose and sing their good old songs to enhance the opportunity drive.

I am glad that the Treasury Department has invited King Cole to its national volunteers dinner here at the Hotel Statler on April 19, with President Truman planning to attend together with other prominent Government officials. Spreading harmony is a great work, and I hope King Cole will continue his leadership in this direction.

Lastly, I should like to say that on May 23, at the National Press Club, Keep America Saving will be sung for the first time by the

Press Club chorus of 62 voices and by the Washington chapter of the National Capitol Chorus, representing 125 SPEBSQSA voices. Good luck and good singing, fellows.

Addresses Incident to Award by Spanish Government to Very Rev. Francis X. Talbot, S. J.

EXTENSION OF REMARKS
OF

HON. HERBERT R. O'CONOR

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Thursday, April 14 (legislative day of Monday, April 11), 1949

Mr. O'CONOR. Mr. President, one of Maryland's outstanding educators, the Very Reverend Francis X. Talbot, S. J., president of Loyola College, Baltimore, and former editor of the Jesuit weekly, America, was honored recently by the Government of Spain with the insignia of the Order of Isabella the Catholic, with the rank of commander.

This award is the highest and oldest insignia of distinction of the Spanish Government. It was presented to Father Talbot in recognition of services rendered in the cause of humanity to the people of Spain.

Because the addresses made on that occasion by Father Talbot and by Mr. William J. Casey, general chairman, the sponsoring committee of Baltimore presented such a clear and authoritative picture of the relation of Spain to the world situation, a relationship which is very much in the minds of everyone these days, I ask unanimous consent that excerpts from these speeches be published in the Appendix of the RECORD.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

EXCERPTS FROM ADDRESS OF THE VERY REVEREND FRANCIS X. TALBOT, S. J.

At the Spanish Embassy on Sunday afternoon, I indicated the single reason why I might possibly deserve any distinction. I can take credit only for this, that I made an editorial decision in July 1936, when the issues were nebulous and the facts available to me were scanty. I can take credit for this, that I was one of the very few editors of national publications in the United States who properly evaluated the clash of ideologies and forces in Spain 15 years ago. I can be a bit self-satisfied tonight, when all the facts are available and the issues are history, that I was completely and irrefutably correct in that editorial decision. Whatever else I may have written or spoken or done was derived from that decision and performed through a sense of duty.

Lest I appear cryptic, I shall indicate briefly my reasons for espousing the Nationalist cause in Spain from the very beginning. As an editor of America, the national Catholic weekly, I was obliged to keep myself informed about world events. My attention was focused on Spain in 1931 when King Alphonsus went into voluntary exile, and the republic was proclaimed. I observed the struggle of the parties of the left and the parties of the right to establish a stable government. But then, about 1934, I clearly discerned in the Republican movement the growing strength of the Communists, the Marxist Socialists, the Syndicalists, and Anarchists, the chaos they were causing in the social, economic, religious, and political spheres, their increasing acts of aggression and violence against the soul and the nature of the Spanish people. I recognized the aim of Stalin in following the Lenin line by setting Europe ablaze at both ends, and the strategy of duping the liberal elements and sowing discontent in the depressed elements. Moscow was clearly planning, I judged, to seize the Government of Spain by patient impenetration and, if this failed, by violence and bloodshed.

Then occurred the elections of February 1936. A contested tally gave a slight margin to the parties of the left. Manipulated by-elections increased the leftist majority in the Cortes. Feeling its strength, the Communist spearhead directed the Government in a systematic destruction of freedom of speech and of the press, instigated the gradual suppression of religious education and liberty, and planned, by an open secret, to beat down all political opposition through gerrymandered elections. The Sovietization of Spain was well underway.

All of these parliamentary aggressions were accompanied by acts of violence. From February till June 1936, during the 4 months of the leftist regime, 113 general and 218 partial strikes were called, 170 churches were destroyed by fire, 69 clubs were battered down, 10 newspaper offices were burned, and attempts were made to fire 294 public buildings, of which 251 were churches. There was an unrecorded number of political assaults and murders.

By the summer of 1936, the seizure of dictatorial power by the Communist-inspired leftist was imminent. It was then that the military under Gen. Francisco Franco revolted against the political junto that was corrupting society, poisoning the roots of religion and branding on Spain a foreign, totalitarian ideology. It was then that I, as the newly appointed editor in chief of America, made my decision against the Marxist junto gripping Spain and in favor of the insurgents. There were but few American editors, publicists, organizations on the side of myself, Father Thorning, and other Catholic spokesmen. Everyone of importance in the United States shouted down the rebellious Nationalists and swung public opinion violently in favor of the Leftist Republicans. It was on the Spanish question in the United States that the Communists in the United States reached their highest peak of influence. And as the Nationalists in Spain battled communism by guns, so I and my associates assailed American communism by words.

Looking back, I can well understand the position of our American leaders and people. They were well fed with the volume of propaganda sent out by the Republican government which completely controlled all the vehicles of communication. They were permitted to hear scarcely any of the truth in favor of the Nationalists. They were misled by the American propagandists who saw in Spain—not two deadly enemies to world peace and human freedom—but only one. They cried out in horror against fascism in Spain. And so did I. But they did not comprehend the equal and greater menace of communism in Spain.

Now, perhaps, they are able to read completed history more clearly than they read history in the making, 13 years ago. Now, undoubtedly, they are convinced that communism is as deadly as fascism and nazism. Now, when they read history backward they must understand what Spain would undoubtedly have been, if the Marxist, atheistic totalitarianism had vanquished the Christian and traditional Spain.

Today there would not have been a free Spain seeking friendship with the United States and the western democracies. Rather, Spain would have been first on the list of the enslaved nations. There used to be a free Poland and a democratic Czechoslovakia, an independent Bulgaria, and a self-governing Hungary. But these and other nations have been throttled by the iron hand of communism and enslaved behind the iron curtain. Spain saved herself from this fate.

I need not belabor the point that Moscow sought Spain as its first conquest in world revolution. The first clash of the Fascists and the Marxists was in Spain. The first battlefield of World War II was on Spanish soil. The first violent conflict between the ideology of communism as against that of western Europe and the United States, burst open in Spain. The first people of Europe to experience the vehemence and violence of atheistic communism were the Spaniards. By saving itself, Spain may one day be credited with the verdict that it helped save the Christian and democratic nations that are now engaged in a cold war, and may be involved, God avert, in a burning and a bloody war. Our way of the future, as the other speakers have attested, is that of friendship for Spain as a weapon of defense against world aggression.

EXCERPTS FROM ADDRESS OF MR. WILLIAM J. CASEY, GENERAL CHAIRMAN, THE SPONSORING COMMITTEE OF BALTIMORE

The outbreak of 1936 in Spain was a clash of ideologies not then understood in the outside world. The citizens of Spain in this civil conflict were seeking to halt a political group that had seized power and was professedly and energetically moving to sovietize Spain; that was building up a dictatorship, and to this end setting loose appalling destruction of life and property. This was of terroristic design and aimed at crushing the individualistic and social aspirations of the people.

The outside world at the same time was being cleverly deluded with the fiction that the then powers of government were waging the battle of world democracy. As the facts were uncovered, those in control were exposed as strongly communistic and as seeking absolute power to establish and perpetuate a totalitarian state. In the meanwhile, so misled was the world's understanding of the real issues that the then Madrid Government had enlisted the sympathies of people of the world attached to democratic principles, who were even beguiled into condemning as rebels the people of Spain actually fighting to recover their liberties.

Many Americans at the time were nevertheless puzzled at Russian planes manned by Soviet combatants and Russian war matériel that joined the Madrid government in its warfare against what subsequently developed to be two-thirds of the people of Spain. At the outset of this conflict the man who is being honored tonight set out with his genius for exploration to get at the real truth. He uncovered the fraud then being perpetrated in the United States by the propaganda of lies and misrepresentations. In a challenging and comprehensive manner he prepared his findings and under the aegis of a large group of eminent Americans this was given publication. The curtain was thus lifted. Vigorously pursuing his self-appoint d task through broadcasts, public lectures, the press, illuminating articles and editorials in America, of which he was then editor in chief, Father Talbot organized and set in motion an informed public opinion that checked our country from going all out in accepting the fraudulent propaganda being handed out in this country with all of the ingenuity of the Soviet pattern and even with the use of American dollars contributed by the unwary.

In this aggressive campaign for spreading the truth Father Talbot recognized that words alone were inadequate and as chair-

man headed and gave direction to the Spanish Relief Fund which raised over $100,000 for the relief of the children, the aged and stricken people of Spain, at a time of their most desperate plight from the evils set loose upon them.

The destructive warfare is now over and what do we find? A Government to be measured by its performances. Rebuilt cities, highways, social reforms long delayed coming into realization, a more united and purposeful people in backing their Government; these are the facts of today. Steadily gaining ground is the Christian social group of young intellectuals, interested in land reform and social advancement, largely inspired by the Pope's encyclicals.

The radical groups, while losing ground, still maintain their Soviet contacts. The Government has the backing of the people and the army. An era of stability and progress is now substantially under way.

The blunders of world authorities in their attitude towards Spain are now giving way to a more enlightened and realistic approach. For example, turn to this statement of Winston Churchill:

"It is a great mistake to allow legitimate objections to Franco and his form of government to be a barrier at this time between us and a country with whom we have many natural ties. It is folly." Then Mr. Churchill adds with a little rueful hindsight, quote: "It is true that I agreed at Potsdam that Spain should not be invited to join the United Nations, but I said that in hope of obtaining full Russian cooperation in a real instrument of world peace. Time has passed since Potsdam and we have now a different relation with Russia."

A few months ago one of America's most sagacious minds in the field of politics, a man noted for his intellectual honesty and forthrightness, James A. Farley, had this to say:

"It is not a matter of whether we agree with the politics within Spain. It is simply a matter of whether Spain is essential to the security of the democracies, and any military man will tell you that it is."

Can we interpret less from such statements of these two master political minds than that Spain is an essential link in the North Atlantic Security Pact, now in process of enactment as the hope of the civilized world for preventing a third world war? Further, don't these declarations suggest to our common sense that with an awareness of the reconstruction so definitely in sight in Spain, our planning for world peace is incomplete unless linked to Spain? The hard economic conditions yet to be overcome there, particularly the severe and increasingly difficult problem of restoring foreign commerce because of the shortage of foreign currencies, plainly indicate that our lavish expenditure of American dollars under the Marshall plan should include a share for Spain. Our country could give a great lift towards perfecting the North Atlantic security pact by fully embracing Spain in our international relations, including the Marshall plan, and bringing its strategic position as to the Mediterranean sector into the formidable alliance for world safety to be established by the pact.

Momentous days are just ahead in Washington for the completion of the security pact. Heartening news comes from essential strategic sectors of decisions to join the pact. Exciting as to this evening's event is the announcement that Portugal is to become one of the parties. There already exists a defense alliance between Portugal and Spain. What more fitting prayer could go up from this distinguished gathering than that Father Talbot's honor may be climaxed by Spain now finding and accepting a pressing and unanimous welcome as a partner in this compact for enduring world security.

Small Business

EXTENSION OF REMARKS

OF

HON. J. HOWARD McGRATH

OF RHODE ISLAND

IN THE SENATE OF THE UNITED STATES

Thursday, April 14 (legislative day of Monday, April 11), 1949

Mr. McGRATH. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an excerpt from an article published in the Washington Times-Herald on Friday, April 1, 1949, which I think will be of interest, since it deals with the important subject of small business.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

THE DAYBOOK

(By Tris Coffin)

The spunky National Federation of Small Business is tieing on the gloves for a showdown scrap with the powers that be in the Senate.

George J. Burger, the federation's hard-driving and single-minded Washington VP, threw out the challenge in a smoldering letter to Senate leaders. He is trying to break the deadlock that keeps the ruckus over a Senate small-business committee tied up tight in the Rules Committee.

Weeks ago, the Senate bigwigs argued that no special committee should be named to keep a lookout for small business. This was backed up by the powerful banking committee, which said, sure kids, a subcommittee could handle all small-business affairs.

But Burger didn't take this lying down. He stormed up on the Hill like a cyclone and pinched and prodded other Senators to challenge this ukase from on high. So the question of an independent committee is now stewing in the Rules Committee.

Burger's letter is addressed to the rules chairman, scholarly CARL HAYDEN; majority leader, SCOTT LUCAS, and old KENNETH MCKELLAR, Appropriations Committee bossman.

In a whack at the Banking Committee's pious statement that it could look after small-business investigations on a $60,000 budget, Burger slugged: "This would amount to less than 2½ cents per small-business institution.

"If this would be the extent of the Senate's aid to small business for a year, we state it would be a waste of public funds, and small business isn't interested in any lip-service relief.

"Small business isn't asking for charity or a subsidy. All it wants is just this: That where its problems are justified by factual evidence it will have a duly constituted body in the Senate empowered to explore the individual problems and then make the proper recommendations direct to the Senate. Small business needs this encouragement at this critical time in its business career."

With this off his chest, Burger snaps in his low, fast chant like an auctioneer, "We'll call a spade a spade."

Senator LUCAS was the front man for those against a separate investigating committee in the earlier battle, but he has passed the word along quietly that this time the boys can get someone else to lead the forces against Burger and company. He's got too many bruises to treat.

Basing-Point System Loses Ground—Reclamation Bids Show Wide Variance at Destination—Phantom Freight Charges Give Way to Actual Freight Rates—Small Business Fears Moratorium

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 14, 1949

Mr. PATMAN. Mr. Speaker, I have shown many times the exact pattern of bids which the Cement Trust inflicted upon the buying public prior to the Supreme Court decision in the cement case on April 26, 1948. I have also shown the price pattern of bids subsequent to the Supreme Court decision which indicates that buyers of cement now have an opportunity to make a selection of a supplier on a competitive basis.

The whole basing-point question revolves around the theme of the public interest. I have maintained, based on facts which have been available to me, that basing-point systems of pricing in any commodity are not in the public interest. Such systems by their very nature are monopolistic and cannot be successfully operated except by collusion behind a curtain of secrecy. I have demonstrated that the utmost care is exercised by members of industries using the basing point and similar systems to guard against public knowledge of the operation of such pricing devices. The basing-point system in the cement industry and the rigid steel conduit industry came to light only after a long period of search and investigation by the Federal Trade Commission. If we now undertake to forge a shield by way of a moratorium, however innocuous its purpose, we shall have subjected small business enterprise to the mercy of monopoly and unfair trade practices.

I desire at this time to further inform the Members of Congress of the pattern of cement prices since the Supreme Court decision. I am including tables of bids received by the Bureau of Reclamation for certain projects under the Bureau's supervision. The tables follow:

TABLE I.—*Specification No. 2291, 40,000 barrels of portland cement in bulk, for the Boise-Anderson Ranch project, bids opened June 24, 1948—Destination, Mountain Home, Idaho*

Bidder	Per barrel price, f. o. b. mill	Freight rates	Per barrel destination price
Permanente Cement Co	$2.65	$2.0868	$4.7368
Oregon Portland Cement Co	[1] 3.05	.8648	3.9148

[1] Oregon, 0.10 cent per barrel discount; Permanente, no discount.

NOTE.—Maximum price increase at time of shipment, Permanente 0.20 cent, Oregon 0.15 cent.

TABLE II.—*Specification No. 2447, schedule No. 1, 280,000 barrels, type 2, portland cement, and schedule No. 2, 512,000 barrels, type 2, portland cement, for Columbia Basin project, bids opened Oct. 26, 1948—Destination, Odair, Wash.*

Bidder	Per barrel price, f. o. b. mill	Freight rates	Per barrel destination price
A. Permanente Cement Co., Oakland, Calif.	[1] $2.65	$1.1381144	$3.7881144
B. Permanente Cement Co., Seattle, Wash.	[1] 3.05	.6392	3.6892
Superior Portland Cement Co.	3.00	.6392	3.6392
Ideal Cement Co.	3.50	1.998816	5.498816

[1] Net price, others 0.10-cent barrel discount.
A. Bid on 396,000 barrels.
B. Bid on 396,000 barrels.

NOTE.—(No. 1). Total required 792,000 barrels—other bids on total quantity.

NOTE.—(No. 2). Maximum price increase at time of delivery, Permanente, Oakland, 0.20-cent barrel, others 0.15-cent barrel.

TABLE III.—*Specification No. 2493, 37,500 barrels of portland cement in bulk, for All-American Canal Boulder Canyon project, bids opened Dec. 21, 1948—Destination, Mecca, Calif.*

Bidder	Per barrel price f. o. b. mill	Freight rates	Per barrel destination price
Permanente Cement Co.[1]	$2.95	$1.8612	$4.8112
Monolith Portland Cement Co.	3.62	1.0152	4.6352

[1] Maximum price increase at time of delivery 0.20 cent; other, none.

TABLE IV.—*Specification No. 2591, item No. 1, 72,000 barrels of portland cement, for the Columbia Basin project, bids opened Mar. 15, 1949—Destination, Adrian, Wash.*

Bidder	Per barrel price, f. o. b. mill	Freight rates	Per barrel destination price
Permanente Cement Co.[1]	$2.999607	$1.0152	$4.014807
Lehigh Portland Cement Co.	3.45	.678	4.1268
Spokane Portland Cement Co.	3.45	.7144	4.1644
Ideal Cement Co.	4.50	1.9552	6.4552
Carroll Mill Co.	----------	----------	[2] 4.80

[1] Permanente, no discount, others 0.10 cent per barrel discount.
[2] Bid includes delivery to job site in bags—informal bid.

TABLE V.—*Specification No. 2597, 3,000 barrels of portland cement in paper sacks, for Paonia project, bids opened Mar. 22, 1949—Destination, Somerset, Colo.*

Bidder	Per barrel price, f. o. b. mill	Freight rates	Per barrel destination price
Permanente Cement Co., Oakland, Calif.[1]	$3.05	$3.91248	$6.96248
Permanente Cement Co, Seattle, Wash.	3.45	4.11008	7.56008
Superior Portland Cement Co., Inc.	3.45	4.11008	7.56008
Ideal Cement Co.	3.55	1.292	4.842

[1] No discount, others 0.10 cent per barrel.

NOTE.—Maximum price increase at time of delivery: Permanente, Oakland, none; others, 0.15 cent; Ideal, 0.30 cent for unshipped portion after first year of contract.

BIDS WITHOUT BENEFIT OF BASING POINT

The foregoing tables enumerating great quantities of cement purchased by the Bureau of Reclamation, without benefit of the basing point, are indicative of the pattern of bid prices which have come to my attention from many sources. The claim has been made that the moratorium proposals are not intended to revive basing-point pricing. This claim of intention is undoubtedly sincere. However, the industries which used the basing-point system prior to the Supreme Court decision, according to the newspapers and other publications, definitely intend to use the basing-point system if a moratorium is declared. Articles which I have read speak of the expectation of again adopting the basing-point system if granted immunity by a moratorium.

SMALL BUSINESS FEARS MORATORIUM

Many organizations composed of small-business institutions, including the National Federation of Small Business, Inc., the National Food Brokers' Association, the Associated Retail Bakers of America, the National Candy Wholesalers' Association, Inc., the National Farmers Union, and the United States Wholesale Grocers' Association, Inc., have voiced disapproval and fear of the proposed moratorium bills. These and other organizations interested in protecting the American economy from the insatiable appetites of monopoly are trying to make their protests heard. There is no doubt that the Congress is interested in the preservation of small business. This has been demonstrated time and again by the inclusion of small-business provisions in many acts of Congress, and only 2 days ago by the inclusion of a special small-business section in the economic cooperation bill.

MEMBERS ASKED TO STUDY BID ABSTRACTS BEFORE AND AFTER THE SUPREME COURT DECISION

I earnestly request that Members consider the tables above, showing different bid prices on cement after the Supreme Court decision on April 26, 1948, and tables, which I have in the past and will in the future bring to their attention, which show identical bid prices before the decision.

If, perchance, we, as Members of Congress, were moved to pass a moratorium bill on every construction of law by the Supreme Court, we would shortly plunge our country into such a chaotic condition that no man could determine with any degree of accuracy what was law and what was not law. We are a law-abiding people and we like to know what the law is and we do not like to cast shadows of doubt upon its interpretation. Turning aside arguments, whether plausible or otherwise, that the moratorium is intended to clarify existing law, the fact remains that even among the proponents of a moratorium, doubt exists as to its meaning. There is only one way, and that is the straight and direct way of allowing sufficient time for doubts, which may prevail in the minds of some people as to the existing antitrust laws, to be resolved by the orderly method of judicial procedure. When that is done let us set our sights to strengthen the antitrust laws for the protection of the American economy, and particularly the small-business segment of our economy and not turn the clock backward by way of moratoriums.

Britons See Chicago, Wonder About Exports

EXTENSION OF REMARKS
OF
HON. JAMES P. KEM
OF MISSOURI
IN THE SENATE OF THE UNITED STATES

Thursday, April 14 (legislative day of Monday, April 11), 1949

Mr. KEM. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Britons See Chicago, Wonder About Exports," printed in the Chicago Daily News of April 7.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BRITONS SEE CHICAGO, WONDER ABOUT EXPORTS

(By Phil S. Hanna)

American mass production methods are ideal for the United States, but they would have limited application in Britain, so thought Sir Maurice Denny, British shipbuilder, one of a party of 21 Britons on American tour.

"With your 145,000,000 people you folks have a market within your own shores—but we, with one-third of that number, must find exports to live. If we adopted your mass-production methods we would have to double or treble our exports," Denny added.

But one of the American hosts replied: "We are building up surpluses of many of the same things you manufacture—if we both export, who is going to buy the combined output?"

ANSWER DIFFICULT

That question was not so readily answered. Cuthbert B. Clegg, British textile operator who has one plant said to be as modern as anything in America, frankly acknowledged that it was a knotty problem.

Another visitor was asked: "If the United States lets enough of your surpluses in to keep your factories operating, how can you expect us to keep on supplying ECA recovery funds?"

In confidence, the visitor replied: "That is the pesky part of the world situation today. America is doing the most Christian-like act in history. But after seeing your productive capacity I am bound to say that if world markets cannot be developed you are running the risk of finding yourselves in the same boat we are in."

DEMAND LIMITED

The nations that can pay for exports, he added, do not need them to the extent necessary to absorb United States and British surpluses and those who need them are unable to pay.

In the last 25 years many of the normal importing countries—India, for example—have made great strides toward self-containment. There is also danger of new cartels, he concluded.

It was thrilling to hear a tablemate at the Blackstone meeting declare that "we are be-

ing served as much meat at this one meal as Britons get in a week."

But the economic views given off the record gave me something to think about as regards the United States situation.

Science and a Lasting Peace

EXTENSION OF REMARKS
OF
HON. J. ALLEN FREAR, JR.
OF DELAWARE
IN THE SENATE OF THE UNITED STATES
Thursday, April 14 (legislative day of Monday, April 11), 1949

Mr. FREAR. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Science and a Lasting Peace," by Waldemar Kaempffert, published by International Latex Corp. as a public service in the Washington Post April 4, 1949.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SCIENCE AND A LASTING PEACE

(In view of Mr. Churchill's speech of March 31, 1949, it is noteworthy that the International Latex Corp. first ran this article as its editorial advertisement on March 22, 1944.)

(By Waldemar Kaempffert)

Despite the reluctance of the great powers to yield their ancient sovereignties in the interest of world unity, the signs are plain enough that, as science and technology sweep on, unification proceeds rapidly.

It means something that an Englishman, a Frenchman, an American, an Australian are scarcely distinguishable so far as their clothes are concerned. It means something that automobiles are very much alike; that electric lights in millions of homes here and abroad glow in accordance with the same principle. It means something that Hottentots, Chinese, Americans, and Englishmen rock with laughter at the same film or thrill to a symphony short-waved from New York to London. It means something that in all advanced countries people travel in similar trains, steamers, or planes, cook by gas supplied by a gasometer, suck dirt out of carpets by electricity shot from a central station. It means something that mass production and standardization, which are the hallmarks of a developed industrial technology, have been adopted by every industrial nation. At the bottom of all this lies the conviction that science and technology are good in themselves and are worth cultivating for social and economic reasons.

A WORLD-UNIFYING FORCE

Clearly, we have in science a world-unifying force that should be systematically and rationally applied. Already there are in the world perhaps 250,000 first-class research chemists, biologists, physicists, and engineers. These men and women in normal times meet in international conventions and give freely of their knowledge to the world. No questions are asked about the race, nationality, or creed of these internationalists. We have here the nucleus of an organization that could weld the world psychologically and socially into a unit.

Science ought to be discussed at the peace table and not just politics, spheres of influence and economic rights—the kind of science that will really usher in a new order. Science has never had more than half a chance. It has had to develop in the face of frustration, even of downright suppression. Let us then at the peace table organize research on a world-wide scale with the intention of raising all countries to a single high intellectual and economic level, of giving all peoples a common outlook, and of thus preparing them for the acceptance of a single political order. We need experience in thinking and acting together if we are to convince ourselves that more is to be gained by regarding the land, the sea, and the air as a whole than by regions and countries.

Suppose, therefore, we organize a World Scientific Commission and suppose that we finance it by contributions from participating nations. One quarter of 1 percent of prewar budgets would be enough.

The Commission would first map out what has been accomplished. Gaps in our knowledge would appear. The program of research would be framed to fill them as well as to advance existing knowledge. As the results poured in some of the major disgraces of our scientific record would be expunged.

It is a disgrace that millions must still groan with arthritis. It is a disgrace that the conquest of cancer is not yet in sight. It is a disgrace that we have only the vaguest notion of what happens when a piece of beefsteak is chewed and digested. Because we know so little of the mechanics of heredity—why we inherit blue eyes or stub noses and some afflictions from our parents—it is a disgrace that we cannot pick out of the American population the 18,000,000 who are themselves mentally sound but who are believed to be the carriers of mental disease that can be passed on. It is a disgrace that millions of chemical compounds remain to be discovered—compounds of immense potentialities in medicine, agriculture, and industry. It is a disgrace that we cannot predict what the weather will be a fortnight hence in Chicago and New York.

FRUITS OF ORGANIZED RESEARCH

If we organize research to remove these and many other disgraces we shall not only improve the lot of mankind but change world outlook. Enlist the aid of the sociologist to predict the consequences of discovery and invention, so far as that is possible, and it lies within our power to direct social change, to imbue the world with new social purpose, to prepare the world for unity.

No vast palace of research is necessary. Universities that accept grants under the plan would still conduct research on their own account. So would the great foundations and industries. The Commission would be fully aware of its social function, meaning that the unknown would be penetrated with no thought of profit yet with the conviction that direct material and intellectual benefits would accrue. The Commission would concern itself not with inventions as such but with the discovery of principles that inventors, engineers, physicians, and farmers could apply.

Year after year the work would go on. The lagging biological sciences would receive an enormous impetus, and the social scientists and psychologists would be able to make field studies and conduct experiments on a scale unprecedented. We want to accelerate the process of unification that has begun with steamships, radio, airplanes, motion pictures, and engineering.

SCIENCE AND HUMAN PROGRESS

The World Scientific Commission must concern itself with the broad pattern of education as well as with the organization and support of research. That pattern must be shot through and through with social purpose. What does relativity mean to me? Why are physicist. bombarding atoms? What good will it do when they find out how matter and how the universe is put together? Such questions probe deep into meanings that are rarely revealed in the classroom. Both the social point of view and the scientific approach to any problem must be acquired by the masses of Asia, Europe, and the Americas. It may take decades, but the project is worth undertaking.

Give us international cooperation in science, and soon there will be cooperation in other fields. For invariably change in science means social change, so that new discoveries in turn call for cooperation in government to make the most of them. With peace maintained by an international police force and experience in cooperation gained by the international organization of science (the one subject on which we can agree), the world will begin to think of unity, not as something utopian but as something necessary.

Presented as a public service by—
INTERNATIONAL LATEX CORP.
DOVER, DEL.

Address of Rev. William J. Smith, S. J.

EXTENSION OF REMARKS
OF
HON. DONALD L. O'TOOLE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 14, 1949

Mr. O'TOOLE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following speech to the Knights of Columbus, Brooklyn Council, No. 60, April 10, 1949, by William J. Smith, S. J., director, Crown Heights Associated Activities, Brooklyn, N. Y.:

Humanity is faced today with perhaps the greatest challenge and crisis that man has ever known. The saddest part of the whole picture is that so many of our world leaders seem to understand neither the problem nor the answer.

We fought a world war to guarantee peace and prosperity. We got a cold war with half the world starving. We established a United Nations to solve all international problems and not one of the member nations has yet been able to provide liberty with security at home.

The United States of America, the mightiest of them, has succeeded in developing the greatest industrial empire the world has ever seen; we have yet to build a sound social order wherein liberty and security are assured at the same time.

Two essential factors are necessary for any human society. Liberty and security. The citizens must be freed of the fear of scarcity and want if a stable and permanent human society is to be maintained. At the same time they must have sufficient liberty to develop the potential for progress which they possess in soul and body.

As a matter of fact, practically every nation in the world is now struggling with this basic riddle—how to bring into balance these two vital elements—liberty with security.

In God's original design there was no problem. The arrangement was as simple as the mind of God could make it. The Creator would guarantee an abundance of the necessities of life for all. Nature would provide spontaneously for the needs of God's children.

The creature, on the other hand, respecting the sovereign supremacy of the Almighty,

would use the precious gift of liberty as God had decreed. Cooperating with God's grace, man would use his natural powers of intellect and will to restrain any inclination to overstep the limits of human rights that had been laid down by the Creator. He would not usurp the place of the heavenly Father in human affairs.

The modern world, however, knows not peace nor liberty nor security. Our every ill, our every evil, our every fear and danger is due to ignorance of one very short, simple sentence.

"This is God's world." That short sentence contains the answer to every social problem that besets the human race. It is because this simple truth goes unrecognized, unrealized, and unwanted that large segments of humanity have today become a seething mass of discontented, suffering, sorrowing human beings.

We have never experienced the full meaning of that simple statement—"This is God's world." Almost from the beginning of human history, God's creatures decided to rewrite the blueprint for human society. We would remake the world, not in God's image and likeness, but in our own. The only world we have ever seen is the demoralized world of men in revolt, not the divinely designed social order intended by the Creator.

Adam was the first liberal. He would have unrestricted personal liberty regardless of the consequences. Yes, I know it is not popular to speak of the Father of mankind. You get into theology. That's God's world and the modern generation wants none of it. We do speak of Adam, nonetheless. If you believe in God, you must accept Adam. He is the key to the present condition of the world. He was the world's first rugged individualist. He was the first to abuse that mighty, mysterious gift—the terrible power of liberty, the freedom even to deny or to defy God Himself.

Every godless so-called liberal ever since has been guilty of the same error. Freedom, the liberty to do as you please, is the only virtue in the godless liberal's book. Order, authority, spiritual obligations have no meaning for him. He is a sovereign, a supreme being in his own right.

Adam was the first liberal and his unregenerated decendants are legion. It is true, life without liberty can be a living death; but life without God denotes a dying humanity.

Human beings, devoid of divine assistance, are incapable it seems of enjoying true liberty together with security.

Overstressing either one or the other, we will plunge into an irrational individualism leading to chaos or succumb to the servitude of dictatorship. The one moral power in the world that can bring both into balance is one whose authority is flouted and whose teachings ignored, misunderstood, or calumniated—I mean the Catholic Church.

Yet unless liberty and security can be brought into balance no sound human society can be maintained. The conflict between the two was not of God's making. It is man-made. The contradiction dates back to the beginning of the human race. The problem is not merely an economic one; basically it is spiritual, just as man is primarily a spiritual being.

Study the case histories of individuals, scrutinize the movements of the world which have changed the course of history and you will find the strains of that same struggle running through every page.

To treat the subject adequately we would have to study the history of every nation in every period. We have time merely to hit a few of the high spots.

With the coming of Christ, a new era dawned upon the world. In that day the masters of the Roman Empire were the lords of all they surveyed. Rome ruled people and things, men and money, with an iron hand.

Only the slave labored. If you can call slavery security, he had it. The freedman enjoyed whatever liberty the minions of Caesar wished to give him. His security was gained at the expense of the loss of liberty to the slave.

Gradually the church transformed this servile state. The institution of slavery withered away and the means of production came into the hands of the freedmen. The State as we now know it had not yet evolved. There was no protection against marauders and aggressors. The property-less laborers and the smaller landowners sought security by pledging themselves to live and work for and defend a feudal baron. Liberty was sacrificed for security. The age of feudalism arose.

Side by side with it, however, under the inspiration of the church and the acceptance of her teachings, the Guilds grew up and flourished. For 700 years, men knew the meaning of a just wage, an honest price, a decent profit. They did not try to hide injustice behind an automatic law of supply and demand or the phoney slogan of free enterprise. Employer and employed lived in an harmonious industrial society with justice and charity as the guiding principles of their actions. They recognized that personal liberties must be used to serve, not to enslave their fellowmen.

By the thirteenth century, Christendom was united spiritually, socially, economically with the bond of one faith, one obedience, one philosophy of life, one Lord, one baptism. Through the influence of the church, the western world had achieved at least an approximation to a balance between the twin weighing pans of liberty and security.

Came the sixteenth century. No doubt a hundred causes contributed to the upheaval which today goes by the name of the Protestant Reformation. Many of my non-Catholic friends are surprised when I tell them that the religious rebellion of the sixteenth century was led by Catholics. The revolt was one from within, not an attack from without. We should not forget that. A complexity of causes entered into it. Basically, however, it was the conflict of liberty versus security reasserting itself.

Abuses, both in the temporal and spiritual world, were widespread. No one who has a regard for truth should deny it. But it was not only the abuses that became the target of these rebellious Catholics. The whole principle, nature, and tradition of spiritual life was under fire. The bolt to individualism, away from spiritual authority, was a break with the established order of Christian civilization that had endured for 1,600 years.

The sovereignty of the church, not in any temporal affair, but as a spiritual authority, was challenged. As Adam, intent on enjoying an excess of liberty, chose to subordinate God's will to his own, so too, his sixteenth century descendants decided to supplant the teaching authority of the church by the private and personal judgment of each individual.

A book, the Bible, was to become the sole norm and guide of faith and morals. The church had guaranteed spiritual security to its membership through the instrumentality of a divinely protected infallibility. The freedom of the individual was necessarily restricted within the boundaries of God's revelation as interpreted by the infallible voice of the church. Sixteen hundred years of unity and spiritual security were interrupted as personal liberty proclaimed its protest against the restrictions imposed by faith and morals.

That revolt still rumbles on. The greatest reason for it in the present day is the contradiction of men who call themselves Catholic, but fail to follow the teachings and principles of the church.

In quest of greater liberty, these dissident Catholics in the sixteenth century cut the moorings that bound them to the bark of Peter. The Western World, outside the church, was set adrift on the shoreless ocean of individualism.

It has been tossed and buffeted by contrary winds and tumultuous waves ever since.

The French Revolution of 1789 was a raging storm that blew the untrustworthy vessel farther out to sea. God knows there was need of reform in France at the time, but not revolution; certainly not the kind of revolution that took place.

On the economic horizon a new phenomenon was seen to be emerging. Capitalism! Capitalism? What praises are sung in its honor! What mystic wonders we attach to the name! It was the same old issue with a streamlined front. The banner of rugged individualism was raised aloft. Social responsibility? Human rights? Nonsense!

Capitalism was nothing less than the individualism of the sixteenth century applied to economics. Today we see some of its effects full-grown. Monster corporations—48 of them worth more than $1,000,000,000 apiece—any one of them with greater assets than 38 individual sovereign States—challenged constantly by giant trade-unions in a self-perpetuating class warfare. Is there any wonder that the bishops' committee of the Catholic hierarchy said in its 1940 message that the system has been predicated on false principles? Or that they should have characterized it in these words:

"They call it free enterprise—but the freedom is for those who possess great resources and dominating strength rather than for the weak or those who depend simply on their own labor for their well-being."

Was Pius XI wrong when he wrote in his famous social encyclical—

"Free enterprise is dead; economic dictatorship has taken its place; desire for gain has been supplanted by a lust for power."

Forty-eight billion-dollar corporations in America, 250 of them own and control two-thirds of all the manufacturing facilities in the Nation. What voice have the working people or the public in the present system? Individualism has built a frankenstein.

Monster corporations versus giant unions in conflict. Liberty for the few; the security of all constantly in jeopardy.

My repugnance for communism is too well known to need repeating. Today, however, we see the strange and horrifying spectacle of atheistic communism clinging to and claiming a monopoly upon the principle of solidarity, while non-Communist America is riddled with economic strife and the Christian world is split into conflicting sects because of the corrosive principle of individualism.

It all began as a spiritual revolt, a dissension in the ranks of the Catholic world. But it could not be confined to one phase of human activity. The spirit spread into every sphere of human living. We witness it now in literature, in the drama, in education, in labor, in industry, in entertainment, in international affairs. It is no longer simply a question of a difference of religious convictions.

The individualism of the sixteenth century has become the intolerance of the twentieth century.

"Keep God out of business, out of politics, out of education, out of industrial relations; out of everything," we are told.

"Don't mention His name in peace conferences; you will offend Russia."

"Keep the preachers in the pulpit and the priests behind the altar rail. That is their world and this is ours!" No, my muddled liberal, this is not your world, any part of it. It is God's world, all of it, and the church will not be muzzled. Nor will we ask Earl Browder, William Z. Foster, Joe Stalin, or any of the fellow-traveling clerics on the Com-

munist band wagon when or where or of what we may speak!

National and international life on all planes and in every phase show signs of the dissolution which began when the solidarity of Christendom was shattered and disrupted.

No voice but that of the Vatican still proclaims the complete, unabridged and untampered-with doctrine of Christ. No voice pleaded harder for peace in our day. Yet how feeble it sounds in a world of harsh hatreds and godless liberalism.

We have seen a Second World War—rulers of the nations mocking the Prince of Peace—thumbing their noses at His vicar in the Vatican—and now some have the audacity and the effrontery to say that the Vatican was the cause of war and the instigator of a new one.

What difference is there in this accusation and the one leveled against Christ by the Scribes and Pharisees when they charged Him with working divine miracles through the power of the devil? There is no difference. Both utterances proceed from the same spirit.

The culmination of individualism, by a cruel irony, seems to be reaching its climax in a contrary, paradoxical opposite—the collectivism of Karl Marx—communism.

Some there are who tremble at the thought of a communistic conquest of the world. They shudder at the sight of the hammer and the sickle. Those who live intimately beneath the symbol of red slaughter may well fear the ghastly shadow that it throws upon their lives. But there is no deep mystery about communism. Cardinal Cerejeira, Patriarch of Lisbon, summed it up in a recent radio speech in a couple of sentences:

"Communism," he said, "is a scourge sent into a de-Christianized society because it has failed to translate into practice the Christian doctrines of social justice and to make the brotherhood of man a reality.

"Although Christian by tradition, Western civilization is dominated by secularism which has deprived society of Christian spirituality * * *. Viewed in this light, communism is nothing but the last, logical step in the process of de-Christianization.

"It cannot be exterminated by police measures."

He might have added "Nor will it be deterred by diplomacy, boasting about democracy, or resting our hopes on the devastating power of the atom bomb."

St. Paul knew about communism years ago.

"Our wrestling," remarked the intrepid apostle, "is not against flesh and blood, but against principalities and powers, against the rulers of the world of this darkness, against the spirits of wickedness in high places."

What defense does he recommend?

"The armor of God"—"the breast-plate of justice"—"The shield of faith"—"the helmet of salvation"—"the sword of the spirit."

"Protest meetings are all right," I imagine he would say, "but I don't think you can lick an Archangel with a speech, a placard, or a slogan."

It is right and prudent to make use of every possible ordinary human means at our disposal to counteract the aggressions, insidious or open, which are used by an enemy of humanity. But we might as well face the facts. Communism is not an ordinary evil. It is an extraordinary, universal, diabolical conspiracy to overthrow the entire existing order of human society with one fell swoop. It is the scene of Lucifer versus Michael reenacted through human agents. It is the culmination of all the revolts of man against God concentrated in one international movement.

To date we have been attempting to meet the menace with a comfortable kind of Catholicism, by a diluted Christianity shot through with secularism and aided by an odd assortment of pagan allies.

Do you think that the Western World has what it takes to measure up to the awesome responsibility that now faces it? I am fearful, as things stand today, that we are weighed in the balance and are found wanting.

It seems to me that the choice of two alternatives is already upon us. We must choose now to rise to the heights of heroism or await the impending era of martyrdom.

The non-Communist world stood united in protest against the unjust sentence of Cardinal Mindszenty. The sainted prince of the church is still in prison. World opinion has had no effect upon the fate of Archbishop Stepinac. The persecution of Protestant ministers in Bulgaria has not been halted for an hour by the reaction of the world to the previous trials.

Communist leaders in Italy, France and England and the United States have within the past few weeks announced their intention of supporting the Soviet Union should war come upon their homelands. The red rulers of Russia in Moscow have given not the slightest indication that the future holds anything different. Satan is determined that he will conquer God's world at any cost and Stalin is his prophet. The human race, down the years, has been clamoring to be free from the yoke of the Creator and to be secure in its own conceits. It looks very much as though the Almighty is permitting us to have our way.

A Christless civilization is witnessing on every front the triumph of secularism.

It may well be that communism is destined to engulf the world. Similar scourges have not been unknown in history. It may well be that in spite of every effort which we, as individuals, can make, the forces of evil may still claim a toll of carnage, suffering and destruction never witnessed before. God will not hold us responsible for it. No single individual can be held accountable for the general deterioration of the world. We play but a part, the role of one son of God. We help or hinder the kingdom of God by our individual lives. Our one great concern is to play that one part well.

We must choose between a philosophy of morality and a philosophy of might. Justice demands that every man receive his due. But justice is not enough. Blended with justice must be charity—and charity does not inquire whether the subject of our attention be worthy or unworthy. We serve our fellow man regardless of race, creed or color—because he needs our help. Justice will remove grievances. Only charity can supply the bond of unity that will restore the brotherhood of man under the Fatherhood of God. "Do good to them that hate you." "You are your brother's keeper."

Armed Forces Appropriation Bill

EXTENSION OF REMARKS

OF

HON. EUGENE D. O'SULLIVAN

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 14, 1949

Mr. O'SULLIVAN. Mr. Speaker, under 5-day general leave requested and secured yesterday by Mr. MAHON, chairman of the Subcommittee on Appropriations, which presented to the Committee of the Whole House on the State of the Union, and also to the House of Representatives, House bill 4146, the National Military Establishment appropriation bill for 1950, I submit the following communication received by me from one of my Omaha constituents, Arthur C. Storz, Jr., who during World War II was an officer in the United States Air Force, and who as such officer distinguished himself in such service with great honor and credit to himself and to the benefit of his country. As an exceptional flyer with great experience in action, I feel that this contribution might well merit the serious consideration of the Members of this House of Representatives, as well as all interested people in the armed forces of this Nation and also the people generally.

LETTER OF ARTHUR C. STORZ, JR.

You gentlemen in Congress are now approaching a decision on which the very freedom of our country may depend. You are deciding, in the event of war, the weapons we will use and who will use them. In other words, you are choosing our first line of defense.

In choosing our first line of defense, I think you should keep in mind that the best defense is a better offense. Now, which branch of our services, the Army, Navy, or Air Force, is able to give us the best offense?

As you gentlemen very definitely know, we cannot avoid a choice of arms by buying all kinds of weapons. We cannot maintain the world's largest Army, the world's largest Navy, the world's largest Air Force, and still remain economically healthy. For this reason, we must build a force which, in case of aggression, can hit the Russians fastest and hardest.

According to Mr. William Bradford Huey, one suggested formula is for a big Army, with lesser appropriations for the Navy and the Air Force. This calls for universal military training, as well as the equipping of 45 western European divisions, and the maintenance of 18 combat divisions of our own. Is this realistic? The Russians have 300 divisions and limitless terrain. The big-army plan, with total conscription of American youth, is not the formula for peace.

The second possible formula is for a big Navy, with lesser appropriations for the Army and Air Force. This calls for construction of gigantic aircraft carriers (in 4 or 5 years' time), the formation of huge task forces, and, in general, the strategy of the recent Navy war against Japan in the central Pacific. Now, is this realistic? Why should the Russians fear warships, even supercarriers? Spreading over one-fifth of the earth, the sources of Russia's power cannot be seriously damaged by carrier aircraft. Our Navy does not possess a single airplane which can be launched from a carrier today with an atom bomb. Offensively, the Navy's weapons—short-range bombers carrying old-fashioned TNT, highly vulnerable mammoth aircraft carriers, ponderous outmoded battleships—have lost their relative importance in an air atomic age against the vast, continental land power with a first-rate Air Force. Obviously, it is like comparing a horse and buggy with any of our modern automobiles.

The third alternative is the air-atomic formula, which calls for the world's most powerful striking Air Force, with lesser appropriations for the Army and Navy. This is realistic. An air-atomic force is an offensive weapon, with which aggressors can be made to suffer, hence, an impressive argument for peace. With an unchallengeable Air Force we would have, in readiness, the one means with which we can immediately deliver our atomic, radiological, bacteriological, and psychological weapons to Russia's heart. By adopting this formula, we can assure our allies and the Kremlin that we intend to maintain a constant, well-advertised, undisputed, 5-year advantage over Russia in air-atomic weapons. This is our one best chance to get protection without bankruptcy. This is the only factor which can offset an aggressor. It is the world's best hope for peace.

The air-atomic formula is supported, of course, by the air officers; but it is also supported by many Army officers, a few Navy officers, and by the overwhelming majority of the American people. It is opposed uncompromisingly, for obvious and quite human reasons, by the Navy, by industrial suppliers of the Navy, and by interested civilian Navy advocates.

It isn't easy for the Navy to take second place after 150 years of being our efficient and only first line of defense. Up to the beginning of World War II, the only arms we maintained in readiness were defensive arms to repeal an overseas invasion. This means that only the Navy was kept ready to fight; and the Navy probably got the lion's share of our defense appropriations.

During World War II, aviation came into its own, and gentlemen, before it was over, the Air Force became not only our first line of offense, but our first line of defense. A Navy will, of course, be essential if the Russians, despite all our efforts to stop them, force us into war. To protect our shipping from submarines and land-base bombers, we shall need fast destroyers, numerous small aircraft carriers and antisubmarines. We shall need improved models of the Navy craft we used against Germany, not Japan. The solid blue water sailors of the Navy know this is the Navy's proper role. They resent the wasteful efforts of the air admirals trying to duplicate the role of the Air Force. They believe the Navy should be a Navy. Even Secretary of Defense Forrestal says, "Responsibility for strategic warfare belongs to the Air Force and responsibility for antisubmarine warfare belongs to the Navy." The Navy strategy for survival has been to grow so big that no Congress can remove it. The Navy, for instance, has been authorized to bring its air strength up to 14,500 planes—more than the Air Force planned to operate in the 70-group program that has been denied it so far. Yet, except for use against submarines and bombers attacking our shipping, these Navy planes would be of little value in a war with Russia. They are short-ranged; they are designed to sink nonexistent enemy ships; they can't carry atomic weapons. How many Navy airplanes did we use against Germany—a continental power like Russia? Only those that hunted submarines.

The Navy is now building a mammoth superaircraft carrier. Authorization for this was obtained by a combination of pressure and deliberate misrepresentation. We were led to believe that this carrier, in 1952, could handle airplanes carrying the atomic weapons. As a matter of fact, the new carrier, even if it can manage to launch a plane big enough to carry the atomic bomb, it will not be able to land the plane back on board. This carrier will cost more than $1,000,000,000, with the plane complement, and the scores of support vessels, without which it cannot leave port. They will stand an excellent chance of sinking it if it ever ventures within their striking range. According to last week, that would be all the way around the world.

In 1948 the people defeated the Navy lobby. The program for the 70-group air force was before Congress. The Navy, supported by Defense Secretary James Forrestal, opposed it bitterly. Congress almost unanimously repudiated the Navy and Mr. Forrestal and authorized the 70-group program.

Now, the same old battle is joined again. Mr. Forrestal, the Maginot minds, the battleship admirals, and the vested interests are trying to rob us of the victory we won in 1948. They want the Air Force to be reduced, instead of expanded. Instead of increasing our present 59 groups to 70, as authorized by Congress, the Navy lobby determined that we shall reduce them to 48, but the American people want the Air Force to come first in our military planning. Not because we aren't proud of the men in the Army and Navy, but because we live in an air-atomic age, confronted by an enemy who can be stopped only with air-atomic weapons. The Air Force is the pay-off weapon; this is our atomic fist; this is the only force with which we could strike atomic blows at Moscow within a few hours.

Our Strategic Air Force is our war-preventing force, our force of peace. Here is the present condition of the Strategic Air Command. They have six groups, the crews of which are magnificently trained, alerted, ready for action. Eight more groups have been activated and are now in the long, tedious, expensive process of training. They are approaching readiness. The other six groups cannot be activated until additional funds are available.

The basic equipment for the strategic air command in the fourth year after the war is still a modified version of the B–29. This is not because the Air Force is satisfied with it. The need is for faster, longer range bombers, so that we may dispense with foreign bases altogether. But, such airplanes come slowly, expensively, with vast effort—and while money is being poured out abroad, adequate funds for improving our bombers are not available at home.

The B–36 and the B–50 are quickly approaching operational use. Our jet bombers are still experimental. Only last week an American Air Force bomber completed a nonstop flight around the world—the most astonishing flight in history. In 94 hours, 1 minute, the plane, a B–50, aptly named Lady Luck II, flew 23,452 miles. It was refueled four times from the air, maintained an average speed of 239 miles per hour. The flight was immediately accorded a dramatic place in the strategy of the cold war. It means that the plane could have dropped an atomic bomb any place it pleased and still get back to its base in the good old U. S. A. It means, too, that the American Government apparently is through salving Russia. The flight could have been stopped by the State Department, but was not. Finally it meant, experienced observers said, the Government has recognized that military readiness to strike back any time, anywhere, is an absolute essential of peace.

Now, is this a place to save money? Are 360—or 600—airplanes too many for this force? Should we not have 1,000 or 2,000 of the finest long-range bombers procurable, ready now and always to defend the Nation? Should we halt the training of crews? Is not our strategic Air Force the exact spot where we should concentrate our money and our effort? Should not this force be given 1–A priority? Should we not resolve that each year our strategic Air Force planes will become faster and deadlier, the range extended, the crews better trained, so that no aggressor will dare break the peace? There is no point in our spending $1,000,000,000 a year on atomic research unless we intend to develop the world's best air force to deliver the atomic weapons.

The Wood Bill

EXTENSION OF REMARKS

OF

HON. E. E. COX

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 14, 1949

Mr. COX. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement:

STATEMENT OF HON. JOHN S. WOOD, OF GEORGIA

I have today introduced a new bill to establish a fair and evenly balanced national labor-management policy. The new bill is designed to meet many of the criticisms that representatives of organized labor have directed at both the existing Taft-Hartley Act and my previous bill (H. R. 3228) and that have appeared to me and some of my colleagues as having merit.

While the new bill repeals the Labor-Management Relations Act, 1947, the bill incorporates the best features of that act. All of the variations from the 1947 legislation which the bill proposes—and there are many—are of a liberalizing nature. No provision of the bill seeks to tighten the 1947 legislation in any manner. It eliminates all of the provisions of my previous bill (H. R. 3228) that had a tightening effect.

Important variations between my new bill and the Labor-Management Relations Act, 1947, are as follows:

1. The bill abolishes the requirement that before a labor organization may make a union shop or maintenance of membership contract with an employer a majority of the employees subject to the contract must have authorized it in an election held by the National Labor Relations Board.

2. The bill permits unions to compel employers subject to a union-shop contract to discharge employees whom the union has expelled for participating in wildcat strikes or for being a member of the Communist Party or some other subversive organization.

3. The bill makes clear that it is not an unfair labor practice for an employer to notify a union that he has places to fill.

4. The bill specifically makes employees on strike eligible to vote in representation elections even though they are not entitled to reinstatement, subject to reasonable time limitations.

5. The bill deprives employers of their right to invoke the act unless they file with the Board affidavits disclaiming membership in the Communist Party or other subversive organizations.

6. The bill permits struck-work clauses in union contracts to be carried out within reasonable limits without violation of the secondary boycott provisions.

7. The bill relieves unions of liability for damages for refusing to handle struck work under similar circumstances.

8. The bill abolishes provisions of existing law requiring the general counsel of the Board to seek injunctions in secondary boycott cases, and substitutes therefor a provision giving him discretion to apply for injunctions against any unfair labor practices, either on the part of employers or labor organizations, before or after the issuance of a complaint.

9. The bill eliminates that provision of existing law which makes a mere failure on the part of employees to comply with the statutory 60-day notice requirement a forfeiture of their rights under the act.

10. The bill clarifies the application of the 60-day notice provision of existing law to reopening clauses of collective-bargaining contracts.

11. The bill gives to unions a grace period of 120 days after the close of a fiscal year within which to file with the Secretary of Labor the financial data which the present law requires.

12. The bill eliminates the cumbersome and ineffectual procedure of existing law which provides for compulsory but unenforceable arbitration of disputes over the assignment of work tasks, thus permitting the Board to handle these disputes effectively under the regular procedure set forth in the complaint and representation sections.

13. The bill clarifies the provisions of existing law relating to strikes and lockouts which jeopardize the national health and safety by enabling the President, when the President finds it necessary, to apply to the courts for immediate protection of the public, without awaiting the report of a board of inquiry, and at the same time making available more effective means of bringing about settlement of the matters in dispute.

14. The bill eliminates the requirement that employees must vote on the employer's last offer, thus doing away with the referendum, which the Director of the Mediation and Conciliation Service and the Joint Committee found to have served no useful purpose.

15. The bill contains numerous technical changes made necessary by the repeal of the Labor-Management Relations Act, 1947.

The 16,000 Veterans' Administration Hospital Beds Ordered Canceled by President Truman Will Cost the American Taxpayers Nearly $13,000,000 or the Cost of 3 New 200-Bed Hospitals

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 14, 1949

Mr. VAN ZANDT. Mr. Speaker, by reason of the committee's refusal to cancel contract authorization in the amount of $237,000,000 to be used for the construction of veterans' hospitals at various points in the United States, we who opposed the 16,000-bed-reduction order of the Veterans' Administration have won a partial victory.

In mentioning the fact that we have won a partial victory, I do so because I am fearful that the language contained in the bill, while it retains the $237,000,000 to cover the construction program, does not make it mandatory that the President shall proceed with the program.

I am not sure whether it is possible to write into the bill a mandatory provision and for that reason, I want to bring to the attention of the Committee a few pertinent facts regarding the 16,000-bed-reduction order issued by Administrator Gray, of the Veterans' Administration, at the request of the President of the United States.

Like the average Member of Congress, my home state of Pennsylvania has suffered as the result of the loss of 1,450 beds because of the complete abandonment of plans to build a new hospital, and a reduction in the number of beds in other hospitals under construction. This reduction of 1,450 beds came at a time when hundreds of veterans were in State institutions because of the crowded conditions of Veterans' Administration hospitals in Pennsylvania.

Aside from the Veterans' Administration hospital in Pennsylvania, let us look at what actually happened as a result of the 16,000-bed-reduction order. Based on information furnished me by Veterans' Administrator Gray, the over-all estimated cost and savings as a result of the order are as follows:

	Number of hospitals or major bed-addition projects	Number of beds	Estimated cost
Original program [1]	100	54,498	[2] $1,119,582,842
Revised program [1]	76	38,382	840,382,560
Net savings	24	16,116	279,200,282

[1] Includes purchased hospital at Butler, Pa.
[2] Congress had authorized $1,064,278,931 for this purpose.

Your attention is invited to the fact that the Veterans' Administration has abandoned plans for constructing 24 new hospitals. In addition, through the cancellation of these 24 hospitals and the revision of plans for others under construction, the loss in beds amounts to 16,116. The Veterans' Administration claims credit for the saving of a little better than $279,000,000.

Let us develop at this point, how much it cost the American taxpayer to enable the Veterans' Administration to report a saving of some $279,000,000.

First, almost every community where a hospital was to be constructed but has been canceled, huge sums of money were spent in providing sites, utilities, and so forth, for the hospital. For an illustration, let us take Salisbury, N. C., located in the district of my distinguished colleague, the gentleman from North Carolina, Hon. ROBERT DOUGHTON. The community of Salisbury floated a bond issue in the sum of $350,000 for the purpose of upholding its end relative to the construction of the new hospital. On January 10, 1949, the Veterans' Administration canceled the 921-bed Veterans' Administration hospital and in so doing, not only left the community of Salisbury "holding the bag" to the tune of $350,000 but an expenditure of $1,030,000 made by the Veterans' Administration was thrown away when the hospital was canceled. No doubt the other 23 communities where hospitals were canceled have had an experience similar to Salisbury, N. C.

Mr. Chairman, I want to insert at this point exhibit A, which reveals that the Veterans' Administration, to save a little better than $279,000,000, actually took a loss of $10,014,000. This table will also show the number of beds involved, cost of sites, technical services, and incidentals in connection with the 24 hospitals that were canceled. Let me add, that the overhead of the Veterans' Administration which no doubt would amount to a considerable sum is not included in the following figures:

EXHIBIT A

Estimated obligations incurred on 24 eliminated hospitals

	Number of beds	Type	Total	Technical services		Site [1]	Other [1 2]
				A/E contracts	Other		
			Thousands of dollars	*Thousands of dollars*	*Thousands of dollars*	*Thousands of dollars*	*Thousands of dollars*
Total (24)	11,171		10,014	5,432	1,971	1,400	1,211
19 assigned to Corps of Engineers	8,671		9,859	5,432	1,826	1,390	1,211
(1) Americus, Ga	250	Tuberculosis	331	238	61	[3]	32
(2) Charlotte, N. C	500	General medical	374	187	63	[3] 65	59
(3) Chattanooga, Tenn	500	do	441	282	72	[3] 27	60
(4) Decatur, Ill	250	do	329	180	73	[3] 44	32
(5) Detroit, Mich	500	do	513	250	79	[3] 76	108
(6) Duluth, Minn	200	do	274	182	62	[3] [4]	30

[1] Obligations for sites and fixed equipment in the main can be salvaged by the Government.
[2] Represents primarily obligations for fixed equipment.
[3] Site acquired.
[4] Less than $500.
[5] Includes approximately $16,000 obligated by the Corps of Engineers.

Mr. Chairman, I mentioned several times that the plans for hospitals under construction have been revised. There cost to be incurred by the Veterans' Administration for changing the plans is $2,739,000. The following table tells the story in detail with regard to redesigning the 15 hospitals under construction:

EXHIBIT B

Estimated obligations incurred or to be incurred for specified categories of costs on 15 hospitals altered in size

	Bed capacity		Type	Estimated design costs			Estimated obligations incurred and to be incurred for sites	Estimated other obligations incurred prior to redesign
	Previous	Revised		Estimated obligations to be incurred for redesign	Estimated obligations incurred prior to redesign [1]			
					A/E contracts	Other		
				Thousands of dollars	*Thousands of dollars*	*Thousands of dollars*	*Thousands of dollars*	*Thousands of dollars*
Total 15 altered in size	14,445	9,500		2,739	3,494	1,068	7,712	193
Total 10 assigned to Corps of Engineers	9,445	6,500		1,813	3,494	928	5,622	193
(1) Cincinnati, Ohio	750	500	General medical	[2] 149	233	63	[3]

(4) New York, N. Y	1,000	1,250	do	643	25	60	[4] 2,969	
(5) Philadelphia, Pa	1,000	500	do	[2] 155	400	89	249	
(6) Pittsburgh, Pa	1,250	1,000	Neuropsychiatric	20	564	112	[4] 106	
(7) Pittsburgh, Pa	1,200	750	General medical	25	441	148	186	
(8) St. Louis, Mo	1,000	500	do	[2] 156	380	90	[4] 166	
(9) Syracuse, N. Y	1,000	500	do	[2] 155	410	85	288	
(10) Washington, D. C	750	500	do	325	290	86	[4] 1,600	
Total 5 assigned to Veterans' Administration	5,000	3,000		926		140	2,090	
(1) Atlanta, Ga	750	500	General medical	150		2	120	
(2) Chicago, Ill	1,000	500	do	157		27	987	
(3) Cleveland, Ohio	1,250	1,000	Neuropsychiatric	318		8	264	
(4) Cleveland, Ohio	1,000	500	General medical	152		10	622	
(5) Oklahoma City, Okla	1,000	500	do	149		93	97	

[1] Obligations for topographic, subsoil, and utilities studies as well as a substantial portion of the obligations for final working drawings and specifications can be salvaged by the Government for use on revised projects.
[2] It is planned to have redesign accomplished by the Veterans' Administration.
[3] Proposed donation.
[4] Site acquired.
[5] Primarily fixed equipment.
[6] Approximately $140,000 was obligated prior to cancellation of original A/E contract; balance represents estimated settlement cost on current A/E contract which is in process of being canceled.

NOTE.—Veterans' Administration overhead costs are not included in the above figures.

Mr. Chairman, let us see how much it cost the taxpayers of America to actually make a saving of a little better than $279,000,000 claimed by the Veterans' Administration as a result of the 16,000-bed-reduction order.

(a) 24 hospitals eliminated (already expended by VA)	$10,014,000
(b) Cost of redesigning 15 hospitals	2,739,000
Total	12,753,000

Thus, it is seen that in carrying out the 16,000-bed-reduction program the Veterans' Administration sustained a loss of $12,753,000.

Nor can we stop here. According to General Gray, Administrator of the Veterans' Administration, the cost per bed of the entire hospital-construction program averages $22,000 per bed. Thus, the money wasted by the Veterans' Administration in putting into effect the 16,000-bed-reduction program would have provided approximately 600 beds, or the number sufficient to equip three new 200-bed Veterans' Administration hospitals.

If the decision of the President in canceling 16,000 beds was in the name of economy, the American people and the veterans in particular have been shortchanged.

American Ideology Said Losing Ground in China

EXTENSION OF REMARKS
OF
HON. LEROY JOHNSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 14, 1949

Mr. JOHNSON. Mr. Speaker, under leave to extend my remarks, I include herein an article by Albert Ravenholt, correspondent for the Chicago Daily News, including the printed title of the article, which appears above. This article was in the Hong Kong Standard on March 23 and was forwarded to me by a very dear friend of mine who has had much contact with China. He lived there a number of years and I have great faith in his appraisal of the situation in China.

In a letter to me under date of March 24 he stated, "I am enclosing a clipping to you which I commend very seriously, and with approval, to the attention not only of you but to whomsoever you would care to extend it."

Since the letter did not contain a statement that I might publish this, I am not disclosing the name of this individual. However, his experience with China and Chinese and his unimpeachable integrity and training would lead me to believe that his appraisal of the article would be correct.

For the information of the Members of the House, I am placing this article in the Appendix of the RECORD.

The article follows:

AMERICAN IDEOLOGY SAID LOSING GROUND IN CHINA

(By Albert Ravenholt)

SHANGHAI.—One of the reasons American ideas are losing out in China can be found in the bookstores of Shanghai and other cities.

Few of the fundamental books on American thought, Government, and science are available even to Chinese who can afford them. Majority of such works have never been translated into Chinese and are not published here.

Meanwhile, literally millions of copies of Russian publications translated into Chinese are distributed throughout the country. They have been a major factor in orienting non-Communist Chinese to the Soviet way of thinking.

UNITED STATES AID

The aid which the United States has given to China during recent years is calculated in billions of dollars. But since VJ-day only $10,000 has been budgeted for translating into basic ideas of American life. That sum was allocated to the United States Information Service in 1945–46 and permitted the translation of 22 books. It left no funds to cover the cost of publishing.

Every year since then the USIS has presented a budget which would permit a few of the more important American books to be brought out in Chinese. Information offi-

cers here have prepared "critical" lists of several hundred books which would help Chinese understand how Americans think. But each year the requested funds have been refused by the authorities in Washington.

This failure to make available in Chinese the best America has to offer has had serious consequences here. It has greatly facilitated the anti-American campaign of the Chinese Communists. Many young Chinese have come to consider American culture as essentially a gadget civilization.

MIDDLE-ROADER

One rather prominent Chinese middle-of-the-roader expressed it to me this way: "You know, no American thinkers have made any important philosophical contributions in the last 10 years." He had never had access to books that might make him think otherwise.

The American failure to send to China ideas of lasting value along with cotton, rice, and medical supplies is most apparent in the universities, colleges, and middle schools. These schools are relatively much more important than similar institutions in the United States. While the great mass of Chinese remain illiterate, these schools will provide the leaders, regardless of what government rules China.

During and since the war with Japan these schools have been desperately short of all kinds of books. Some have lacked even the most rudimentary textbooks. To a considerable extent this shortage of books has been responsible for the poor quality of Chinese education in recent years.

RUSSIANS MOVE IN

Chinese commercial printers translate and publish only those popular foreign-language books assured of a profitable sale. They have included American best sellers such as Gone With the Wind and Forever Amber. The market is too uncertain to permit commercial houses to bring out scientific, technical, and historical works.

Soviet representatives in China have taken full advantage of this opportunity. In Shanghai, the Russians maintain the Epoch Publishing Co. Russian books ranging from outright propaganda to classics are translated into Chinese. A few are illustrated and printed on glossy paper. But most Chinese translations of Russian books are published in large, cheap editions.

These Russian books are sent out through an elaborate distributions system. Many are sold in regular Chinese book stores at prices slightly below cost of books. They are a tempting bargain for the ordinary Chinese reader with a thin pocketbook. Other translations of Soviet writings are distributed to book stores near the campuses of Chinese universities. There they are sold for a price Chinese students can afford to pay. And the students buy them in large numbers.

Within its regular budget the USIS has been able to translate a limited number of articles by American writers on contemporary events. These are published as pamphlets in Chinese and English. They have included such accounts as Drew Middleton's Report on Russia. The pamphlets sent out have been eagerly accepted by the Chinese schools which have used them for classes studying English. It's safe to assume that the students working with them learned more than English.

These efforts have been puny compared to the need.

General Pulaski's Memorial Day

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 14, 1949

Mr. PHILBIN. Mr. Speaker, I have received a large number of resolutions urging the adoption of the pending resolution to create a special memorial day each year for the observance and commemoration of the death of Brig. Gen. Casimir Pulaski. These petitions have come to me from the rank and file of the people, not people of Polish descent alone, though they have communicated in very large numbers, but people of every rank and station.

I have urged favorable action on this resolution. It should be a legislative must for this session of Congress. It is not necessary for me to emphasize the outstanding zeal, idealism, and loyalty to the American cause of this great Polish figure of Revolutionary days. It is not possible to measure his magnificent contribution. He exemplified in his life and activities the spirit of human liberty itself, and his unselfish assistance in the establishment of our own free Government will be remembered by the American people as long as this Nation exists. It is most fitting that his anniversary day be properly and appropriately commemorated, and I hope that the leadership will recommend early favorable action on the pending resolution.

Resolution relative to General Pulaski's Memorial Day now pending in Congress

Whereas a resolution providing for the President of the United States of America to proclaim October 11 of each year as General Pulaski's Memorial Day for the observance and commemoration of the death of Brig. Gen. Casimir Pulaski is now pending in the present session of the United States Congress; and

Whereas the 11th day of October 1779 is the date in American history of the heroic death of Brig. Gen. Casimir Pulaski, who died from wounds received on October 9, 1779, at the siege of Savannah, Ga.; and

Whereas the States of Arkansas, California, Connecticut, Delaware, Illinois, Indiana, Kentucky, Louisiana, Maryland, Massachusetts, Michigan, Minnesota, Missouri, Nebraska, New Hampshire, New Jersey, New York, Nevada, Ohio, Pennsylvania, South Carolina, Tennessee, Texas, West Virginia, Wisconsin, and other States of the Union, through legislative enactment designated October 11 of each year as General Pulaski's Memorial Day; and

Whereas it is fitting that the recurring anniversary of this day be commemorated with suitable patriotic and public exercises in observing and commemorating the heroic death of this great American hero of the Revolutionary War; and

Whereas the Congress of the United States of America has by legislative enactment designated from October 11, 1929, to October 11, 1946, to be General Pulaski's Memorial Day in the United States of America: Now, therefore, be it

Resolved by the Polish Women's Citizen Club of Three Rivers, Mass.—

1. That we hereby memorialize and petition the Congress of the United States to pass, and the President of the United States to approve, if passed, the General Pulaski's Memorial Day resolution now pending in the United States Congress.

2. That certified copies of this resolution, properly authenticated, be sent forthwith to the President of the United States, the Vice President of the United States, the two United States Senators from the State of Massachusetts, and to the Representative in Congress from the First Congressional District of the State of Massachusetts.

Mrs. NELLIE MOTYKA,
President.
MARY V. JAJUGA,
Vice President.
ANNA R. KULIG,
Secretary.
EDNA S. FRYDRYK,
Secretary.
BERNICE I. TENCZAK,
Treasurer.

Resolution relative to the General Pulaski's Memorial Day now pending in Congress

Whereas a resolution providing for the President of the United States of America to proclaim October 11 of each year as General Pulaski's Memorial Day for the observance and commemoration of the death of Brig. Gen. Casimir Pulaski is now pending in the present session of the United States Congress; and

Whereas the 11th day of October 1779 is the date in American history of the heroic death of Brig. Gen. Casimir Pulaski, who died from wounds received on October 9, 1779, at the siege of Savannah, Ga.; and

Whereas the States of Arkansas, California, Connecticut, Delaware, Illinois, Indiana, Kentucky, Louisiana, Maryland, Massachusetts, Michigan, Minnesota, Missouri, Nebraska, New Hampshire, New Jersey, New York, Nevada, Ohio, Pennsylvania, South Carolina, Tennessee, Texas, West Virginia, Wisconsin, and other States of the Union, through legislative enactment designated October 11 of each year as General Pulaski's Memorial Day; and

Whereas it is fitting that the recurring anniversary of this day be commemorated with suitable patriotic and public exercises in observing and commemorating the heroic death of this great American hero of the Revolutionary War; and

Whereas the Congress of the United States of America has by legislative enactment designated from October 11, 1929, to October 11, 1946, to be General Pulaski's Memorial Day in the United States of America: Now, therefore, be it

Resolved by the Board of Selectmen, town of Palmer, Mass.—

1. That we hereby memorialize and petition the Congress of the United States to pass, and the President of the United States to approve, if passed, the General Pulaski's Memorial Day resolution now pending in the United States Congress.

2. That certified copies of this resolution, properly authenticated, be sent forthwith to the President of the United States, the Vice President of the United States, the two United States Senators from the State of Massachusetts, and to the Representative in Congress from the First Congressional District of the State of Massachusetts.

JAMES H. FITZGERALD,
HERBERT W. BISHOP,
PETER F. WARAKOMSKI,
Board of Selectmen.

Relief Flights in Snow-Bound Western States

EXTENSION OF REMARKS
OF
HON. WALTER K. GRANGER
OF UTAH
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 14, 1949

Mr. GRANGER. Mr. Speaker, a few days ago I made some critical remarks here on the floor of the House with respect to what I thought was extremely costly operations of the so-called hay lift, or hay ride, during the terrific storms in the West this past winter.

Some official in the Air Force took exception to what I said, expressing the view that any air operation of the kind engaged in over the snow-bound areas of the West is expensive business.

I am willing to admit that I know little about cost in the operation of aircraft. Therefore, I am inserting at this point a short statement prepared by the Air Force showing what their operations were and the approximate cost.

If one human life was saved—and I think they did save human life—there is not much we can say about the cost. Furthermore, their report shows that the greater part of the cost will be absorbed in their normal expense of operations. That is to say, if they had not been engaged in this emergency work the planes and personnel would have been flying somewhere else.

FACT SHEET ON "OPERATION HAYRIDE"

The Air Force's participation in disaster relief operations in the snowbound Western States lasted approximately 1 month—from January 24 to February 25. The relief flights took place in the various snow-bound sectors of Arizona, Idaho, Wyoming, Utah, Nebraska, and North and South Dakota. The number of planes engaged on the project varied, but at one time 116 planes—most of them cargo transports of the C-82 and C-47 type—were active in the flights. USAF personnel active in the operations varied between 300 and 500.

SUMMARY

Tonnage of hay and feed dropped or delivered: 4,577.56 tons (this includes 1,879 tons of cattle feed, regular food rations, medical supplies, and emergency medical equipment carried by planes in just the Nevada-Utah area).

Additional items transported: 458 passengers; 5,000 blankets; 77 "weasels" tracked vehicles; 1 radio beacon; 200 pounds of medical supplies; 5,000 cubic centimeters of blood plasma; ½ ounce of radium (worth $500,000); 875 gallons of fuel oil (dropped in small cans); 2,250 pounds of special parts for tractors, plows, etc.

Reconnaissance flights: 217 hours.

Supply flights: 5,496 hours; includes reconnaissance hours.

Cost: $1,300,000 "constructed"; final reports due Tuesday. Almost all of these operational costs can be absorbed into the normal annual programed flying hours scheduled for these planes.

The above figures also reflect other relief activities such as the ground equipment furnished by the commanders of various bases to clear roads, carry supplies to isolated communities, and provide clothing for other snow victims.

Pan-American Day

EXTENSION OF REMARKS
OF
HON. ROBERT L. COFFEY, JR.
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 14, 1949

Mr. COFFEY. Mr. Speaker, Pan-American Day is the occasion on which we celebrate the friendship existing among the 21 sovereign American Republics, a friendship which has been cemented for more than half a century—by the International Conferences of American States and other inter-American gatherings. At these conferences arguments and discussions on questions of interest to all have generally resulted in agreements which represent mutual compromises and which have brought about better relations between the states.

This half a century of effort was consummated in two conferences held in 1947 and 1948, when three agreements forming the pillars of the inter-American system were signed. The first of these is the treaty of reciprocal assistance signed at Rio de Janeiro in 1947. This treaty gives permanent form to the principles of hemispheric solidarity embodied in the Act of Chapultepec approved in Mexico City in 1945. It lays a clear obligation on the parties to take positive action beyond mere consultation to assist in meeting an armed attack against any American state. It not only covers armed attacks but any other fact or situation that might endanger the peace of America. It is also completely consistent with the provisions of the United Nations Charter.

The United States Senate ratified the treaty on December 8, 1947. Our ratification was the second. The fourteenth ratification, deposited by Costa Rica and received on December 3, 1948, brought the treaty into effect with respect to the ratifying states. The usefulness of the treaty was promptly demonstrated when within a few days after it became effective, Costa Rica demanded that the Council of the Organization of American States halt an invasion of its country from Nicaragua, and a peaceful settlement of the dispute was accomplished by the Council.

The other two agreements were signed at Bogotá in 1948. The first of these establishes the Organization of American States with a Charter which is already largely in operation. It confirms the legal existence of a de facto system that has been functioning since 1890. Moreover, it, too, is entirely compatible with the United Nations being a regional agency as provided by the United Nations Charter. The Pan American Union becomes the central and permanent organ of the organization and continues to function at Washington.

As stated in article 1 of the Charter, the object of the Organization of American States is to achieve an order of peace and justice on the American continent, promote the solidarity of the member States, strengthen their collaboration and defend their sovereignty, their territorial integrity, and their independence.

In the organization of American states, all the members are one another's peers; they have equal rights and equal obligations. The foremost power has only one vote in its assembly halls, exactly like the poorest and weakest. All matters are decided by majority vote, even the sanctions to be adopted against an aggressor state. Thus no single state can block a decision that is adverse to its interests if that decision is backed by a majority. Another basic precept is that no state or group of states has the right to intervene in the internal or external affairs of another state, directly or indirectly.

In the opinion of Dr. Lleras, secretary general of the organization of American States:

> The organization is today, in spite of its shortcomings, the most perfect instrument of its kind that ever existed between sovereign nations. The Charter, in comparison with any analogous document of any era, is the most advanced that has been signed spontaneously, in complete unanimity, by the 21 states associated under its provisions to enjoy the rights they concede to one another mutually and to meet the obligations that they assume therein.

The third agreement is the American Treaty of Pacific Settlement, also signed at Bogotá. It is designed to coordinate and improve the various treaties on Pacific settlement concluded by previous inter-American conferences. The treaty prescribes the various methods to be employed in settling disputes. It goes still further; it foresees no controversy that cannot be solved definitively within a reasonable length of time. It refers the contending parties to the International Court of Justice or to compulsory arbitration, if the matter is without the competence of the court. However, a matter is subject to settlement, before it reaches this stage, by a series of peaceful procedures, which include mediation, good offices, conciliation, and investigation.

The signing of these three agreements represents great progress in inter-American political relations and should go far toward preventing war in this hemisphere, at least, as far as the American states themselves are concerned. There remains much to be done in other fields, especially the economic, and plans have been made for a conference to be held in Buenos Aires to work out details for cooperation in economic matters. The economic agreement of Bogotá established the general lines along which economic cooperation will develop but it will be the task of the Buenos Aires conference to define specifically the procedures to be employed.

European Recovery Program

EXTENSION OF REMARKS
OF
HON. WATKINS M. ABBITT
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 14, 1949

Mr. ABBITT. Mr. Speaker, I am wholeheartedly supporting the European recovery program, H. R. 3748.

This is what is commonly known as the Marshall plan, which was initiated last year by the Congress under the leadership of Secretary of State George C. Marshall. At that time, although World War II was over, the democracies in western Europe were tottering on the edge of economic bankruptcy. The rising star of the Russian bear was reaching out to engulf them. A number of the small countries in Europe had already been overrun by the Communists. Particularly Greece, Italy, Belgium, Holland, and France were weak, economically. The Communists were about to take over the Italian Government. It was necessary that something drastic be done to help these countries save themselves and build up their internal affairs, economically.

Secretary Marshall worked out the plan whereby our country would help the democracies of western Europe help themselves. We would furnish them supplies, raw materials, and money to purchase raw materials so that they could rebuild their industries that had been torn down by the ravages of war. It was not to be a loan or a gift of money; it was an investment in future world order and economic stability.

The object of the European recovery program is the restoration of the free nations of Europe to that self-sustaining basis which alone can insure the continuance of their independence and the freedom of their domestic institutions. Its purpose is economic recovery of the world.

In seeking to insure the freedom of peoples by strengthening their economic base, the bill envisages a broad effort of economic collaboration and self-help among the nations of Europe qualifying as participants. It envisages that for 4 years those nations may call upon the United States for extraordinary assistance to redress the gap between their needs and their capability to provide for themselves, if they are to attain a self-sustaining basis.

The recovery program has done much to achieve its goal. Great strides have already been made in bringing economic stability to the democracies of Europe. A far better job than was expected by the most enthusiastic backers of the Marshall plan has already been accomplished. We can ill afford to stop this great program before it has reached its ultimate goal, even though the countries that are being helped are well on the road to recovery, economically.

This is not an appropriation of moneys, but is an authorization which sets a top ceiling of the sums that may be appropriated later on.

The bill authorizes an appropriation of $1,100,000,000 for the period April 3 to June 30, 1949, and $4,280,000,000 for the fiscal year 1950. It also authorizes a public-debt transaction of $273,300,000 to be made available for guaranties of American investment in projects helpful to the European recovery program. The new authorization for guaranties is for $300,000,000 minus such sum as has already been allotted for guaranties made or in prospect, which is $27,700,000.

It is now contemplated that it will not be necessary to continue the so-called Marshall plan for the full 4 years as originally planned, due to the great strides that have been made during the life of the program. Even western Germany is in much better shape economically and is almost ready to embark on a course of its own, as a free country, but under the supervision and guidance of the United Nations. The one distressing point in the over-all world picture is that of China. Instead of a free people gaining in China it has been the reverse. The Communists are overrunning the land and the situation looks almost hopeless at this time, although last week the Congress voted token aid for free China.

As stated before, this bill is merely an authorization for the continuance of the Marshall plan, and it will be necessary in the near future for the Congress to appropriate the necessary money to carry through the program.

Although the present authorization expired April 1 of this year there will be no stop in the flow of materials and implements in the carrying on of the program, due to the fact that sufficient purchases under the first year's program have been made to keep the goods flowing over to Europe. In other words, the pipe lines were full of goods already contracted for but not delivered and there has been no interruption in the program.

Protecting Our Own

EXTENSION OF REMARKS
OF

HON. CLINTON D. McKINNON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 14, 1949

Mr. McKINNON. Mr. Speaker, I wish to express my appreciation to the Honorable JOHN J. ROONEY and his Subcommittee on State, Justice, Commerce, and Judiciary, and the whole Appropriations Committee for a realistic correction to a problem in the Southwest that is contributing to unemployment among our own American people.

I refer to a recent appropriation that will allow the Immigration and Naturalization Service to detail additional enforcement officers to the Mexican border to prevent and apprehend Mexican nationals who enter the United States illegally.

I have been informed that 25 additional enforcement officers are being added to the southern California district where we are being overtaken with unemployment and serious economic conditions. The gravity in our State is reflected by recent statistics which reveal that in Los Angeles County unemployment has increased from 185,000 in February to 194,000 in March. Out of a labor force in San Diego County of 172,000, we have 17,500 unemployed. In San Diego public-assistance cases have increased 18.7 percent from June to December of 1948.

The development of commercial agriculture in the Southwest shortly after the end of the First World War created a new gap in the labor market for farm employment and Mexican nationals eagerly crossed our borders to seize upon this opportunity to supplement their meager incomes. Many came illegally and often with encouragement from United States ranchers and farmers direly in need of this type of labor. During the years immediately preceding World War II as additional acreage was open the influx of these seasonal agricultural workers took on major proportions. The Government of Mexico and the United States entered into agreements providing for the official recruitment of Mexican agricultural workers. These agreements, which were confirmed by Public Law 45 in 1943 and Public Law 229 in 1944 originally provided for a maximum recruitment of 50,000 workers and subsequently the figure was increased to 75,000.

Recruitment continued under similar agreements after the cessation of hostilities in World War II and at present negotiations are pending looking to a renewal of the agreements. In the meantime, however, the Mexican Government will not permit its nationals to enter the United States for temporary seasonal employment and ranches and farmers in the West and Southwest are complaining concerning "crops rotting in the field while the world starves" and about Border Patrol Inspectors rounding up illegal workers found in their employ. The result of this inability of Mexican farm laborers to effect legal admission to the United States has been to increase the number of workers who enter surreptitiously and the United States Immigration Service is hard-pressed to enforce our immigration laws.

Every effort is being made by that agency, with the personnel available, to apprehend aliens who endeavor to enter the United States illegally. During the first 7 months of the current fiscal year approximately 159,321 Mexican nationals who had entered or were attempting to enter the United States illegally were apprehended in Mexican border districts. During the last two fiscal years the Border Patrol apprehended 193,852 and 194,954, respectively. This is exclusive of those apprehended in the interior of the country. More current statistics show that 5,000 nationals of that country were apprehended in the three immigration border districts of San Antonio, El Paso, Tex., and Los Angeles, Calif., during the last week of February 1949.

I have been informed by Commissioner Watson B. Miller that his officers will not go onto the farms in search of Mexican nationals who have entered illegally but will confine their activity to the streets, highways, and places of social gathering. By returning these people, we will be able to provide more employment for American citizens and for the Mexicans who are legally entitled to be in the United States, and this policy should not disturb the farmers nor create a labor scarcity.

There may be other approaches to a solution of the problem and I would be the last one to suggest that our permanent immigration policy should be affected by a temporary sectional business

recession but it would appear that this immediate condition could be alleviated by a prompt successful completion of pending farm labor negotiations with Mexico and by authorization of funds, such as recently done by the House through the recommendation of Mr. Rooney's Subcommittee on Appropriations, to provide immigration officers in sufficient numbers to cope with this grave situation.

Chicago Tribune Versus Taft-Hartley Law

EXTENSION OF REMARKS
OF
HON. RAY J. MADDEN
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 14, 1949

Mr. MADDEN. Mr. Speaker, today another strike ties up the Washington newspapers. The newspapers in Chicago and some of the surrounding area have been engaged in a disastrous strike for over 18 months and it is still continuing. Thousands of newspaper employees have been idle during this period of time. Millions of dollars have been lost by the newspapers, the unions, and the members of the unions. The Taft-Hartley Act has promoted untold chaos and bitterness in labor-management relations as it pertains to the newspaper business. The newspapers and unions in the District of Columbia are now in the throes of a second strike within a week.

I am herewith submitting an editorial from the Chicago Tribune of November 22, 1947, wherein they state editorially that they were opposed to outlawing the closed shop as provided in the Taft-Hartley bill. The same editorial could apply to every industry in America as far as the closed shop is concerned.

AFTER 95 YEARS

"In 1852, the Chicago Tribune entered into contractual relationship with Chicago Typographical Union, No. 16, which has continued until this day, without interruption of so much as an hour."

We are quoting from a memorial presented by the union to the Tribune on its hundredth birthday last June. The union went on to speak with pride of "this unparalleled record of industrial peace extending over 95 years."

We regret that this record, as a matter of great pride to us as well as to the union, has now been interrupted. It has been interrupted because the union now wishes us to proceed on the theory that the Taft-Hartley law is not the law of the land.

When the law was under discussion in Congress, as our readers will recall, we advised against outlawing the closed shop. We did so, among other reasons, because we knew that the closed shop worked well in our own plant and had worked well for half a century or more.

Congress did not take our advice. Neither the Tribune nor the typographical union writes the laws of this country. Congress does. We will risk a great deal in the interest of uninterrupted service to our readers and advertisers, but we will not violate the law of the United States.

The Tribune hopes that the present difficulties will be resolved speedily. We shall continue to make every effort to come to an understanding with the union. We have faced a good many problems of many sorts in the course of a hundred years. In solving them, we have never before lacked the cooperation of the printers' union. We hope that this time we won't have to find a solution in spite of our friends in local 16.

Pennsylvania Week

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Thursday, April 14 (legislative day of Monday, April 11), 1949

Mr. MARTIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address on Pennsylvania Week, by Hon. Floyd Chalfant, delivered before the Lyons Club of Greencastle and Waynesboro, Pa.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Pennsylvania Week is more than an idea.

It is a working force, aimed toward certain attainments in a State of which we are proud.

It is a period of concentration on what we have and do in the Keystone State, and a period of effort to improve.

The germ of the idea came with the first thought that Lions, Rotary, and Kiwanis in Pennsylvania might be persuaded to have talks simultaneously about affairs in their own communities.

But the germ of an idea for a day in 1946 expanded until it became a thought for an entire week.

Governor Martin and his cabinet endorsed the idea of Pennsylvania Week enthusiastically, and early in 1946 the committee he appointed laid plans for the first celebration.

He asked general cooperation. Churches of all faiths and denominations, newspapers, industry, mercantile interests, agriculture, schools, units of government—all cooperated.

A great meeting was arranged to inaugurate the 1946 week at the Forum in Harrisburg, with the Governor to be the speaker. Arranging the program was a task, because it had to move on the split second.

We timed it for the Governor, with escort, to leave his office 5 minutes before the program was to begin. He had worried about having a crowd, but we had the Forum packed.

He was nervous about the time element, too. At the stage entrance he was held back a moment while synchronized watches were checked.

"Shall I go on?" he asked, and threatened irritability.

"Just a moment," I dared caution the Governor.

At 2 minutes before the program was to begin the Governor was permitted to walk on the stage with his party. Precisely on the hour, the program began. He spoke to the split second, the prayer was to the split second, the music was to the split second, almost the applause of the crowd was to the split second.

But the meeting was a grand success.

One of the cabinet officers could not attend. He was to deliver a speech in Wilkes-Barre. In his zeal this man somehow had overlooked it was Pennsylvania Week. In his car en route to Wilkes-Barre, the present Governor of Pennsylvania, Hon. James H. Duff, happened to recall, "this is Pennsylvania Week."

He literally tossed his speech out of the car window, and in the few moments before arrival had pieced together another on Pennsylvania Week. It was a good one, too, although it never appeared in type.

At that moment Mr. Duff became one of the most ardent supporters of Pennsylvania Week. When he went into office as Governor, he was determined that Pennsylvania Week should be continued and improved upon.

The first Pennsylvania Week has furnished a pattern for succeeding Pennsylvania Weeks. What is going on this week in the main is the same that went on that first week back in 1946.

But, you may ask, why Pennsylvania Week, when already we are loaded up with more weeks to celebrate than there are weeks in the calendar?

Simply this to acquaint the people of Pennsylvania more fully with the greatness of their own State—its resources, its development, its history, and its potentialities for the future.

It is basic that Pennsylvanians must have a thorough understanding of their own greatness and achievements, in order to appreciate fully their own possibilities.

Pennsylvania Week has been designated at a time when the people of Pennsylvania may focus their attention upon knowing their home State and their home communities, and the great variety and possibilities to be found there.

Massachusetts has its Plymouth Rock, which it keeps in a cage, to mark the spot where the Puritans landed in their quest for freedom.

But Pennsylvania has its Independence Hall where the cause of freedom was proclaimed and our Government started, and it has its Liberty Bell where people may approach close to see and be inspired.

Virginia rejoices that it is the land of Presidents.

But Pennsylvania has hallowed ground, for on its soil first prayers were said as the principles of freedom of worship, freedom of the press, fredom of speech, and freedom of assembly were written into the first Constitution of the United States of America.

New York boasts it has the largest population of any State, and the largest city in the world.

But Pennsylvania, with a population over 10,000,000, is the only State with 2 of the Nation's 10 largest cities, and it also contains more small cities and towns than any other State.

Some other States may tell of their water resources.

But Pennsylvania points to natural water resources beyond compare, while some of these other States in their desperate search for water can only refer to man-made means of irrigation to make things grow.

New England may boast of good roads, the great Southwest of its grazing grounds, or the Middle West of its growing grain, California of its gold deposits, Oklahoma of it oil.

But Pennsylvania has more improved roads than 10 of the New England and Eastern States, including New York, New Jersey, and Maryland. It has its grazing grounds of purest green to produce the best of dairy foods, and it is common knowledge that Pennsylvania's grains are among the world's best, while anthracite production alone is far greater in value than all the gold California and all the other States may produce, and Pennsylvania oil is seized upon avidly by the residents of the oil States themselves as the best oil.

One could go on indefinitely pointing out amazing contrasts. Titan of industry and a leader in agriculture, Pennsylvania is also the home of natural beauty, scenic wonders, diversified recreation, and historic shrines by the hundred.

Founded in the tradition of racial and religious tolerance, Pennsylvania has maintained a high place in the religious and cultural life of the Nation.

It has more than 13,000 churches with more than 5,000,000 communicants. The first law ever enacted in Pennsylvania was a guarantee of religious freedom.

And since that early time when William Penn proposed that every man should have a right to worship God as he saw fit, Pennsylvania has clung tenaciously to its concepts of religious liberty and freedom.

While some of the States around us have seen fit to lift some of the puritanical restrictions of early days, we in Pennsylvania have been slow to accept a change from a way we know to be right. We have not forgotten the Sabbath, nor given legal sanction to questionable forms that might rob us of our traditions. Pennsylvania stands today the keystone in our guardianship of religious liberty just as it stood as the keystone in those other days in the fight for the four freedoms. We must not forget.

Pennsylvania is an industrial State because our forebears were a hard-working class with vision. It is an agricultural State because it has been richly endowed of nature, and again because of the qualities of our people who have worked in appreciation of what God has given.

It may seem beside the point, but it is true that Pennsylvania has more farms than all of England and Wales.

And since we are mentioning some of Pennsylvania's firsts, do you know that Pennsylvania outproduces every other State in more than 50 major industries? It has one-tenth of all the manufacturing employment and pay rolls in the entire Nation.

Pennsylvania has an abundance of raw-material resources and produces more power than any other State.

Pennsylvania has more than one-third of the Nation's steel plants.

It has game for the hunter, fish for the fisherman, trails for the hiker, recreation of all sorts in its mountains and in its dells for all of the people.

And, again, do you know, Pennsylvania has more accredited colleges and universities than any other State, and has one of the finest public education systems in the world.

Also, how many of us are aware that Pennsylvania possesses a State police system that is famed the world over as the best?

Pennsylvania literally has everything. A man by the name of Smith came from Kansas a few years ago to visit his brother in Wilkes-Barre. After his trip through the State, he exclaimed "Pennsylvania has everything." This became the State slogan, given us by a man from Kansas.

A young woman from California visited relatives. She, too, saw much of the State, then came down into the farming country. As she boarded the train en route home, she exclaimed of the wonders.

"In Pennsylvania God has given you everything," she said. "In California, we have to make our own way."

Is it any wonder that we who live in Pennsylvania this week are turning to an exposition of our wonders?

In every section of the State something is being done to call attention to what Pennsylvania has and does.

Every crossroads in this great Commonwealth has something of interest to invite our friends to these crossroads to get them to see and to enjoy something of our life. It is a great State in which to live and in which to work.

A prayer was offered by Rev. Dr. W. Emory Hartman at the opening of the first Pennsylvania Week in 1946. From the State Forum at the capitol in Harrisburg, he spoke this vital invocation of thanksgiving, which may continue to be our prayer down through the ages:

"We thank Thee, Father of us all, for Pennsylvania's heritage of freedom; for her free churches and free schools; for freedom of inquiry in her colleges and universities; for her freedom of press and freedom of assembly. May the spirit of liberty and tolerance that permeated our great founder imbue us still."

Do We Need a Political Realinement?

EXTENSION OF REMARKS

OF

HON. IRVING M. IVES

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Thursday, April 14 (legislative day of Monday, April 11), 1949

Mr. IVES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a brief article entitled "Do We Need a Political Realinement?" by Mr. Oren Root, which appears in the April 15 issue of the Commonweal. I call this article to the attention of all Senators, and recommend it for reading on the part of all who are interested in the preservation of our two-party system. The article is a very significant one.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DO WE NEED A POLITICAL REALINEMENT?

(By Oren Root)

One sometimes hears the wish expressed that there could be a realinement of membership in the major political parties in the United States. The Democratic and Republican Parties are too much alike, it is said. Why can we not shuffle things around so that all liberals, progressives and the like are in one party and all conservatives, reactionaries and the like in another? Then things would be clear—so this view goes—and we would no longer be faced, as we so frequently now are, with a choice between Tweedledee and Tweedledum.

This is a plausible position, and one must sympathize with the sentiment behind it: that political parties should be something more than coalitions of divergent forces held together by the desire for power, that they should be founded on principle, that they should stand for something. There are, however, a number of powerful and persuasive arguments to the contrary which should not be overlooked. The purpose of this article will be to review and analyze some of those arguments.

It seems safe to say that the kind of realinement suggested would involve a major change in the political methods and traditions of the United States. Historically, the great issues which have divided this country have not divided it vertically between parties, but have cut horizontally across parties. The issue of civil rights, for example, is not an issue between the Democratic and Republican Parties, but is an issue within each of those parties. The same was true of the pre-World War II interventionist-isolationist issue. Because the sitting President at that time happened to be an interventionist and a Democrat, the interventionist tendency was somewhat stronger in the Democratic Party and the isolationist tendency somewhat stronger in the opposition party. Even so, one has only to remember the Senator Wheelers on the one hand and the Willkies and Stimsons on the other to perceive that the issue of the war was not an issue between parties.

There are many other examples: prohibition, the issue of our entering the First World War, ratification of the Treaty of Versailles, the issues revolving around immigration quotas, and others. The only great exception was the issue of slavery. The Republican Party was founded and came to power in absolute and united opposition to the spread of slavery. On that issue the country was divided vertically and not horizontally. The result, let us never forget, was the Civil War.

The fact that these great issues, the slavery issue excepted, have been issues within parties and not between parties has not prevented their being discussed and resolved. They have been discussed and resolved, but the process has gone on simultaneously within both parties, often with varying results in various parts of the country. Thus, at one time the Democratic Party was wet in New York but dry in Virginia, while the Republican Party was dry in Kansas and wet in Pennsylvania. Ultimately, in 1932, the Democratic Party swung decisively into the repeal camp while the Republican Party continued to straddle. The Democratic Party had resolved the issue in a way which the country approved, while the Republican Party had not, and this, almost as much as the votes cast against the depression, was responsible for the Roosevelt landslide of that year.

Another conclusion which it seems safe to draw is that today any realinement such as has been suggested would tend to be along economic lines, so that it would find this country divided essentially on a class basis—all the workers in one party, all ownership and management in the other—one party representing all those with incomes of more than, say, $3,500 a year and the other party all those with less. If anybody can think of a more tragic eventuality than that he must indeed have a good imagination. As early as 1904 Theodore Roosevelt foresaw precisely this danger. Writing in that year to Philander C. Knox, Roosevelt asserted: "It would be a dreadful calamity if we saw this country divided into two parties, one containing the bulk of the property owners and conservative people, the other the bulk of the wage workers and the less prosperous people generally; each party insisting upon demanding much that is wrong, each party sullen and angered by real and fancied grievances." Roosevelt's efforts to make the Republican Party a servant of all the people rather than of special interests were inspired in large measure by his desire to prevent the very kind of realinement which some people today believe to be desirable.

Another result of the kind of realinement which has been suggested can best be expressed in the alternative, because, if all liberals were in one party and all conservatives in another, one of two situations would ensue. In the first situation, each party in turn would come to power from time to time, on the National, State, and municipal levels, with consequent violent swings of policy from right to left or vice versa every time there was a change of administration. It should be noted that the changes of administration might come about for reasons having nothing to do with ideology, as, for example, on account of corruption or inefficiency in the party in power; but inasmuch as the only alternative to the party in power would be a party which, by our supposition, held strongly opposing views, the violent swings in policy would follow nevertheless. This would be quite different from the present situation, where changes of administration are always moderated by the divergence of views within the party coming to power. If, for

example, the Republican Party had won the national election last November, liberals would have attached great hopes to the moderating effect upon any swing to the right which would have been exerted by the more forward-looking members of that party. Likewise, there can be no doubt that conservatives in the country are today finding considerable solace in the brake upon the Truman program which is being applied by the old-line members of the Democratic Party.

In the alternative situation which might ensue, one party would be so much more in tune with the needs and desires of the people than the other party that the latter would never be elected at all. The immediate consequence of this would be one-party government, the evils of which in a democratic system do not need to be spelled out. The ultimate consequence would inevitably be a division of the party in power between right and left, or between the clique close to the throne and the clique away from the throne, or between geographical section and geographical section, so that in due course we would be right back where we started, except that the names would be different. Aside from the evil effects of the period before we thus went full circle, this eventuality would have the added danger that instead of splitting into two parts the ruling party might split into three or four or more parts, so that we would end up with government by party blocs, as in France.

Lest what has been written above has frightened any reader, let it be said that there does not seem to be any likelihood of the suggested realinement coming about in the near future. The principal reason for this is that, partly because the United States is so big and partly because Americans are by nature more interested in concrete solutions than in political ideologies, people become Republicans and Democrats for reasons which frequently have very little to do with political ideology. In the first place, tradition and inheritance have their effect upon the choice of party which a man or woman makes at an early age. This may not be an intelligent basis for choice but it is a natural one. Then, too, many a person choice is influenced by the local conditions in which he or she comes of age: one will become a Republican because he lives in New York and is scandalized by the machine politics of Tammany Hall; another will become a Democrat because he lives in Georgia and the only effective way to fight for progress there is to fight within the Democratic Party—and so forth. Or a person's choice may be affected by the particular leader who dominates the national scene at the moment; that person begins to think seriously about political matters. It would be interesting to know, for example, how many Americans in their sixties are Republicans because they came of age in the era of Theodore Roosevelt and how many others are Democrats because their political awareness developed in the day of the other and Democratic Roosevelt.

Later in life an individual whose political affiliation has been made on some such nonideological basis as here outlined may discover that on the ideological issue of the moment he is not in sympathy with the dominant group of the party to which he belongs. If he is just an ordinary voter he can easily transfer his allegiance to the opposition major party or he can go to one or another of the minor parties which spring up from time to time and which frequently are devoted to some clear ideological concept. But if he is active in political life it would ordinarily be political suicide to try to change parties. He would risk being considered a turncoat by the party he left and an opportunist by the party he joined. He would move out of associations where he was known and with which he was familiar into associations where he would be a stranger. Besides, a few years later the issues might have so changed that he would want to shift back again. Sometimes, under peculiar and exceptional conditions, a transfer of party allegiance has been successfully made in American life. LaGuardia, Henry Wallace, and Wendell Willkie are outstanding examples. But they are the examples that prove the rule.

What then is such a person to do? The answer, under our system, is to stay in his party and fight within that party for the principles in which he believes. This is what he should do both out of practical political motives and because the result, for the reasons set forth forth in the earlier part of this article, is good for the country. This, at the moment, is what Senator MORSE, Senator IVES, Congressman JAVITS and a growing number of other leading personages are doing within the Republican Party and, approaching the matter from the other side of the issues of the day, what Senator BYRD, Senator GEORGE and others are doing within the Democratic Party.

The compromises which this kind of program makes necessary are irritating to crusaders and idealists. In this particular period of history they are especially irritating to those of us Americans who class ourselves as liberals and who believe that government should serve the interests of all the people rather than those of a favored few. The real goal for liberals in the United States, however, should be not a realinement of parties but victory of the progressive wing in both parties. What vistas would unfold before a United States in which the Republican and Democratic Parties—both truly committed (not in platform words but in actual performance) to the welfare of the average man, not only within the country itself but throughout the world—differed only as to how that objective could best be obtained. So long as there is any hope of achieving such a condition, liberals in both parties owe a duty to carry on the fight where they are. If the day ever comes when in either party all such hope is gone—well, sufficient unto that day is the evil thereof.

Medical Care for Workers

EXTENSION OF REMARKS

OF

HON. CLINTON D. McKINNON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 14, 1949

Mr. McKINNON. Mr. Speaker, I have always thought that American industry should be pushing as hard as American labor for a better health-insurance program—because one of the greatest wastes in all industry is absenteeism from sickness. In that connection I found a story in the New York Times of April 3 very interesting:

In the offices of a big New York business concern on lower Broadway there is a large room where 160 employees do tabulating procedures that are essential to its operation. Each day, however, an average of eight of the computing machines are idle, their operators having failed to report to work because of illness.

Although this percentage of absenteeism because of sickness may seem high, it is, in reality, only average, for each employee in the United States is absent an average of 12 days a year because of illness. The time lost due to sickness costs this country $8,000,000,000 a year, and reduces the Nation's productivity by approximately 5 percent. There is also an additional 2-percent loss of productivity due to the existence of latent or chronic diseases, undiagnosed and consequently untreated.

Today management is recognizing more and more that the most valuable asset in an industrial investment is manpower and that good health, high morale, and maximum output are so closely interrelated and interdependent as to be practically inseparable. Surveys by many business advisory groups have shown that medical care for personnel tends to promote efficiency, reduces occupational disease, lessens accident frequency, cuts absenteeism, decreases labor turn-over, lowers compensation costs, and improves labor-management relations. Many employers recognize that it is just as sound a business practice to invest in the health and productivity of their employees as it is to set aside reserves for depreciation and replacement of equipment.

As Dr. John J. Wittmer, assistant vice president of the Consolidated Edison Co. of New York and director of its excellent medical program, said recently, "It is certainly the responsibility of industry to see to it that manpower receives such care and consideration as is appropriate to its top position in the scheme of our industrial economy. I can't conceive of a plant manager in this day and age, ordering, installing, and operating mechanical equipment without (1) determining exactly what was required of the equipment, (2) securing the best equipment for his needs, (3) having it installed by competent mechanics, and (4) establishing an operational maintenance program to insure optimum efficiency and useful life. Is there any moral or practical reason why we should do less for the individual, without whom the equipment could not have existed, let alone be operated?"

In addition to the Consolidated Edison Co., some other outstanding medical programs in industry are operated by General Motors, American Tobacco Co., Union Carbide & Carbon Co., the American Brake Shoe Co., the Texas Co., and the Standard Oil Co. of New Jersey.

As the primary purpose for the existence of business in our economy is to make a return of its invested capital, it is logical that business must consider the establishment of industrial medical services from the standpoint of their cost and return. Some industrial physicians, statisticians, and executives believe medical services should be economically justifiable entirely on a monetary basis, while others believe that the industrial relations factors are sufficient for justification of the cost of such services.

The cost of industrial medical services vary, of course, and are dependent upon the type and scope of services given, the prevailing costs of salaries, equipment and supplies, administrative methods and the number of employees given service. For example, the Standard Oil Co., of New Jersey, provides a complete medical program for its employees outside of the country, and a highly specialized diagnostic service for those who are employed within the United States. Similarly, it is difficult to generalize on the economic return to a concern making an investment in medical services.

One example, however, is that reported in the recently published 2-year cross-sectional survey of industrial health facilities in 227 plants in 33 States, conducted by the Industrial Hygiene Foundation. In an excellently supervised and maintained health department of a chemical industry, the average annual cost of its medical department, including safety and health activities, was $21,335. With 1,225 employees, this meant an annual cost of $17.42 an employee, or 0.68 percent of the annual pay roll of $4,125,000.

In reporting their pay-off, plant officials pointed out that the number of accidents a year in their plant was 1.3, as compared

with a national average of 36. On an average cost of $500 for each accident, they estimated this saving at $17,350. Although the national average of the number of days lost annually in a plant of this size and type of industry is 3,000, this plant averaged 425.

Based on the rate of $1 an hour, this meant an additional saving of $20,600. As their insurance premium is only 42 percent of the national average for a plant of this size and type of industry, savings in insurance payment amounted to $16,250.

During the year, sickness absenteeism in this plant was 4.16 days, as compared with a national average of 7 in similar industries. Based on an average charge of $1 an hour, the company saved $27,832. Labor turnover in this plant was also reduced by 50 employees over the national average, which the company estimated saved them $5,000.

Totaling these, the company estimated they had a return of $87,032 on their investment of $21,335, or $4.08 for each dollar spent.

The experience of this one company cannot, of course, be directly related to other concerns. However, it is estimated generally that competent medical or health services can cut the losses due to sick absenteeism and latent illness by about 50 percent. One large New York company, for example, has cut down its sick absenteeism from an average of 12 to an average of 6 days, saving an estimated $1,500,000 a year. Reports from 1,625 smaller companies show that in the plants of 500 workers, health programs have saved each an average of $30,510 a year.

The value of a good industrial medicine program cannot be measured by the yardstick of monetary savings alone, for such a program pays human as well as dollar dividends. We need not only industrial medicine but medicine in industry.

Hearings Schedule of the House Committee on Public Works on Rivers and Harbors and Flood Control Projects

EXTENSION OF REMARKS

OF

HON. WILLIAM M. WHITTINGTON

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 14, 1949

Mr. WHITTINGTON. Mr. Speaker, under general leave granted in the House today to extend my remarks in the CONGRESSIONAL RECORD, I include the following schedule of hearings on rivers and harbors and flood-control projects to be conducted by the House Committee on Public Works:

RIVER AND HARBOR HEARINGS

The House Committee on Public Works will begin hearings on river and harbor authorizations for all projects on which the Chief of Eengineers has submitted favorable reports since the passage of the River and Harbor Act of July 24, 1946, not included in the River and Harbor Act of June 30, 1948, on Tuesday, April 26, 1949, at 10:00 a. m., and will conclude the hearings on Tuesday, May 10, 1949. All proponents and opponents, including Senators and Representatives, will be heard following the presentation of the individual project by the Chief of Engineers or his assistants. All witnesses desiring to be heard should submit their names to the clerk of the committee, indicating the projects in which they are interested, as they will be heard as the individual projects are called for consideration.

1. Tuesday, April 26: Maj. Gen. Lewis A. Pick, Chief of Engineers, will open the hearings with a report covering the river and harbor program, authorizations, appropriations, and balance of authorizations, with his recommendations. He will be assisted by Maj. Gen. R. C. Crawford, Assistant Chief of Engineers, and Col. Wayne S. Moore, resident member, Board of Engineers for Rivers and Harbors, and other assistants.

Projects including harbors along the States of Maine and Massachusetts:

Wood Island Harbor, Maine, and Pool at Biddeford (H. Doc. 49, 81st Cong.).

Scarboro River, Maine (H. Doc. 69, 81st Cong.).

Mystic River, Mass. (H. Doc. 645, 81st Cong.).

Mattapoisett Harbor, Mass. (H. Doc. 664, 80th Cong.).

Winthrop Beach, Mass., shore protection (H. Doc. 764, 80th Cong.)

2. Wednesday, April 27: Projects including harbors along the States of Connecticut, New York, and New Jersey:

Stonington Harbor, Conn. (H. Doc. 667, 80th Cong.).

Eightmile River, Conn. (H. Doc. 666, 80th Cong.).

Fire Island Inlet, N. Y. (H. Doc. 762, 80th Cong.).

East Chester Creek (Hutchinson River), N. Y. (H. Doc. 749, 80th Cong.).

Jamaica Bay (Mott Basin), N. Y. (H. Doc. 665, 80th Cong.).

Sandy Hook Bay, N. J., at Leonardo (H. Doc. 108, 81st Cong.).

3. Thursday, April 28: Projects including harbors along the States of Maryland and Virginia and the District of Columbia:

Lake Ogleton and Walnut Lake, Md. (H. Doc. 712, 80th Cong.).

Hellens Creek (Calvert County), Md. (H. Doc. 663, 80th Cong.)

Governors Run, Md. (H. Doc. 670, 80th Cong.).

St. Patricks Creek, Md. (H. Doc. 671, 80th Cong.).

Potomac River (water chestnuts), Washington, D. C. (H. Doc. 113, 81st Cong.).

Rappahannock River, Bowlers Wharf, Va. (H. Doc. 109, 81st Cong.).

4. Friday, April 29: Projects including harbors along the State of North Carolina:

Pamlico Sound to Beaufort Harbor, Marshallburg, N. C. (H. Doc. 68, 81st Cong.)

Pamlico Sound, Taylors Creek, N. C. (H. Doc. 111, 81st Cong.).

Cape Fear River at and below Wilmington, N. C. (H. Doc. 87, 81st Cong.).

Norfolk to Beaufort Inlet, I. W. W. at Fairfield, N. C. (H. Doc. 723, 80th Cong.).

Far Creek, N. C. (H. Doc. 770, 80th Cong.).

5. Monday, May 2: Projects including harbors along the States of Georgia, South Carolina, and Florida:

Brunswick Harbor, Ga. (H. Doc. 110, 81st Cong.).

St. Marys River, Fla. and Ga., and North River, Ga. (H. Doc. 680, 80th Cong.)

Savannah River, Ga. and S. C., (S. Doc. 6, 81st Cong.)

Fernandina Harbor, Fla. (H. Doc. 662, 80th Cong.).

Horseshoe Cove, Fla. (H. Doc. 106, 81st Cong.).

Lake Worth Inlet, Fla. (H. Doc. 704, 80th Cong.).

St. Augustine Harbor, Fla. (H. Doc. 133, 81st Cong.).

St. Petersburg (Bayboro) Harbor, Fla. (H. Doc. 70, 81st Cong.).

Palm Beach, Fla., Beach Erosion Study (H. Doc. 772, 80th Cong.).

6. Tuesday, May 3: Projects in the States of Texas, Iowa, and Wisconsin:

Little Bay, Fulton, Tex. (H. Doc. 114, 81st Cong.).

Mississippi River at Davenport, Iowa (H. Doc. 642, 80th Cong.).

Mississippi River at Alma, Wis. (H. Doc. 66, 81st Cong.)

Mississippi River at Prairie du Chien, Wis. (H. Doc. 71, 81st Cong.)

Kenosha Harbor, Wis. (H. Doc. 750, 80th Cong.).

Mississippi River at Muscatine, Iowa (H. Doc. 733, 80th Cong.).

Mississippi River at Clinton, Iowa (S. Doc. 197, 80th Cong.).

Chocolate and Bastrop Bayous, Tex. (H. Doc. 768, 80th Cong.).

7. Wednesday, May 4: Projects in the States of Michigan and Missouri:

Manistique Harbor, Mich. (H. Doc. 721, 80th Cong.).

Grand Marais Harbor, Mich. (H. Doc. 751, 80th Cong.).

Trenton Channel, Detroit River, Mich. (S. Doc. 30, 81st Cong.).

Mississippi River at Hannibal, Mo. (H. Doc. 67, 81st Cong.).

8. Thursday, May 5: Projects including harbors along the States of Oregon and California, and in the Virgin Islands:

Westport Slough, Oreg. (H. Doc. 134, 81st Cong.).

Redwood City Harbor, Calif. (H. Doc. 104, 81st Cong.).

San Joaquin River, Stockton Channel, Calif. (H. Doc. 752, 80th Cong.).

Christiansted Harbor, St. Croix, V. I. (H. Doc. 771, 70th Cong.).

9. Friday, May 6:

Arkansas River and tributaries, Arkansas and Oklahoma (H. Doc. 758, 79th Cong.).

Big Sandy River and Tug and Levisa Forks, Ky., W. Va., and Va. (H. Doc. 264, 80th Cong.).

10. Monday, May 9: River and harbor projects on which increased authorizations are needed, and all other river and harbor projects eligible for consideration by the committee.

11. Tuesday, May 10: Senators and Representatives who have not previously appeared or who desire to make other and further statements.

FLOOD-CONTROL HEARINGS

The House Committee on Public Works will begin hearings on flood-control authorizations for projects on which the Chief of Engineers has submitted favorable reports since the passage of the Flood Control Act of July 24, 1946, not included in the Flood Control Act of June 30, 1948, including the projects hereinafter mentioned and including projects on which the Chief of Engineers has submitted favorable reports to the Director of the Budget, on Monday, May 16, 1949, and will conclude the hearings on Thursday, May 26. All proponents and opponents of a project, including Senators and Representatives, will be heard on the day scheduled for the consideration of that project following the presentation of the Chief of Engineers, the Assistant Chief of Engineers, or the representative of the Civil Works Division, Corps of Engineers. All proponents and opponents should submit their names before the hearing to the clerk of the committee, indicating the projects in which they are interested.

1. Monday, May 16: Maj. Gen. Lewis A. Pick, Chief of Engineers, will open the hearings with a report on the status of national flood control and flood control along the lower Mississippi River and tributaries, with authorizations, appropriations, and balance of authorizations, with his general recommendations. General Pick will be accompanied by Brig. Gen. R. C. Crawford, Assistant Chief of Engineers, and Col. Herbert C. Gee, of the Civil Works Division, Corps of Engineers. Brig. Gen. P. A. Feringa, president of the Mississippi River Commission and division engineer of the lower Mississippi Valley division, and other division engineers as desired by the Chief of Engineers will attend when projects under their supervision are considered.

Eastern United States area including New England, North Atlantic, and Southwest Atlantic, and including streams flowing into the Gulf of Mexico east of the Mississippi River.

(a) Additional authorization for comprehensive plans for the Connecticut River; for the Lackawaxen River; for the Savannah

River; for projects for central and southern Florida, for Georgia, South Carolina, and other Atlantic States.

(b) New reports: Anacostia River and tributaries, District of Columbia and Maryland.

(c) Special bills and survey authorizations.

2. Tuesday, May 17: Ohio River Basin or Great Lakes area, including additional authorizations for the approved comprehensive plans.

(a) New reports: Upper Allegheny River in and around Bradford, Pa. (S. Doc. No. 20, 81st Cong.). Lost River at Orleans, Ind. (H. Doc. No. 105, 81st Cong.).

(b) Special bills and survey authorizations.

3. Wednesday, May 18: Missouri River Basin and Red River of the North, including additional authorizations for the Corps of Engineers and the Bureau of Reclamation for the approved comprehensive plan and for the Red River of the North.

(a) New reports: Elkhorn River, Nebr.; South Platte River and tributaries, Colo., Wyo., and Nebr. (H. Doc. No. 669, 80th Cong.); Yellowstone River and tributaries, Wyo., Mont., and N. Dak.; Kansas River, Colo., Nebr., and Kans.

(b) Special bills and survey authorizations.

4. Thursday, May 19: Southwestern United States, including additional authorizations for approved comprehensive plans for the Arkansas River Basin and for the middle Rio Grande in New Mexico.

(a) New reports: Grand (Neosho) River, Kans., Mo., and Ark. (H. Doc. No. 442, 80th Cong.).

(b) Special bills and survey authorizations.

5. Friday, May 20: Pacific Northwest area, including additional authorizations for approved comprehensive plans fo rthe Willamette River Basin.

(a) New reports: Columbia River and tributaries, Oreg., Wash., Mont., and Idaho; Albeni Falls project, Idaho (S. Doc. No. 9, 81st Cong.); Green-Duwamish River, Wash.

(b) Special bills and survey authorizations.

6. Monday, May 23: Pacific Southwest and Hawaii, including additional authorizations for Los Angeles, Sacramento, San Joaquin, and Kaweah and Tule River Basins.

(a) New reports: Santa Ana River, Calif. (H. Doc. 135, 81st Cong.); Kawainui Swamp, Hawaii.

(b) Special bills and survey authorizations.

7. Tuesday, May 24: Mississippi Valley, including the lower Mississippi River and tributaries, and the upper Mississippi River and tributaries, and including additional authorizations for the approved comprehensive plans along the lower Mississippi River and tributaries and the upper Mississippi River and tributaries, and the White River Basin, Ark. and Mo.

(a) New reports: Mississippi River at Canton, Mo. (H. Doc. 107, 81st Cong.); Mississippi River in the vicinity of Cape Girardeau, Mo.; St. Francis River, Ark. and Mo. (H. Doc. 132, 81st Cong.); Grand Prairie-Bayou Meto, Ark.; Cache River Basin, Ark.

(b) Special bills and survey authorizations.

8. Wednesday, May 25: Proponents and opponents of other projects in other basins or regions.

9. Thursday, May 26: Senators and Representatives in Congress to submit statements respecting other projects than the individual projects on which they may have previously submitted statements.

Appropriation Comparisons

EXTENSION OF REMARKS
OF
HON. JOHN TABER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 14, 1949

Mr. TABER. Mr. Speaker, for the information of the Members of the House, I insert table showing the bills in which appropriations were carried for the fiscal year 1949, the requests for 1950, the House action, the increase or decrease above the budget, and the increase or decrease in 1950 above or below the 1949 bills.

The result is a net decrease below the budget of $299,388,850 and a net increase above last year's appropriations of $4,216,360,749.

The table follows:

Appropriation comparisons, exclusive of foreign aid and legislative

	1949 approved [1]	1950 request [2]	House action [2]	House action versus 1950 request		House action versus 1949 approved	
				Increase	Decrease	Increase	Decrease
Independent offices	$6,787,102,402	$7,775,566,830	$7,104,571,603		$670,995,227	$317,469,201	
Civil functions	641,575,666	767,733,220	593,292,270		174,440,950		$48,283,396
State-Justice-Commerce	511,129,662	740,023,456	684,616,102		55,407,354	173,486,440	
Labor-Federal Security	1,866,053,700	2,235,065,685	2,211,794,085		23,271,600	345,740,385	
Treasury-Post Office	2,244,727,680	3,172,666,750	3,072,817,903		99,848,847	828,090,223	
Agriculture	577,546,953	726,879,908	943,117,979	$216,238,071		359,332,955	
District of Columbia	99,729,483	103,321,427	98,923,621		4,397,806		805,862
Government corporations	38,479,061						38,479,061
Interior	407,836,974	616,805,020	536,461,908		80,343,112	128,624,934	
Armed services	11,403,477,413	13,219,835,700	13,849,361,800	629,526,100		2,445,884,387	
Deficiencies	2,034,554,306	1,776,302,974	1,739,854,849		36,448,125		294,699,457
Total	26,612,213,300	31,134,200,970	30,834,812,120	845,764,171	1,145,153,021	4,598,628,525	382,267,776

[1] CONGRESSIONAL RECORD Aug. 17, 1948. [2] House reports.

NOTE.—Net decrease of $299,388,850 or 0.9 percent; net increase of $4,216,360,749 or 15 percent.

Economics of World Trade

EXTENSION OF REMARKS
OF
HON. GEORGE G. SADOWSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 13, 1949

Mr. SADOWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an article by C. M. Weyand, vice chairman, world affairs committee, Detroit Board of Commerce, and executive assistant, Nash-Kelvinator Corp. The article appeared in the Detroiter, a magazine published by the Detroit Board of Commerce, under date of April 11, 1949:

ECONOMICS OF WORLD TRADE

(By C. M. Weyand, vice chairman, world affairs committee, Detroit Board of Commerce, and executive assistant, Nash-Kelvinator Corp.)

World trade is essentially world economic cooperation. The world pattern viewed from the angle of natural resources and native genius of peoples provides infinite variety. The obvious result is world economic interdependence. Trading between the countries of the world is the vehicle which moves the surplus materials and products from one part of the world where they are in excess of requirements, to some other world area where they are vitally needed. Food grains, metals, rubber, lumber, coffee, spices, manufactured goods, these and countless other materials and products make up a ceaseless stream of goods continually moving across national boundaries, required to complete the economy of some other place other than place of origin. No nation, no trading area, is economically sufficient unto itself.

From the dawn of history when the camel trains moved across the deserts of the East, trading handicraft for foodstuffs, down through the centuries where the sailing ship braved the Atlantic and sought the wealth of the Far East and finally a new world, has continued this ceaseless urge to find areas of trading where the surplus of goods of one land could be exchanged for those of another, resulting in increased wealth and higher standards of living; in short, a better and a more complete life.

It is true that in the era of discovery and exploration at the close of the Middle Ages, and the early centuries of the Modern Era, international trading was characterized often by exploitation and unfair exchanges. Far-off trading posts were secured by force and grew into colonial possessions with little consideration given to the rights of conquered peoples. But this era passed and world trading grew up. The age of piracy gave place to international rules and regulations which provided in the field of world trading the practice of business ethics common in domestic trading.

In those relatively happy days before World War I, and for a time between the First and Second World Wars, most nations found no serious difficulty in securing their necessary imports. The foreign credits which they earned through services rendered or exports made could readily be converted into the exchange of those countries from which imports were received. The international exchange of commodities, goods, and services, became increasingly a basic requirement of the economic and social well-being of every country. So, today, all countries without exception, including those most favored by nature and the genius of its citizens, must

secure from abroad a complement of their requirements.

Before the two world wars, the productive capacity of western Europe equaled that of the United States. The senseless destruction of these wars set back the economic clock of progress to such an extent that we do not yet see the answer to the problems that these world wars have created. Western Europe which before the First World War was a paradise of good living, with economic stability, balanced foreign trade, and peaceful progress, is today the problem spot of the world. Teeming populations seemingly unaffected by the loss of human life caused by these wars, find it practically impossible to maintain their economic security and well-being. The widespread destruction of the means of production have left those countries incapable of producing those surpluses which they can use as a medium of exchange for the materials and goods which they require from abroad.

In the final analysis, wealth from outside a country's borders can only be secured for wealth of equal value within a country. This is the essence of international trading. Those uninformed as to the function and technique of world trading were accustomed to gloat over statistics showing favorable balances indicating the exports of the United States greatly in excess of imports. Such misguided enthusiasts are rapidly disappearing as the economics of world trade become more generally understood. The postwar period has driven home a much needed lesson—while a country must give in order to receive, it is equally true that no country can continue indefinitely to give unless the account is progressively showing evidence of working toward a balance.

With amazing accord the American public has supported Government appropriations for relief and economic reconstruction abroad. The ordinary citizen has lost track of the number of billions of dollars expended by the Government for foreign trade, but he is becoming increasingly troubled by its effect, high-lighted by higher taxes and higher living costs. Other countries are extending aid to less favored neighbors, thus giving the world scene a pattern of world economic cooperation unparalleled in world history.

But the imbalance between United States exports and imports and similar imbalances between other trading areas of the world, continue to be a matter of grave concern. Only time will give the complete answer to the question of whether postwar reconstruction aided by economic generosity, is to be recorded as an"Operation Rat Hole" or an economic stimulant productive of world economic stability and balanced foreign trade.

There is no magic formula which will maintain high levels of world trade in defiance of economic laws. Artificial stimulants in terms of gifts and loans may help for brief periods, but over the long period no world market can continue to draw goods and services from other markets in excess of goods and services it can provide as a fair exchange.

As far as the United States is concerned, our problem is to increase imports. We must assist the debtor nations of the world to earn dollars. Therefore, the extension of the principle served by the Reciprocal Trade Agreements Act must be continued and extended. We must remove the barriers to international trade. We must increase our imports. Much has been accomplished in lowering American tariffs, but our tariff wall is still too great a barrier to imports. In the year 1948, we bought over $7,000,000,000 worth of goods from abroad; but in the same period, we sold over $12,000,000,000 worth abroad. We cannot indefinitely operate a Marshall plan to provide dollars to balance the account. Common sense indicates that the wiser policy is to assist the world through our increased imports to earn the dollars which they require for their purchases from us.

It's Time To Slug Back

EXTENSION OF REMARKS
OF
HON. GEORGE G. SADOWSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 13, 1949

Mr. SADOWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a powerful and fighting editorial that appeared in the April issue of the United Automobile Worker:

IT'S TIME TO SLUG BACK

Reactionary forces in America, reviving from the coma induced by the November 2 election results, have launched an all-out campaign against the welfare and living standards of the American people.

It is a two-pronged attack, aimed at 1949 collective bargaining demands on the one hand, and at the Fair Deal legislative program on the other.

It is a scarce campaign. The campaign strategists pick out the developing danger signals in the national economy, exaggerate them, and attempt to paint a gloomy picture that shows the whole Nation marching down the road to depression and attendant mass unemployment. They point to the approximately 3,500,000 unemployed, to slightly declining prices, to the cut-backs in production in some of the soft goods industries—shoes, textiles, clothing, light appliances.

MUST LABOR BACK DOWN?

And the conclusions they draw from these developments are that labor unions should trim down or withdraw their economic demands and that Congress must forego the much-needed social legislation encompassed by the Fair Deal program. Because, they say, these collective bargaining demands and this proposed social legislation are discouraging and depressing to the captains of free enterprise. We are told, of course, on other occasions that these same captains of industry are bold, adventurous pioneers, whose sole concern is the welfare of the Nation and who have never a thought for profits except as they serve to sustain and provide for unfortunate widows and orphans. Now they tell us that they can't do business very well if they are discouraged and depressed by union demands to improve living standards and acts of Congress that provide human security and a stable economy.

Some of these free enterprisers have even appeared before the President's Council of Economic Advisers and have said, in effect:

"The psychology of the workers will change for the better if there is a long line at every hiring gate, and our ability to get greater production out of them will improve if there is mass unemployment outside the factory gates."

That is the attitude of the men who profess to be the guiding geniuses of our vast economic machine. There can be little question that there is a deliberate campaign afoot in America to create a partial recession so that the masters of industry and finance can get the political and economic advantages which they think will flow from such a recession.

INIQUITOUS WEDDING

In Washington the handmaidens of economic royalty who sit in Congress have stripped off all pretense of responsibility to the people who elected them and have shut out of their minds the disturbing memory of November 2, 1948. The Dixiecrats and reactionary Republicans are no longer living in sin; their formal though unsavory marriage was consummated during the recent filibuster. Mr. and Mrs. Dixiegop are now holding open house on Capitol Hill. In return for GOP assistance in wrecking the civil-rights program, the other spouse of the new union is doing its (it is impossible to distinguish the sex of the parties to this marriage) best to help torpedo the rest of the Fair Deal program. They tried their best to emasculate the new rent bill. They are now training their guns on efforts being made to repeal the Taft-Hartley Act, enactment of a broader social-security program, a higher minimum wage, a national-health bill, Federal aid to education, and the other decent and constructive legislation called for by President Truman and the vast majority of the American people.

TAKE THE OFFENSIVE

The only answer we of the UAW-CIO can find for ourselves, other members of organized labor, and liberal-thinking Americans outside the union movement, is to take the offensive.

All the reasons for which we drafted our demands in the first place and all the reasons which made President Truman's legislative program necessary remain unchanged.

As a matter of fact, all of the negative economic facts in our economy merely sharpen and point out more clearly the necessity and the compelling need for the things we are fighting for.

As President Reuther told the international executive board at its March meeting:

"Unemployment has increased because we haven't got enough purchasing power in the hands of the people. If we permit the fact that unemployment is growing to be used to divert us away from our drive for wage increases and other economic gains, then we will intensify the forces that make for unemployment in the first place."

DRIFT TO DEPRESSION

And if we permit the Dixiegop coalition in Congress to weaken our fight for improved social legislation, we will be permitting the Nation to drift into the chaos and tragedy of another depression.

The UAW-CIO calls upon its entire membership to mobilize our maximum strength to back up our 1949 economic demands. We call upon them and their families and neighbors to make known to their Senators and Congressmen their support of the Fair Deal program and their determination to use their votes to see that people who will support that program are elected to office and kept in office.

NO TIME FOR TIMIDITY

This is not a time for men of little faith and less courage. It is not a time to be frightened by the scare campaigns and threats of big business. It is a time for courageous, constructive, aggressive action.

The officers and board members of the international union are prepared to lead that kind of fight. They ask for, and are confident of receiving, your vigorous support.

Earthquake Damage

EXTENSION OF REMARKS
OF
HON. RUSSELL V. MACK
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 14, 1949

Mr. MACK of Washington. Mr. Speaker, I take this opportunity to call the attention of the House to the earthquake which yesterday struck the States of Oregon and Washington, killing 8

persons, injuring 65, and causing property damage estimated at $10,000,000.

This is the second major disaster to strike these two States within the last 11 months. The first tragedy was that of the disastrous Columbia River floods of May and June of last year which took a toll of nearly 20 lives and caused $60,000,000 of property damage.

Last year's Columbia Valley flood was one of the most disastrous in the history of the Nation. Now, even before our people have fully rehabilitated their communities from the damages of that flood, they have been struck by another disaster of great magnitude.

The Washington delegation has offered its fullest cooperation to the Governor of the State of Washington, Arthur B. Langlie, in being of help in any way he deems necessary. Furthermore, we have been assured of the fullest cooperation of the Federal Bureau of Community Facilities from its deputy commissioner for planning, Arthur D. Morrell. For this we are most grateful, knowing the excellent job that agency performed for the people of our region following last summer's disastrous floods.

Appropriations on ECA Bill Should Be Carefully Scrutinized and Examined

EXTENSION OF REMARKS
OF
HON. EDWARD H. REES
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 12, 1949

Mr. REES. Mr. Speaker, this bill authorizing the expenditure of money for what is described as Eupropean cooperation is an important piece of legislation. It is important because of the purpose for which it is proposed to be used and because of the amount of money involved.

This bill does not, of course, appropriate the money. As above stated, it authorized the payment of funds provided Congress sees fit to make appropriations therefor. Such appropriations as Congress deems necessary will be considered later.

In view of the fact that our Government has already committed itself on this policy and has agreed to help the countries included in this program, it becomes a question of carrying out such promises. We have been told by proponents of this legislation and by the Administration that the assistance provided under this program is for the purpose of helping these countries to help themselves, and most important of all, it is expected to help prevent such countries from the overrun of communism.

Appropriations implementing this measure will be submitted at a later date. I think it is extremely important when such appropriations are submitted that all of the items contained therein be carefully scrutinized and examined. We should make sure that the assistance granted under this legislation goes to the people to whom it is assigned.

It is also important that we make sure that it goes for commodities and goods that are really needed by these countries and not for the purpose of favoring any particular group so that they may have a chance to dispose of a surplus of goods, or building up trade in favor of any certain interests. In other words, see to it that these funds are to help the folks affected, and not especially to help people who want to sell their goods. Of course, the money should be used to buy American goods because American money is being spent.

It is also important that the expenditure of such funds be handled just as economically as may be done. Furthermore, if it develops that it is unnecessary to spend as much money as is allowed under this bill, then all savings possible should be made.

I supported the amendment of the gentleman from Wisconsin [Mr. SMITH], who suggested we save only a small part of the funds allocated hereunder. I thought he made a good case, but the majority of the House deemed otherwise.

Mr. Speaker, we hope and pray that the legislation approved today will be for the good not only for the people who receive these benefits but for the people of our own country as well. Personally, I am deeply concerned with regard to the tremendous expenditure of the taxpayers of this country in its attempt to bring about a better understanding between the nations of the world.

Figuring ERP Assistance

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 12, 1949

Mr. JAVITS. Mr. Speaker, there is appended hereto an excerpted table from page 18 of the committee report on H. R. 3748; together with an excerpt from page 72 of the book entitled "European Recovery Program—A Report on Recovery Progress and United States Aid" issued by ECA, February 1949. Taken together they illustrate the methods of figuring ERP assistance for the individual participating countries referred to in my remarks on page 4396 of the CONGRESSIONAL RECORD of April 12, 1949.

European recovery program—United States aid, 1948–49 and 1949–50

[In millions of dollars]

	1948–49			1949–50	
	Requested by national governments	Recommended by OEEC	ECA proposed allotments	Requested by national governments	ECA illustrative allotments
Austria	339.3	217.0	215.2	217.0	197.0
Belgium—Luxemburg and Belgium dependencies and overseas territories	358.2	250.0	247.9	250.0	200.0
Denmark	149.9	110.0	109.1	110.0	109.0
Free Territory of Trieste	22.0	18.0	17.8	12.8	12.0
France and dependencies and overseas territories	1,114.9	989.0	980.9	890.0	875.0
Germany: Bizone—					
Total aid	1,083.0	1,051.0	984.0	912.1	880.6
Less GARIOA	−637.0	−637.0	−573.4	−539.7	−476.6
ECA aid	446.0	414.0	410.6	372.4	404.0
Germany: French zone	100.0	100.0	99.2	100.0	115.0
Greece	211.0	146.0	144.8	198.1	170.0
Iceland	11.0	11.0	5.2	10.0	7.0
Ireland	111.0	79.0	78.3	75.4	64.0
Italy	799.5	601.0	555.5	610.1	555.0
Netherlands and dependencies and overseas territories	657.0	496.0	469.6	507.0	355.0
Norway	104.0	84.0	83.3	131.8	105.0
Portugal	0.0	0.0	0.0	100.6	10.0
Sweden	109.0	47.0	46.6	70.7	54.0
Turkey	85.3	50.0	39.7	94.2	30.0
United Kingdom	1,271.0	1,263.0	1,239.0	940.0	940.0
Commodity reserve [1]			13.5		
Aid allotment, total	5,889.1	4,875.0	4,756.2	4,690.1	[3] 4,202.0
Administrative and other nonaid expenditures [2]			67.3		80.0
Grand total	5,889.1	4,875.0	4,823.5	4,690.0	4,280.0

[1] Represents purchase price of goods procured or to be procured by U. S. Government agencies, but not yet authorized for procurement by participating countries.
[2] Consists of dollar costs of strategic materials, ocean freight on relief packages, technical assistance, investment guaranties, administrative expenses, and confidential fund.
[3] Rounded downward to $4,200,000,000 in total request.

2. ECA REVIEW OF THE NATIONAL PROGRAMS FOR 1949–50

It has been necessary for the ECA to prepare a preliminary and illustrative division of aid among the countries for the fiscal year 1950 and to arrive at a total figure before the OEEC has screened the individual national programs and made its own recommendations. As will be seen later, the OEEC has had had an opportunity only to arrive at a preliminary estimate of the total dollar aid needed for western Europe as a whole. During the few months of its existence, it has completed its first annual program and has done considerable work on the long-term program. Since the latter should be the framework within which each annual program is fitted, the OEEC wisely gave priority to the work on the long-term program.

The ECA made its estimates on the basis of the individual national programs submitted by each of the participating countries to the OEEC. The total request of the participating countries for United States aid in 1949–50 amounted to $4,690,000,000. This reduction from the OEEC program figure of $4,875,000,000 for 1948–49 was achieved almost entirely by lower requests for aid from the

United Kingdom and, to a lesser extent, from France and the bizone. The other countries either requested amounts of the same magnitude as they are receiving in 1948–49 or asked for greater aid. Among the latter were Sweden, Norway, Denmark, Greece, and Turkey. Portugal submitted a request for aid for the first time.

Employing the method of analysis described in an earlier section of this chapter, the ECA arrived at an estimate of $4,200,000,000 as the amount of aid required by the participating countries for the fiscal year 1950. This ECA estimate can be compared with the recommendations of the OEEC for the second program year. As noted before, the method employed by the OEEC in making its recommendation for 1949–50 differs substantially from that used by the ECA. The national programs are submitted by the participating countries to the organization were statistically summarized into a consolidated balance sheet and the OEEC applied certain rough criteria to the resulting consolidated-import program. Chief among these was that consumption levels should not exceed 1948–49 where such increases would involve additional dollar expenditures. However, the OEEC recognized that there may be special cases in which an increase in food consumption over the 1948–49 level might be justified and, consequently, allowed in its revision of the consolidated-import program for an increase of 2.5 percent. The net result of the difference between the modest increase recommended by the OEEC and the rather large increases proposed by the participating countries in their program submissions was sufficient to reduce the magnitude of the OEEC consolidated-import program by $216,000,000. Other reductions were made by the OEEC in the total proposed import of certain consumer goods and industrial equipment and the estimate of freight costs were correspondingly reduced.

As a result of these various reductions, the OEEC arrived at a figure of $4,347,000,000 of ECA aid necessary for 1949–50.

It will be seen that the approach employed by the OEEC is wholly different from that of the ECA. The OEEC screened the consolidated totals for all of the participating countries as a group; the ECA screened the program of each individual country and then added the results of its individual appraisals together in order to arrive at a total aid figure for the whole group of countries. Specifically, the ECA method has made possible a more rigorous appraisal of the national programs and, in the case of some countries, the aid figures arrived at by the ECA are less than sufficient to cover their etxernal dollar deficits. Taking account of these differences in approach, the OEEC figure of $4,347,000,000 does not diverge markedly from the ECA figure of $4,200,000,000.

The determination of the actual distribution among countries of such funds as the Congress may decide to appropriate for European aid during the fiscal year 1950 will develop in two steps. The assembling of new national submissions, the making of forecasts, and the formulation of policy judgments for the best utilization of European resources has been and will continue to be the responsibility of the OEEC. The report of the OEEC and its recommendations for the division of aid, when completed, will be reviewed both by the European organization of the ECA and by the Administrator's staff in Washington prior to final decision by the Administrator. It would be only then that the program for the division of aid for the fiscal year 1950 would be promulgated and even that program would be subject to continuous review and adjustment in the light of actual events. The participating countries are wholly familiar with this procedure and will, therefore, understand that the text and statistical tables for 1949–50 in his document may not be used to support any request, either to the OEEC or the ECA, for aid in any particular amount for any country or for any particular purchase or payment.

ECA Appropriations

EXTENSION OF REMARKS
OF

HON. JAMES P. RICHARDS

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 14, 1949

Mr. RICHARDS. Mr. Speaker, under leave to extend my remarks on the ECA bill, I submit the following further observations:

In the debate of April 12 on the extension of the European recovery program, the gentleman from Wisconsin [Mr. KEEFE] asked whether it was the intention of the Committee on Foreign Affairs to take to the Nation word that the maximum of authorization must be the amount to be appropriated later in the appropriation bill.

I assured him then that the figures presented by the committee were indeed subject to the scrutiny of the Committee on Appropriations in the light of later developments in the relevant data.

The gentleman from Indiana [Mr. HALLECK] addressed a similar question to my colleague [Mr. JUDD]. He asked what assurance might be given that the performance of a year ago would not be repeated and that subsequent examination of the figures by the Appropriations Committee would not be taken as a violation of obligation undertaken in the authorization. Mr. JUDD reassured Mr. HALLECK that there was no intention to make the figures binding upon subsequent action.

I believe these sincere questions deserve deliberate answers, and I am therefore taking this additional occasion to state my views for the RECORD.

Let us first review the facts of the situation of last year referred to by the gentlemen.

In the development of this program the participating governments initially requested $8,300,000,000 for 15 months of operation.

The Administration reduced this request to $6,800,000,000, reviewing the figures in a realistic reappraisal of needs and balancing them against American availabilities.

When it became apparent that the Congress would wish to authorize for only 12 rather than for 15 months, the request was reduced to $5,300,000,000 for 12 months.

The Economic Cooperation Act of 1948 accepted that figure as the authorization. It provided that $1,000,000,000 thereof should be realized from the sale of notes by the Administrator to the Treasury.

As I recall it, the bill reported by the Committee on Appropriations last June recommended a new appropriation of $4,000,000,000 for European recovery.

To this were added the $1,000,000,000 to be realized from the sale of notes. An additional $55,000,000 was available through the interim-aid appropriation (subsequently reduced to $10,000,000).

Thus, the committee showed that the $5,055,000,000 available for the European recovery program as a result of its action was only $245,000,000 less than the $5,300,000,000 asked by the Administration and approved by Congress for the first 12 months ending April 3, 1949.

The committee went on to stipulate, however, that the total funds thus made available should be made to last for 15 months or through June 30, 1949. For this period the Administration had estimated Europe's minimum recovery needs not at $5,300,000,000, but at $6,800,000,000.

This represented a reduction of the magnitude of 21 percent. The Economic Cooperation Administrator, Mr. Paul Hoffman, immediately pointed to the significance of the reduction. The effect would be to cripple the recovery aspects of the legislation, he said, and thereby the program would be deprived of the very reason for its existence.

I recall—and my files confirm my recollection—that the press and public leaders of this country reacted in a similar way. There was immediate recognition of the principal effect of the Appropriations Committee's action—a basic alteration of the intent of the Congress.

No one stated the issue more succinctly than did the distinguished Senator from Michigan, Mr. VANDENBERG, whose remarks I now quote in part:

> The practical effect of the House bill is to repeal, by indirection, the intent and purpose of this legislation and to reverse this established American foreign policy both at home and abroad. * * * this Congress, as a matter of intelligent self-interest, cannot afford to throw our attitudes into doubt and thus to multiply the terrified confusion of a world in which the forces of aggression and subversion thrive upon confusion. We must not feed the very fires we would put out. * * * any such cynical reversal would be a major policy decision which should not be made through the back-door of an appropriation bill. Indeed, it should not be made at all.

Fortunately, the strength of public opinion behind the viewpoint expressed above was such that the judgment of the Appropriations Committee was substantially reversed.

The Foreign Aid Appropriation Act of 1949 kept the figures at approximately the level of the bill as reported by the Committee on Appropriations, but it added language making it permissible to spend the sums within a period of 12 months if it should be found necessary to do so by the President. Thus, the Chief Executive was given an option to see that the intent of the Congress as specified in the organic act should be carried out.

We know now, on the basis of a year's performance under the European recovery program, that the figure contemplated in the Economic Cooperation Act of 1948 for 12 months was basically sound. To have reduced it drastically would have been an error of grave consequence. Fortunately, the force of American public opinion made it possible to avoid that error.

It is possible for a change in quantity to become a change in quality. It is possible for a question of dollars to become a question of basic policy. It is possible, by trying to cut the dimensions of a program, to eliminate all the virtues that justify it.

Fortunately, the better judgment prevailed last year, and I believe almost all of us are convinced now that it was the better judgment that prevailed.

On the basis of what happened a year ago, and of what has happened subsequently, I for one am willing to say that I would not want the basic objectives of the European recovery program tampered with by a drastic reduction of its resources.

The report of the Committee on Foreign Affairs on the bill to extend the program gives sufficient indication that we not only expect, but indeed will welcome, scrutiny of the data when the Appropriations Committee reviews the figures. Our report attempts to point out to the other committee possible opportunities to save in the light of price data not available at the time of consideration of H. R. 3748.

Review of the factors is one matter. Reappraisal of the objectives and reduction of the scope are quite a different matter.

The Committee on Appropriations fulfills an invaluable service when it applies to the data of a program such as this an expertness and an experience not available to the members of a committee which is preoccupied with policy considerations. But when the Committee on Appropriations carries its functions to the length of attempting to supplant the judgment of the policy committee on what the scope and purpose of a policy should be, I believe it goes beyond its jurisdiction.

The public criticism that occurred a year ago over the attempt to alter the nature of this program by drastically cutting its resources should not leave a feeling of dismay or sensitivity.

We are all here trying to serve the will of the American people. That will has a way of making itself known when it is crossed. None of us here can promise to temper the wind of criticism that is likely to blow when an attempt is made to reverse a public decision.

Clear Channel Radio Stations

EXTENSION OF REMARKS
OF

HON. JOHN B. BENNETT

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 14, 1949

Mr. BENNETT of Michigan. Mr. Speaker, under leave to extend my remarks, I include the following article by Ward L. Quaal which appeared in the Mining Journal, Marquette, Mich., April 9, 1949.

(By Ward L. Quaal, acting director, Clear Channel Broadcasting Service, Washington, D. C.)

Farmers throughout all sections of America have fought many years for rights they believe to be justly theirs as against the discriminatory advantages enjoyed by city dwellers, and have effectively organized for the security of these rights. In one all-important field, however, they have not made their voices heard and have seen their rights whittled away without hardly a protest, namely, in the matter of radio service. Radio service is, of course, important to all people but to none more so than the person dwelling in rural and sparsely settled areas who does not have ready access to the entertainment, education, information, news, and religion available in cities. The great contribution of radio to our civilization is, or should be, that it brings these advantages to remote listeners everywhere.

The farmers have failed to give more than passing notice to a United States Senate bill which, if it became law, would deprive them of much of the service they presently receive through the great medium of radio and would prevent a badly needed improvement in that service.

Senate bill 491 threatens to do exactly that. There is no need to be greatly concerned with the welfare of people who reside in the larger cities having radio stations or those living relatively close to such cities. The persons whose radio reception would suffer are those residing in communities where there are no radio stations—areas which cannot economically support stations of their own and rural areas removed from cities having radio stations.

IMPORTANT IN UPPER PENINSULA

In Michigan's Upper Peninsula and the northern sector of the Lower Peninsula, radio reception has never been consistently good. In fact, radio engineering experts term it one of the most difficult to serve of all regions. In Michigan alone, over 456,000 persons would be without nighttime radio service were it not for the class of radio station known as clear-channel stations.

Nation-wide, the people residing in 75 percent of the area of our country are solely dependent upon clear channel stations for their only nighttime broadcast service. All of these people reside principally in small towns and rural sections which are scattered over virtually all of the States.

Wayne Coy, chairman of the Federal Communications Commission, speaking in Boston on January 25, 1949, directed attention to incomplete radio coverage, stating, "This is a big country and a lot of people live in it. Some 20 millions of those people have never had adequate radio service."

CLEAR CHANNEL VITAL

Chairman Coy's statement points up the most important unsolved problem of Federal regulation of broadcasting, namely, how to provide these millions of people in large rural and sparsely settled areas, including those in Michigan's Upper Peninsula and the northern sector of the Lower Peninsula, with service somewhere near comparable to that enjoyed by city listeners practically everywhere. The latter receive strong, clear signals, day and night, not merely from one, but usually from four up to as many as 20 stations located in their respective communities, with a corresponding choice of programs. Rural listeners in the inadequately served areas, however, insofar as they receive any service at all, must be content with weak signals, marred with static for most of the time, from a comparatively few distant stations. They are not afforded their fair share of radio's great contribution to our civilization, the opportunity of listening to programs produced in the great centers of culture, information, education, and entertainment.

There is only one effective way to remedy this defect. It is by retaining what are known as clear-channel stations and permitting, indeed requiring, them to increase their power so as to provide the sort of signal that is necessary for improved service.

Here is why 26 clear-channel stations (technically referred to as class 1-A stations) are the primary source of nighttime radio pleasure for 50,000,000 distant rural listeners.

HIGHWAY THROUGH AIR

A radio channel is a road through the air, the highway along which programs travel from the station to your receiving set. Only 106 channels are available for use by 2,147 United States radio stations (including Hawaii and Puerto Rico).

On some of these channels—all shown by number on the radio dial—the Government allows from 2 to as many as 156 different stations to broadcast simultaneously day and night.

Signals and programs from different stations using the same channel—the same path through the air—interfere with one another. To be heard at night free of such interference over even a small area, stations on shared channels must be located some distance apart, their power limited and other technical devices employed.

Known as local and regional stations, they serve only cities and small surrounding areas. Regional stations, with a few exceptions, are heard over a distance of less (usually much less) than 35 miles at night, free from interference. Local stations have a nighttime interference-free radius as low as 2 miles and rarely in excess of 10 miles. These local and regional stations serve only 25 percent of the country's area at night. The remaining 75 percent of the country depends, and must continue to depend, upon clear-channel stations for nighttime reception.

THEY ARE PROTECTED

Only one station is allowed to use a class 1-A clear channel at night, when radio waves travel farthest. As a result, there is no other station on the same channel to scuttle its program with interference. Given this protection the clear-channel station is able to reach out and cover farm areas and small towns.

The Senate bill (S. 491) now before the Senate Interstate and Foreign Commerce Committee would, if it became law, endanger this service to the rural folks. The residents of our rural areas and our small towns face a loss or serious impairment of their highly coveted radio service unless action is taken to defeat this measure in Congress. The threat becomes more alarming when one examines closely the provisions of the Senate bill. It would require duplication of stations on the clear channels, thereby causing interference which would lead to deterioration of service to the remote areas. Secondly, the bill, if it became law, would limit maximum power of United States stations to 50 kilowatts, thus foreclosing any reasonable possibility of improving the present inadequate service. At the present time, Mexican stations are operating with power far in excess of 50 kilowatts. If the United States clear channels are broken down, we will sacrifice the exclusive use of our clear channels to other North American nations.

It is imperative that our clear channels be retained and that higher power be granted, for only in this way can service to rural and small-town America be maintained and improved.

In the past, whenever attempts have been made to secure higher power, it has precipitated bitter attacks by certain interests. In October 1924 when United States stations were asking for an increase in power from 1 to 5 kilowatts, John Shepherd, of Boston, later president of the National Association of Regional Broadcasters, in opposing the increase, said: "If the power is increased without any limitation of hours or season, it will result in less enjoyment to millions of people, and for that reason it should not be done at this time." Other persons joined Mr. Shepherd in his attack. Some declared that "the use of anything more than 1,000 watts (1 kilowatt) would mean the blotting out of

small competitors." The same interests opposed increases to 50 kilowatts in 1930 and have been opposing power in excess of 50 kilowatts ever since.

Mr. Shepherd and his colleagues have seen their fears vanish with the years, for in 1924 there were only 535 stations in the United States and today there are 2,147. During these past 25 years, American listeners have been better served with each increase in power. There are today 338 5-kilowatt stations, 35 10-kilowatt stations, and 73 50-kilowatters. Keeping in mind the fourfold increase in radio stations in the Nation since 1924, it can hardly be stated that the small competitors were blotted out. The arguments of the opponents of higher power, if applied to aviation, would have prevented the public from enjoying faster and more comfortable air transportation, and, if applied to any other business, would require that the clock stand still on any advance in civilization.

One of the many reasons why power increases do not hurt the smaller station is the importance of local appeal to the listener. There is a natural tie to the home-town station, a loyalty which cannot be severed merely by the signal strength of a distant station.

Fear of signals from distant stations becomes even more absurd in considering the advertiser's needs. The advertiser prefers a local outlet in a market of any importance to him. It is impossible for the programs of WGN, WLS, WMAQ, or WJR to merchandise a product in Marquette, Ishpeming, Negaunee, Escanaba, Gladstone, or any other remote city. WGN cannot sell autos for dealers in Ishpeming and Marquette, nor can it sell clothing for dealers in Escanaba. Only the local stations can merchandise the area in such a way as to bring sales success to the local business houses. For these reasons, local radio stations will continue to prosper. They serve their communities well.

An increase in power above 50 kilowatts will render no injury of any kind—technical, economic, social, or otherwise. On the contrary, the public, all classes of stations, and the industry generally will be greatly benefited. Higher power on our clear channels will give the neglected rural and small-town listener the improved radio service to which he is entitled.

Directors: Pay More Dividends

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 14, 1949

Mr. PATMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from Forbes Magazine of Business for April 1949. The opinions given in this article are substantiated by a large volume of mail which I have received from stockholders, citing instances in which small or no dividends have been paid despite large corporate profits.

DIRECTORS: PAY MORE DIVIDENDS

Every corporation's executives and directors should weigh these facts when they next meet to determine their concern's dividend payments. These figures were prepared for the joint committee of Congress now studying profits:

In 1926 corporate profits after taxes were $7,300,000,000. Dividend payments amounted to $4,800,000,000.

In 1948 corporate profits after taxes were estimated at $20,300,000,000. Of that sum $7,300,000,000 were distributed as dividends.

In 1926 companies paid in dividends an average of 58.9 cents of every dollar of net income.

In 1929 companies paid out as dividends 69.2 cents on each net income dollar.

In 1938 a high of 75.8 cents was paid out of each dollar of net income.

In 1946, 43.7 cents.

In 1947, 38.1 cents.

And in 1948—the lowest amount in history—the share of each profit dollar distributed to stockholders was only 36 cents.

This publication warned last year, and it more earnestly warns management again this year, that such disproportionate withholding of investors' money for whatever fine purpose is short-sighted, unjustified, and is bound to bring on legislated, forced distribution of greater profit percentages. It is for the investor to decide if he wants more of his money put into a particular company, not the managers of the money he has already invested.

No thinking stockholder advocates anything like complete profit distribution; investors want sound companies, with reserves for emergency, with proper funds for modernization, for sensible expansion.

But they are surely entitled to more than one-third of the profits their investment earns. They get no dividends when there are no earnings, as a rule; they should get fair dividends when there are record earnings.

Isn't it plain that one very real reason equity capital is so hard to locate these days is the lack of equity in sharing profits with the man whose money makes them possible? Except for the handful in the sky-high tax brackets, a greater return on their holdings would have much appeal to most investors.

And if the exchange's new effort to attract small savers to stock buying is to succeed, a greater return, a more reasonable share in profits when they are earned, would certainly add tremendous lure.

If managements don't act themselves along such lines, there are indications Congress will.

The following letter is self-explanatory:

KANSAS CITY, MO., *April 6, 1949.*

Mr. OTIS H. ELLIS,
Executive Director, Select Committee on Small Business,
House of Representatives,
Washington, D. C.

DEAR MR. ELLIS: Thanks for your letter of April 4.

Thought you might be interested in an article in the Forbes magazine, which is a magazine of business, April 1 issue 1949, on page 12, entitled "Directors: Pay More Dividends." When a magazine of this stature writes an article such as this it is evidence that a large number of investors feel that the management of corporations have not given the stockholders the proper consideration.

I trust that your committee will carry through on your ideas as to forcing corporations to pay the stockholders their just proportion of earnings each year, whether the earnings be large or small, and that also management be forced to take up with stockholders the matter of plowing back earnings into properties, equipment, etc. As it is handled now management seldom asks the stockholders, who are the real owners of the corporation, what they want to do with the earnings, but assumes the prerogative of being the sole judge as to what is best for the corporation, which as I see it, is entirely wrong.

Yours very truly,

HAROLD A. MERRILL.

Address of Hon. Tom C. Clark

EXTENSION OF REMARKS
OF
HON. JOHN E. LYLE, JR.
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 14, 1949

Mr. LYLE. Mr. Speaker, south Texas continues to contribute to the welfare and stability of our country and the world. We have been blessed with great natural resources and with people who have the imagination and the courage to work for peace, progress, and prosperity. We are proud of our home, of our democratic heritage, and of the contribution we are making and will make to the world. Last week Corpus Christi played host to the Democrats of south Texas and our friends from throughout the State. We were honored to have as our guest the Honorable Tom Clark, our great Attorney General. He delivered an outstanding address, and I am pleased to share it with you who were not privileged to hear it.

It is good to be among Democrats—especially the south Texas variety.

I know of no other region in the Nation that produces a sturdier or stronger breed of Democrats.

Maybe it's the climate. Democrats around here seem to have many of the characteristics of the cactus plants—their roots go deep, they stay alive the year round. While other political specimens wither and die the Democrats just grow healthier, and when a man tries to kill them out he finds they multiply.

Texas too has a strong representation of Democrats in the Congress. We can take particular pride in the remarkable representation we have there. Two great Texans represent you in the Senate. The voice of TOM CONNALLY is known and respected throughout the world—on both sides of the iron curtain—as an able, fearless advocate for democracy. By his side today stands one of the most vigorous, hard-hitting, loyal public servants ever to represent Texas—a man whom you folks and all Texans know well as your friend—LYNDON JOHNSON. The Nation is fortunate that Texas has two such capable men participating in the law-making of the Nation and the peace-making of the world.

On the other side of the Capitol Texas is represented by a great delegation of alert, forthright Texans, headed by the number-one Democrat of Texas, Speaker SAM RAYBURN, the ablest lawmaker in the land.

We—Texas and the Nation—are most fortunate to have our friend JOHN LYLE as your Congressman. You have 23 effective representatives—including some of the most powerful men in Washington—working together as a team. And you have young men of great capacity and impressive sincerity, such as LLOYD BENTSEN, of the valley, there to carry on the tradition of outstanding representation which our great State has enjoyed through the years.

The Democratic Congress is an assembly of wise, intelligent men who are progressive because they are independent. You need not worry about the laws they will write or the actions they will take.

Mary and I have looked forward with real enthusiasm to this visit in Texas and 110-year-old Corpus Christi. We revel in again celebrating the glorious victory of November and the part Texas had in it. We wanted to be among Texans again and hear Texas talk. We knew we would get a shot in the arm from

the invigorating spirit of growth, ambition, and optimism which fills the minds and hearts of Texans.

Fifteen years ago, even 10 years ago, Corpus Christi was nothing but an outpost. Today your city is the capital of the vast region of south Texas, including the Magic Valley.

Texas has had vision—planning for tomorrow.

Because of this, Texas has industry. It will have more.

Texas has a thriving, prosperous trade. It will have more.

Texas has phenomenal growth. That will continue.

Texas has, above all else, opportunity, and today there is no limit on what that opportunity can mean to you, to Texas, to the Nation, and to all the nations which rim this Gulf, the doorstep of Corpus Christi. Your city is representative of Texas progress.

Opportunity has been reborn all over the land. That is an important thing for us to remember. It has not been an accident or a coincidence that freedom of opportunity has been restored to the American heritage within the span of four Democratic administrations.

Wherever you find opportunity in America today, whether in Corpus Christi or any of thousands and thousands of other cities and regions, that opportunity was created by the hard work, intelligent planning, tireless determination, and great faith of the people working as a team.

Two great modern-day Presidents—Franklin Roosevelt and Harry Truman—two great Democrats in the tradition of Thomas Jefferson, Andrew Jackson, Grover Cleveland, and Woodrow Wilson—had faith in the people, and the people had faith in them. Together we have worked out a happier, more prosperous way of life—the American system.

We Americans do not forget our friends, and from long experience the people have learned that Democrats are their friends.

Did you ever think back over our history and realize that every time our country has faced a crisis the people reached out and made a Democrat their President?

Thomas Jefferson, the founder of our party, author of the Declaration of Independence, gave to the Nation the Louisiana Purchase, guaranteeing to America forever a place in the world of great powers.

Andrew Jackson, who returned the government to the people, drove the money changers from the temple of finance, and was a friend of Texas and Sam Houston, and the idol of the American people.

Grover Cleveland, who restored honesty to government; his credo was: "A public office is a public trust."

Woodrow Wilson, who pioneered a new freedom which might have—but for a small group of selfish obstructionists—prevented the Second World War.

Franklin Roosevelt, whose courage and determination restored prosperity and security to a bankrupt nation and made human dignity and individual freedom a reality.

Harry S. Truman, whose great role recast the foreign policy of the United States. It was he who decided that the power of the United States should be used affirmatively in the interests of a decent world. The whole hope of western civilization was in the balance. Harry Truman acted promptly in the Rio Pact, the Truman doctrine, the European-recovery program, and the North Atlantic treaty. And along with these great decisions—made by your President—he gave the world point four of his inaugural address, a program for applying American know-how and resources to the resuscitation of the backward areas of the world. With this planning—this program—aggressive communism is being routed, the disaster of another war averted, and permanent peace—we hope—achieved. As the Washington Star—an independent Republican newspaper—said only this week:

"Once again, in a time of great need, the American system has produced a President who had the wisdom and the courage to make the right decision and the strength of character to act upon it."

These great Democratic leaders had one notable characteristic in common. Unlike some of their contemporaries, these Democrats were not so worried about the past as they were determined to breathe justice, equality under the law, and opportunity into human lives.

That, I would say, is the fundamental belief which distinguishes a Democrat from a Republican. The true Democrat works today while planning for tomorrow.

Some folks ridicule us for this. They accuse us of being starry-eyed dreamers and impractical planners scheming to control the lives of every person and organize their thinking as well as their work. They seem to believe that it is alien to the American way of life for any administration to concern itself with its citizens of today as well as tomorrow.

I say they are wrong. I say they are overlooking the basic spirit of the American dream—a spirit that is neither Democratic nor Republican, but plainly and simply American.

Some folks like to say we do too much planning. They imply that we aren't practical. They fail to recognize that planning is a businessman's word. Show me a good businessman and I'll show you a man who plans for the future. It is the only way a man can stay in business successfully. The Democratic Party is the only party which has recognized this and adapted the principles of good business to the affairs of Government.

When our critics scoff at us or shout alarms about us because we are planning for the future, they ignore the fact that the only occasions when we have been plunged into chaos have been those occasions when the Government had made no preparation for the future but was operating day to day.

Democrats believe an ounce of prevention is worth a pound of cure. Unfortunately, some are never willing to pay for the ounce of prevention and never convinced they must buy the pound of cure. When a Democrat suggests we need that ounce of prevention, he is denounced for an alarmist. When he says we need the pound of cure, he is tagged as a spendthrift, a Socialist, or maybe even a Communist.

But names never hurt anyone. When I hear or read vilification of myself I am reminded of a little verse: "To those who talk and talk this motto should appeal: The steam that blows the whistle never turns the wheel."

No matter what our critics say about us, no matter what names they call us, the Democratic Party and the people still understand each other—and they get along together quite well.

A few weeks ago I was reading a Texas newspaper which had an account of a speech delivered at Austin by our own great American, SAM RAYBURN. Speaker RAYBURN told that assemblage of Democrats in Austin just what he told President Truman after the elections last year.

The Speaker said:

"I don't know whether there will be a recession in 1949, but I know there is nothing in our fundamental economy except fear to bring about a depression."

That remark by Speaker RAYBURN is one which all of us—Democrats and Republicans alike, and particularly you businessmen—should consider soberly.

Fear is a terrible thing always, and it is dangerous. It reduces strong men to the illogic of a frightened child awakened by the sound of the wind blowing through an open window. Fear is inflammable. It leaps from person to person, neighbor to neighbor, burning more brightly as it goes.

Since the elections last November there has been a lot—in fact, far too much—scare talk. It did not start down here, but I am sure you have heard it. Scare talk about depression. You have heard the loose predictions that a recession is just around the corner. You have heard men predict all sorts of dire things because of what they think the Democrats will do.

The singers of economic blues and the predictors of dire things are surely short-sighted if they think Texans scare easily. Nor have we forgotten the pollsters' depression of 1948. The November 2 prediction crash. Now that was a depression—the biggest depression in the history of forecasting.

All these panic provokers had to do in order to get the truth about our national economy was to make a simple inquiry. They would have found that there were over 300,000 more persons employed in January 1949 than in January 1948.

And remember this—there were over 100,000 more people employed in January 1949 than in any other January in our country's history. In February—a seasonal month of cold and wintry weather—there were over 30,000 more persons employed than in February 1948. And last month—March—the number of employed increased 479,000.

Looks like the depression forecasters are in the same boat with the pollsters.

Look at business: Earnings in 1948 were 30 percent higher than in 1947; corporate profits the highest in history. Personal income of the people, yours and mine, passed $213,000,000,000, by far the greatest in history. Texans alone earned over $8,000,000,000. Around 60,000,000 people have been continuously employed.

Let's just take inventory, for a moment—right here in Corpus Christi.

Don't you have here more than you have ever had before. You have by careful planning balanced your industry and economy until now there is no reason to worry about your ability to produce more and more goods—nor your ability to sell those goods profitably and quickly.

Your primary concern is whether your consumers, present and potential, have the power to buy those goods. Unless that buying power is present then your prosperity cannot survive.

That was the cause of the depression back in the thirties, the ability to produce and the talent to sell was present, but the power to purchase was gone. Though the Democratic Party inherited a legacy of chaos, collapse, and confusion, it worked, and worked, until today we have unparalleled prosperity. No one wants to return to the economic conditions of the thirties.

If you want to know what the Democrats will do now, if you want to know what the fair-deal program of President Truman means today, I will tell you—it means that the Democrats intend to keep our present-day production levels—yes, and multiplying still more in the future

It can be done, and the Democratic Party will do it.

We believe that by wise, intelligent planning, by bold, courageous action, prosperity can be maintained for a peaceful society.

For example: The Democratic Party believes that you here in Corpus want and should have assistance in expanding your port into a busier, greater gateway to the world. I join your businessmen in the belief that with the proper assistance you can make Corpus Christi a hub of the hemi-

sphere. Are we of the Democratic Party idle dreamers and reckless planners when we agree with you and when we seek to give the Government the power to lend you a helping hand? I for one do not believe we are.

This is not a new way of running this business of government. It is older than our Nation, older even than the recorded history of the North American Continent. Throughout the pages of history, every strong, progressive government has been one which worked for the people.

The Democratic Party, from the age of Jefferson on to the present, has recognized the importance of a working alliance between Government and the people.

We have started building prosperity by developing earning power and buying power at the bottom; we have recognized the folly of concentrating wealth at the top, praying that the wealth will "trickle down."

This is not socialism.

This is not extravagance.

This, I say, is Americanism—the true American way.

You merchants and businessmen and farmers—think, for a moment, what this has meant to you. When a man comes into your place of business today, you can be almost positive that he is coming in to buy, not to beg.

The Democratic Party which won the election last fall, and today holds the reins of government, is the same party in spirit and in purpose as the party which brought us to this era of prosperity. And we didn't do it with promises—we did it with performance. The Democratic Party still has just one goal—the greatest good to the greatest number—and we have no favorites, no enemies. As the rain falls on the just and the unjust alike, the spirit of the Democratic Party permits no narrow prejudices to guide its efforts to make life more rewarding for all Americans.

The Democratic President who sits in the White House—that straight-forward, courageous man from Missouri who fears nothing but God—is not concerned with planning for the left or the right, but with planning what is right and casting aside what is wrong. The Democratic platform is the blueprint. It has not been filed away in the cabinet of forgotten political pledges. Our great leaders—Texans and others alike—are shaping into a living, dynamic reality the progressive plan and program adopted in the City of Brotherly Love—headed by our capable and beloved Vice President, Alben Barkley, this team is busy in the Eighty-first Congress. We can talk about our party's accomplishment there for today it has progressed further in the adoption of its program than any Congress in history. By the 17th of this month all appropriation bills—save one—will have passed the House. The Economic Recovery appropriation will be on the statute books, the Rent Control Act will be in full operation—the creation of a Department of Defense, with a full complement of under secretaries and assistants, will be history. Together they are rapidly forging new legislation for veterans' care, educational aid, labor, housing, medical welfare, and other humanitarian purposes. They will become the law, make no mistake about that. If we are to keep our freedom we must carry out this program. Freedom must be guarded every day, its reality by each individual improved and enlarged. It must be earned by each generation again and again. Harry Truman and Alben Barkley are showing the way. Americans of good will are backing their, and the Democratic Party's, efforts. In a world where freedom is in peril let us thank God for America, for Texas, and our leadership. The future is ours—with God's help we shall make the most of it.

Not All Newspaper Editors Opposed Veterans' Pension Issue

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 14, 1949

Mr. VAN ZANDT. Mr. Speaker, fortunately for our veteran population, all newspaper editors were not duped by the false and misleading propaganda disseminated by the social planners against the veterans' pension issue.

Reliable information on the pension issue is now available to all Members of Congress and to the American people. As a result the cost of pensions to needy veterans is recognized by all thoughtful Americans as a necessary aftermath of war.

The North Pittsburgh Times published in Pittsburgh, Pa., is one of the few newspapers in the Nation which had the courage to refresh the memory of its readers with regard to the roseate promises made to veterans when dark war-clouds hovered over our land.

In the April 7, 1949, issue of the North Pittsburgh Times the editor discusses the subject of veterans' pensions, and his observations are of timely importance and worthy of the most thoughtful consideration.

The editorial is as follows:

WE'LL PAY OUR SHARE

So far as we can discover, the Times is about the only paper in western Pennsylvania that is not opposed to pensions for veterans. We make no apology for that stand, rather we elect to champion it.

We start out on the premise that pensions are part of the cost of war. There has never been a war in American history that did not result in pensions or bonuses for the veterans of that war. There never will be one that does not so result. Right or wrong you can mark it down that wars result in pensions. And we think it is right.

Certainly, there are veterans and veterans. There are those who went through the hell of modern combat; there are those who only underwent the trials of an officer's club or a glorified amusement program; and there are those who sat behind a desk in complete security. But which one wasn't uprooted from all of his normal pursuits and assigned his duties subject to military discipline?

Of course, many taxpayers object to paying pensions. Of course, the total bill frightens them. But they weren't frightened in the same way when they were urging the lifting of the arms embargo, short steps to war, and the unconditional surrender of dictators. Oh, no. When trade and commerce were threatened, when the wrong ones were winning, and when our security was jeopardized, we wanted to get into war—and we voted for those who would get us into it.

All that may have been good and wise, but now our tune has changed. It reminds us of the sick sinner who hunts out a saint or of Kipling's Tommy Atkins. We are all for everybody else sacrificing when we are in danger or our welfare is threatened; then when the danger is gone, we aren't so anxious to pay the check.

Please tell us this: We invite your response. How can a Member of Congress vote for the Marshall plan, the new lend-lease, or the improvement of backward countries and vote against pensions for needy veterans? Ask yourself that one. To be sure, the Marshall plan is good business; it is, in fact, good national defense. So is the North Atlantic treaty, and the building up of backward countries may pay dividends, but we also have to pay our bills. And whether we like it or not, one of those bills is pensions for needy veterans.

Granted, you can throw out Members of Congress or members of the General Assembly who vote for pensions. But you can't put people in their places who won't do the same thing. The best, from a tax-saving viewpoint, that is possible is someone who will keep pensions within reason.

In that connection, the veterans' organizations must help. As they served in war, so must they serve in peace. They must keep their requests within realistic bounds. Their sacrifices and the sacrifices of their comrades must not be rendered in vain because of exorbitant pensions. No matter how just their claims, prudence dictates that they must be tempered by the ability to pay. Our freedom can only be lost by economic collapse. Economic collapse can only come from prolonged excessive taxation.

We could go on and on. The matter, however, can be summarized. Needy veterans deserve; they should have the help of a grateful Nation. Veterans generally should limit their righteous demands to what the traffic will bear. The Nation is not without a sense of obligation. What is right will be done to the limit of ability. We only urge that the taxpayer remember pensions are a part of the cost of war and that veterans remember that all of the costs of their sacrifices can't possibly be paid.

By way of a footnote: We just can't stand the glorification of war veterans in Congress with incomes of $15,000 and up, who vote against pensions for their needy comrades, whose problems they always understand in campaign speeches.

American Shipbuilding

EXTENSION OF REMARKS

OF

HON. CHARLES A. WOLVERTON

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 14, 1949

Mr. WOLVERTON. Mr. Speaker, it is gratifying to realize that there is an ever increasing interest being taken by Congress in building up our merchant marine. One of the latest indications of this growing interest is the building of a new superliner in the near future under authority and funds already provided for.

In this connection and as part of my remarks I include an editorial published in the Courier-Post newspapers, Camden, N. J., April 12, 1949, entitled "Third Step Toward Real United States Maritime Fleet," reading as follows:

THIRD STEP TOWARD REAL UNITED STATES MARITIME FLEET

This country's postwar passenger shipbuilding program has advanced another long step with the United States Lines' authorization of the first American superliner.

The new vessel is to be built at Newport News, Va., at a total cost of $70,373,000. She is to be delivered some time during 1952. Her cruising speed will be between 28 to 30 knots, so that for the first time an American-built ship will be able to challenge for speed

records on the North Atlantic, the area she will serve.

The superliner will gross only 48,000 tons, which is little more than half the size of the *Queen Mary* and *Queen Elizabeth*. But she will carry a crew of 1,000 and luxury accommodations for 2,000 passengers, and will be able to pass through the locks of the Panama Canal, which the two *Queens* with their broader beams cannot do.

At present our largest merchant liner is the 26,000-ton *America*, and it has been more than 50 years since the United States has built a large luxury ship to compete with the best of those under foreign flags.

The new vessel will be built for easy conversion to use as a troop transport, and will incorporate many of the latest defense features, of which her high speed is one of the most important. She will be able to carry an entire division at one time.

The Government, from the $203,000,000 fund granted the Maritime Commission by Congress, will pay the major portion of the ship's cost—$42,285,784. The steamship company will pay $28,087,216. Since the Navy would probably have had to build such a vessel entirely from Government funds if this one were not constructed, this division of costs does not appear to be a bad bargain.

Authorization of the superliner is the third key move this year toward laying the foundation of a great new American passenger fleet, the value of which has been well demonstrated both in war and peacetime.

The first step in this program was taken only recently here in Camden when the New York Shipbuilding Corp. laid the keel of the *President Jackson*, one of three 12,600-ton passenger-cargo vessels for the round-the-world trade of the American President Lines.

The second came a day later at Quincy, Mass., when the Bethlehem Steel Co. laid the keel for the first of two 20,000-ton express liners to sail between New York and Italy.

Building of all these ships is most significant to the Nation.

They will enable American companies to compete more adequately on the high seas for commerce, passenger, and cargo with the government-subsidized ships of foreign countries.

They mean much in the survival and revival of our stagnant shipbuilding industry, keeping skilled labor at work and available for emergency and keeping shipyard plants from rusting away.

They will provide the Nation with ships specially designed for quick conversion to transport use so that we will not have again to rely solely on uncomfortable and insufficient cargo vessels for that purpose.

It is cause for congratulation that restoration of a real American fleet to the seas is under way, and that it is being accomplished so largely through private enterprise.

"Fixing" of Athletic Contests

EXTENSION OF REMARKS
OF
HON. SIDNEY R. YATES
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 14, 1949

Mr. YATES. Mr. Speaker, under leave granted me to extend my remarks in the RECORD, I include Senate Resolution No. 13 adopted by the Sixty-sixth General Assembly of the State of Illinois on April 6, 1949:

Whereas all sports-minded Americans have been shocked by the brazen attempts of certain disreputable individuals to fix athletic contests and sporting events by bribing participants therein; and

Whereas these nefarious activities tend to bring all sports into disrepute and, unless effectively checked, may cause the ruin of American athletics; and

Whereas sporting events provide needed entertainment for millions of Americans, and participation in wholesome athletic endeavor builds strong bodies and inculcates lofty moral ideals among the youth of America, so that sports may truly be considered the backbone of our Nation, and their protection a matter of national concern; and

Whereas the laws of the several States are inadequate to cope with the menace of bribery where interstate activity is involved, unless supplemented by effective legislation on a national scale; therefore, be it

Resolved, By the Senate of the Sixty-sixth General Assembly of the State of Illinois, that we respectfully request the Congress of the United States to exert its earnest efforts to preserve the American sporting heritage by the prompt enactment of a stern and effective law designed to eliminate attempts to influence the results of sporting events and athletic contests by bribing competitors or officials; and be it further

Resolved, That suitable copies of this preamble and resolution be prepared by the Secretary of State and forwarded to the President of the United States Senate, the Speaker of the United States House of Representatives, to each of the United States Senators from Illinois, and to each of the Representatives in the Congress of the United States from Illinois.

Adopted by the senate, April 6, 1949.

SHERWOOD DUNN,
President of the Senate.
EDWARD H. ALEXANDER,
Secretary of the Senate.

I Made a Great Error, Thank God

EXTENSION OF REMARKS
OF
HON. EUGENE D. O'SULLIVAN
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 14, 1949

Mr. O'SULLIVAN. Mr. Speaker, since the publication of my article, Why Cannot the Republican Party Learn Anything Anymore, which article appeared in the Appendix of the CONGRESSIONAL RECORD on Friday, April 8, 1949, I have received a communication, dated April 12, 1949, from Hon. HUGH D. SCOTT, JR., chairman of the Republican National Committee, 1337 Connecticut Avenue NW., Washington 6, D. C., as follows:

DEAR MR. O'SULLIVAN: I have read your insertion in the CONGRESSIONAL RECORD of Friday, April 8, 1949. I assume that you would not knowingly misquote a colleague and, therefore, I take this opportunity to call to your attention a statement attributed to me at Omaha which never happened there or anywhere else.

I have never used the phrase or reference, "better people with better minds," and while it may have helped the context of your article, it would not have been inserted, I am sure, had you first checked the information.

I am not in any way interested in a retraction, but simply wanted to mention as one colleague to another that the statement was not made by me, and I trust that you will be good enough to accept my word to that effect and that the reference will not be made again.

Naturally I accept the word of my colleague that he never used the phrase or reference "better people with better minds," even though I was rather reliably, but quite apparently incorrectly informed about my colleague's Omaha statement. I shall be in Omaha in a few days and will check carefully the source of my information and if it had any basis in fact I shall make a further report to my worthy colleague and will have something further to report in the CONGRESSIONAL RECORD.

It goes without saying that I rejoice and that I am very much relieved to learn that my worthy colleague has not claimed at any time or in any place that the Republican Party is composed of the "better people with better minds," and I feel sure that it is the truth that the people in the Republican Party are neither the better nor the brainier, and I am sure that the experiences of the past 20 years have disclosed so undisputably that to be the fact.

For the Democratic Party, since there is now an open claim, I now appropriate the thought that it, and it alone, contains the "better people and the better minds," and I shall not deny to anyone that I made that statement in the CONGRESSIONAL RECORD, and in every other place where I have spoken or may hereafter speak, and I pledge you that I shall never again say that the Republican leadership has ever made the claim anywhere that its party is composed of the "better people with better minds" because that is surely not true and cannot be claimed by its leadership.

Address by Hon. Overton Brooks, of Louisiana

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 13, 1949

Mr. BROOKS. Mr. Speaker, under leave to extend my remarks, I present a copy of a speech delivered by me several months ago in the city of Shreveport, La., to a large gathering of junior chamber of commerce members. I later broadcast this address. I think the printing of it is timely now as it is on flood control and especially covers the magnificent work of the Army engineers both in peace and in war. It is as follows:

Flood-control bills will still pass Congress and the work will still continue. The heavy demand for American money from foreign sources and the pressure of one succession of crises in the battle of Berlin leave little doubt in my mind that we must fight our way forward for everything which we can obtain from Congress on flood control and river development. I expect to fight for every project which will aid in the development of our valley and which will aid in making it safe from annual floods and crevasses. I believe with reasonable certainty we can hope to obtain funds for the com-

pletion of the Bayou Dodcau Dam and Reservoir project which will involve some $400,000. I intend to press for more money on the Shreveport-Bossier City levee and revetment work which will need some $400,000 more. Certainly, at this point in the valley, we want to see an appropriation for five or six million dollars for the Texarkana Reservoir which means so much to us and another $1,000,000 for bank-protection work on Red River below Denison, Tex., to the mouth of the river. I am most anxious to witness the beginning of the Ferrel Bridge project in Texas with at least a million dollars and the Mooringsport Reservoir (Caddo Lake project) begun with another $1,000,000.

On the Overton waterway project, we face a hard battle. We will be most fortunate if we obtain any money for this project; but with the knowledge of the extreme importance to the entire valley of this water navigation, I am going to do my best to obtain in the House money necessary to continue the planning work on the project. Any amount, even as low as $300,000 will be most satisfactory to me. It is not necessary that I again say this project and others like it in Louisiana took a tremendous setback with the death of Senator Overton for whom the project is named. We must therefore reorganize our forces and do the best we can to push this matter to the fore in Congress at an early date.

I do not believe that I have to sell any person at this meeting upon the vital importance of flood control. A large part of the future of not only Shreveport but of the entire Red River Valley is tied up with the progress of valley development. Our work in this respect has already added untold millions in wealth—increasing assessments on land and making available additional land suitable for agricultural purposes in many parts of the valley. I do not have to refer to the increase in land values in parts of Bossier City and Shreveport, especially in the Broadmoor section of the city resulting from fin work done by the Army engineers in this section of the Southwest.

This work of flood control is tied up with other important work of the Federal Government. There is, for instance, the soil-conservation work. While these great rivers which traverse our State bringing the floodwaters of many sections of the Nation down upon us are being turned into benign forces for good, they are also at times some of the most destructive forces with which we have to contend. I do not refer entirely to the matter of floods, as destructive as we know floods are to our people and to property. I refer also to land erosion and soil wash. This has become, and is now, a tremendously important problem throughout the United States. The other day I had the opportunity of making an inspection of Red River from Denison to the mouth of the river. As this inspection ended in south Louisiana, our party proceeded from New Orleans to the mouth of the Mississippi. At this point, we had the experience of watching the dredging work being done to maintain a 40-foot channel in the river at this point.

I was much impressed at the line in the water which marks the end of the Mississippi and the beginning of the Gulf of Mexico. It is clear, sharp, and distinct. You can see it easily. The ugly, muddy water of the Mississippi River dumps its load of silt at that point and, clearing up, becomes a part of the Gulf of Mexico. This silt, which is literally dumped on the bottom of the river at this point, keeps up the age-old process of filling up the bottom of the river. The engineers are under instructions to maintain a 40-foot channel; and for this purpose, they have acquired at a cost of some $5,000,000 a specially designed boat which scoops the mud from the river-bottom and loads it in the hold of the boat. This is done by means of huge tubes which are lowered into the water and rest on the bottom. A large sleeve or mechanical shoe sucks the liquid mud from the bottom into the boat. In 45 minutes, they told me, 6 tons of silt is loaded in the boat; and it is then hauled some 12 miles out to sea to the deep water where it is dumped into the bottom of the Gulf, being lost forever to our people. This process of lifting the silt from the bottom of the river and dumping it into the deep Gulf continues 24 hours a day, 7 days a week, and 9 or 10 months each year. It is almost endless; and in the course of 1 year alone some tons of the richest soil God Almighty ever gave to mankind is lost forever to useful pursuits.

You ask, perhaps, what is this to me? What have I got to do with the mud on the bottom of the Mississippi River at its mouth 100 miles below New Orleans? My answer is this: That mud is your farm. A large part of it comes from the Red River Valley. I can identify it by its color. It is the rich top 7 inches of our soil, the soil which nature has been building up throughout the ages and eons of time. It is the best part of your land—and I know you here well enough to know that many of you have farms. That silt being daily scooped from the bed of the Mississippi and dumped into the Gulf is the top part of your farm—the richest part of it—and the part which cost you most when you bought it and the part which is of greatest service to you in using the farm. It is said that a 180-acre farm flows down the Mississippi River past New Orleans every day in the year. Certain enough soil flows down the Mississippi each day to fertilize and enrich a 1,000-acre farm each day.

The Army engineers are doing a fine job keeping open the south pass at 35 feet and the southwest pass at 40 feet depth. It is not an easy one to keep the river open as our farms literally flow down the river. It is a most important one. And, generally speaking, I think the Army engineers have done a most creditable job in our river and harbor work. They now have the years of experience behind them; and we must not permit this work to be taken from them and given to other agencies.

Several weeks ago President Herbert Hoover came out with a report which is most disturbing to me. The Hoover report recommends the consolidation of all Federal building agencies into one huge Department of Public Works. Ordinarily I am in favor of consolidations. I am not in favor of this particular recommendation and I propose to fight it.

This report, as I understand it, will have the effect of taking from the Army engineers all civil functions. It will mean that the agency which has had control of this type of construction since the origin of Federal flood control and river and harbor work would now give it up; and all of the wealth of experience obtained throughout the years by this agency will be lost. I think it is certainly a mistake to make this type of change in our Government.

This matter is much more important than this. The river and harbor work was originally placed under the Corps of Army Engineers because it is a peacetime work; and the Corps of Engineers was available for this purpose. The Army engineers could very easily have given up this work; and accepted throughout the years a much more uneventful existence by confining itself to Army service duties. Such an attitude would have taken from availability some of our finest engineers during times of peace. It would have retarded much and by many years the progress of our flood control and our rivers and harbors program. It would have postponed the day when we in the Red River Valley could have expected to make our people and our homes floodproof from the disastrous effects of the constant deluge of high water which comes from the States located above us. Such a course might easily have proven disastrous to our whole program.

But I think the recommendations of the Hoover report are even more objectionable to us from a defense viewpoint. The Corps of Engineers is one part of our defense system which performs a similar type of service both in peace and war. It is true that in time of war the hazards of the service are immensely increased. It is true that some of the problems are immensely magnified and the conditions of living are altered. It is true that in times of peace the building program of the Army engineers calls largely for careful planning, skill, and efficiency of service. These are qualities needed also in time of war. War calls also for physical strength, valor, and courage. It calls for patriotism of the highest order. But in the performance of its wartime duties, the Corps of Engineers relies upon the experience gained in times of peace.

I was told that this was the case before the Second World War. During the months of November and December of 1944 when I was in Europe at the request of the Army to inspect conditions at the front and make a report to Congress, I had occasion to make an inspection especially of the work of the Army engineers. On one particular occasion, I was taken to the front by an engineer colonel, whose home is in Washington State, as I recall. He is now retired and gone back to his home. A very able officer, he completely lacked the quality of fear. On the occasion to which I refer, the colonel took Congressman DAVIS and myself along the great Albert Canal. A look at the map shows us at once the importance of the Albert Canal to Europe as one of its main waterways. It connects the great port of Antwerp, Belgium, with the Meuse River. It was therefore desperately needed by our people as a means of supply to our entire Army which at that time occupied positions facing the Rhine River in its desperate drive on the Ruhr Basin and on the great German steel and industrial center in the Ruhr Valley.

Some 55 bridges over this canal had been wrecked by the retreating Germans and these bridges had to be repaired; and what was equally important, the debris from this wreckage had to be removed from the bottom of the canal if it were to be of any service or use to our troops. Canal boats had been destroyed in the channel of the canal. Canal locks had been injured—luckily for us not very seriously injured—and had to be repaired. At points the sides of the canal had been shattered and thrown in the bottom of the channel. Much work had to be done—and under most difficult conditions. The canal paralleled the front line and, at that time, it was located almost within rifle range of the front German lines.

As combat engineers manned the guns, others went to work like beavers to clean the canal and repair the damages. I saw a crew of engineers on one bridge, taking time successively working on the damaged bridge and manning the antiaircraft guns. If you want to see men really work, watch them when they are under fire. They turn out more work in 10 minutes than you would think possible in an hour. They literally perform miracles; and these engineers did that very thing. In an unbelievably short time, the canal had been cleaned and, although not completely repaired, was in such a shape as to sustain water traffic. Before the Germans realized it, this great waterway (the most important from our standpoint in all Europe) began to move heavy war munitions from the great port of Antwerp, Belgium, southward, dropping it off at various points along the lines for our truck transportation units to pick up and move to the units where it was badly needed.

As I saw our combat engineers perform these miracles of repair to roads and bridges

and airports, I realized then the need at the front for the heavy dirt-moving machines which we saw daily along the banks of the lower Mississippi and the Red. I had seen bulldozers, caterpillars, draglines, and other heavy equipment which we see in use in Louisiana at work along our water-swollen rivers for days moving up to the front. I began to wonder what was the need for all of this equipment and why place this slow-moving machinery on roads already crowded with men and artillery and ambulances moving to the front. It was only after I saw this equipment actually in use by our engineers that I realized this was just as important in the winning of the war as was ammunition.

As I stood there on the banks of the Albert Canal, my mind slipped back to scenes in Louisiana during periods of high water and during times of crevasses. The rush, the frenzy, the maddening haste was all there, although on a much larger scale; the equipment and the machines were present; and the men were in uniform and worked at unbelievable speeds. The same routine and methods were in use in repairing this canal and cleaning the river with which it connected as was used in flood-control work in the United States. The same general principles of organization and of planning were present; the same materials were needed and the same knowledge and training was necessary.

You learn fast on the front and under fire. You either learn fast or you don't learn at all. So it didn't take me long to learn that the basic experience and training that our Corps of Engineers receives as it works out its problems of flood control and of navigation in California, Connecticut, and Louisiana paid huge dividends in valuable service and made possible a superb record in the late war. Others may cry about consolidation; but for my part I think the training which our Corps of Army Engineers receives in its peacetime civil-functions program is worth more than all the savings which the wildest advocate of efficiency and consolidation would predict. More than this, I think this training makes possible superb efficiency and performance when the dark clouds of war lower upon our continent. It is a guaranty of readiness in an emergency and an assurance of training in war emergency. Consolidation may add to efficiency of Government in time of peace; but it takes from it in time of war.

My friends, the Corps of Engineers has a glorious history in war as well as in peace. I would not see them disturbed or disrupted one iota. It was a colonel in the Army Engineers who set foot in Normandy 24 hours before D-day. It was the combat engineers who cleared the way, clipped the first barbed-wire entanglements, repaired the beaches, rebuilt the bridges and cleaned the roads so that our troops could proceed from the beachhead in Normandy to higher ground and to more protection. It was our peacetime trained Army engineers that spilled their blood at the first landings in Normandy and at the last surrender of the last Jap in the Orient. Billions of dollars of construction was handled by them. Thousands of airports were built by them and countless other installations desperately needed to win the war as quickly as possible.

It is not surprising, then, to see as one lands on the now historic Omaha beachhead in France a small stone shaft, already constructed, to the memory of the First Battalion of Army Engineers. It is located where the First Engineers landed on hostile shores and stands as a silent marker to the glorious performance of our Corps of Engineers who, while trained in times of peace in their active work for flood control and rivers and harbors, yet are fully able and ready to immediately divert their experience and background to the critical demands of war. I would not take one jot or tittle from any other branch of service; but I certainly feel the time is ripe to acknowledge a job well done by our engineers.

The Hoover report makes a mistake in seeking to disrupt this organization. It will bring about inefficiency rather than efficiency. It will take from our Corps of Engineers the training and experience which is priceless in our hour of crisis. It brings to us no assurance of economy or efficient public service. It is faint reward to men who have such a remarkable history of performance during the times of need in the past. I am, therefore, going to vigorously oppose the Hoover report to consolidate into one agency all Government construction.

Establishing Two-Price System

EXTENSION OF REMARKS
OF
HON. RALPH HARVEY
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 14, 1949

Mr. HARVEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Courier-Times of New Castle, Ind.:

ESTABLISHING TWO-PRICE SYSTEM

Obviously, the new farm program suggested by Secretary Brannan is a definite introduction of a two-price system, one guaranteeing the farmers high prices and the other giving consumers the hope and benefit of low prices. Naturally this cannot be done without someone paying the bill, and that someone is the taxpayers who will pay for the subsidies the Government dishes out to maintain prices, to the farmers on the one hand and trying to retain the good will of the consumers on the other with lower prices. Under such a plan, if the Government decides the farmer is entitled to 35 cents a dozen for eggs, which they are costing the consumer only 25 cents, the Government makes up the 10 cents difference.

The thing might even be extended to other lines. When automobile sales slump, why not let the consumer have a new car for $1,000 and let the Government pay the manufacturer the difference? The principle is exactly the same. The New York Times sees it this way:

"As for the old 'parity' that would be supplanted by a new and startling concept of 'normality,' the administration would set as its target a 'minimum income' goal designed to assure agriculture as much buying power as it had in 'the first 10 years of the previous 12-year period.' Put more nakedly, the target for 1950 would be the average farm income for the wholly abnormal war and postwar years, 1939–48, when both production and prices were the highest in the Nation's history. The average farm income for that decade was $26,234,000,000, compared with $7,877,000,000 for 1939.

"Only one logical explanation suggests itself for the sudden emergency out of nowhere of this proposed new adventure in agricultural planning with its economic legerdemain and its promise of unprecedented largess to the farmer. It has all the earmarks of a heavy-handed attempt to repair the political damage sustained by the administration as a result of the recent decline in farm prices, and at the same time to top the Republican bid for agriculture's favor represented by the comparatively conservative Aiken law."

Weakening Our National Security Can Please None Save the Kremlin

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 14, 1949

Mr. VAN ZANDT. Mr. Speaker, for several months past, a widely read, and, unfortunately, widely believed publication, Reader's Digest, has been running a series of articles by one William Bradford Huie, sharply critical of policies of Congress and the national military establishment, and portraying a dangerous foreign policy.

I have no quarrel with the right of anyone to express opinions—even opinions which I do not share—provided they are produced from irreducible truth. The Huie articles not only evade the truth, they employ deliberate falsehood to bolster a preconceived opinion. I say "deliberate" falsehood, since much of the opinion and most of the supporting testimony is merely a condensation of opinion and false witness contained in the discredited book The Case Against the Admirals, written by Huie. A rather detailed listing and refutation of the half-truths and outright falsifications contained in that book was placed in the Appendix of the CONGRESSIONAL RECORD by me on March 6, 1947.

I am surprised that a magazine with such an efficient research department and with such a splendid reputation for integrity as Reader's Digest has published these articles. And it is only because of the previous high repute of the Digest that I deign to take the time of my colleagues with this discussion of the articles and Huie.

The articles in question criticize the size and role and missions of the Navy, Army, and Air Force. We know these missions will not be determined by magazine articles or gossip columnists. It is done by the President, upon recommendation of the National Military Establishment, and by the Congress. Phonies like Huie, when given the audience supplied by Reader's Digest do nothing but impair public confidence in the acts of Congress.

Moreover, Mr. Speaker, it is the Huies and the de Severskys and the gossip columnists who are interfering most with the smooth working of our unified national defense. The Congress, the Secretary of Defense, the Secretaries for Army, Navy, and Air and the chief military heads of each service have all been working together to iron out the difficulties of the unification program as authorized by Congress. Our national security is unified. We all know that in the beginning there have been bugs, and there are still some bugs to come. This unification was a revolutionary departure from custom, and it could not be implemented overnight. But it is working and the three services are in agreement over fundamental concepts.

Mr. Speaker, those of us in Congress, and particularly those of us on the Armed Services Committee, know that there is no snarling fight between the services. But the Huies and other sensation-seeking writers are giving the impression there is. When they do they retard the smooth working of our national defense set-up, and that weakens our security. Weakening our national security can please none save the Kremlin.

I keep returning, however, to the question of why Reader's Digest, with its wide facilities for research, is publishing the Huie articles. I am sure they are fully familiar with Huie's background. That, alone, should have had led them to check thoroughly the supporting statements Huie puts in his articles. Had that been done, the articles could never have been printed, unless Reader's Digest wants only to sabotage our national security.

This is not the first time Huie has written something for profit which was based upon untruths. In 1941 Huie—now an expert on matters of national defense—was an export on sports—intercollegiate football to be exact. In that year Collier's magazine published an article by him, How To Keep Football Stars in College. It was an indictment of the University of Alabama, the alma mater of some of our most distinguished colleagues here in Congress. Collier's was immediately faced with threats of libel suits. It made an investigation, and, on April 5, 1941, published an apology, which read, in part:

> On the basis of information which was considered reliable * * * (Collier's) accepted and published the article in good faith. Searching inquiry did not confirm Mr. Huie's statements * * * Collier's is convinced that a serious injustice was done the University of Alabama, its faculty, its athletic coaches, its students, and its alumni by publication of the article referred to, and for this reason we sincerely regret its publication and are happy to make this statement.

It was profitable, in 1941, for Huie to be an athletic expert and write about subsidization—without bothering to obtain facts.

A little later, in 1942, Huie turned up as an authority on another subject, and he may have the proper background for it. In 1942 he published one of those sexy novels which clutter up our bookstands.

It was about this time Huie began acquiring his only experience with military matters. After the Collier's article he was hired by American Mercury as a ghost for Gen. Hugh Knerr, now Inspector General of the United States Air Force, and then a colonel in the Army on inactive duty, and A. P. de Seversky. In 1943 he came to the Navy Department seeking information on the construction battalion organization—the Seabees.

This was the time when the commanding officer at Camp Perry, Williamsburg—the Seabee boot camp—was under criticism in the press and in Congress for raising hogs. Huie was alarmingly frank in stating that his article would be unfavorable. He was also alarmingly frank in telling Bureau of Yards and Docks public-relations officers that his draft board was breathing down his neck. The upshot was that he enlisted in the Seabees, was given the rating of chief carpenter's mate, and sent to Camp Perry where he was given a public-relations assignment.

Next he was sent to Alaska with a Seabee battalion for public-relations duty. There he began issuing press releases without clearing them with the commanding officer and using Navy communications for his own purposes without obtaining permission. Those of us who have served with the armed forces can well understand the reaction of the commandant. When Huie was called on the carpet he informed the commandant that as public-relations personnel he was responsible not to the local command but to the Secretary of the Navy. The commandant, looking at Huie's rating badge, decided he would no longer have a public-relations assignment, and assigned him to a detail chopping firewood. Huie squawked. Bureau of Yards and Docks had him returned to Washington.

Here Huie again applied for a commission, and it was granted, and he became an ensign and was quickly spotted to junior grade lieutenant. He was then ordered to Europe to send back material for Navy Department press release on Seabee activities and Bureau of Yards and Docks equipment, such as mulberry. He went ashore at Normandy on M-plus-five. Nothing was heard from him for some time, when there showed up in the Navy Department Office of Public Relations some articles written by Huie for American Mercury. These were frozen and Huie was informed (1) as a Navy public-relations officer he could not write for personal profit, using material obtained in line of duty, and (2) material prepared by him must be made available to all media, and not channeled to one particular publication.

Whereupon, Huie, when he returned to the United States, requested that he be permitted to resign his commission on grounds that he was not cut out to be a naval officer and lacked the technical knowledge to discharge his duties. His request for permission to resign was turned down, and he filed another request, seeking inactive duty. This was granted and he was returned to inactive duty, even though the war was still in progress and its end not in sight.

These, then, are the qualifications of a man who is being passed off by Reader's Digest as an expert on national security—one of that group of armchair strategists and Monday-morning quarterbacks who pontificate military strategy and tactics on the basis of half-truths and outright untruths. The Congress of the United States determines national security policy. What kind of policy would we write here in the Capitol if we depended on gossip columnists, armchair strategists, and Monday-morning quarterbacks. We do not write military policy until we have thoroughly examined and investigated every item of supporting testimony that has been offered—not once, but four separate times. The legislative committees of the House and of the Senate each conducts its own separate investigation into the facts of military life. Once a policy has been determined, the Appropriations Subcommittee of each House conducts further exhaustive studies before providing the money to implement policy. Thus the military policy of this country is determined on the basis of irreducible truth.

The Reader's Digest and Huie are not satisfied with that democratic and constitutional means of civilian rule of the National Military Establishment. Because of some petty gripe against the Navy, they are urging a Maginot-minded theory of national security which can serve no useful purpose but to impair the confidence of the people in the ability of Congress as an institution to discharge its duties. And that, Mr. Speaker, is playing only into the hands of the Kremlin.

As previously stated, Mr. Speaker, I have no quarrel with the right of anybody to have an opinion, provided that opinion is based on fact. Reader's Digest and Mr. Huie have presented these articles and given the impression that supporting arguments contain a listing of facts. Any perusal, not even too careful, by informed persons, indicates that they are shot through with half-truths and outright untruths. I should like to call your attention to some of the more flagrant misstatements in the Huie articles.

Huie said Russia has no naval or merchant fleet worth mentioning. This is not true. The Committee on Armed Services of the House has announced that Russia has the largest, most modern submarine fleet. She is building 45,000-ton battleships—larger editions of the German pocket battleship. She has a surface fleet sufficient to contest the Baltic, eastern Mediterranean, Adriatic, and western North Sea. Her merchant tonnage is almost equal to that of Japan on December 7, 1941.

The Air Force can give Moscow and Magnitogorsk multiple doses of what struck Hiroshima, reports Huie. This is true only if Russia stays behind her own boundaries and offers no resistance. In the face of resistance, United States bombers must have advance bases in order to have fighter protection. Mr. Speaker I have the greatest admiration for the skill and abilities and potentialities of the Air Force, but, like Generals Bradley and Vandenburg, I realize that one weapon—the long-range bomber—cannot, single handedly, win a war.

Huie said none of Russia's vital industry is within range of naval weapons. This is untrue, and largely an academic question, since such an attack by the Navy is strategic and stragetic bombing is but a secondary role for the Navy and is carried out only when the Air Force requests and directs it. If the Air Force is denied close-in air bases, only carrier-based aviation could get at Russia's vital industries. There is no military target on the Eurasian land mass out of range of existing naval aircraft operating from carriers up to 300 miles from the coast.

Huie said the Navy's answer is that it will not be relegated to such a secondary role. He was discussing the Navy as a transporter of troops and equipment and in connection with its antisubmarine warfare. I do not know what he was talking about when he spoke of the Navy's refusal to be relegated to a secondary role. The mission of each of the three armed services was determined, by unanimous agreement, at the Key West and Newport conferences. Moreover the Navy has publicly and enthusiastically announced its emphasis on antisubmarine warfare.

Huie said you do not fight submarines with big carriers, you use jeeps. As a Congressman and as a Reserve naval officer, who saw combat service in two world wars, I should like to observe that you fight submarines with everything you have. Submarines are combated in two ways: First, you try to destroy submarines in the open sea; and second, you destroy them at home in their pens. If you have close-in air bases shore-based aircraft can be used against submarine pens, as was done against Germany. Otherwise you send carriers out to bomb these pens, as was done against Japan.

Huie said the Navy does not have enough roles to justify its present size. Huie might think the Navy does not but the Joint Chiefs of Staff, which recommended the size of the three services, and the Congress, which set the size, think so.

Huie said we are now buying more planes for the Navy than we are for the Air Force. That is like saying there is more food in a dish of peas—containing many individual peas—than there is in a T-bone steak, which is just one steak.

The real determination is air-frame weight, as was brought out in the hearings before the House Armed Services Committee, of which I am a member, when we were proposing the 70-group air force. I might say, in this connection, to illustrate the close integration of the armed services, that we called the Navy in on the 70-group proposal and they did not oppose it.

But to get back to the difference between the Air Force and the Navy in the matter of aircraft. In terms of airframe weight, in this year's appropriation, the obligational authority for the Air Force will be about 27,000,000 pounds, and the equivalent figure for the Navy will be 7,700,000 pounds, which is about 3½ to 1. This determination was made by the Joint Chiefs of Staff and is based upon the requirements of each service to carry out its assigned mission.

Huie said naval aviation is short-ranged. This, of course, is completely false. The range of naval aviation is the radius of its aircraft plus the range of its carriers. Naval aircraft, during the war, ranged to the Japanese homeland. They are at present ranging to the eastern Mediterranean. The range of Air Force strategic bombers is the distance from the United States of its advance bases plus the range of the planes themselves. Range and radius are two distinct terms, which Mr. Huie has confusedly mixed up and misused.

We have, according to Huie and Reader's Digest, the largest, most efficient submarine fleet in the world. I agree about the efficiency of our submarine fleet, but not about its size. Russia has nearly 300 submarines. The United States has 80 active and 100 in reserve.

Huie says the Navy plan calls for the construction of at least six supercarriers. This is not true. I was a member of the subcommittee, headed by the gentleman from Ohio, Mr. Hess, which authorized the 65,000-ton carrier. The Navy asked for authority, which was granted, to build only one prototype supercarrier. To further illustrate the integration existing in the armed services, we sought testimony from the Air Force on this bill. We were informed that the Air Force saw nothing in the supercarrier that represented an overlapping of their mission on the part of the Navy.

Next, I want to read a direct quote from Huie's article in the December Digest:

> On the day that 2,800 men died at Pearl Harbor these admirals were still restricting * * * land based bombers from Hawaii to no more than 300 miles at sea.

That is completely false. In the first place in 1941—and now—the Navy had no authority whatsoever to restrict the range of planes other than their own. Secretary Symington of the Air Force stated quite definitely in Hawaii, on June 29, 1946, that it was the Secretary of the War and his staff in 1937 who had ruled that Army planes should have only a 300 mile off-shore radius.

Reader's Digest and Huie said that the Navy Industrial Association and the Navy League of the United States were organizations through which the Navy carried on propaganda, and stated that the Navy League jumped when Navy Public Relations cracked the whip.

Navy Industrial Association is composed of industrialists with Navy contracts. They were, for a time, members of the Navy Council, an advisory and consulting group composed of organizations with the common aim of promoting naval interest. NIA resigned from Navy Council offering as its reason that it did not share that common aim.

As for the Navy League, they were at one time banned from entering any Naval Establishment on orders from the Secretary of the Navy. Neither of these historical facts sounds like organizations being used for Navy propaganda.

Huie told his Reader's Digest audience that the Navy looks after the health of Congressmen. Congress hires its own medical officer. For a number of years the medical officer has been Dr. George Calver, a retired rear admiral in the Medical Corps, who entered the Navy as a Reserve. Huie also refers to the fact that some of us have gone to Bethesda Naval Hospital. Military hospitals are operated on an interservice basis, open to members of all services, regardless of which one is in charge of a particular facility, and available to civilian Government officials needing hospitalization. We can go to Walter Reed or a Public Health Service hospital just as readily as we go to Bethesda. In fact, the gentleman from New Jersey [Mr. THOMAS] is now in Walter Reed.

Huie has gotten himself completely involved in his various discussions of the 65,000-ton carrier, and by his own assertions admits his statements are false.

In his first article, published in the December issue of the Digest, he said:

> Instead of taking off from a vulnerable strategic carrier in the North Sea with six B–29's, why not take off from Iceland or England with 60?

As everyone knows, the B–29, which Huie assumes can and will take off from the big carrier, is the same plane that delivered the atom bomb to Hiroshima, Nagasaki, and Bikini. Yet in the March issue, he makes the assertion that atom-bomb planes cannot take off and land from the carrier.

The Navy makes no contention that the B–29 can be operated from the big carrier, but planes capable of carrying the atom bomb can take off from and land on even smaller carriers. Members of Congress have observed the operation and considerably more than six can be in the bombing groups.

Huie, when repeating misstatements of fact, should at least be consistent. He, has furthermore, misrepresented the cost of the big carrier, putting it at more than a billion dollars. He reaches this figure by citing the cost of ships which would operate with the big carrier in a task force, ships already built and operable.

Huie, in trying to present the Maginot-minded thesis of a single-instrument national security force, is also very inconsistent. In his March piece he claims the Air Force is not satisfied with the B–29, the B–50, or the B–36, yet, in the same breath, he urges a 2,000-plane fleet of these types.

He is further inconsistent in his own arguments, when, in the January issue of the Digest, he reasoned (1) we should not have a Navy because no potential enemy possesses one and (2) we should also not have an Army because the potential enemy has too big an Army.

I am not going to discuss too much his January article, because I am sure if the same piece had appeared in Pravda we would be at war now. The State Department was very much concerned over the reaction to the January piece, and I, for one, do not wish to give it further circulation.

Huie and the Reader's Digest in April recount elaborate tests of bombing against the battleship *Utah* off the California coast. The results of these tests were described by Huie as sensationally successful, but he said are kept secret by evil individuals. Before the war the Navy carried out intensive bombing training and testing on the *Utah*. Undoubtedly Army Air Force planes participated. I have no idea what Huie means about sensationally successful, but it should be recalled that the *Utah* was used as a radio-controlled target and was uninhabited. Yet she did not sink until Japanese naval aviation sank her at Pearl Harbor.

Most of the misstatements I have mentioned here are old and familiar. Huie used them in his book, The Case Against the Admirals. For a detailed listing of the errors in that book, I refer to an extension of my remarks in the CONGRESSIONAL RECORD of March 6, 1947. I could list many more misstatements and half truths from the Reader's Digest, but I think those mentioned are sufficient to prove the point that Mr. Huie is merely writing a line which at the moment appears profitable. He told the Washington Pen Club he does not have the convictions he portrays in his articles.

Mr. Huie is from Alabama. Down there they know him for what he is. I call your attention to an editorial from the Brewton Standard, a newspaper published in Brewton, Ala., as an expression of the regard for Mr. Huie held by some Alabamans. I include this editorial as a part of my remarks.

[From the Brewton (Ala.) Standard of November 18]

ALABAMA CONTRIBUTES TO THE FIELD OF LITERARY ARTS

According to the latest hot dope, Alabama is making another contribution to the field of literary arts, this time with a military angle. William Bradford Huie, "widely known authority on air power and naval history," and native of the State, is going to expound on how the United States Navy is out to steal the show from the Air Force.

It is nice to find that Mr. Huie, widely known authority on air power and naval history, has graduated to the upper brackets. In fact, Mr. Huie, widely known authority on air power and naval history, has gone a long way since his mud-pie days when he was an authority on athletics. Back about 1940, Mr. Huie, widely known authority on air power and naval history, was a peanut-sized pundit on football as it is bought and paid for in the Southeastern Conference.

In those days, Mr. Huie, widely known authority on air power and naval history, exposed the hideous fact that some college ball players get paid for their talents. He did this so vividly that the magazine carrying Mr. Huie's article was promptly threatened with a court suit. Rumor hath it that this periodical was happy to settle out of court.

Unless memory serves us wrong, Mr. Huie, widely known authority on air power and naval history, put in time during the last war with the United States Navy. He was probably a widely known authority on the back end of a Liberty ship with a gun crew, or maybe he was a junior officer on some other kind of ship. It further seems that Mr. Huie, widely known authority on air power and naval history, didn't like the Navy because the Navy didn't appreciate his peculiar talents as a widely known authority on sports, such as football.

But since then, he has graduated. He is now a widely known authority on air power and naval history. It is to be assumed that he has stood on the bridge of a battleship, that he directed carrier strikes, that he has been on extended submarine patrols, that he has even ridden in the captain's gig and the admiral's barge. But to become a widely known authority on air power and naval history he must also have flown B-29's, piloted jet planes, gone on fighter strikes, and held the door while an Air Force general climbed into his plane. Certainly a widely known authority on air power and naval history had done all these things.

Timothy J. Crimmins

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 14, 1949

Mr. PHILBIN. Mr. Speaker, I ask unanimous consent to have printed in the Appendix of the RECORD a recent article from the Worcester (Mass.), Telegram, concerning the resignation, of Chief of Police Timothy J. Crimmins of Palmer, Mass., who is concluding a long, honorable, and distinguished service to his community of more than 40 years. The article briefly outlines his career and some of the episodes which have marked this fine gentleman as such a capable and efficient law enforcement officer.

I am pleased to take this opportunity to acknowledge his outstanding service and to wish him health and happiness, relaxation and a long life. He has performed his duties efficiently and well. He has earned the gratitude of all. May he enjoy many years of peaceful and happy retirement which he so abundantly deserves.

PALMER POLICE CHIEF RESIGNS

PALMER, Thursday.—Chief of Police Timothy J. Crimmins, 72, after 45 years of service, submitted his resignation to the Board of Selectmen last night, effective June 30. He will receive a pension under provisions of a retirement act adopted by the town 2 years ago.

Appointed to the force April 11, 1904, he has served the town continually since. When, in 1916, growth of the town required a change from the system of individual patrolmen to an organized police department, he was the unanimous choice for chief.

During his service, only seven murders were committed within his jurisdiction and in every case he apprehended the criminal and obtained a conviction. The record also shows that of all the automobiles stolen or unlawfully used in this town since 1904, only one is unaccounted for.

DANGEROUS WORK

Many of his arrests were made under particularly dangerous circumstances. One was the apprehension of the man who killed William Green in North Wilbraham in 1917. Tracing the criminal to his home, Chief Crimmins, who had with him Dr. Daniel W. O'Connor as a deputy, found the door barricaded. When a demand that it be opened was refused, Chief Crimmins kicked the door down only to find the murderer facing him with a sawed-off shotgun. A quick shot from the chief's gun broke the man's arm.

In 1927, a child's body was found stuffed into a barrel at the Thorndike Street dump and within 10 hours Chief Crimmins had identified Albert Doe as the killer and had placed him behind bars.

On a more recent occasion, he disarmed and arrested a bandit who had held up a local store a short time before, bringing in his man after a strenuous battle.

Chief Crimmins was born at Wire Village, Spencer, the son of Daniel and Hanora (Mansell) Crimmins. He came to Palmer Center with his parents when he was 6 months old. He received his education at the old district school in Palmer Center and while still a boy went to work in the mills at Thorndike.

EARLY CAREER

He later worked for Armour & Co. and in the old Holbrook grain store, and afterward as a section hand on the Boston & Albany Railroad. He also worked for a time for the contracting concern of M. J. Dillon. He was employed as a hod carrier at the same time that his life-long friend, the late Judge David F. Dillon, then completing his college courses, was working as a bricklayer for his father.

Chief Crimmins has four children, Daniel W. Crimmins of Palmer, and Margaret M., Alice L., and Mary E. Crimmins, all at home. His wife, the former Mary Whelan, died in 1927.

Chief Crimmins has made no announcement as to his plans after retirement.

Cost of War

EXTENSION OF REMARKS
OF
HON. RALPH HARVEY
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 14, 1949

Mr. HARVEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Courier-Times of New Castle, Ind.:

COST OF WAR

When many people talk glibly of the possibility of a third world war, it is wise to attempt to assess the cost of the last conflict. Nothing resembling an exact accounting can be made—there are too many imponderables and intangibles, which permit of only an informed guess. One of the most thoughtful efforts to arrive at the cost of World War II appears in Harper's magazine for April in an article by C. Hartley Grattan, long a student of the economic implications of war.

Mr. Grattan concludes that about 10,000,000 members of armed forces lost their lives. The last war was unique in that civilians suffered a heavier mortality than did men in uniform. The casualties from bombing; the planned extermination of whole categories of civilians; the terrible death rate among slave laborers; the losses in underground movements—these and other causes probably were responsible for 30,000,000 deaths. Thus, the total human cost of the war was 40,000,000.

The total the material cost brings the analyst to extremely difficult ground. The most obvious and easily unearthed cost is the money actually spent for military purposes by victor and vanquished. This is recorded in national budgets. It came to more than a trillion dollars—$1,117,000,000,000. Next we must arrive at the cost of the physical damage which was done during the long course of the conflict. Factories, power plants, transportation systems and whole industrial regions were razed on a wholesale scale. Both sides concentrated on attacking dwelling areas—people who have no place to live especially in severe weather are of small value as workers. Mr. Grattan arrives at the figure of $2,234,000,000,000 (over two trillion) to cover the cost of direct destruction.

But this is not all. There is another economic cost, which is the most difficult yet to estimate. That cost is found in the depletion of natural resources, the disorganization of economic systems, the value of labor and material seized and carted off by invaders, and so on. Mr. Grattan places this cost at $650,000,000,000. Adding all the costs up, we

have a final, incredible figure of $4,000,000,000,000. And this, as he says, leaves out the moral cost of war, which is beyond statistics.

Cut in Funds Will Bring Hardships

EXTENSION OF REMARKS
OF
HON. E. L. BARTLETT
DELEGATE FROM ALASKA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 14, 1949

Mr. BARTLETT. Mr. Speaker, I am appreciative of the fact that the 1950 appropriation bill for the Interior Department as it passed the House of Representatives a few days ago carried $56,256,658 to finance the various Alaskan programs under the jurisdiction of that department. This will mean real progress toward the development of the Territory. It will mean the extension of the work that has been so successfully begun in the last 2 years.

I do not detract from my appreciation and that of all Alaska for this consideration of its problem when I say that I sincerely regret some of the reductions that were believed necessary in the budget estimates. I hope, for example, that the Alaska Railroad rehabilitation item can be restored. I am equally hopeful that increases can be made on the other side in some of the smaller items in the bill, including the loan fund under the Alaska Native Service of $500,000 which is sorely needed.

The importance of these small items often is overlooked or underestimated. Let me give an example: In the Indian Service request, under the caption of "Alaska native service," was an item for education of the natives of Alaska, for which the budget estimate was $1,703,740. The bill as it passed the House carried $1,676,305, a reduction, one might say, of only $27,435. Many would wonder how such a small reduction could be of concern even to me, but let me quote from some reports that have been received by the Interior Department from Mr. Don C. Foster, general superintendent of the Alaska native service. These are routine reports for February. Under the heading "Nutrition program at Beaver," which, by the way, is a village on the Yukon River approximately on the Arctic Circle, Mr. Foster says:

Although no school has been operated at Beaver during the past year, nutrition and home-economics supplies which were in the school when closed have been used to provide much-needed relief for a small group of children in this community. Much credit is due to Charles W. Schultz, a local resident of Beaver, for his assistance with distributing this food to needy families. This was done purely as a public service by Mr. Schultz without compensation. He has been most meticulous in securing receipts from families to whom food was issued. We anticipate that the school will be open at Beaver during fiscal year 1950 and that the children of this community will have the benefit of a regular lunch program.

Let me read the letter from Mr. Schultz, dated January 28, 1949:

DON C. FOSTER,
General Superintendent.
GEORGE A. DALE.

DEAR FRIENDS: Am sending you receipts of the food I let the natives have—hungry children at Beaver and the vicinity there. Isn't much left only some flour, coffee, and some old dry fruit and part of a case of milk which is spoiled, all the milk wasn't very good, had been frozen before I moved it to my cellar.

I gave John Luke some of the food for cleaning off the snow off the roofs. Hope this will be satisfactory as it had to be done—the wood shed was about to cave in.

The natives are hard up here this winter. I know many of the children are underfed. I help them what I can, but I am too old to help them much. Too bad we didn't have a teacher here this winter, hope we will have one next winter. Should have one early enough so they could put in the gardens which would help the natives a whole lot. I have a tractor and plows and harrow, and could help. There is some seeds at the school, of course they are old, but some of them may be good. Well, I guess I have said enough. Best wishes to you both. As ever,

Yours truly,
CHARLES W. SCHULTZ.

Let me also quote from a letter from Don Foster under date of February 11, 1949, to Mr. Schultz:

CHARLES SCHULTZ,
Beaver, Alaska.

DEAR MR. SCHULTZ: Again our thanks to you for your public-spirited services in behalf of the people at Beaver. We regret that there were not more food supplies available to distribute to the native children. We have turned over the receipts you supplied to our Property Division. It was entirely satisfactory for you to give the food to John in exchange for his labor in clearing the snow from the woodshed. The remaining flour and coffee should be distributed as you see fit.

The Bureau of the Budget has approved funds for reopening the Beaver school during the coming year. If this money is now appropriated by Congress we can be reasonably sure of having a teacher for you by late summer. There is no hope of having a teacher there in time to start the gardens as we do not have sufficient money to pay their transportation before July 1. If people are interested, however, we would be glad to have you distribute among them the seeds which are in the schoolhouse so that they can start gardens of their own.

Thank you again for your assistance. Much as it has helped us it has been even more help for the children of your community and I am sure you must feel a great deal of satisfaction knowing that your service has made the winter a little easier for some of the youngsters.

Sincerely yours,
DON C. FOSTER,
General Superintendent.

Now, Mr. Speaker, let me go back and note that a reduction of $27,435 was made in the item "education of natives" in the appropriation for the Alaska Native Service of the Bureau of Indian Affairs. I do not know whether a school teacher can be sent to Beaver unless that amount is restored. It will not require $27,000 to finance the school teacher at Beaver, not more than one-fourth or one-third that much, I presume, but these funds, I would like to impress upon the House, mean activities that have a purpose in the field. I hope that Mr. Schultz' letter will be kept in mind in considering restoration of budget cuts when the time comes.

Old-Age Assistance

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 14, 1949

Mr. REED of New York. Mr. Speaker, under leave to extend, heretofore granted, I am inserting the testimony presented by Marjorie Shearon, Ph. D., before the Ways and Means Committee, on social security as proposed under H. R. 2893, and old-age assistance under H. R. 2892, as follows:

QUALIFICATIONS OF THE WITNESS

I am appearing in the public interest in opposition to H. R. 2892 and 2893. My qualifications as an expert are as follows: I spent 9 years in the executive branch of the Government, 5 in the Bureau of Research and Statistics in the Social Security Board, 4 in the Public Health Service. From 1945–47 I served as Senate consultant on social security and health and in 1947 was health consultant to the Senate Committee on Labor and Public Welfare. In 1937 I wrote the economic brief, Economic Insecurity in Old Age, which was used by Robert Jackson in defending the Social Security Act before the Supreme Court. It has been said my brief was largely responsible for the favorable decision upholding the act. In 1941 I served as consultant to a Senate subcommittee which investigated the administration of old-age and survivors insurance. For the past 17 years I have been engaged in research, administration, and legislative activities at Federal, State, and local levels. More recently I worked with the Senate during more than 50 hearings sessions on the Wagner-Murray-Dingell bills for social-security medicine in 1946, 1947, and 1948. I am editor of American Medicine and the Political Scene, a weekly news release dealing with social security, health, and medical legislation, public finance, and the operations of the Federal Government.

SOCIAL SECURITY AFTER 14 YEARS

Having had an opportunity to study at close range the operations of the various social-security programs, and having for many years worked on legislative proposals and research reports for Congress, I am fully aware of the complexity of the problems now confronting you. Fourteen years ago I thought the Social Security Act was an inspired piece of legislation which would help the American people to attain at least basic security against the major catastrophes of life. I thought it would aid the States and would do away with the disgraceful social work means test in public-aid programs. But after observing how the program has operated, I have been forced to the conclusion that the Social Security Act cannot be made financially sound, administratively feasible, or socially desirable. It is riddled through with inequities and anomalies. It is an inducement to administrative abuse. Instead of reducing programs for public charity, it has fostered them. Already, before the program is fully operating, there has been built up a vast body of administrative law regarding

definitions and the rights of employees and employers. The OASI trust fund has been raided. There is a $7,000,000,000 deficit. Trust fund reserves have been siphoned off and I O U's substituted. Wherever you turn, in viewing this law and its administration, you are confronted by abuses, dilemmas, and seemingly insoluble legislative problems. Mounting costs present a serious threat. Special pleaders, asking you to promise benefits for 50 years hence, say they would not presume to tell the Members of Congress how the benefits are to be paid for 50 years from now. The presumption is in asking the Congress to promise paradise unlimited without simultaneously furnishing data on the limitless costs of paradise unlimited.

QUESTIONS

While I shall make certain detailed recommendations regarding the language of H. R. 2893, I think it is more important to raise a number of questions which I believe the committee should face before taking any action on either bill. The Social Security Act is unquestionably the most far-reaching law on the Federal statute books. It already affects every person in the country. It strikes deep into the roots of our national customs, our fiscal policies, and our economic stability. It resulted in Supreme Court decisions in 1937 which were based not on legal precedents, but on social and economic considerations. The law has brought about serious conflicts between and among the three branches of Government. If it remains in force, I believe it will result ultimately in a transformation of our form of government into state socialism. Therefore, I think the first question before this committee should be not how much social security, how much coverage, and what taxation, but rather: Do we wish longer to try to achieve social security, to the extent that it is achievable, through the operations of the Social Security Act? Should not the act, in whole or in large part, be repealed and a fresh start made?

Second, should we any longer countenance the drafting of our social legislation along lines laid down by the International Labor Organization for the Socialist and Communist countries of Europe?

Third, should we withdraw from the International Labor Organization because of its Socialist domination and the principles for which it stands?

Fourth, should we not substitute a sound, moderate, workable retirement system for the entire population on a strictly pay-as-you-go basis? I agree with Mr. Williamson that some flat sum, such as $30, possibly $40, a month should be paid by the Federal Government to every person who applies at age 65 with proper credentials. The retirement annuity should be truly available as a right, no question asked. It should be a floor of security, not a ceiling of luxury. The amount should not be large enough to discourage private initiative. No attempt should be made to make it adequate. The philosophy of social adequacy advanced by Commissioner Altmeyer is the philosophy of the welfare or police state. There should not be a work test for eligibility to the Federal retirement annuity. Everyone should be encouraged to work as long as he can, both for his own good and to reduce the social charge for his upkeep. Taxes paid into the OASI system thus far could be returned or credited.

Fifth. Should not the Federal Government get out of the relief business as Harry Hopkins said it would back in 1934? Return the public assistance programs to the States and to budgetary realities. It is absurd in an era of great national prosperity to have built up a relief load of 5,000,000 persons on which the country is spending $2,000,000,000 a year. This does not include expenditures of between $4,000,000,000 and $5,000,000,000 annually on various social insurance programs and veterans' pensions and compensation. All told, we are now spending between $6,000,000,000 and $7,000,000,000 from the public treasury for the support of persons who are sick, disabled, aged, unemployed, or otherwise dependent. Administrative policies have encouraged large relief rolls and have acted as an inducement to recipients of public assistance to remain as public charges in perpetuity. In the early 1930's it was regarded as a disgrace to seek public or private charity. Under the leadership of the Federal Government, the people have been taught to believe that Government hand-outs are socially acceptable and without stigma. A reversal in policy would be good for the country.

Sixth. Should we not drop some of the Social Security fictions? Social insurance is neither social, nor insurance. It is a taxing device for the exploitation of new revenue fields through regressive, instead of, progressive taxation.

Social security taxes on employees and employers are taxes, not contributions or premiums. They are just one more income tax. They are collected by the Bureau of Internal Revenue and are paid into the Treasury. After they reach the Treasury they are used the same as any other internal revenue. They are spent currently as received. A bookkeeping device has been inaugurated to make everything look all right. Of course, everything is not all right. Even Mr. Linton conceded that it would not be proper to use the funds recklessly simply because they were available. Many persons think the funds have constituted a big inducement to the Federal Government to spend lavishly on social experiments rather than carefully on the essential functions of Government.

Seventh. Is there any feasible way to make the Social Security System actuarially sound? If you tax the public enough to pay for the benefits you have already promised and are being asked to promise, you will build up enormous reserves which it is generally conceded is undesirable. If you keep taxes low and have only a contingent reserve, the next generation will be faced with crushing taxes to meet the deficits you are now creating. On the other hand, are you prepared to say to the people in all honesty: "This total program for social security will cost, when mature, some 20 to 25 percent of payrolls. It may even cost 40 or 50 percent as similar programs have cost elsewhere. Do you wish to pay such taxes for social security under Government auspices or would you prefer lower taxes and fewer Federal benefits in cash and kind?" The question should be squarely presented to the people now, on a nonpolitical basis.

RECOMMENDATIONS

After long study of these problems, my own recommendations are as follows:

1. Repeal the Social Security Act. Enact retirement and other cash-benefit legislation with flat monthly benefits, a 3-percent tax on all wage, salary, and other earned income and no tax exemptions. This would enable the Federal Government to give $30 a month to every person at age 65, on proof of age. States could give as much additional as they thought wise, either with or without a means test. Veterans could be brought in on the same terms with an addition of possibly $20 a month as an indication of gratitude for services rendered in time of war.

2. Abandon the costly, cumbersome, useless wage-record system in Baltimore. Charge it up to profit and loss or to experience. The weighting of the social-security formula from the very start tended to wipe out much of the relation between taxes paid and benefits received. It was good for publicity and propaganda purposes to say that benefits were geared to earnings. Actually, the more a man earned in wages and salary and the more he paid in taxes, the less he received proportionately in benefits. Each revision of the system tends to obliterate the relation between wages and benefits, which are mostly fiction, anyway. Let us be honest about it. Let us admit that the Baltimore operations are one vast boondoggle. The machine installation may be the joy and pride of the International Business Machines Corp., but it is also a great expense to the American people. Furthermore, the administrative cost to American business for collection of taxes, record keeping, legal advice, etc., must be a staggering charge on the economy. One businessman told me he had to employ 1 additional clerk for social-security operations for every 16 employees; another man said it was 1 for 12 employees in his organization. I believe the charge on the economy may well be over $1,000,000,000 at present for administration of the Social Security Act in addition to what the Government is spending. These things were not foreseen when the law was passed, perhaps because no one could have predicted the number of schemes administrators could devise to make administration complicated and costly.

3. Abandon the trust-fund fiction and temptation. Collect social-security taxes as part of income tax, without making the taxpayer go through extra computations. Earmark 3 percent, if that seems desirable. However, if we are going to accept the theory that society owes a certain amount of protection to the aged, disabled, and dependent we might as well make a social budgetary charge each year on the general revenues and be done with it. If this is not done, Congress, public officials, and pressure groups will be involved in interminable disputes over the amounts to be charged to general revenues and to social-security taxes. In any event, the Government will be called upon to meet all deficits from general revenues and to finance more and more programs from the general fund.

4. Withdraw from the International Labor Organization. (This is discussed further below.) This committee should carefully study the philosophy of social security promulgated by the International Labor Organization and now being followed in legislative proposals offered to the Congress by the Social Security Administration. For instance, do you approve the principle that social-insurance cash benefits are to be paid only to replace wage jobs? You were surprised when Commissioner Altmeyer explained that the Social Security System is providing wage-loss annuities at 65 or later, not retirement annuities. Similarly, maternity benefits are intended only for women who suffer a wage loss during maternity. That is the ILO philosophy.

5. Abandon the work test as an eligibility requirement for OASI benefits, if you retain the present Social Security Act. It is socially undesirable and economically wasteful.

6. Cease discrimination against women with respect to the age at which retirement benefits shall be received. First of all, there is little accurate information about the ages of women married to men 65 and over who are in receipt of OASI benefits. I believe the age differential between the sexes is only about 2½ years. However, it does a great disservice to workingwomen, and that means one-third of women of working age, to set 60 as the retirement age. Employers, who already discriminate against older women, will surely jump at the opportunity

not only to retire women at 60, but to refuse to employ them at 50 or 55, because they would be too near retirement age. Furthermore, it is assumed that the majority of women at age 60 are dependent on some man. As a matter of economic reality, even many married women are no longer dependent on male workers at any age. Frequently the chief reason why they are working is that they have taken over all or part of the economic burden for support of the family, including the male upon whom they are supposed to be dependent. The ideas about women reflected in H. R. 2893 are antiquated. Old World ideas that have no place in this country. I recommend, therefore, that whatever is decided about retirement age, and eligibility for benefits be the same for both sexes. Women should certainly be permitted to work as long as they wish and can find jobs. I found during the war that age was no deterrent for women. They found clerical and other jobs at age 70 and above. They are ingenious in developing occupations for themselves, and I surmise they would like to be permitted to work out their own salvation without interference from the Federal Government, however well-intentioned that interference is.

7. It is unfair to compel the self-employed and other groups to come into the system unless they so desire. Let them decide after the rates of taxation and the benefits have been truthfully explained to them by some informational service other than that of the Social Security Administration. Perhaps no other group would suffer more under the social-security system than the self-employed. Most of them could presumably provide for their own retirement far more satisfactorily than the Federal Government can. A farmer, physician, lawyer, or writer would presumably prefer to have his money as he goes along to put into his business than he would to pay several hundred dollars a year in extra taxes over a 40-year period only in the end to be told he cannot have his old-age and survivors insurance benefit unless he gives up his business or profession.

The Federal officials who drafted H. R. 2893 have made the initial taxing rate for the self-employed 2¼ percent of income. This is 1½ times the amount paid by an employee. This change of heart by the Social Security Administration, which formerly advocated charging the self-employed twice as much as employees, may be viewed as a bribe to entice the self-employed into the system. However, there is no guaranty that the tax rate will not be quickly upped to twice as much as for employed persons on the ground experience has shown 1½ times the employee tax was too low. Furthermore, as the taxes on employees and employers rise over the years, they will also rise on the self-employed who may, before long, find themselves paying 7 or 8 percent for old-age and survivors insurance. In addition, if farm labor is brought in, the farm owner will find his income greatly burdened with his own taxes plus his share for all hired labor.

I believe that inclusion of the self-employed in the social-security system would force many small businesses to fold up. It would introduce innumerable anomalies.

8. Expansion of the social-security system in the manner proposed would constitute a great threat to the entire insurance industry of the United States. It is true that life-insurance representatives have told you of a temporary increase in their business as a result of the Social Security Act. However, as the system takes up more and more of the worker's income in taxes, there will be nothing left of his disposable income for savings in the form of life insurance, home ownership, cash savings, and investment in securities. He will have hard scratching to make ends meet. That is part of the ultimate course of social security—it turns the major portion of the worker's income over to the Government, deprives him of freedom of choice in the way he shall spend his earnings, and makes him increasingly dependent on the state. If you establish a system of cash benefits for temporary and permanent disability you will wipe out most of the health and accident insurance business of the country, because people will not have enough money to buy private insurance and pay the heavy taxes which you or future Congresses will be forced to levy.

The United States has developed a great private insurance industry. More insurance in private companies is held in the United States than in all the rest of the world. The reason for that is that while the rest of the world was following Bismarck's plans for social insurance, the United States followed the way of free and independent people who made provision for their own contingencies without seeking Government intervention. Do you wish to throw out private insurance for the sort of social security they have in Russia, Germany, Italy, or Great Britain?

9. I suggest that the committee find out why the Social Security Administration is now recommending that cash sickness benefits be tied in with OASI after recommending for years that they should logically be united with unemployment compensation. Is it because the Social Security Administration wants to keep a strangle hold on the sickness-benefits program and fears it will lose out to the States?

10. I think the committee should not place too much reliance on cost-of-living indexes. The Labor Department has been changing its social philosophy about cost of living, especially since Ewan Clague, an Altmeyer man who was formerly Director of the Bureau of Research and Statistics of the Social Security Board, became Director of the Bureau of Labor Statistics. When any index plays a part in social legislation, you may expect it will be tampered with to fit changing ideologies.

THE ORIGIN AND BACKGROUND OF THE SOCIAL SECURITY ACT

It will be recalled that Bismarck in the 1880's was responsible for enactment of a series of so-called insurance laws. Bismarck translated into law the theories of his economic advisor, Prof. Adolph Wagner of the University of Berlin, who is credited with having done more than anyone else to give to state socialism its scientific form and scientific foundation. Professor Wagner's social philosophy and total program for state control were outlined in an article published in 1887 in which he advocated (1) public ownership of banking, insurance, communications, and utilities, and (2) state "insurance against sickness, incapacity, and old age." He likewise proposed and justified a new scheme of taxation, the pay-roll tax, that would not only serve the legitimate purpose of raising revenues but would at the same time fulfill the purpose of what he called "regulative interference" with the lives of the people.

This interference was to operate by regulating first the distribution of income and wealth, and second the purchasing power and living habits of the lower classes. The latter form of interference was to be accomplished by "administrative measures, and eventually compulsion." Professor Wagner stated: "This two-sided policy of taxation I call social. The second side here advanced * * * is based, as concerns the mass of the population, the lower laboring classes, on the assumption that in the truest interests of the nation a guardianship may and must be established over the national consumption or over the application of income to personal purposes." [1] These social-insurance laws, as they were called, were hailed "as the high-water mark of German State Socialism." [2]

Bismarck's social-insurance laws were designed primarily to raise revenue and to attach the workers to the German State. In return for accepting the principle of compulsion and of control by a powerful bureaucracy, the lower classes were promised certain pitifully small cash benefits and free services which they might claim as a right. The benefits have been aptly described as "a series of small bribes." [3] The workers were led to believe they were getting something for nothing, because their employers were compelled to pay part of the social-insurance taxes. At the start there was no state subsidy. The Government provided the compulsion and the interference; labor and management footed the bills. The social-insurance system thus set up in the 1880's include wage loss as well as cash benefits during old age, sickness, extended disability, maternity, death benefits, and free medical care.

During the succeeding 35 years many countries followed Germany's lead. Ministers of finance were attracted by the ease with which taxes could be extracted from workers before they could lay hands on their wages. Bureaucrats delighted in ever-expanding governmental programs which gave them jobs in perpetuity and great power over people.

In 1919, at the end of World War I, the League of Nations was created. One of its subsidiary organizations was the International Labor Organization set up in the same year in Geneva. The United States did not join either the League or the ILO. The first director of the ILO was Albert Thomas, leading French Socialist of his day. For 15 years he devoted his life to organizing and shaping the ILO as a Socialist organization. He traveled throughout the world preaching the gospel of Geneva and urging nations to join the ILO. The United States was not overlooked during these missionary travels. In 1934 Secretary Frances Perkins suggested to President Roosevelt that the United States should join the ILO. He approved and suggested that she take the matter up with Congress. In the closing sessions of the Seventy-third Congress a bill was introduced authorizing the President to accept membership in the ILO. The bill passed through the Senate without discussion, and was rushed through the House without hearings and reports. The United States thus became a member of the ILO in 1934 and in so doing committed itself to work for enactment of social legislation developed along the lines laid down in Geneva.

Plans were immediately made to draft an economic security bill. A few weeks after the ILO bill was passed, the President appointed the Committee on Economic Security, the members of which were: Frances Perkins, Secretary of Labor, chairman; Harry Hopkins, Federal Emergency Relief Administrator; Henry Morgenthau, Jr., Secretary of the Treasury; Homer Cummings, Attorney General; and Henry A. Wallace, Secretary of Agriculture. Two consultants from the ILO were brought to this country to help draft the economic security bill in accordance with ILO principles. It was so drafted. After prolonged hearings in 1935, the original bill was redrafted and was finally passed on August 14, 1935. Few people in or out of Congress realized at that time that the Social Security Act was not in reality of American origin. Instead, it hewed closely to the Geneva line.

I mention these facts because they have a direct bearing on the provisions in the bills now under consideration. In 1944 the General Conference of the ILO, meeting in its

[1] Quotation from article in Tubinger Zeitschrift published in 1887 and quoted by Dawson, William, Bismarck, and State Socialism (London), 1891, pp. 156-158.

[2] Dawson, W. H. loc. cit, p. 109.

[3] Russell, Bertrand, German Social Democracy, 1896 (London), p. 107.

twenty-sixth session, in Philadelphia, on May 10, adopted a declaration of aims and purposes of the ILO and of the principles which should inspire the policy of its member nations. These aims, purposes, and principles had been thrashed out the preceding year in Ottawa, Canada, under the guidance of "Cradle-to-Grave" Sir William Beveridge, Arthur J. Altmeyer, Wilbur J. Cohen, Isidore S. Falk, and other officials of the Federal Government. At that time elaborate recommendations were made covering every phase of social security—the whole range of cash benefits, free medical care, benefits for the armed services, public works, etc. There was prolonged discussion of methods of financing and of administration. The long-range objective in many instances indicated that ultimately programs would be financed entirely from general revenues after a period in which taxes would be shared by employees and employers. It was frankly stated that where a whole population was covered for medical-care benefits the program might appropriately be financed out of general revenue.

The Members of Congress, and of this committee in particular, should realize that the ILO program, as outlined in 1944, is a stupendous one. Long before the members of this committee consider social-security proposals, the principles of the bills are mapped out by representatives of foreign countries whose ideologies are repugnant to us. As one studies these alien suggestions, one is reminded again and again that the stage had already been set by a crusading Socialist when, in 1934, this country entered the ILO in the role of a novice among a group of experienced left-wing actors.

As a member nation of the ILO we are obligated to make every effort to conform our national legislation to the Geneva principles. After the ILO adopted the 1944 declaration of principles,[4] these were sent to the President who forwarded them to the Congress in a special message on May 24, 1944.[5] The declaration of principles was written into the ILO constitution which was approved by the Congress in 1948. We are now doubly committed to make every effort to conform our social legislation to those principles. We are committed to furthering programs which will achieve, inter alia, "the extension of social security to provide basic income to all in need of such protection and comprehensive medical care."[6] I urge the committee to study these principles very carefully with a view to understanding what the over-all program is that you are furthering.

If this committee will take the time to study the activities of the ILO, you will find that Federal officials, under the leadership of Commissioner A. J. Altmeyer, who is the United States representative to the ILO, are working assiduously to impose on this country a program of national compulsory social insurance of the type now in existence in Socialist and Communist countries in Europe and in South America. If you will look back over the past decade you will see these trends in social security in this country: Pressure for extension of coverage, larger benefits, higher taxes, more programs. When the whole population is covered, there ceases to be any reason for special social-security taxes. The social-insurance fiction is dropped and the program is financed from general revenues. Other countries are in various stages of transition from "social insurance" to straight state socialism or communism. Congress, under pressure from the bureaucrats and from other vested interests, gives a little here and a little there. Before any more concessions are made, I urge you to study the Geneva blueprint that this country is following under the aegis of the Social Security Administration.

The bills which have been presented to Congress from the Social Security Administration are predicated on these principles as final objectives, in accordance with Geneva dicta: universal coverage, including self-employed and other groups currently mentioned at these hearings; a slow transition from a theoretically self-supporting system, financed by employees and employers, to one depending on deficit financing with increasing Federal subsidy (such subsidy is now being obtained through the device of charging interest on the trust-fund investments); Government "insurance" against the contingencies of (a) sickness, (b) maternity, (c) invalidity or permanent disability, (d) old-age dependency, (e) death of the breadwinner, (f) unemployment, (g) emergency expenses, and (h) employment injuries. This committee has been surprised to learn that our old-age and survivors insurance provides only wage-loss annuities instead of retirement annuities. This would be no surprise if you studied the ILO theory regarding social insurance. The range of contingencies supposed to be covered by social insurance is "all contingencies in which an insured person is prevented from earning his living."

This country is already so deeply involved in the Socialist program of national compulsory social insurance for the entire population, that I strongly urge the committee to consider whether, in pursuing and extending this program, you are taking irrevocable steps in the wrong direction. If you adopt this system for our country, it must be compulsory, universal, and, ultimately, federally administered. Furthermore, if you adopt pieces of the program, you will finally have to accept the whole thing. Thus, if you enact into law provisions for cash benefits for sickness and permanent disability, you will have to nationalize medicine because you will need the physicians, dentists, other health personnel of the country to police the cash-benefits program. The further you go the more deeply are you mired.

COSTS

Throughout these hearings, members of this committee have sought information about costs. You have teased a little information out of Federal officials here and there, but no one would give you the whole picture. You might not be able to stand the shock. However, I submit that it is dangerous to enact piecemeal legislation without knowing where the whole program is heading, how much it will cost, and what it is likely to do to the economy.

It would be unwise to consider the two bills in a vacuum without seeing them in relation to the other proposals of the administration, namely, those for national compulsory social security medicine and those for cash-sickness benefits. A fair estimate of the cost of all these programs when fully operating is from 20 to 25 percent of pay rolls, thus:

	Percent of pay rolls
Unemployment benefits	4.
Medical care and hospitalization.	5 up.
Dental care, home nursing, certain drugs.	1.
Temporary disability and maternity benefits.	2 to 3 up.
Old-age, survivors, and permanent disability.	10 to 12.
Total	22 to 25 up.

The cost would be met by taxes of 6 percent on employers, 6 on employees, and 6 to 8 on self-employed. The deficit would be made up out of general revenues obtained by increasing income taxes. We all recognize that Government estimates are on the low side and are heavily weighted with favorable factors. This is done not to alarm Congress or arouse public indignation. Taxes are appealingly low at the start; benefits are glamorized. But it would be helpful to this committee if, instead of assuming high wages, rising over the years, and full employment, we were to look at costs if there should be a major depression. (At this point I should like to introduce into the record an editorial which appeared in the The Star of March 29, 1949, and two letters appearing in the same paper on April 7 and 9.)

You may gain some idea of the costs of such fantastic programs by looking at what has happened in other countries. New Zealand passed a comprehensive social-security law in 1938. The law provided all types of cash benefits and a wide range of "free" health services. After 6 years of operations the total cost of all social-security benefits amounted to 40 percent of all the national revenues.[7]

Even before it was possible to put all the programs into effect the Government was being asked to contribute nearly as much from general revenues as was raised through social-security taxes. The social-security system was so near financial collapse at the end of 5 years that the social-security tax was increased and the subsidy from the general fund was increased 157 percent from one year to the next.[8] Similar difficulties face the Labor Government in Great Britain where, for instance, the cost of the national health service, exceeding all Government expectations, was 38 percent higher than the official estimate. Social insurance "contributions" in Great Britain are now taking 40 percent of earnings. Russia passed a social-insurance law in 1911 at the same time as Great Britain. In 1937 they changed over to a program financed entirely from general revenues. It took Great Britain 35 years to go from small social-security taxes and moderate compulsion to large taxes and all-out compulsion. Several decades are required after initiation of a social-security program before a country goes completely Socialist or Communist and nationalizes the programs. The social-insurance fiction, with taxes shared by employers and employees is then dropped. Nationalization is the final step.

SOCIAL INSURANCE TRUST FUNDS

The OASI trust fund and other social security trust funds should be thoroughly investigated before any expansion of the program is authorized. One of the unexpected results of these funds is that they have resulted in a government within the Government, a budget within the budget. I wish to call your attention to the annual report of the Secretary of the Treasury on the state of the finances for the fiscal year ended June 30, 1948. On pages 398 and following (table 2) is a record of receipts and expenditures of the United States Government for the fiscal year 1798 through 1948. Beginning in 1937, receipt of taxes destined for the trust funds is not shown in the consolidated table of receipts and expenditures, nor are expenditures shown. The Secretary explains on page 16 of his report that such receipts and expenditures are shown in the daily Treasury statement under the title "Trust accounts, etc." As you study his report and the Budget of the United States for fiscal year 1950, you will discover two parallel budgets—one for trust fund income and expenditures and the regular budget for all other income and expenses of Government. In this way, you do not see total outlays all in one place. I think

[5] Doc. 261, H. R., 78th Cong., 2d sess., May 29, 1944.

[6] The Constitution of the ILO, Annex III (f).

[7] Shearon, Marjorie, New Zealand's Free Medical Benefits, 1948, pp. 26-28.

[8] Communication from Press Secretaries, Ltd., London, dated April 7, 1949.

this is an inexcusable subterfuge and tends to confuse the unwary. The United States budget for 1948, for instance is given as $33,791,301,000 (pp. 1386 and 1394 of the Budget). However, if one adds trust fund expenditures of $6,809,573,000, it makes total expenditures for 1948 $40,600,874,000. In view of the fact that social-security taxes are paid into the Treasury and are spent like any other revenue for current operations, I believe we should drop all the double bookkeeping and present one consolidated budget.

With respect to the size of trust funds, it is interesting to note that these now account for over $30,000,000,000 (Report of Secretary of Treasury for 1948, p. 19). These various trust fund operations constitute what I call the government within the Government, the budget within the budget. The assets in the OASI trust fund on June 30, 1948, were as follows (Report of the Secretary of the Treasury 1948, p. 562):

Special Treasury certificates of indebtedness, 2⅛ percent maturing June 30, 1949	$7,709,000,000.00
Treasury bonds, bearing interest at 2¼ to 2½	2,227,779,256.82
Total investments	9,936,779,256.82

Now the interesting thing about this OASI trust fund is that there is so little available cash left. At the end of October 1948 this was the situation:

Status of OASI trust fund, 1937–48

[In thousands]

Receipts:	
Appropriations, roughly equal to social-security taxes	$11,848,898
Interest received	1,041,543
Total	12,890,441
Expenditures:	
Benefit payments	2,230,722
Administrative expenses	296,572
Total	2,527,294
Assets:	
Net total of U. S. Government securities in fund	10,255,761
Cash on hand	107,386
Total assets, October 1948	10,363,147

There was only a little over $100,000,000 either in the form of cash or as a credit of the fund account. All told, nearly $12,000,000,000 had been received. Over $1,000,000,000 had been taken from the general fund and put into the trust fund as interest over the 9-year period. Interest payments now amount to about $200,000,000 a year out of general revenues. This interest is paid by all taxpayers, even those not under the social-security system. I believe this charge is unjust and that it is to all intents and purposes a Federal subsidy to the OASI. If we abolished the whole trust fund idea and put social security on a pay-as-you-go basis, these anomalies would be cleared up and would result in a reduction in taxes.

CONCLUSIONS

I strongly urge the committee to study the whole social-security program for a year before taking any action. Special attention should be paid to the International Labor Organization, its constitution, and our commitments. A careful study of long-range costs of the whole social-security system should be made with no help, advice, or professional prompting by any member of the Social Security Administration. Trust fund operations and implications should be reviewed. Consideration should be given to repeal of the Social Security Act in whole or in part and creation of a bona fide retirement plan for all persons at 65, on a pay-as-you-go basis. We should not make future commitments of benefits or taxes. It is ridiculous for us here today to be making plans for people who will be living in the year 2000. Above all, I urge the committee to study the traditional relationship throughout the world between comprehensive compulsory social-security programs and either state socialism or communism.

The Late Hon. Andrew L. Somers

EXTENSION OF REMARKS

OF

HON. MARY T. NORTON

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 14, 1949

Mrs. NORTON. Mr. Speaker, I was not present on April 6 when the sad news was announced in the House of the death of our beloved Member, ANDREW L. SOMERS. Had I been present I would have joined with those other Members—his many good friends—in expressing my heartfelt regret that we had lost a distinguished and able Member.

ANDY and I were elected to Congress in 1924. He was then a handsome, enthusiastic young man, full of the joy of living, with the ambition of serving his country and the good people of his district, for whom he always expressed the kindest sentiments of devotion and loyalty. During all the years that followed, during many of which he suffered greatly, he was a credit not only to his constituents but to his country. Extremely modest, few Members of recent years, because of his long illness, had the opportunity to know ANDY SOMERS or to appraise his many gifts of mind and heart. Always shrinking from publicity and shy with strangers, it was difficult to know the man, but those of us who knew him well admired his ability and loved him.

I recall his brilliant presentation of the very important Gold Reserve Act of 1934, when he was chairman of the House Committee on Coinage, Weights, and Measures. During my 25 years in the House, I have never heard a more complete and forceful discussion of any bill to come before the House. I recall on that occasion, when he had completed his explanation of the bill, the Members on both sides of the House stood in tribute to the man. His presentation of that bill was just about as nearly perfect as anything I have ever heard.

Unfortunately, his health did not permit him to be the leader he should have been. In a recent conversation I had with him he told me of his ambition as chairman of the House Public Lands Committee, an ambition to be an outstanding chairman and to make a great contribution to his country in that capacity. Trained in rational thinking, ready in debate, convincing in his appeal, and emotionally sensitive, I believe, had he been given the time he would have helped to solve many of the great problems before that committee, problems too often misunderstood by many of us in the East, but about which he seemed to have complete understanding. The problems of the Indians and of the great Southwest appealed to his sense of fair play and he was as intensely interested in helping the forgotten Indian as he was in assisting an unfortunate in his own district.

ANDY SOMERS had a very great interest in people, and it gave him real pleasure to work with people. He believed in democracy, and he practiced democracy. We shall miss him in the days ahead, but we shall rejoice that his days of suffering are gone and pray that his soul may rest in peace. To his wife and family I extend my heartfelt sympathy in their great sorrow.

Numerous Dangerous Wells and Cisterns Are at Old Greenville

EXTENSION OF REMARKS

OF

HON. A. S. J. CARNAHAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 14, 1949

Mr. CARNAHAN. Mr. Speaker, under permission to extend my remarks in the RECORD, I include herewith an article from the Daily American Republic, Poplar Bluff, Mo., of Tuesday, April 12, 1949:

NUMEROUS DANGEROUS WELLS AND CISTERNS ARE AT OLD GREENVILLE

The tragic death of little Kathy Fiscus in an abandoned well at San Marino, Calif., has caused persons all over the Nation to demand that all abandoned wells and cisterns be permanently sealed.

In Poplar Bluff an abandoned well is found now and then when the old coverings give way, but their most dangerous place in this part of the State, according to those who know, is at Old Greenville.

One former resident of Greenville said yesterday he believes there are at least 300 wells and cisterns in old Greenville which are very dangerous.

Fishermen pass through the old town site, bird hunters frequent that area in the fall, and there are many cases where children play around through the area that was once the thriving Wayne County seat.

"The only way I could locate my old home site," that former Greenville resident said, "when I went there some few weeks ago, was by a well. It had been covered over but the covering had rotted away."

He said the area is now owned by the Federal Government which apparently has done nothing toward closing the old wells and eliminating the hazard.

The Case Against Present Panamal Canal Tolls

EXTENSION OF REMARKS

OF

HON. SCHUYLER OTIS BLAND

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 14, 1949

Mr. BLAND. Mr. Speaker, under unanimous consent, I extend in the Appendix of the RECORD an article by Mr.

Charles L. Wheeler, entitled "The Case Against Present Panama Canal Tolls." The article is as follows:

THE CASE AGAINST PRESENT PANAMA CANAL TOLLS

(By Charles L. Wheeler)

The urgent need for a reduction in the tolls charged by the Panama Canal has long been evident; only recently has the possibility of effecting a change been more than remote. A month ago, House Resolution 44 empowered the Committee on Merchant Marine and Fisheries to examine tolls charged by the Panama Canal with particular attention to proper accounting and allocation of costs. Such examination may well be the forerunner to an intelligent and far-sighted revision of tolls, if the most is made of the present opportunity.

A few figures will prove the importance of Canal tolls not only to the shipping industry but to the economy of the coastal States as well.

For the fiscal year ending June 30, 1947, total tolls collected amounted to $17,596,602. Of this amount 51.1 percent was paid by American-flag ships. It is equally significant that 26 percent of the entire tolls bill was charged against our intercoastal lines. Of this amount, iron and steel manufactures moving intercoastally paid tolls amounting to $913,197 during 1947. Lumber and mill products moving to the east coast from the Northwest were charged $872,744 for the same year, and canned food products contributed a total of $335,508.

The unhappy plight of the intercoastal trade is well known. Today the volume of shipping on that route is 40 percent of the prewar figure—and that 40 percent is operating at a loss. It is estimated that the intercoastal carriers lost a total of $7,500,000 in maintaining operations during the period July 1, 1947, to December 31, 1948.

At present rates, the Canal toll for the intercoastal round voyage of a C–3 is $13,826, or almost as much as the entire monthly wage bill including overtime and all other supplemental payments. Fourteen thousand dollars a voyage can mean the difference between the revival of the intercoastal trade to its prewar level, or its gradual abandonment in the face of mounting losses.

The intercoastal trade is not alone in the difficulties it is experiencing. Our entire merchant marine is finding it increasingly difficult to meet the renewed competition of low-cost, foreign-flag operators. And in two world wars it has been our merchant marine that has supplied the vital nucleus of trained personnel and available shipping which are invaluable in time of emergency. It would be false economy to let this part of our economy deteriorate, when its importance from the standpoint of national defense is beyond question.

There are two general misconceptions with regard to the Canal, and the first of them revolves around the question of tolls. It is widely believed that the tolls charged are barely sufficient to cover the actual out-of-pocket costs incident to Canal operation. Actually, the reverse is true. The Governor's report for fiscal 1948, just released, indicates a net revenue from operation of the Canal and its business units of $2,622,672.75. Such sizable profits are not out of line with past performance.

Over the life of the Canal, toll revenues have exceeded expenses attributable to transiting by over $274,000,000. To put it another way, commercial tolls, plus tolls forgiven on Government vessels, have been sufficient to pay all operating and maintenance expenses on the basic Canal and its cost of construction, with a profit remaining of over $2,000,000.

The matter of forgiven tolls is worth special attention. From the first, American warships have been allowed to transit the Canal without charge. The result has been an undercollection averaging $1,000,000 annually from 1914 to 1942. A further undercollection of approximately $43,000,000 occurred between 1942 and 1947 for a total short-charge of some $73,000,000 to date. The result has been the curious spectacle of a Canal built primarily for national defense with nearly 100 percent of its capital and operating costs charged against commercial shippers.

The Kiel Canal affords the closest parallel to the Panama Canal in origin and employment. Built primarily to increase the mobility of the German Navy, its employment by commercial shipping was always secondary. Shipping tolls prior to the First World War paid for less than 1 percent of the initial cost of construction. In 1919, the capital investment was written off as a military expenditure and subsequent tolls reflected nothing but operating costs and such sums as might be needed for commercial betterments.

It is true that the accounts of the Canal purport to show an accumulated loss from operation, but this result is arrived at only through application of an interest charge at the rate of 3 percent of the total cost of the Canal. This charge is at present in excess of $15,000,000 annually.

It is manifestly unfair to make this charge solely on the basis of commercial use, when the semimilitary nature of the Canal is self-evident. Needless to say, such practice is unique as far as our Government is concerned.

The second general misconception concerning the Canal is based on the Hay-Pauncefote Treaty. The object of the treaty was simply to establish certain principles of neutrality, but it is supposed to contain a specific guaranty that our intercoastal vessels will never be exempt from tolls. No such guaranty exists, though through constant repetition the originators of this myth probably come to believe it themselves.

The wording of the treaty itself is worth examining. Article III which is customarily cited as bearing on the intercoastal toll position merely states that there shall be no discrimination against any nation—in respect of the conditions or charges of traffic. But the intercoastal movement of cargoes is exclusively an internal transportation affair, open only to American vessels. Toll concessions granted in this trade could by no stretch of the imagination be considered discriminatory against foreign shipping. Congress followed an identical line of reasoning in the Panama Canal Act of 1912 which specifically exempted our intercoastal vessels from tolls. Although this legislation was rescinded 2 years later, Congress took pains to reserve all treaty rights in future toll legislation.

Many suggestions have been made for restoring a measure of vitality to our intercoastal shipping. The most effective immediate assistance would be through the elimination of all tolls on transits of intercoastal domestic vessels. The forgiven tolls should be treated as revenue as are forgiven tolls on Government vessels, and would not therefore act as a burden on other vessels using the Canal.

It is clear that there is no treaty obligation against removing these tolls, and that considerations of national defense and our domestic economy both underline the necessity for such action.

In the past tolls have been fixed without regard to the fact that the Canal is one of our greatest military assets. Its worth from the standpoint of national defense would on the very least equal its commercial value. If such a 50–50 division were made, it follows that present tolls could be cut 40 percent and still leave a wide operating margin.

Such a toll reduction is more than justified by past earnings of the Canal, by its semimilitary nature, and by the fact that 51 cents out of every dollar of tolls collected comes at present from the pockets of our own hard-pressed shipping industry.

Finally, there is every reason to believe that reduced tolls would result in increased traffic through the Canal, and that actual loss of revenue would accordingly be decreased.

It has taken years of effort on the part of the shipping industry and a serious depression in our domestic steamship operations to obtain the investigation called for in H. R. 44. We must not let our hard-won opportunity slip through our fingers; we must push most vigorously for the removal of intercoastal tolls, and for the reduction of other tolls by at least 40 percent.

There is not much time to secure this action, for the report of the investigating committee must be submitted prior to June 30, 1949.

Favorable results will be obtained only if the civic organizations, port authorities, importers, exporters, community interests, labor and management groups, propeller clubs, and similar organizations in the principal coastal cities band together in demanding a revision of tolls while it is still not too late to help our shipping industry.

Economy, Efficiency, Security?

EXTENSION OF REMARKS

OF

HON. FREDERIC R. COUDERT, JR.

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 14, 1949

Mr. COUDERT. Mr. Speaker, under leave to extend my remarks, I include the following editorial which appeared in the New York World-Telegram on Tuesday, April 12, that will well repay the reading:

ECONOMY, EFFICIENCY, SECURITY?

The House Appropriations Committee has approved a national defense budget of $15,909,116,800, which is $631,252,100 more than President Truman requested when he submitted the largest military budget in our peacetime history.

This action was taken in the interest of economy, efficiency, and security, according to the committee.

Economy! That must have been a slip of the tongue, or tapped out on one of the typewriters used during the campaign.

Efficiency? The Military Establishment could use a lot of that, but will more money buy it? It never has.

Security? We want that, too. But spending for military security is building on sand if our economic security is being undermined. And slaphappy budgeting is working in that direction.

The Senate has just passed the $5,580,000,000 appropriation for European recovery, which is the amount the Truman administration recommended. We would not quarrel with that action but for the fact that new items not included in the budget have yet to be considered. In a few days, for instance, the President will ask Congress for $1,250,000,000, and possibly more, to arm western Europe. That was not provided for in the budget.

Unless this money to arm Europe is taken out of the European recovery fund or our own defense budget, new money must be found, and where? It isn't in sight unless new taxes are voted. And is this a time to vote new taxes? It certainly is not. Yet the dubious alternative will be deficit financing.

The Marshall plan, North Atlantic defense measure, and our domestic military program all come under the heading of security, and should be grouped together in the over-all budget. Instead of doing that, the President and Congress are using the piecemeal approach, dealing with one problem at a time.

Relative needs cannot be appraised and balanced against one another under this method, nor can a ceiling be maintained over the total budget. It is a sure way to build up a deficit.

We believe in the Marshall plan. We believe in the North Atlantic defense program. We want a sound national defense establishment. But this country should not go beyond its financial depth in supplying any of these needs. That is not economy, it isn't efficiency, and it is not buying real security.

Is There a Housing Shortage?

EXTENSION OF REMARKS
OF
HON. JOHN F. KENNEDY
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 14, 1949

Mr. KENNEDY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article entitled "Is There a Housing Shortage?" It is my firm belief that the statements contained in this article will be of definite interest to those who are concerned with the housing program:

The article follows:

IS THERE A HOUSING SHORTAGE?

The country is being flooded with propaganda against the housing bill, S. 1070, and its counterpart in the House of Representatives, H. R. 4009. It all comes from the same old sources, a mere handful of high-pressure organizations who have always consistently opposed all housing reforms or innovations suggested (even including those which they eventually came to support with enthusiasm, such as FHA), and who would certainly today oppose any effective solutions to the housing problem whatsoever. Why? For the simple reason that these are the interests who would profit, by and large, from a continuing shortage of decent homes.

And for the most part this flood of pamphlets uses the same old arguments except for one new note. Instead of merely promising, as always, that "private enterprise can do it," they're now making a much bolder claim: "Private enterprise has done it."

"The acute phase of the housing shortage is over," said Thomas Holden in one widely circulated leaflet.[1] And he is echoed by the United States Savings and Loan League and the National Association of Real Estate Boards. The problem is solved, therefore no need for reform.

And a lot of statistics have been put together and printed in order to prove it. So, since many of us come from cities where neither the shortage nor the slum problem seem to be much improved, if at all, it may be worth taking a glance at some of the statistics in one of the primary source books of the antihousing lobby, prepared by Miles L. Colean for the Construction Industry Information Committee of the Producers' Council.

It starts right off with some fine big figures to show that we have provided more new dwellings since 1940 than we did during a comparable period in the booming 1920's. "In 1948 alone," writes Mr. Colean, "new construction and conversion operations established an all-time annual record in providing an estimated 1,200,000 additional nonfarm units." A fine figure indeed, and remarkably close to the widely used estimates appearing in a long series of congressional reports, to the effect that we need a regular home-building rate of 1,250,000 to 1,500,000 dwellings a year to solve the shortage within the reasonable future and thereafter tackle the long-delayed replacement problem." The intended import of Mr. Colean's figure is clear. Surely anyone who would criticize such an industry, or try to reform it, must, as Mr. Holden suggests, have purely subversive intentions. Those dangerous subverters, Fortune, the Wall Street Journal, and Senator TAFT, must all be wrong.

But let us look at this "record" a little more closely.

A more familiar figure for 1948 acomplishment in residential construction is the Bureau of Labor Statistics estimate, based on local records, of 926,000 dwelling units actually started. This was a pretty fair accomplishment in itself, but it was not a record (although it is higher than is anticipated for 1949 unless we get some legislation passed very quickly indeed).

Mr. Colean must also have been cognizant of the fact that the residential building rate has been falling off, because the first thing he did was to translate the official BLS figure from "starts" into "completions," which meant that the recent slight decline did not have to be taken into account. This device (of which I am not really very critical—anyone arranges figures somewhat, I suppose) brought his figure for new construction up to about a million units.

On top of that, however, he added an estimate of 200,000 dwellings provided by "conversion," that is by cutting up big old mansions into several flats or transforming nonresidential structures into homes.

Now this might well strike one off-hand as a pretty large figure. It might seem that most of the readily convertible structures would have been tackled during the war or shortly thereafter. And the author gives no source of explanation.

And then, should you look further, a curious contradiction might come to your attention. The same author, Mr. Miles Colean, produced another pamphlet for the Producers Council, just 6 months before this one, in August of 1948, called an Analysis of Future Housing Demand. In this earlier publication he was not trying to prove that the industry had established any records or solved the housing problem. At that time he was more interested to warn the building industry against "over expansion" (a curious viewpoint which I will not, however, take the time to discuss in any detail today). But in this study also he needed an estimate of the current rate of conversions.

The figure he used was, strange to say, just exactly one-quarter of the 200,000 figure he used in February of this year. His estimate of the number of dwellings to be provided by conversion in 1948 was, and I quote him, "based on an annual rate of 50,000 conversions." And this time he gave a source, as follows: "According to the Office of the Housing Expediter, 64,500 conversion units were placed under construction and 45,300 completed during the calendar year 1946."

Now I know that figures are slippery, and our basic facts about the housing problem are so inadequate that they can often be interpreted in quite different ways with the utmost sincerity. But a 400-percent markup of an estimate within a 6-month period is nevertheless pretty steep. And a figure based on the final estimate, however it may have been arrived at, is hardly a very conclusive argument in support of the theory that the housing shortage has been solved, or in opposition to S. 1070 and H. R. 4009 which many of us are convinced is badly needed from our direct personal experience, whether we have had time to put together any figures or not.

This particular figure, on conversions, is of course not very important in itself. It is merely an example of why we should not be overly impressed with all this flood of fine figures and expensive printing. Other and perhaps more serious questions could be raised about Mr. Colean's figures but I will not take your time with them here. Suffice it to say that the loudly proclaimed "proof" that our slums have been disappearing since 1940 is at least as vulnerable as the evidence that the shortage has already been solved. And it may be doubted that the Census Bureau would claim that their recent surveys, based on very small samples, are scientifically adequate for any such complicated manipulation as they have recently been subjected by Mr. Colean and others.

As far as the shortage is concerned, there probably was a slight alleviation in 1948 considering the country as a whole, although there is little or no indication of improvement in most of our big, growing cities and metropolitan areas. The recent testimony of mayors and other local officials from all over the country is pretty strong evidence on that point. Even according to Mr. Colean's own figures, there were at the end of 1948, 2,200,000 married couples living in other families' households or in transient quarters. And, judging from most of the larger cities' continuing stand in favor of rent control, despite the terrific pressures from the other side, there is little evidence that vacancy rates have even begun to decline in most of the more heavily populated areas.

But it is high time that the tide is turned. For this shortage is no little fly-by-night temporary emergency. It has been building up ever since 1929, for from that time until last year we regularly and steadily failed to build as many new dwellings as there were additional families, let alone allowing for replacement of the old outworn stock of slum homes. By 1939 most big cities were already feeling a severe shortage even though it was still partly hidden by unemployment, which always causes considerable so-called voluntary doubling up.

On the significance of the deep roots of our current problem I might quote James Felt, a most successful and respected member of the Real Estate Board of New York. In a recent statement on the Core of the Housing Dilemma (which he says reflects "the very valuable advice and suggestions of Gen. Otto Nelson, Mr. Alfred Rheinstein, and Mr. Beardsley Ruml") he writes:

"Foremost among the domestic problems confronting our country is the provision of adequate housing. While our housing shortage is generally blamed on World War II, it is actually due to basic defects and inadequacies which have plagued the housing and construction industry for many years. * * * The industry's many shortcomings * * * are all symptoms of one basic defect—extreme fluctuations in house production. This is the underlying cause of our housing predicament. Only a relatively stable output will make possible an efficient industry. * * * The production of most commodities is aimed to keep up with effective demand rather than basic needs. * * * A man may have a car during a prosperous period and do without one in a slump. But a family needs a home and should have a home year in and year out. That is why the volume of house production must bear some relationship to basic need which can be measured and anticipated—not solely to effective demand, which is unpredictable.

It is in this light that the current housing statistics should be closely scrutinized. The "effective demand" for $10,000 to $20,000

[1] Housing Dictatorship and Soft Socialism, Commerce and Industry Association of New York, March 1949.

houses is beginning to fall off, by every index. January and February "starts" were lower than last year, and Mr. Thomas Holden himself, in his Architectural Record for December 1948, predicted an over-all decline in residential construction for 1949. And this is happening while the shortage is just about as bad as ever and the worst old slums are coming back into use instead of being demolished.

The immediate social need for the housing program envisioned in S. 1070 and H. R. 4009 is obvious to everyone who has a heart to feel and eyes to see, whether he uses them to get cross-eyed over statistics or not. But it is almost as necessary to the welfare and steady prosperity of the country if it is considered wholly from the angle of over-all economic and fiscal policy. We'll do it anyway if and when a depression descends on us; we all know that. Why not do it now, when it will both help to solve the housing shortage and forge a powerful weapon against the very possibility of depression?

As Fortune said of the current bill's ill-fated predecessor, the Taft-Ellender-Wagner bill, S. 866 of the Eightieth Congress, it "supplements private enterprise at its weak points and strengthens it where it could be strong."

In the heat of their misguided emotions, the antihousing lobby has been falling, as a matter of fact, into much larger and more glaring inconsistencies than any little discrepancy in statistical usage. For long years they regularly attacked the Wagner-Ellender-Taft bill and the Taft-Ellender-Wagner bill as inflationary. And now they are still making the same charge against the present bills, S. 1070 and H. R. 4009. "Public housing is inflationary" says the Savings and Loan League and all the other opposition pamphlets sing the same tune.

But I need hardly point out that these same organizations and their close confreres have been singing quite a different tune, and most vociferously, in connection with other legislation recently considered in Congress. To hear them in that role, one would think that a major depression had already descended on us.

But there are others, and not only among the administration's supporters by any means, who have seriously studied the fiscal aspects of the housing problem and therefore do not need to veer from side to side, or try to play both ends against the middle. Let me quote from an editorial in the New York Herald Tribune for March 4, 1948, an editorial which is still more timely and urgent today than it was a year ago when it was written:

"Accepting the widespread need for housing for all income levels, we need a comprehensive program to meet this need. Houses now being built concentrate on serving the upper third income bracket. Little is being built for the great middle market, and virtually nothing at all for the lowest third who can be reached only by Government subsidies. Nothing could be more inflationary than the present housebuilding boom. Current building is skimming the cream from the housing market and, given the peculiar economics of the building business, the only question is when that market will break.

"Certainly a balanced building program, with a substantial share of housing for middle- and low-income groups would be less inflationary and more likely to lead to the sustained high level of productivity over a long period which all experts agree is needed to overcome present housing deficiencies."

In sum, here is one issue which is truly bipartisan in the best sense, S. 1070 and H. R. 4009 which are pending in both the Senate and in the House of Representatives are supported equally by honest liberals and by honest conservatives, by everyone in short who has studied the problem and has his country's welfare at heart.

GOP Trying To Talk Fair Deal to Death

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 14, 1949

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an article by Doris Fleeson entitled "GOP Trying To Talk Fair Deal to Death," which appeared in the St. Louis Post-Dispatch of April 13, 1949:

GOP TRYING TO TALK FAIR DEAL TO DEATH—REPUBLICAN SENATORS FILIBUSTER ON EVERY ISSUE, BUT ARE NOT UNITED

(By Doris Fleeson)

WASHINGTON, April 13.—The real filibuster of the Eighty-first Congress is under way in the Senate.

Republicans opposed to the entire Truman program are conducting it. It consists of extending debate day after day by long speeches more or less relevant to the issue and continuing long past the hour when it is apparent that the Senate has made up its mind. The classic example is the 15-day ECA debate in which a dozen isolationists consumed three-quarters of the time and at the end registered only 7 noes as compared to 70 ayes.

The Democrats realize what is going on but they are powerless to stop it. They pretend to be brave about it and insist that, in the end, it will prove fatal politics for the Republicans.

Nevertheless, they are tense and annoyed. They realize that to pull a clear-cut creditable record out of the confusion will test their endurance, their nerve, and their brains.

The situation represents in a sense a war of nerves in which the victors will be proclaimed by the American people in the 1950 election. Meantime every piece of legislation becomes a major crisis, a wearing and time-consuming struggle. This is hard on all the Members of the greatest gentlemen's club in the world which prefers to do its work in a less militant atmosphere.

Some Republicans frankly dislike the trend and privately damn their minority leader, Senator WHERRY, whom they blame for this strategy. This group would also prefer to play down their southern allies of cloture-civil rights fame.

So far the elder statesmen of the party, Senators TAFT and VANDENBERG, are keeping their counsel. Faced in caucus with a real split in the party, they have acceded to the course of not making any issue so far as a party matter. The result is that many Republican Senators, like some Democrats, are playing by ear and that Senator WHERRY himself has veered far right of TAFT-VANDENBERG stands. It has been suggested that the Republicans really have a TAFT center, a VANDENBERG left, and a WHERRY right.

TAFT THE WHIP-CRACKER

It is quite possible that TAFT, on domestic issues which greatly concern him and in which he personally has much at stake, will soon do a little whip-cracking. These include Taft-Hartley repeal, housing, and aid to education. TAFT in the role of rescuer of the Senate from the verbal morass in which it is floundering would earn rather widespread gratitude.

The Democratic leadership's obvious plight led to a week-end flurry of reports that majority leader LUCAS was disgusted and ready to quit. These are false. Some of his colleagues have been sharp with LUCAS about timetable and other blunders. But in the main they appreciate his hard task and are not inclined to ride him.

The worst feature of it all to elder Senators is the tendentious quality of the tedious debates, the poor attendance of Senators and the lack of a real exchange of views. They feel that too often the Senators apparently want only to get their harangues printed, their refusals to yield for questions indicating that they are not really interested in the opinions of others.

The Truman Circus

EXTENSION OF REMARKS
OF
HON. KATHARINE ST. GEORGE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 14, 1949

Mrs. ST. GEORGE. Mr. Speaker, under unanimous consent, I include in the Appendix of the RECORD some short articles by William Robert Plumme. They follow:

THE TRUMAN CIRCUS

I. PRESIDENT CALLS FOR FASCIST MACHINERY TO PROTECT AMERICAN WAY OF LIFE

(By William Robert Plumme)

President Truman's program as revealed in his message to Congress on the state of the Union and the national economy have been described as socialistic. Socialism, however, aside from its close connection with communism, is also a nice word for fascism.

It has not been in error that Communists have said fascism was the halfway mark toward communism. Advanced in the middle 1930's, as an excuse for their support of the New Deal, it was meant, no doubt, to placate those left-wing thinkers who recognized the New Deal for what it was and is, even while remaining under some myopic illusion regarding the true nature of communism. The dream often seems so much fairer than the reality. The New Deal, of course, was also accused of following the 1932 platform of the Socialist Party.

Neither should it be considered as accidental that Mussolini was an ex-Socialist, nor that Hitler's program for a state-controlled economy was called national socialism. Like our own New Deal, both were based upon a combination of syndicalism and a sort of watered-down socialism sometimes called Fabian socialism.

Under the first, the economy of the Nation is broken down by a series of general strikes, such as those which have occurred both in France and in Italy. In Italy such strikes preceded the advent of fascism. The same purpose may be seen behind the Nation-wide strikes pulled by some of our labor unions here—namely the great family of CIO.

Fabian Socialism, on the other hand, is the peaceful voting into existence of a socialistic state in the manner in which it has been taking place in England under the Labor Ministery.

The tactics of the former, however, can be combined with the latter as is being demonstrated by our New Deal-CIO tie-up.

Government control is fascism

The economic base of fascism is government control of the nation's economy—of

the means of production. Price fixing, wage setting, the control of working conditions, the allocation of materials and manpower, compulsory "vocational guidance," the control of the investment market, and of imports and exports are all part of such a regime, as, indeed, they are of all forms of despotism. The medical profession, of course, is also socialized.

The great difference between fascism and communism is that under the former ownership remains in the hands of its investors and managers; management, however, is deprived of its freedom to produce, and the opportunity to improve production, both in quality and quantity, while the public is deprived of its freedom of choice, and the benefits of competition. Government rather than competition and the customer set the standards for production.

It is a serfdom in which government enjoys all of the benefits of a totalitarian economy without any of its responsibilities, and the well being of everyone becomes dependant upon the benevolence and omniscience of a legion of selfish, unfeeling, unknowing, ignorant and self-seeking administrators acting at cross purposes for reasons of personal advantage.

Communism merely does away with the mockery of private enterprise, replacing it with one of public ownership by the people, for it takes possession in the name of the people, who only occasionally and on some matters may be permitted to vote "yes."

Actually, however, the term "people" as used by the Communists has never been defined. Whether it means all of the members of the society, the Communist Party, or the highest levels of policy making in the management of industry and government has never been stated.

The President's message, however, did not call for a full-fledged Fascist state. A few of the assortment of measures for that have been left out. But it made a good start. It is to be remembered that neither did national socialism in Germany spring into being full grown. It too was enacted piecemeal.

Absent, for instance, are import controls—obviously out of line with the stated aims of the reciprocal trade agreements—which, however, do actually hide a good deal of controls on imports just the same.

The allocation of labor, is also absent, partially because the Taft-Hartley Act must first be repealed. But in January 1945 after the Germans had made their break through at Ardennes Forest, that incident was used as an excuse by the administration for the reintroduction of a bill labelled "must legislation" to meet the new emergency. Later its real purpose was revealed, i. e., the control of our labor supply after the war was over.

Fascism in Britain

The allocation of labor is in effect in Brittain where it is known as the Breckinridge plan. Its name in Hitler's Germany is not known to this writer, if, indeed, it had a name.

Thus the democracy which today exists in England, and which some people insist upon calling socialism is in reality full fledged fascism on the high road to communism through the nationalization of some key industries.

The rest—the allocation of materials in short supply, selective price and related wage control, export controls, the control of farm production and the control of credit—are all there in the President's program. Some are watered down to be sure, but in principle are just as deadly to the system of free enterprise, and the freedom of self-government. Credit control, for instance, is not a very far cry from the power to conscript capital—once desired by President Roosevelt as a wartime power.

THE TRUMAN CIRCUS

II. PRESIDENT'S PROGRAM A HODGEPODGE OF CONTRADICTION—SMALL BUSINESS HIT

(By William Robert Plumme)

From the standpoint of political science the program of President Truman, as enunciated in his message to Congress, is pixie-eyed; from the standpoint of political economy it is ruinous; while from that of political philosophy it is full of contradiction.

Thus the President states: "We must assure small business the freedom and opportunity to grow and prosper," and at the same time wants to saddle it with an allocation of materials, and an increase in taxes for the middle-income brackets, i. e., the owners of small businesses.

While President Truman admits that personal savings increased in 1948 over 1947, and that a larger proportion was invested in housing, unincorporated business and farms, he fails to mention the important role the Eightieth Congress played in making this possible through tax reduction. Nor did he mention the important part tax reduction, with its consequent expansion of business, played in providing 1,000,000 more jobs for the Nation's increased work force.

His feelings on the matter, however, are plain since he wants to increase taxes. This fits in with the New Deal's traditional policy of using syndicalistic tactics to create an economic impasse which, in turn, serves as an excuse for advancing socialistic measures to solve the new emergency.

No doubt this adds to small businesses "incentive to make its full contribution to the national welfare." Small business might like the pat on the head, but it must remain gravely concerned over the knives he is sharpening. It cannot be blamed for being afraid to turn its back.

Small business provides most jobs

It should not be forgotten that small business provides most of the Nation's income and wealth, and is the backbone not only of our economic freedoms but of our political institutions and liberties as well. Destroy small business and you destroy this Republic of ours, and everything it stands for: freedom of opportunity and enterprise, the pursuit of happiness, and even the ability to enforce the bill of rights.

Freedom of enterprise and self-government are like Siamese twins. Each perishes without the other. It is equally true that economic monopoly and despotism are part of each other.

In line with the President's policy for "a fair distribution of opportunity" "business will have the help, and encouragement of Government" with price fixing, allocation of materials, export controls, credit controls, the lowering of tariffs on imports through reciprocal trade agreements, and more taxes, if the President has his way.

"Small business has been losing ground to growing monopoly," stated the President. Granting that this is true, which party has been in office these past 16 years.

A report issued by one New Deal Attorney General accused the steel industry of being almost completely integrated, and monopolistic in character. Many such reports have been issued under the New Deal without subsequent action. In the case of the steel industry, however, United States Steel was permitted to acquire a steel plant out West, built at Government expense during the war, from one agency of the Government whose members are responsible to the President of the United States. Then another agency of Government whose members, likewise, are responsible to the President of the United States, the Justice Department stepped in with antitrust proceedings against the corporation. The New Deal packed Supreme Court, of course, found in favor of United States Steel.

If President Truman was sincere in his complaint against this "growing monopoly" he could have prevented United States Steel from acquiring the plant in the first place.

Thus the President has uttered the strongest indictment against his own party, his own administration, and the men who hold office under him, and the strongest reasons against granting him the power to allocate materials, which he seeks.

Allocation hits small business

During the war Congressmen were kept busy with complaints of small-business men, who after having been awarded war contracts and sometimes with the highest priorities by the military services, found themselves being discriminated against and hamstrung by the Washington bureaucrats.

As one high-ranking Washington bureaucrat stated with regard to a businessman with an AAA priority from the Navy: "Why, he is just a little fellow." Yet this little fellow who was able to produce his product cheaper than some of his big competitors was unable to obtain the necessary materials. The high-ranking bureaucrat had come to the Government from one of these competitors.

The reconstruction of the power of Government to allocate materials would recreate such situations, and for two reasons: First, many of the administrators would have to come from big business itself and, as in the past, would represent the interests of their old organizations, rather than the general welfare. The rest would seek to curry favor with the giant corporations. In the past they expected to and did go to work for their organizations when they left Government, their jobs with the war having come to an end. Of course, in leaving they issued statements declaring it impossible for them to get along on their salaries of from $6,000 to $12,000 a year, a chant which was taken up by their friends outside of Government.

Under such conditions, who would represent or care about the multitude of little fellows, who, collectively, produce more, provide more jobs, and contribute more to the general welfare than all of the big business organizations put together.

Bureaucracy always despotic

The truth of the matter is bureaucrats never have and never will represent either the public in general, nor business as a whole. Bureaucratic control of a Nation's economy has always left the small man on the outside looking in. This was true in ancient times. It was true in the days of the king's courtiers, and it is equally true today. They have never created anything by economic waste by compelling businessmen to scurry all over the place in order to obtain materials which otherwise would have been easy to get at.

There has been every indication that the E. R. P. has been following a similar practice of favoritism, despite provisions in the act intended to give everyone an equal opportunity at obtaining contracts. It has been disclosed that in some fields certain favored business organizations have received contract preferences at the expense of their rivals. Recently President Truman himself promulgated an order to Paul G. Hoffman to ignore these provisions in the act altogether.

THE TRUMAN CIRCUS

III. PUBLIC HIT BY PRESIDENT'S PROGRAM

(By William Robert Plumme)

As a cure-all for inflation, President Truman has called for an assortment of controls, which have never worked anywhere, nor at any time in the history of mankind. He

wants increased taxes on corporate and individual incomes, gifts and inheritances, excise, and fresh social-security taxes.

Now who is the President trying to kid? Who does he think is going to have to pay these taxes? Ultimately it must be the consuming public, either over the counter or out of their pay envelopes.

For labor it must mean another decrease in purchasing power—reason enough to start fresh demands for pay hikes, and set off another inflationary spiral.

For small business and the middle income group it means a decrease of savings, a decrease in the funds which otherwise would be available for the expansion of small, unincorporated businesses.

Yet an expansion of these businesses must take place if they are to contribute their share toward the accommodation of the yearly addition of 1,000,000 persons to our labor supply which the President indicates will occur. The voting of new taxes would be a body blow to the Nation's small business organizations in their effort to compete with the growth of monopoly to which he referred in his messages to Congress. But it would be in keeping with the syndicalistic tactics of the New Deal-CIO alliance in their drive toward a fascist state.

Far from acting as a depressant upon inflation, increased taxation with a record peacetime budget merely means the transfer of purchasing power from the consumer to Government, with an accompanying lowering of the general standard of living. With labor seeking to recover through increases in wages, it means stepping up the pressure of inflation, not its decrease.

And if the other pet bogey of the President, deflation were to set in, instead of purchasing power being in the hands of the American people where it ought to be, Government would be compelled to step in with a new spending spree. This presumably would lead to more taxes, or else to deficit spending which also means more purchasing power in the hands of Government and less in the hands of the public.

Such a policy in Government must inevitably lead to more and more control over our lives until we become reduced to a position of political and economic servitude. It may be viewed as another tactic in the syndicalistic approach to socialism, i. e., fascism.

Government-created inflation

Depressions may or may not be man-made as the President claims but the recent inflation was most certainly Government-made.

Time was when the Nation's currency was backed by gold, and exchangeable therefor. The New Deal had to take the Nation off the gold standard before it could indulge in its first spending spree, domestic and foreign.

There is, however, another commodity which can back up currency, being exchangeable therefor, and that is merchandise on the shelves or property such as machinery, homes, land, etc. If the supply of goods increases in relation to the supply of money, prices go down; but if the supply of money increases in relation to that of goods, prices must go up unless price controls are clamped on.

This is commonly called the law of supply and demand, and it operates in Communist Russia just as strongly as it does in capitalistic America.

During the war, money was paid out as wages for labor, etc. Most of the goods produced went off to war and to other countries. With price controls in effect, despite high taxes, there developed an excess of money in the hands of the public which was not backed by goods on the shelves, and never shall be so backed.

Sooner or later this pent-up excess purchasing power would have to be released, if nowhere else, then in black-market operations. The effect would have to be inflationary since the new goods on the shelves were backed by fresh money paid out for labor and other services.

A continuation of price control would not have been a solution. It could not skim off the excess purchasing power. As a remedy it was worse than the evil since it created the bottlenecks and shortages which inevitably follow in the wake of Government controls, thereby creating more inflationary pressure, the ratio between cash in the pocketbook and goods on the shelves becoming even greater.

The Soviet Union solved the problem by deflating the value of its currency, by taking purchasing power away from those who had been saving their money rather than spending it.

Public pays and pays

In our own case, the public having paid for the war once in the form of shortages, has been called upon to pay for it all over again in the form of inflation, and is being called upon to pay for it yet once again as it picks up the tabs on $252,000,000,000 of debt plus additional charges of interest.

This has proven very perplexing to a lot of people, but the President in his message forgot to touch upon the matter.

Not content, however, with the inflationary effects of wartime deficit spending, the omnipotent holy holies of Washington saw fit to bid up the price of grain in its purchases for shipment to Europe last spring and called for price controls as a solution for their own acts.

Likewise, a bottleneck in home construction was created by one Government agency's purchasing and hoarding of cement still in short supply, and so necessary for the construction of homes, roads, and dams. Whereupon another bureau called upon Government to enter the field of home construction and provide the housing which they accused private builders of being unable to produce.

Col. Edward C. Kavanagh

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 14, 1949

Mr. PHILBIN. Mr. Speaker, under consent to extend my remarks in the RECORD, I include therein copy of a letter conferring a high French decoration upon my distinguished friend, Col. Edward C. Kavanagh:

FRENCH EMBASSY TO THE UNITED STATES,
Washington, February 16, 1949.

Col. EDWARD C. KAVANAGH,
Army and Navy Club, Washington, D. C.

MY DEAR COLONEL: I have the honor to advise you that by decree dated January 12, 1949, you have been named Chevalier in the Order of the Legion of Honor.

I am happy to be able to congratulate you for this well-merited distinction which you must consider as evidence of the gratitude of the French Government for the inestimable services you have rendered to France in the course of the First and Second World Wars, thus helping to maintain and reinforce with admirable devotion, the friendly relations between France and the United States.

Please be good enough to accept, my dear Colonel, the assurance of my highest regards,

HENRI BONNET,
French Ambassador to the United States.

The European Recovery Program, the World-Wide Struggle Against Communism, the Necessity of Keeping America Solvent, and the Further Necessity of Military Preparedness of the United States

EXTENSION OF REMARKS
OF
HON. JAMES S. GOLDEN
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 12, 1949

Mr. GOLDEN. Mr. Speaker, we have before us for consideration the European recovery program commonly known as the Marshall plan. We are beginning the second year of the operation of this program. After extensive hearings before the committee whose duty it is to write this bill and refer it with its recommendations to the Members of Congress, we find that it reaches the floor of the House for debate after having received the unanimous support of all members of the committee, both Democrats and Republicans.

Members of both parties have stated to us the absolute necessity of continuing this program and they state in substance that we must not abandon the countries in Europe and England who are steadfastly resisting the spread of communism and who believe in free government and who believe in God and the church.

They have stated to us that in case of war, which we all hope can be avoided, that these countries will be our first line of defense. Realizing that there is a division in the world today, that peoples and countries everywhere that believe in freedom and the Republican form of Government and who believe in God are arrayed on one side against communism which curses God and defies religion and hopes to destroy it and who have declared themselves as being against free government, it appears to me that there is nothing left for us to do but to take the recommendation of all members of this committee from both parties and to proceed along in our bipartisan foreign policy and vote to support this bill.

America can no longer live by herself. Modern means of communication and transportation have made us close neighbors to the rest of the world and if communism sweeps over the earth, America may go down with the rest of civilization and it would take us a thousand years to get back to our present standards of living.

While this is true, we must give some thought and be concerned about the solvency of America. If we so weaken our financial structure, and if we place too great a burden upon the backs of the taxpayers of America, we may get in such a situation that we could no longer protect ourselves or help other Christian, freedom-loving nations.

No one from either side of the aisle has introduced any amendment or any bill to discontinue the European Recovery Program. All we have in the way

of an amendment is that the huge sum requested in this bill be reduced approximately $500,000,000 which represents an approximate cut of 10 percent.

I favor this amendment and this cut in the appropriation for the Marshall plan. I think it is time that we should notify all of our free nations in Europe that the United States cannot continue to meet every request that is placed upon us even though there appears to be a desperate struggle going on and desperate need for the funds. It is my opinion that if we reduce the amount of this bill by 10 percent it will let every European country know that they themselves must exert greater effort and greater economy and that we are reaching the end of our ability to support and aid them in their recovery program.

Another reason why I think we should cut this appropriation 10 percent is that in our own domestic economy and especially in our appropriations for public works in America this Congress, at the present session, has agreed to cut the appropriation bills, not 10 percent, but 15 percent. We did this because we though that prices of all sorts of goods and commodities were going down, that money would purchase more, and because we felt that rigid economy was necessary to keep this Government solvent.

Under these conditions, while everybody realizes the necessity of supporting the European recovery program, I shall vote for the 10 percent reduction and then I shall vote for the bill whether the amendment carrying the reduction is passed or not, because it seems to be absolutely necessary to stop the spread of communism in Europe.

We will have up for consideration on April 13 a bill providing for appropriations to carry on our armed forces program and permit them to expand so as to secure this country in case of war. This bill will provide for the largest amount of money in the peacetime history of America. It will be necessary to appropriate to the various branches of our armed forces a little short of $16,000,000,000. That, added to the sum necessary to support the Marshall plan for another 12 months, will exceed $20,000,000,000 of American money.

All Members of Congress realize that our needs are desperate, that America is at the crossroads of her history, and that we must be prepared in case of war. If these were not the facts, it is my belief that no Member of Congress would be for these huge appropriations and these enormous spending programs. They will tax the ability of the American people to meet them and they will entail much sacrifice and hardship upon every American citizen.

On the other hand, the Committee that has prepared and presented to Congress the bill calling for approximately $16,000,000,000 for our Armed Forces to secure this country brings us a unanimous report. All Republican Congressmen and all Democratic Congressmen say that this program is necessary to preserve America.

We all know that Russia is on the march, that her world-wide plans are designed toward revolution and the overthrow of all Republican forms of government and all Christian people by force.

We undertook to reconcile the differences of the various nations of the world and to build a lasting peace through the United Nations Organization. For many months the United States and other free countries struggled with Russia to agree upon a program of peace. Thirty different times Russia has blocked the efforts of the other nations of the world to bring about a lasting peace. Russia does not want peace. She is on the march and has already overrun and captured and subjugated the peoples of 15 nations against their will.

Recently the Communist organization in France, in Italy, and in our beloved America declared to the world that in case of war, they would support Russia against their own homeland. Counting her own people and the people she has conquered in Europe, Russia now has over 200,000,000 people in Europe. Counting the Communists in Korea and the people in China that have recently come under the world-wide sweep of communism, Russia has more than 200,000,000 people across the Pacific.

It appears that America alone is holding aloft the torch of Christianity and free government. We have less than 150,000,000 people. We cannot afford to allow Russia to conquer the balance of Europe, and neither can we afford to allow her to conquer the rest of China, India, and the Orient. Our situation is desperate. We must make the protection and security of this country our first concern, This overcomes and overrides our great desire to economize in America.

We are convinced from the exhaustive studies and reports of this committee that it is absolutely necessary that we appropriate these huge sums totaling approximately $16,000,000,000 for our armed forces and in excess of four billion for the European recovery program.

Because of the afore-mentioned reasons, I shall support both programs. I think that our committee that reported out the bill providing for funds for our armed forces acted very wisely in placing great emphasis upon building the strongest Air Force that the world has ever seen. Our very lives, our security, and the future of this country depends upon the military might of this country, the atomic bomb, and the uniting together of all peoples everywhere that are willing to resist the blood-thirsty dictator of Russia who designs to conquer the world.

On the Legal Side

EXTENSION OF REMARKS
OF

HON. GLENN R. DAVIS

OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 14, 1949

Mr. DAVIS of Wisconsin. Mr. Speaker, under leave to extend my remarks, I desire to include a radio address by Mr. Fraser S. Gardner, national legislative chairman of the Army and Navy Union, the Nation's oldest active veterans organization. Mr. Gardner has long been active in veterans' organizations, and since 1944 has presented a radio program entitled "for the veteran." His words, therefore are entitled to consideration by veterans and by Members of Congress.

The address follows:

At the close of World War II, almost 20,000,000 men had risked their lives, broken up their families, suffered economic, physical, and psychological injury to help maintain the freedoms of America. They had looked to us, here at home, to provide them with the means to win it—the guns, the transports, the equipment.

When they turned homeward, victorious, they looked to us and to the new and powerful resources of rich America for jobs. They also looked to us for the way back, back to a normal productive life in the environment of peace and security. They sought it in the same way as their civilian neighbors, in an expanding economy that provides good jobs for all employables, not because they are veterans, but because they are men. They did not find it in a mustering-out pay check, a preferential rating for nonexistent jobs, or even in more than generous unemployment allowances. Those who have "found" themselves have done so only by waging another war, that of "dog eat dog," and then to linger in the fear that the boom is over, the bust is here. Not yet do we have any assurance of a continuing profitable economy.

So far all the programs for employing the returned servicemen in our industries have been predicated on the general assumption there would be a job for him to do. And, so far, of course, that has been true with the majority of our veterans choosing to go into industry. During the past 3 or 4 years management and labor, as well as local and Federal Governments, have taken steps to help the veteran find the kind of job he specifically wanted. Most of these steps involved some form of veteran preference, either State, Federal, or both. But the economic future of the veteran cannot be solved solely through preferential treatment and Government aid. The jobs have not only got to be there, they must remain there. The crux of the problem lies in planning for an economy of abundance, a prosperous America.

In the course of the war we geared our economy to an unprecedentedly high level of production, and we cannot, we must not, sink back into a lower level of production without inviting unemployment and economic stagnation. In these postwar years, therefore, we must achieve peacetime enterprise and the production of consumer goods and services on a wholly new scale.

It was my supposition 4 years ago that this country would be unable to utilize in the questionable period ahead, anywhere near the amount of products which we were then manufacturing for war purposes. In fact, an enriched standard of living and full and continued peacetime employment cannot be achieved wholly by the production of things. As one suggestion today the approach to them can be greatly aided, however, through an expansion of the social services which make a fuller and healthier community existence—medicine, education, recreation, religion, child care, youth programs, and the like. And these can be supplemented, of course, by soundly conceived projects for the development of our natural resources; the harnessing of rivers to promote navigation, irrigation, and power; the construction of bridges, highways, and harbors; the conservation and exploitation of soil and forests and mineral reserves.

Stimulation of small business, civic development, and public works, full use of America's gigantic productive resources, incentive taxes, expansion of foreign markets,

low tariffs—all of these and more are necessary to assure the veteran sustained, suitable employment. A continuing healthy overall economy will obviously provide a healthier chance for the veteran than a sick economy with so-called preferential treatment. Most veterans instinctively sense this fact.

Disabled veterans should, of course, continue to be entitled to extra protection and preferences for both public and private employment. Their pensions are still not large enough for handicapped veterans to live on without outside income.

Disabled veterans have the most to fear from a scarcity economy and unemployment, because they are for the most part marginal employees, the last to be employed and the first to go when contraction begins. Their only hope for a decent income and a job, unless preference for them can be really effective, lies in an expanded economy for America, with jobs that last for all.

But, even though we might be successful in securing effective preference for the employment of veterans—disabled or able-bodied—which we have done rather well, the welfare of any one group of Americans is inevitably linked up with the welfare of all other groups of Americans and, therefore, we must strive to cooperate together toward the objective of full, useful employment for all Americans.

As I see it, we face a momentous choice in this postwar period. Having experienced full employment during the war, the American people will not tolerate protracted heavy unemployment again. If we cannot get reasonably full employment in one way we will try to get it in another. Thus, the choice appears to be whether we shall achieve our goal by general planning and general management of our economy, creating general conditions in which the people will make their own permanent jobs through private enterprise, or whether failure to do so in that way will lead us into detailed control and management of all our economic activities. If we are to do it by the general conditions we create we must do adequate planning to that end and do it now. Sustained full employment will not just happen.

Irregular Air Carriers

EXTENSION OF REMARKS

OF

HON. E. L. BARTLETT

DELEGATE FROM ALASKA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 14, 1949

Mr. BARTLETT. Mr. Speaker, under leave to extend my remarks, I include the following letter to me from Mr. Jack Scavenius, president of Mount McKinley Airways, Inc., Anchorage, Alaska:

Because of your continued interest in the problems confronting irregular air carriers in Alaska I am again writing you in further explanation of my viewpoint in these matters and submit the following for your information and consideration.

In reply to my letter to the Civil Aeronautics Board of January 10, a copy of which I sent to the chairman of the Board, Mr. Joseph J. O'Connell, I received a letter from Mr. O'Connell dated February 1, in which he states, among other things: "However, it may be pointed out that there is considerable doubt, at least insofar as available information would indicate, whether additional regulations would have prevented that accident." In my reply to Mr. O'Connell dated February 28, I state: "Having read over the most of the available information concerning the Yale student accident, I agree with your statement but the fact still remains that had the Administrator vigorously enforced present safety regulations, inadequate as they are, this particular operator would either have been out of business 2 years ago or at least he would have been forced to operate in a manner conforming to present safety regulations and common sense."

Approximately a year and a half ago I told the Anchorage Chamber of Commerce that in my opinion the Civil Aeronautics Administration was guilty of gross dereliction of duty. I stated at the time that I was convinced that the local inspectors were doing their level best but, of course, the policy governing the action of the local inspectors comes from Washington.

There are today numerous operators who constitute a potential danger to the public due to their type of operation. Overloading is still prevalent. I have, during the past 2½ years, seen any number of operators, whose idea of maintenance is an occasional mechanic with a tool kit when something goes so badly wrong that it absolutely has to be fixed.

As an example, just about a month ago one operator told me that he feared that C. A. A. was going to get tough and require turn-around checks here in Anchorage. I asked him, rather amazed, if he flew his airplane from Seattle to Anchorage, a distance of some 1,500 miles, let it sit on the field at Anchorage for maybe 2 or 3 days, load it up with passengers and fly it back to Seattle without a check and he cheerfully stated, "Oh, yes, we never check our airplanes in Anchorage."

Mr. O'Connell stated further in his letter that he was sure that the Administrator would wish to be advised of any cases known to me in which enforcement of safety regulations may have been less rigorous than necessary. This, of course, is not possible for me. Being an operator myself, I do not have the time nor the inclination to be detective or stool pigeon for the Administrator. I could fill several pages with violations known to me that have taken place during the past 2½ years but I would, of course, not be able to produce any proof that would stand up in court.

It is not my purpose to get anyone in trouble but these abuses and violations are known to most everyone in the industry and it certainly must be known to the Administrator. The most important thing to me and to the industry as a whole is to get these things cleared up. The period of leniency and education should be over and the operator who wishes to operate in a safe and conscientious manner should be encouraged and helped, while the operator who insists on being an outlaw should be vigorously prosecuted.

As an operator of a noncertificated, irregular carrier I am, of course, very anxious to see the nonscheduled operators get a chance to survive and prosper. But there has been too much irresponsible talk about how the nonscheduled operators have been able to make a profit without subsidies. But the fact remains that some of these operators forget that the reason why they have been able to operate at such a low cost is partly that they have been able to obtain airplanes, engines and accessories, and so forth, from war surplus and partly because they have operated with inadequate maintenance and substandard personnel.

I firmly believe that there is a place in the picture for the nonscheduled operator and that this type of operation should be fostered and encouraged. But I equally firmly believe that strict enforcement of safety regulations is necessary and I further believe, as previously stated, that the present safety regulations governing nonscheduled operations are pitifully inadequate.

I have sent the above letter with my original letter to the Board, to the members of the Senate Committee on Interstate and Foreign Commerce and also to the members of the House Committee on Interstate and Foreign Commerce and to Governor Gruening.

Sincerely yours,

MT. MCKINLEY AIRWAYS, INC.

By JACK F. SCAVENIUS.

Are the Slums Disappearing?

EXTENSION OF REMARKS

OF

HON. ANDREW J. BIEMILLER

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 14, 1949

Mr. BIEMILLER. Mr. Speaker, in one of the pamphlets—Housing Dictatorship and Soft Socialism, Commerce and Industry Association of New York, 1949—now being circulated by the opposition to S. 1070, the slum clearance, public housing, farm housing, and housing-research bill of which H. R. 4009 is the counterpart in the House of Representatives, Thomas J. Holden claims that the widely accepted national estimates of slum conditions and replacement needs are greatly exaggerated, and that the slum problem is rapidly diminishing. He questions the validity of figures used in numerous congressional documents, which are based on the enumeration and tabulation of substandard housing conditions in the United States Housing Census of 1940.

No evidence has ever been brought forward—

He says—

to show that the 1940 census enumerators ascertained, or were sufficiently qualified as experts to judge, whether any or all such units should be classified for demolition or were susceptible of improvement.

And he further claims, somewhat inconsistently, that—

Repeated Census Bureau surveys have shown that there has been steady progress in repairing, modernizing, or otherwise improving existing dwelling units.

It is quite true that the Housing census does not provide the basis for a scientific evaluation of slum conditions, and no one claims that it does. These data have only been used as a rough index, and their limitations were discussed last year by a joint committee of the National Association of Housing Officials and the National Public Housing Conference, as follows:

For national estimates of housing quality we can only rely on census counts of dwellings "in need of major repairs" or lacking in minimum sanitary facilities. By this crude measure, at least one-third of our homes were substandard in 1940. Some of these structures were, of course, capable of repair or modernization and the current census sample surveys indicate that general prosperity has encouraged such improvement. But the vast majority require replacement and many that were virtually abandoned in the thirties are full to overflowing today. Furthermore, the census does not take into account many

equally serious factors—light and ventilation, fire safety, neighborhood conditions—which can seldom be remedied except by wholesale reconstruction. "The detailed Appraisal Method for Measuring the Quality of Housing recently developed by the Committee on the Hygiene of Housing of the American Public Health Association for the qualitative analysis and classification of urban housing on a scientific basis has only been used thus far in a few sample areas. But the results indicate that dwellings requiring demolition are at least as numerous as the dwellings roughly termed 'substandard' on the basis of the 1940 census." (A Housing Program for Now and Later, National Public Housing Conference, 1948.)

In the meantime, however, an exhaustive official study of several blighted areas in my home city of Milwaukee, utilizing the American Public Health Association techniques, has been published. And the results prove beyond question that, for this typical American community, the dwellings requiring outright demolition in the interests of civic health and welfare are not less but more numerous than the rough census gage would have indicated.

The Milwaukee survey covered 221 blocks in three areas, totaling 11 census districts. Twelve thousand and fifty homes were visited, the vast majority of them analyzed room by room. And the results proved that 100 of these blocks, containing 5,057 dwellings, were too far gone or too inherently bad to be capable of modernization or rehabilitation on any sensible or economic basis, and that they therefore require outright demolition. An official recommendation to this effect was made by all the city departments concerned, through the Redevelopment Coordinating Committee. Under the machinery provided by the Wisconsin "blighted area law" these blocks will be scheduled for clearance and reconstruction as rapidly as feasible, with only "interim enforcement" to be applied by the Health Department in the meantime. (As Milwaukee city fathers have regularly testified in Washington, the actual rate must depend on the provision of Federal aids for housing and slum clearance similar to those in S. 1070 and H. R. 4009). The committee likewise determined, on the basis of the survey, that the remaining 121 blocks may yet be saved by systematic rehabilitation and modernization, but even here a large number of scattered structures will have to be torn down in the process.

How do these up-to-date findings, based on the most scientific appraisal techniques available and handled throughout by trained inspectors compare with the findings of the 1940 housing census for the same areas? Surely this is as good a test as could be made of the validity of the census as a rough index of replacement needs.

Thirty specific items applicable to each dwelling are included in the American Public Health Association schedule, and eight items dealing with the quality of neighborhood environment. These are evaluated through a very refined system of penalty points and over-all scoring. As for the scientific care with which the survey was carried out, the following may be quoted from the report:

A consultant in housing appraisal from the staff of the committee on the hygiene of housing of the American Public Health Association was employed by the city of Milwaukee for a period of about 4 weeks in August 1945, for the purpose of training a few key people in the health department and the land commission in the proper use of the appraisal method. Two sanitation inspectors of the health department then trained several other sanitation inspectors in the use of the method. Field appraisal began in September 1945 and was carried on intermittently during 1946, with delay due to a shortage of personnel. Then, the common council authorized the creation of eight positions in the health department for 1947 in order to permit housing appraisal and housing ordinance enforcement. * * * After a training period of approximately 4 weeks the inspectors began actual field appraisal work in July 1947. The remaining seven census tracts were completed by the middle of February 1948. The processing and analysis of data was completed by the end of March 1948. (Blight Elimination and Urban Redevelopment in Milwaukee, report of the Redevelopment Coordinating Committee, city of Milwaukee, June 1948.)

The answer is clear.

In these same 11 census districts in 1940 the enumerators found 4,748 dwellings which were either in need of major repairs or lacked minimum sanitary facilities. This figure is just slightly smaller than the 5,057 dwellings now scheduled for demolition in these districts. But it must be noted that the 5,057 dwellings are all located in the 100 blocks now planned for over-all reconstruction, while other substandard dwellings requiring eventual demolition are found elsewhere in the area.

The 1940 census was a pretty good index, it would seem, if somewhat conservative. And the slums will not even begin to disappear until something like S. 1070 is enacted.

Better Social Security

EXTENSION OF REMARKS

OF

HON. JOHN B. BENNETT

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 14, 1949

Mr. BENNETT of Michigan. Mr. Speaker, the working men and women of this country deserve a better system of social security, and action by Congress on this important subject is long overdue. No program is more vitally associated with the welfare of our working people than an adequate pension at retirement age.

For years we have been talking about the shortcomings of these laws. But to date nothing has been done about it. Americans who have reached retirement age are trying to exist on pensions as low as $27 a month. This is a lower scale than that provided for people of European countries who are the beneficiaries of our foreign-aid program. If we can afford to be generous to peoples of other lands we can at least afford to be fair to our own people. Social security in the United States today is a farce. The rates are so miserable and inadequate that those who are receiving aid under the program cannot maintain themselves on decent American standards.

I sponsored legislation in the Seventy-eighth and Eightieth Congresses and again in this Congress to extend, revise, and improve the social-security system. This Congress should not adjourn until favorable action has been taken to make these laws fair and workable.

PROTECTION FOR ADDITIONAL GROUPS OF WORKERS

My bill, H. R. 2033, would make old-age and survivors insurance available on a voluntary basis, to three large groups of workers now excluded from the system. These groups are: State, county, and municipal employees, employees of nonprofit institutions, and the self-employed.

PROPOSED IMPROVEMENTS IN THE PROGRAM

My bill would abolish many of the provisions that now restrict the old-age and survivors insurance program so that it cannot fulfill its original purpose. This bill would establish contributory social insurance as the primary method of affording basic protection against the economic hazards of old age and premature death by, first, providing adequate benefits based on today's living costs and wage levels; second, liberalizing eligibility requirements to enable a larger proportion of older workers to qualify for benefits; and, third, making the protection of the program available to three large groups of workers now excluded from this protection.

Self-employed: There are about 9,500,000 persons, including business and professional people, farmers, and others who earn their livelihood by means of self-employment. Many of these, because of low or irregular earnings or losses of savings in later years, are unable to provide for their own security in old age or protection for their survivors by savings or purchase of private insurance. For such persons, opportunity to obtain old-age and survivors insurance coverage is essential. Others would be enabled to supplement whatever protection they obtained from private sources through coverage under the old-age and survivors insurance system. Furthermore, the basic protection of the system would be available to persons shifting from the status of employees in covered employment to self-employment.

State, county, and municipal employees. In April 1947, employees of the States and local units of government numbered nearly 4 million, almost half of whom were not covered under any retirement system. Moreover, many State and local systems do not provide survivorship protection, or are otherwise inadequate.

Whether State and local employees in a State were afforded old-age and survivors insurance protection would be optional with the State, as in order to obtain coverage for its employees, the State must consent to the imposition of the Federal tax. Although the provision in the bill is intended primarily to provide protection to public employees in States without retirement plans, it would make possible the supplementing of State and local plans and, in addition, these employees would continue to have the basic protection afforded by the old-age and survivors insurance system, even if they

shifted from public employment to work in private industry or from one governmental unit to another. Similarly, employees in private industry could accept jobs with State or local units of government without loss of their old-age and survivors insurance protection, if the public employment is in a State that exercised the coverage option.

Employees of nonprofit institutions: There are about 1,000,000 employees of nonprofit institutions and it has been estimated that probably not more than two-fifths of this number are covered by formal retirement plans.

Under existing law, a retired worker on whose wages old-age and survivors insurance taxes have been paid for 12 years receives a monthly primary insurance benefit of $28, if his average monthly wage was $100. The formula in my bill would provide this beneficiary $46.20 per month. If his average monthly wage was $200, he now receives $39.20 per month.

This amount would be increased to $63 under the bill. Also, the minimum primary benefit would be increased from $10 to $20 per month, and the maximum monthly benefits payable on a wage record of a worker from $85 to $120 per month.

Age: The bill would provide benefit payments beginning at age 60 (instead of age 65). Workers could exercise the option of retirement at the earlier age, but undoubtedly the vast majority would continue in employment, for even under the proposed higher benefits there still would be incentive to remain in employment, as benefits would be small in relation to normal earnings.

Under the provisions in the bill, failure to work after age 60 would not result in a decrease in the monthly average wage and, in turn, a decrease in the amount of the benefit payments. Moreover, the number of quarters of coverage required to be eligible for benefits would not be increased after a worker attained age 60, thereby enabling a greater number of older workers to qualify for benefits than can now qualify under the present provision.

Insured status: The bill would liberalize the present provision which requires a worker to have been in covered employment at least one-half the number of quarters elapsing after 1936 to acquire fully insured status. This provision keeps many older workers from being eligible for retirement benefits. Under the provision in the bill older workers would be eligible to receive retirement benefits if they had worked in covered employment one-fourth the number of calendar quarters elapsing after 1936. Thus today a worker would need 12 quarters of coverage (instead of 24 quarters) to qualify for retirement benefits. No change is made in the existing provision that upon the completion of 40 quarters of coverage a worker obtains a fully insured status on a permanent basis.

Survivor benefits: My bill provides for continuing a wife's benefits as one-half of the primary insurance benefit, but survivor benefits would be computed at the rate of three-fourths of the primary benefit for one child and one-half for each additional child—instead of one-half for each child—and parents' benefits at the rate of three-fourths the primary benefit for each parent—instead of one-half for each parent.

This provision would substitute, for the various methods now used, a uniform ratio to the primary benefit for all survivor benefits paid to a sole beneficiary and for all two-person and three-person beneficiary groups, except when the groups consist only of children.

Widows without children: My bill would provide for the payment of survivor benefits to widows of insured workers without meeting an age requirement, even though these widows do not have children of the deceased workers in their care—instead of paying benefits to widows only if they have attained age 65 or have such children in their care. This provision is designed to afford protection to the many widows who have never been a part of the labor market and because of age or other causes are unable to obtain employment upon the death of the breadwinner.

Earnings by retired workers: Under the provisions of my bill, all beneficiaries would continue to be eligible for benefits if their earnings in covered employment did not exceed $35 per month—instead of terminating benefits when a beneficiary earns $15 or more per month.

Socialized Medicine—Is It Good Medicine?

EXTENSION OF REMARKS

OF

HON. HERBERT A. MEYER

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 14, 1949

Mr. MEYER. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include a radio address entitled "Socialized Medicine—Is It Good Medicine?" made by me over five stations in my district:

Last week when I talked to you on ECA—What We Can Really Afford, I told you the spending spree of the Administration was still on. Let me illustrate that point some more. One of the spending schemes is for socialized medicine—a medical OPA, which is being presented to you taxpayers under the innocuous title of compulsory health insurance. Under this scheme, you are led to believe that you will get something for nothing. You have to get behind the propaganda that is flooding the country to see what this so-called compulsory health insurance really means. According to the New York Times, and I quote, "This is the most radical reform yet to be broached by the Truman Administration."

What you are really being asked to decide is whether you will accept the idea of socialized medicine, the product of socialistic and communistic countries and leaders which will tax your weekly wages for Government-controlled medical care—or the American voluntary system of individual responsibility.

Under this socialized-medicine plan of the administration, you would pay through a tax taken from your wages, in addition to the amount contributed by your employer, along with the present social security and Federal income taxes. If you or a member of your family needed a doctor or hospitalization, theoretically you would get it for nothing. But here is the catch—

You would have to go to a doctor or a hospital which had joined the Governmental system. If not, you'd either have to take another doctor—or hospital—and pay for it yourself. You'd be paying twice because you would already be paying the compulsory health insurance tax. You see, there is always a joker in any scheme which says you can get something for nothing.

Of course, every worker will be supporting additional Federal bureaucrats and file clerks. You can imagine how many will be employed to take care of 150,000,000 people.

Suppose you or a member of your family were ill. You would probably find yourself one of 100 or more patients—half of them with imaginary ills—who were bent on getting everything they can for their money.

In desperation, you would probably consult one of the private physicians who have refused to join the assembly line, and pay him while, week after week, for the rest of your life, you would still be paying the Government.

This socialized medicine is not a new plan. It's been tried in every country from England to Russia. So busy have the doctors become in England, under socialized medicine, that one of them is reported to have hung out a sign reading, "Please have your symptoms ready."

Aside from the fact that the Government could not possibly guarantee that you could have your own doctor and the hospital of your choice, the pending scheme, if passed, could not promise you any results under 3 years. In the meanwhile, your taxes for this socialized medicine would start immediately. The Government says it would take 3 years just to "tool" up on this program.

And where would the doctors come from to carry on this so-called compulsory health insurance? With the shortage of doctors as it exists today, more and more of them would be forced into public clinics and group practice. The close personal relationship between doctor and patient thus would be largely destroyed.

If you needed a specialist, under socialized medicine, you could have one in theory. But you would first have to get your regular doctor or—and mark this well—a Government official to approve your case and after all this red tape you still might not get the specialist you want, but someone assigned to your case.

And what would be the cost of such a plan? Well, the cost is predicated on your income. For that first 3 years when you will not be getting any service—while the Government is tooling up with fever charts and pills—you would be paying one-half of 1 percent of your salary up to $4,800 a year. But in 3 years that percentage would be 1½ to 2 percent so that a family with an income of $4,800 or more would be paying from $72 to $96 a year. How does that compare with your doctor bill last year?

But this isn't the end. The master cooks who are brewing this socialized-medicine scheme admit that the tax may increase to 3 or 4 percent a year. Even this much tax out of your wages and salaries wouldn't pay the bill, so the rest of the cost would come out of Government general funds—which, in turn, means more taxation to take care of those Government costs. Eventually, this so-called compulsory health insurance would cost from 5 to 15 billion a year.

And what do the doctors get out of this? They could stay out of the scheme and hope to get private patients. Or they work for the government at a flat salary of so much per patient. Any good doctor would be so loaded up with patients he couldn't possibly handle them all. He'd have to have an

assembly line and, like the English doctor, tell his patients to have their symptoms ready.

This is the socialistic or communistic way of doing things. What is the American way?

Millions of families maintain health and accident policies in commercial insurance companies. Many more millions are following the same voluntary health insurance plan in nonprofit organizations such as the Blue Cross, the Blue Shield, and others.

Altogether some 70 to 75 million Americans are protected through voluntary health insurance; 53,000,000 carry hospital insurance; 37,000,000 have surgical expenses covered, while another 6,000,000 have other kinds of medical insurance.

Roughly 160,000 physicians and surgeons are providing better service in the United States than in any other country in the world. Our doctors take a personal interest in their patients. I remember my own family doctor, whose very presence brought comfort and relief whenever illness struck. If the doctor was there—we knew everything would be all right.

Many of you have those memories and know right now how much you depend on that personal relationship you have with your own doctor. These socialized planners would destroy this confidence and relationship overnight, if they had their way. You'd be just one in an assembly line, with a ticket in your hand—sent where a government clerk thought you ought to go—your illness just half diagnosed by a doctor overworked with too many patients and too many forms to fill out for other Government clerks to process.

Under socialized medicine, doctors would be too busy prescribing aspirins to those neurotics with imaginary ills to study individual cases or to do the research work that has made us one of the healthiest nations in the world.

There is a constructive way of attacking health problems rather than "pink pills" prescribed by the Government. Senator H. ALEXANDER SMITH, Republican, of New Jersey, cautioned, "Let's not tear down a fine big house with a leak in the roof, and then build a wonderful new jail to live in." Let's fix the leaky roof.

We can do this by giving Federal aid to States to provide medical care for those unable to pay for themselves. This would probably include not more than 20 percent of the population and would cost around $250,000,000, instead of billions.

Next—and very important—Federal aid should be given to medical schools and students so that we can have more doctors. We need and must have these new doctors, not overburden the ones we have already with miles of Government red tape.

And finally, there should be Federal aid for the inspection of the health of school children. Let's use Federal funds to help those who can't afford to pay their doctor's or hospital bills. We can do this without destroying our entire medical professional.

Everybody wants good health. Everybody is entitled to adequate means to care for health. Approximately 80 percent of the Nation is economically able to meet their personal medical expenses. The 20 percent who are not able to pay need and should have a helping hand, but in providing for them let's not destroy our entire medical profession.

To take care of that minority who need our help, are we going to establish a compulsory, freedom-destroying Government project? Does it have to be Government? I say, "No." What do you think?

Socialized medicine results in two sorts of medicine, really. Good medicine for the well-to-do who can afford to pay a private doctor regardless of health taxation. And bad medicine for the wage earner who feels he can't afford to pay twice for medical expenses. Remember, you never get anything for nothing in this world.

Oriental Fruitfly in Hawaii Serious Threat to Fruit- and Vegetable-Growing Areas of Pacific Coast, Southwest, South, and Southeast—Legislature of Hawaii Asks for Federal Assistance To Carry on Fight

---

EXTENSION OF REMARKS
OF

HON. JOSEPH R. FARRINGTON

DELEGATE FROM HAWAII

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 14, 1949

Mr. FARRINGTON. Mr. Speaker, to Members of Congress from areas where the growing of fruits and vegetables is an important industry, I recommend a careful reading of the enclosed resolution adopted by the Legislature of the Territory of Hawaii.

"To be forewarned is to be forearmed."

If this pest, the oriental fruitfly, ever becomes established on the mainland, the sum of $2,000,000 would become insignificant in the fight which would then become necessary for its eradication.

We of Hawaii know of the damage it can do. The time to fight it is now.

The resolution follows:

House Concurrent Resolution 34

Concurrent resolution requesting the Congress of the United States of America to appropriate funds for the study, control, and eradication of fruitfly pests

Whereas when Hawaii was the base of military operations in the Pacific area during World War II and civilian authority was superseded by martial rule many serious fruitfly pests including the oriental fruitfly (Dacus dorsalis hendl) were introduced into the Territory from the Southwest and West Pacific areas due to the absence of proper inspection of incoming cargoes by sea and air and the absence of other protective measures against such fruitfly pests; and

Whereas the discovery of larvae of the oriental fruitfly (Dacus dorsalis hendl) in the vanda orchid and the embargo of shipments of this orchid from Hawaii effective March 23, 1949, in addition to many other products previously quarantined, points clearly to vastly increased potential danger to American agriculture; and

Whereas this danger is of such nature as to necessitate, in the national interest, an expanded emergency program of study and development of remedial measures, involving the oriental fruitfly and other fruit and vegetable flies; and

Whereas the oriental fruitfly has proven itself, in the 34 months since it first appeared in the Territory of Hawaii, to be one of the more destructive of insect pests attacking fruit and vetegtable crops ever to appear in the United States and incorporated Territories; and

Whereas the oriental fruitfly multiplies with extreme rapidity and exhibits exceptional vitality, having been found almost simultaneously over the entire 250-mile extent of the major Hawaiian island chain; and

Whereas such fruitfly pests attack almost all fruit crops to which it has been exposed, puncturing the skin and depositing eggs which develop into maggot-like larvae which soon result in the fruit becoming masses of pulpy decay; and

Whereas this and similar fruitfly pests damage a wide variety of vegetables such as tomatoes and eggplant, and also the young bolls of cotton, and do damage to certain commercial flowers, growing nuts, and many other crops; and

Whereas these pests have been regarded as primarily tropical, various of them show considerable adaptability, being found in large numbers at cooler temperatures on the slopes of Hawaii's mountains; and

Whereas they adapt themselves to and live in a wide variety of wild plants in inaccessible areas; and

Whereas the oriental fruitfly particularly attacks not only growing fruit crops in the field, but may do extensive damage to such agricultural produce in transit to markets and actually when on display in markets; and

Whereas Hawaii's efforts to achieve needed diversification of its agriculture through expansion of noncompetitive tropical crops is blocked by lack of adequate control of fruitfly pests, even though the two major crops of Hawaii have leaned but slightly on Federal funds for these purposes in the past; and

Whereas due to the introduction of many of such fruitfly pests into Hawaii as a result of the war effort of the entire United States, it is just and equitable that the expenses of eradicating such pests should be borne by the entire United States; and

Whereas agencies of Federal Government promptly spent millions on the eradication of the Mediterranean fruit fly when it appeared in Florida 20 years ago; and

Whereas Oriental fruit fly ravages in Hawaii are but one of the several extraneous effects of the World War II which have disrupted and injured the economy of the Territory of Hawaii, because war influences sharply curtailed basic Hawaiian agricultural industries during the period of hostilities while agriculture expanded in the continental United States; and

Whereas placing of quarantines on shipments of fresh fruits and vegetables from Hawaii and other infested areas has already been carried to extreme measures, such as the recent placing of an embargo on shipments of vanda orchids although there is considerable doubt among entomologists that a viable larva or egg could be transported on vanda orchids under conditions which would permit transfer on arrival to other plants upon which they could complete their life cycle; and

Whereas quarantine measures are negative only, and cannot guarantee that this or similar insect pests may not reach the continental United States through Central American countries or by other routes; and

Whereas only immediate and thorough study and research by adequately staffed and financed agencies can accomplish the control and eradication of the said fruitfly pests: Now, therefore, be it

Resolved by the House of Representatives of the Twenty-fifth Legislature of the Territory of Hawaii (the Senate concurring), That the Congress of the United States of America be, and it is hereby, respectfully requested to appropriate a sum of not less than $2,000,000 to be expended by appropriate agencies of the Federal Government in carrying out prompt, large-scale, affirmative measures to combat, and to seek to reduce, control or eradicate, the oriental fruitfly and other similar fruitflies, in cooperation with experienced Hawaiian and other agencies; and be it further resolved that it be, and it is hereby, respectfully suggested to the Congress of the United States of America that the aforesaid minimum appropriation should be allocated to concurrent, large-scale, intensive studies as follows:

(A) $250,000 to the expansion of the explorations in quest of parasites destructive to fruitfly pests, now in progress in the western Pacific area, India, and in South Africa, it being apparent that if success is to be achieved by this biological control method, the prospect of early progress will be greatly enhanced by an increase in the number of missions in these and other fields, with in-

creased facilities for reception, rearing, testing, and liberation of parasites and predators.

(B) $150,000 to studies of the biology and ecology of fruitfly pests, especially the oriental fruitfly, since comparatively little is now known of how it lives and how it responds to different conditions and environments, and such information is vital to control and possible eradication in any area in which it may appear.

(C) Five hundred thousand dollars to the study of sterilization and fumigation of fruits, vegetables, and flowers, since there is a wide area of unexplored or only partially explored possibilities for physicists, chemists, and biochemists with adequate laboratory equipment, including use of fumigants and gases, supersonic or ultrasonic waves and electromagnetic rays; and, furthermore, development of successful methods will stand for years to come as a vital safeguard to all agricultural areas which may be threatened by these or similar pests.

(D) Five hundred thousand dollars to intensive studies of methods of area treatments and controls, such as spraying from aircraft, various uses of chemicals, and eradication of host plants, inasmuch as such controls will be immediately needed should the fruit fly or a similar pest appear in any area in the continental United States unprotected by ocean barriers.

(E) Two hundred and fifty thousand dollars to intensive development and testing of new insecticides since there are already thousands of new chemical products of laboratories developed during the war which have yet to be properly tested against these specific insects under various conditions.

(F) Three hundred and fifty thousand dollars to research in disinsectizing materials and procedures on local and global common carriers, since rapid development of air travel has brought all continents within a few hours of each other; and be it further

Resolved, That certified copies of this concurrent resolution be forwarded to the President of the United States, to the President of the Senate, and the Speaker of the House of Representatives of the Congress of the United States, to the members of the respective Committees on Agriculture of both Houses of the Congress of the United States, to the members of agricultural subcommittees of the said Senate and the said House of Representatives Appropriations Committees, to the Secretary of the Interior, to the Secretary of Agriculture, and to the Delegate to the Congress from Hawaii.

Another Swindle

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 14, 1949

Mr. REED of New York. Mr. Speaker, the international swindle continues under the leadership of the State Department. The ECA authorization appropriation bill for $5,580,000,000 to exploit the American taxpayer is bad enough, but the swindle does not stop at this point. Let the honest taxpayer, the forgotten man, read the editorial which appeared in the Wall Street Journal on April 14, 1949:

ONE ECA BLUNDER

That the House of Representatives should have voted 354 to 48 and the Senate 70 to 7 to authorize an appropriation of roundly five and a half billion dollars for the Economic Cooperation Administration to disburse in 15 months seems to forecast an actual appropriation not much short of that sum. The Appropriations Committees can and probably will chip off bits here and there; they are not likely to affect the impact of ECA's second year on the United States Treasury and on our own domestic economy.

But the Appropriations Committees can correct a blunder made by the drafters of the ECA measure, one which involves the principles of sound financial policy. Both chambers have gone along with the State Department's mistaken belief that it is part of ECA's mission to guarantee private American capital against certain risks in foreign investment The House bill authorizes a new appropriation of $272,000,000 for this purpose and renews an unobligated balance of $28,000,000 from a previous similar authorization. The Senate bill contains a provision of the same sort.

Specific risks from which American investors abroad may be thus protected are obstacles to the conversion of profits from local currencies into dollars and loss of principal through either nationalization or political disturbances. Will our private citizens, being on notice from their own Government that outside investment in Marshall-plan countries is still hazardous, put their capital at risk where it seems probable that they will have to fall back on this guaranty?

Whether they will or not, they are not in justice entitled to protection at the expense of the general body of Federal taxpayers. These guaranty provisions of the ECA bills are obviously intended to breathe life into President Truman's bold new program for developing the backward regions of the earth and raising the world's living standards. That program is not as new as it is bold. When so-called private capital obtains a Government guaranty of the results of its venturing it ceases to be private capital and takes on the character of a Government loan or grant. The only boldness in the program is calling it new.

Perhaps a $300,000,000 guaranty fund is a picayune thing in these times. It is still big enough to set an evil precedent.

What Next?

EXTENSION OF REMARKS
OF
HON. WILLIAM LEMKE
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 14, 1949

Mr. LEMKE. Mr. Speaker, the Secretary of Agriculture is again lost in the dismal swamps. Since 1932, outside of war prices and good crops, agriculture has been receiving lip service and spasmodic help—subsistence help. No permanent, beneficial legislation has been enacted. If the Department of Agriculture ever hits upon the right solution, it will not be by the law of averages but by accident. If a batter swings at a ball often enough, then he will eventually hit it.

The Department of Agriculture has made so many blunders that it is time it came back to earth. All during the time that the Department made these blunders a perfect solution was before it. I have reference to cost of production—100-percent parity—for that percentage of the agricultural products domestically consumed each year and the world market for the surplus.

If that legislation had been passed, then long ago the farmers and farm organizations would have prevented overproduction of any particular product. They would have seen to it that they got cost of production for 100 percent of their crops. They would naturally produce those crops which were in short supply and not in surplus.

In place of that, ever since 1933, the Department has advocated first, 65-percent parity, then 75 percent, later 85 percent, and Congress finally raised it to 90 percent in spite of the Department's protest. This parity was based on the obsolete and outmoded bogus formula of 1909–14. All the time agriculture was entitled to at least 100-percent parity—100-percent justice.

Now that all segments of agriculture are demanding cost of production—100 percent parity—the Secretary pulls another boner. He suggests that the farm products be sold on the open market—the world market. In other words, the American farmer is now to compete with the peon labor of Latin-America, with the coolie labor of the Orient, and with the slave labor of Russia and other European nations. In the next breath the Secretary assures the farmers that he will compensate them with subsidies, and then proclaims to the consumers that he will in that way bring down the cost of food.

It makes one wonder just how the mind of the Secretary functions. Surely he adds insult to injury when he tells the farmer, "You will have to sell your food products in competition with the Latin-American peon, the Japanese and Chinese coolie, and the slave labor of Russia and other nations." This although he gives them lip service and says that he will compensate them for feeding the Nation out of the United States Treasury—out of the taxpayers' money. This would give the Secretary an opportunity to regiment agriculture with a vengeance.

Fortunately the American people are not that gullible. Both the producers and the consumers know that they would get the short end of the stick. The farmers and the consumers know that subsidies have to be paid out of increased taxes. They know that they pay the Nation's taxes. They know that for every $1 of subsidies, they will in the end have to pay back $2 in taxes. This because of the interest, administration, collection, and distribution expenses. The Secretary ought to know that he cannot pull himself out of a hole by his bootstraps.

The farmer also knows that the farm population has decreased from 30,000,000 to 19,000,000 while the general population has increased 20,000,000. He knows that while agriculture used to elect one-third of the Members of Congress, it is now about one-seventh. Therefore, he realizes that he must get permanent legislation—cost of production—a floor, not a ceiling.

The farmers know that under the Secretary's scheme many people living in

industrial centers could easily be fooled into believing that agriculture was responsible for the high taxes. They could be led to believe that the pennies squeezed out of their earnings were the result of the few pennies that the Secretary, under his scheme, would dish out to agriculture.

I know of no better way of concluding my remarks than by closing with an editorial from the Baltimore Sun, dated April 11. Here is the editorial:

THE FRAUDULENT PROMISE OF CHEAPER FOOD COSTS

One thing that makes so many of the new Government schemes obnoxious is the considerable element of pious and political fraud which they contain. Take the new farm plan proposed by the Truman administration. Take the already constant claim by its partisans that it will lead to cheaper food.

It will not lead to cheaper food. The claim that it will is fraudulent. The new plan will not cut the cost of farm lands. It will not cut the cost of farm labor. It will not cut farm interest rates nor farm taxes. It will not cut the cost of farm machinery. It will not cut the cost of fertilizers or that of feeds. It will not cut freight rates on foods. It will not cut the marketing costs of foods.

The new scheme will not reduce by a single penny a single one of the multitude of economic costs which go into the food finally eaten by the consumer. This and other elements of the Truman program guarantee, indeed, a steady increase in many of these costs.

What, then, do the administration men mean when they say the new plan will produce cheaper food? Why, they simply mean that the consumer may have to pay less for food in retail prices. But that is only because more will be paid for food by the United States Treasury and out of taxes.

The core of the new scheme is a prodigious subsidy for farmers direct from the Treasury to complement returns they get from lower prices in the market. But the subsidies paid to the farmers are part of the economic cost of food. And, as stated, those costs cannot possibly be cheaper and may be expected to rise.

True, the food subsidies will come to a considerable extent out of the yield of the progressive income tax. In this way higher-income people will pay a greater share of the food subsidies than lower-income people. In other words, the Brannan scheme is a way by which higher-income people can be forced to pay directly for the groceries of lower-income people who hitherto have been proud to pay their own way and looked on the consumption of Government-bought groceries as the mark of pauperism.

How big will these tax subsidies be? On this point Secretary of Agriculture Brannan is candid enough to say he has no idea. But this we do know. The income level which Mr. Brannan proposes to guarantee to the farmers is the average level of income they have enjoyed since 1939. That happens to be the highest level of income the American farmer has ever had. Now Mr. Brannan wants to make this exception, this inflated income level, the standard for all the future.

No one will deny the administration a right to propound new farm plans as the present farm plan wavers in a time of declining prices. The debate is just beginning and no doubt respectable arguments can be offered for the administration plan. But the claim that it will bring cheaper food is a fraud.

As We Remember It

EXTENSION OF REMARKS
OF
HON. GEORGE P. MILLER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 11, 1949

Mr. MILLER of California. Mr. Speaker, under leave to extend my remarks, I include herewith an editorial appearing in the Daily Review, of Hayward, Calif., for March 28, 1949, entitled "As We Remember It."

A joint Army-Navy board was created by a resolution adopted by the Congress to study the matter of an additional crossing of San Francisco Bay.

After exhaustive studies this board made a report in which it recommended the building of a combined causeway-tube-type crossing from a point in the vicinity of the foot of Army Street in San Francisco to a point in the vicinity of Fifth Street in Alameda with the recommendation that a tube be constructed in connection with this project under the Oakland Estuary which separates Oakland from Alameda.

The State toll-bridge authority seeks to disregard the recommendations of this joint Army-Navy board and as a result a controversy has arisen between those who would accept the findings of the joint Army-Navy board and the proponents of the toll-bridge authority who want to build a bridge parallel to the present San Francisco-Oakland Bay Bridge some 300 feet northerly of it. The editorial contained herewith is pertinent to this controversy:

AS WE REMEMBER IT

We cannot help but admire the skill of Dave Hope, of the Oakland Tribune, in continuing to battle for a parallel crossing after so-called final and decisive action has been taken to ask permission to build the twin crossing.

Dave reports "the parallel bridge is supported * * * by governmental agencies in the Eastbay. Opposition to the bridge is now confined almost entirely to certain political influences in San Francisco."

Let us now inquire what are "governmental agencies" in the Eastbay? Are they the Alameda County Board of Supervisors and the Oakland City Council, by any chance?

And what are the "political influences" in San Francisco? Are they the supervisors and mayor of the city and county of San Francisco, the supervisors of the county of San Mateo, the mayor of Piedmont, the council of the city of Hayward, and the council of the city of San Leandro?

The former group want the parallel crossing and are called governmental agencies in Dave's dictionary. The second group officially is for the southern crossing and is defined in the Hope dictionary and geography as "political influences in San Francisco."

Dave relates some other interesting things.

Our readers remember how the State's department of public works and the United States Joint Army-Navy Board of Engineers disagree about where the crossing shall be put.

Dave sees no disagreement.

He says in Sunday's Oakland Tribune:

"Both reached agreement in selecting the bridge and the Alameda to Army Street crossing as the final and most feasible solutions."

It seemed to us that the Army-Navy board (1) looked at 29 proposals, (2) said no second bridge would have been necessary if we had been smart enough to have a rapid transit system worthy of the name, (3) decided that only one more was needed, and (4) after a close decision recommended that the southern crossing should be that one bridge.

On the other hand, it seemed to us, the State came out with a decision for only one bridge, which should be the parallel crossing. Faced with the findings of the Army-Navy board, it reconsidered and gave ground. It said the parallel bridge should be built now, and the southern crossing in the sweet by-and-by.

The Federal authorities which handle such matters warned us that while immediately approval would be given to a southern crossing, a new study might be necessary if the State came up with a "final" decision to apply for a parallel bridge. That warning was issued months ago. If it had been heeded, we might well have been started on our way to a second crossing of San Francisco bay.

As it is, there is danger of delay after delay while the State fights to force its parallel bridge through against strong local opposition and against the continued recommendations of the Army and Navy for a southern crossing.

That's the way we remember it, but of course we don't use Dave Hope's dictionary and geography.

Should We Finance National Socialism in Europe?

EXTENSION OF REMARKS
OF
HON. JAMES P. KEM
OF MISSOURI
IN THE SENATE OF THE UNITED STATES
Monday, April 18 (legislative day of Monday, April 11), 1949

Mr. KEM. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a radio address delivered by me over radio station WBAL, Baltimore, Md., on April 16, 1949, on the subject Should We Finance National Socialism in Europe?

There being no objection, the address was ordered to be printed in the RECORD, as follows:

SHOULD WE FINANCE NATIONAL SOCIALISM IN EUROPE?

Good afternoon. I wish to thank radio station WBAL for this opportunity to speak to you and to think with you on an important issue of the day. Congress recently authorized the continuation of the European recovery program, the so-called Marshall plan, for a further 15 months. The amount of money to be spent will be fixed later when the appropriation bill is passed. I do not intend to discuss the merits of the Marshall plan as a whole, many of the objectives of which are good. I shall address my remarks to a single phase of it. I shall discuss with you this afternoon whether any part of your money to be appropriated by the Congress should be used to finance or implement experiments in socialism in the countries of western Europe. By carrying on these experiments some of the governments of Europe are acquiring and operating basic industries.

This is spoken of as the "nationalization" or "socialization" of industry. I am particularly glad of an opportunity to discuss this question with the people of the Free State of Maryland, well known as you are in my own State of Missouri for your insistence on fair play and toleration.

I. MARSHALL-PLAN MONEY HAS ACCELERATED THE NATIONALIZATION OF INDUSTRY IN EUROPE

Several of the countries of Europe are far down the road toward a completely socialized state. England has already socialized 10 of her important industries. France has socialized 23 of them. This process of socialization in both countries has been accelerated to a great extent by the use of Marshall-plan money. Under the Marshall plan each of the participating countries of Europe submits a plan of what it proposes to do by way of internal reconstruction and relief. The United States makes up the deficit in these national plans. What each nation does internally is supported by the money of the American taxpayers. I shall discuss particularly the case of Great Britain; not because of any dislike of the British, but because Great Britain is a typical case and by far the largest beneficiary under the Marshall plan. The American taxpayers have already contributed under various plans, most of them now unhonored and unsung, over $44,000,000,000 to Great Britain.

The Marshall-plan funds go from America in the form of raw materials for Britain's socialized industries and in many other ways. If the United States had not financed the British socialist program, it could not have been carried out. It was American money (your money) that saved Britain from the inevitable unemployment and lower standards of living which would have come under the socialist program.

Socialism and communism are fruit of the same tree, which has its roots in the theories of Karl Marx. They have the same objective, which is the nationalization of all industry. The Communist is willing to resort to any means, including force and violence, to attain this end. The Socialist prefers that the nationalization of industry be obtained by peaceful or democratic methods.

Communism is the form of Marxism which has developed in Russia. The adherents of communism are in control of the Government of the U. S. S. R.—the Union of Soviet Socialist Republics. Socialism is a form of Marxism that has been developed in England and in some of the other countries of western Europe. The British Labor Party is in control of the Government of Great Britain.

And so we are met with this strange paradox. The United States is spending billions of dollars to stop Marxist communism, but at the same time is spending billions of dollars to subsidize Marxist socialism.

As Winston Churchill has said, the Socialist parties in every European country are the handmaids and heralds of communism, and prepare the way at every stage and every step for its future advance.

II. DOES MARSHALL-PLAN MONEY RETARD THE NATIONALIZATION OF INDUSTRY IN EUROPE?

It has been argued by one of the apologists for the Marshall plan that the Marshall plan is the way to check the advance of socialism in Great Britain. He thinks that the Marshall plan will make the British so happy and contented that they won't want socialism. I believe he went so far as to characterize as childish the suggestion that the money of the American taxpayers should not be used to finance and implement socialism in Great Britain.

Let us look at the record. Keep in mind that the Marshall-plan law was signed by the President on April 3, 1948. Did the socialist Government turn back from its program in view of the golden prospect of Marshall-plan money flowing from America? Quite the contrary. A month after the Marshall plan was adopted, on May 17, Clement Attlee, Prime Minister of Great Britain and head of the British Labor Party, assured the party at its annual conference: "We intend to carry on the work to which we have set our hand and with your help we shall win through." On November 2, 1948, Hugh Dalton, former Chancellor of the Exchequer, put it this way: "We shall obstinately persist in carrying out the promises which we made to the electors." But it may be said that was last November—maybe the program of the party has been changed since then. Let us see.

After all, actions speak louder than words. The British socialists are now taking steps to nationalize the iron and steel industry. A few days ago Prof. Harold Laski, the brain truster of the British Labor Party, was in Washington. He said that there are three industries his party plans to nationalize next, but nothing except force would cause him to reveal what they are.

And to bring the record right down to date, on April 12, last Tuesday, a 5-year program for the socialist party in Great Britain was announced. In addition to the industries already nationalized, it is proposed that the Government take over the cement industry, all suitable mineral deposits, cold-storage facilities not already publicly owned, sugar manufacturing and refining, and appropriate sections of the chemical industry—and this will be of particular interest to Baltimore people—two great insurance companies, the Prudential Insurance Co. and the Pearl Insurance Co., both of which have vast investments in other business enterprises.

Does this look like the socialist party is turning back from its program? Who knows better what that program is than the leaders of the socialist party themselves? And remember this: If the United States does not finance the program for further nationalization, it cannot be carried out.

It is also sometimes said that we should not place any strings on the Marshall-plan money because the United States should not interfere in the government or in the economy of a foreign country. But bless my soul, the whole Marshall plan is an interference in the economies of other countries on a gigantic scale. We said to Spain at the outset: "We don't like your Government. You can't have any Marshall-plan money unless you change it." We interfered in the Italian election in 1948. The American Ambassador made campaign speeches, and the Attorney General of the United States addressed the Italian people over the radio on the eve of the election. I do not mean to criticize this, but I do say that it is entirely too late for us to hold up our hands and say with sanctimonious piety: "Of course, we do not wish to interfere in either the government or the economy of a foreign country."

III. COMPETITION WITH NATIONALIZED INDUSTRY IS UNFAIR TO THE AMERICAN WORKINGMAN

I am concerned about this use of your money because we are creating competition abroad that will rise to plague us. The American businessman and the American workingman have always prided themselves upon their ability to meet fair competition anywhere and at anytime. All we have asked is an even break. But we Americans have always insisted that competition be fair. We have put antitrust laws and anti-monopoly laws on our statute books to insure that the competition among ourselves is fair. Now we are helping to create in Europe great national monopolies and setting them up in business to compete with American industry and American labor on unequal terms. Nationalized industries have an advantage over private industries in competition with them, and here is the reason. Nationalized industries enjoy freedom from taxation, the advantages of monopoly and government financial support. Such competition threatens to imperil the welfare of the American workingman.

Let us take the overseas air lines as an example. The American air lines crossing the Atlantic are having great difficulty in making both ends meet. They find themselves unable to buy the finest planes and the latest equipment for a very good reason: they are losing money. On the other hand, the British Overseas Airways, owned by the British Government, have recently contracted for 10 Boeing Strato-Cruisers, at a cost of $1,500,000 apiece, to be paid for out of Marshall-plan money; of course, I mean, your money. And so American taxpayers are giving equipment to foreign overseas government air lines, and expecting American private enterprise to compete with them. No wonder the American private enterprise in competition is discouraged, and unattractive to thrifty investors.

When the Senate Committee on Foreign Relations was considering this matter, Senator GEORGE said to Mr. Hoffman, the Administrator of the Marshall plan: "You may be putting a whole lot of industry in this country out of business." Later, the great Georgia Senator said: "I have warned you." Mr. Hoffman's comment was: "Sir, I cannot tell you how little concerned I am about European competition." With due respect to Mr. Hoffman, let me make this clear: I believe the time has come for us to be concerned about American industry and American working people. I believe we of the American Congress should say to our fellow citizens, who earn their bread: "Our friends, we can tell you how much concerned we are about unfair European competition in the years to come."

I cannot avoid the conclusion that when we think this thing through—at long last—we shall decide not to permit your money, earned under a system of free enterprise and personal initiative, to be frittered away in experiments in socialism on the continent of Europe or in the British Isles.

Tribute to Hon. William Langer, of North Dakota, by E. L. Delaney

EXTENSION OF REMARKS
OF
HON. GEORGE D. AIKEN
OF VERMONT
IN THE SENATE OF THE UNITED STATES

Monday, April 18 (legislative day of Monday, April 11), 1949

Mr. AIKEN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a broadcast over Station KPRO, Riverside, Calif., by Mr. E. L. Delaney, who is one of the best known radio commentators of the Pacific Northwest. In his broadcast, Mr. Delaney refers particularly to the senior Senator from North Dakota [Mr. LANGER], and pays him a well-deserved tribute.

There being no objection, the broadcast was ordered to be printed in the RECORD, as follows:

The "lone ranger" of the United States Senate can take credit today for news which affects the pocketbook of everyone in this country. That "lone ranger's" name is not mentioned in connection with the Washington dispatch of today, but those who have

followed his efforts over a period of years—and particularly in recent months are well aware that Senator WILLIAM LANGER, of North Dakota is to be thanked as much, if not more, than any other individual in the Senate for the encouraging item which is featured in today's news.

The item is to the effect that the United States has prevailed upon the French and the British to alter their stand as regards the destruction of plants and the dismantling of industries in Germany. We are informed from Washington that all or part of 159 steel, metal, and chemical factories which were marked for dismantling will not be removed.

It is even hinted that there is still another plan in the drafting process—which is still secret, but Army Secretary Royall, says will be made public soon. It is expected to lift the restrictions on 10 German industries—shipbuilding being one of them.

To the average person in this country these items of today's news may not appear to affect them to any appreciable extent. Precisely the opposite is true. For every million and hundreds of millions that we can save in this profligate program for European recovery which has been urged by the present administration, means just that much less in the Federal tax burden—which falls on every one of us.

The State Department explained today that the equipment which will be left in Germany is located in 32 plants in the steel industry, 88 metal-working plants, 32 chemical plans, and 7 other factories in the metal industry.

In explaining the decision on the increase in steel-making capacity the State Department said that it was done to obtain greater flexibility and economy of operation in the industry, even though the actual use of this capacity cannot exceed the maximum production of something over 11,000,000 tons set by the western occupation powers.

This alteration in the previous program as set up by the Western Powers was made on the recommendation of the United States following a study of German industrial problems made by a group of American businessmen. The State Department stated further that the agreement was made in order to bring the reparations dismantling program into harmony with the European recovery program.

That is what might be referred to as an understatement. It discloses but part of the truth and the real situation. But what it proves as conclusively as anything is that for four long years the State Department has been carrying out a program that was based on a hate-biased policy, conceived in the councils of the vicious minority pressure group which, during and immediately following the war, exerted such nefarious influence on the administration and the State Department, bringing incalculable loss to the American taxpayers. The fact that the policy and program has now been reversed is indisputable proof of the folly of the previous course of action. For now the State Department announces officially that the change in policy will be in harmony with the European recovery program.

That is the very thing which Senator LANGER emphasized time and time again—and I may say that often he was the only Senator who waged a relentless battle to end that insensate dismantling of factories, which were in no sense war potentials—but which were necessary for the industrial recovery of the whole of western Europe. There were those in the Senate—and no small percentage of the press—who took pains to depreciate all his efforts toward aiding this country by rehabilitating Germany and establishing sufficient industry that they be put on their feet and taken off our backs. Senator LANGER, his critics charged, was playing politics, championing the minorities, placating those in his State who are of German ancestry. What his critics could not do, however, was to disprove the logic of his arguments for a sane and business basis on which to build up European economy. And that sane policy demanded—in fact, it was absolutely necessary that the vital industries which the Western Powers had listed for dismantling—be retained for the very program of European recovery now undertaken.

Just 8 days ago, on April 5, Senator LANGER made a speech in the Senate in which he told that body very bluntly that they were being asked to vote billions for European recovery, and yet those same Senators were not given the vital information they should have been given as regards the status of Europe's economy and what was to be done toward rehabilitating their industries. He said in part: "Actually the dismantlement of German industry continues to be such a secret that the members of the Foreign Relations Committee themselves were told that the United States policy could not be publicly revealed. How are we justified, as Members of the Senate, in underwriting the ECA's request for billions in appropriations for Europe as a whole, because we have not the slightest notion of what our basic policy toward the recovery of Germany's economy actually is. Not a Senator on this floor can tell because it is a secret."

The Senator said further—when demanding that there be a sound policy adopted in the German situation: "On March 12, 1947, President Truman called for an all-out offensive against communism and declared that we were going to take every possible step to end the confusion and suffering in Europe which was providing such a fertile ground for the spread of Soviet influence. My opposition to the Truman doctrine was based entirely on its double-dealing implications, which are now borne out by the fact the President continues to implement these outrageous policies of destroying the German industrial potential upon which the whole of Europe is dependent, both for goods, and for markets, and for economic, social, and political stability."

The destructive and of course costly policy in its relation to the American taxpayer, was the aftermath of the so-called Morganthau plan, a document that was never made public officially; the reason being that it was so outrageous and such a betrayal of all American principles, as well as imposing such tremendous financial burdens on the American people, that it would have been suicidal for the makers of the plan to reveal it at the time it was entered into, which was September 1944.

Now, at long last, a measure of sanity has prevailed and the State Department in today's announcement concedes that the policy it had been following was utterly ruinous for the economy of Europe. What they did not stress however, is that it was also ruinous for the economy of this country. Of course that point was not emphasized.

Although there were others in the Senate and House who battled for the ending of the policy in Germany which spelt ruin to both European and American economy, it was Senator LANGER who took the brunt of the attack and no little abuse from those who refused to accept the logic of his arguments and could not refute the incontestable facts with which he documented them. It is encouraging to know there are some who will wage continued fights for what they believe is a just cause, and certainly LANGER could not be accused of doing any political horsetrading, for he is neither Republican nor Democrat, but one of those independents; sad to say there are not more who can claim to be independent.

Therefore it must be a bit heartening to him to learn that today the State Department has admitted that he has been on the right course all the time in this matter. I will be too much to expect that the State Deparment will make that concession to his judgment a matter of record, but the decision as regards the plant dismantling and the announcement is record enough. So, the "lone ranger" wins again.

There is in this, however, a factor which is carefully played down at this time, but which bears an important part in the decision of the United States, Britain, and France as regards the operation of the factories in western Germany.

The underlying motive which brought about a turn-about decision on the part of our Government is because persons such as Senator LANGER and some others, pointed the necessity of it and besides there was clamor on the part of the minority who opposed the profligate European recovery spending, when millions and perhaps billions could be trimmed from it by permitting Europe's own economy to function with something approaching normalcy.

But that does not explain the reverse position of France and Britain. They are not at all concerned with how much the American taxpayers are burdened to maintain their economies. And furthermore neither Britain nor France gives anything. The record of history verifies that. They make concessions only when it is vitally necessary for their own security or interests.

At long last both France and England are forced to concede—for all the world to know—that they desire Germany and German industry as a bulwark to aid them in the possible conflict with the Soviet. That is not stated officially, but only the most naive will think otherwise.

The industries of the Ruhr—although classed as being anything but war potentials—would be essentials in the event of war. For in war—there is little that does not contribute to the war effort. Although the plants now listed to continue operation in western Germany—make only dishpans or baby-buggies—they are needed in wartime and the baby-buggies are easily converted into some other vehicle which can be of use to a belligerent. Both France and Britain recognize the necessity of having that productive area working—now—in operation. When the time comes—if it should—it can be quickly converted into producing the thousand and one articles necessary for pressing a war.

That is the reason the French and British have made their generous concessions—regardless of the camouflage of words that may be released to mask the real truth. Besides, they also understand that it is vitally necessary that the German workers be kept busy and afforded a reasonable standard of living—through their labors—if they are to be prevented from switching to the Reds. Idle hands and unemployment supplies fertile ground for the sowing of Communist seeds.

One Day in a "Do-Nothing" Congress

EXTENSION OF REMARKS

OF

HON. BRIEN McMAHON

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Monday, April 18 (legislative day of Monday, April 11), 1949

Mr. McMAHON. Mr. President, on April 15 the distinguished columnist of the New York Times, Mr. Arthur Krock, wrote a column entitled "One Day in a 'Do-Nothing' Congress." I wish that

everyone in the United States could read it, because I think it is well worth the effort.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

IN THE NATION—ONE DAY IN A "DO-NOTHING" CONGRESS

(By Arthur Krock)

WASHINGTON, April 14.—The CONGRESSIONAL RECORD carries no editorials. But its transcript of the proceedings of April 13 in the House and the Senate constitutes a sweeping refutation of the charge that the Eighty-first Congress is dragging its feet. Though the Legislature at this stage of a session must exercise its judgment on many matters every day, the grave and intricate nature of those which were considered and disposed of on this occasion emphasized the unusual burdens the present state of the world has laid on the minds and bodies of its Members.

A WORKING CONGRESS

The committees, of course, have done the arduous spade work on bills before they reach the floor. But Members of the Senate and the House who have labored in these committees must then defend their work on the floor. And in addition they must spend hours on local matters in their offices and be available for constituents who want to see them personally. A few Senators and Representatives are accomplished gold brickers. A few don't study the issues they must pass on but, like the peers in Iolanthe, "leave their brains outside and do just as their leaders tell 'em to." However, as a group the Members of Congress work hard at their jobs.

Today's typical issue of the RECORD makes this plain. The Senate, after receiving a number of communications from the Executive and the House, and confirming an Under Secretary of Defense and other appointees, had a long debate on the proposed TVA steam plant at New Johnsonville, which raises complicated questions of public policy and the Constitution, and disposed of two hostile amendments. It then approved the conference report on rent controls in the District of Columbia and was working on the administration's National Housing Act at 7:19 p. m. when it recessed. Meanwhile its conferees on the bill to authorize expenditures for the next 15 months of the Marshall plan were coming to agreement with the House on this measure.

A HEAVY DOCKET

That was a full day by any test for a legislative branch. But the House dealt with an even heavier docket. First, there was the extra appropriation for the Veterans' Administration in this fiscal year, an item of almost $600,000,000, which, because of its urgency and the voting power of its beneficiaries, was promptly approved. Then the House took up the appropriation or $15,910,000,000 for the National Military Establishment in the next fiscal year. For hours its most responsible and informed members labored with the intricate and serious problem of how best to balance our security weapons: whether the Navy should have more; whether denying it would cripple naval aviation to the danger point; whether it is sound military policy to increase by $787,000,000 the fund for the Air Force and absorb $334,000,000 of this by cuts in the budget of the Army and the Navy.

DIFFICULT DECISIONS

An inspection of the debate will show how earnestly the speakers and the Members whom they addressed dealt with this great issue of our times, which the House at length resolved by supporting its Committee on Appropriations. Not surprisingly, in view of the subject, there was some reckless discussion of how to defeat Soviet Russia if war shall come, and one or two of the most responsible Members indulged in armchair strategy that will help Moscow propaganda that the United States is suffused with the psychology of aggression. But these lapses of judgment do not diminish the fact that the House was faced with hard and laborious decisions, and made them in the span of 1 day.

This branch also received the President's request for a Columbia Valley Authority, as did the Senate; listened to attacks on Federal public-power policies in Washington State and on the British film quota; filed for early and favorable action the agreement on the ECA bill (that came today); heard a criticism of the administration's labor-relations bill; and wearily adjourned at 6:26 p. m. until 11 o'clock this morning after Representative POWELL, of New York City, had spoken for some minutes on the "most flagrant injustice" which, he said, "is about to be perpetrated" upon the "defenseless people" of Ethiopia by returning Somalia and Eritrea to Italy.

ISSUES ALL COMPLEX

The processes of Congress are deliberate, but hardly any matter that is before it at this time lends itself to rapid action if there is to be any measured consideration of the general welfare. The issues were never more serious, and on almost every one there is honest division of opinion which produces large minorities. To put such matters in legislative form, with due regard for the costs they impose on the taxpayers and our economic system, and with due regard also for the effect of some of them on the chances for a durable world peace, means long and crushing labor. And after that the American governing principle requires that those committee members who dissent, or who have not been on the drafting committees, shall have their opportunity for debate before the final votes are taken.

The consequence is that time inevitably is consumed in a quantity which seems excessive to those already convinced of what they want from Congress. But, as the above sample exhibit of a legislative day should persuade reasonable persons, this Congress, far from doing nothing, is sweating at its bench and doing quite a lot.

Monopolistic Origins of Basing-Point Pricing in Cement—History Reveals Collusive Aspects of the System—Cement Dealers and Small Business Generally, Victims of 50 Years of Conspiracy

---

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 14, 1949

Mr. PATMAN. Mr. Speaker, one of the principal arguments persistently advanced by apologists for the basing-point system is that, far from being the product of conspiracy, the system came into being as a result of natural process and is nothing more than a natural development. Like most of the older arguments invented by the paid apologists for this vicious system, it is completely at variance with the facts, which prove conclusively that the basing-point system was originally created and later brought to its full fruition by means of illegal collusion and conspiracy. Let us take a look at the record of the cement case.

Portland cement manufacture in the United States began in the Lehigh Valley at Coplay, Pa., in 1878. By 1900 it had spread to the Middle West where the Illinois Steel Co. already was producing cement from steel-furnace slag. The absorption of this company by the United States Steel Corp. in 1901 automatically put Big Steel into the cement business and in 1906 United States Steel Corp. organized Universal Portland Cement Co. to own and operate its growing cement production in Illinois, Indiana, and western Pennsylvania.

BASING-POINT PRICING AIDS MONOPOLY EXPANSION IN STEEL AND CEMENT

These four important interests were the leading factors in the early development of basing-point pricing in cement. With United States Steel Corp. an important factor in both steel and cement it is not surprising that for several years after 1900 the establishment of a single basing-point system of pricing became the objective of leaders in both industries.

The first attempt to establish a basing-point system in cement was made by a single company acting alone, and because it did not have the concerted support of the rest of the industry it failed. Thus, when Atlas Portland Cement Co. built a plant at Hannibal, Mo., in 1901, it announced that it would quote prices at destinations, and B. F. Affleck, of Universal Atlas Cement Co., testified in 1936 that—

> For a time these prices were based on Lehigh Valley base plus freight, the difference between the freight from Lehigh Valley and from Hannibal going to increase the profit of the Hannibal plant, the customers paying no more but getting better service. (Hearings, Senate Interstate Commerce Committee, 1936.)

What Mr. Affleck did not say was that Atlas abandoned Lehigh Valley-plus pricing at Hannibal only because some Middle West producers undercut its prices and took away its business. The failure of this early attempt clearly demonstrated that without concerted support of all members of the industry, which can generally be obtained only through collusion, the basing-point system cannot succeed.

BASING-POINT SYSTEM REQUIRES UNIFIED ACTION

When this attempt by an individual firm had failed, attention was turned to bringing about concerted action through trade-association agreements. In 1902 the Association of American Portland Cement Manufacturers was formed, and in 1904 it began to study what might be done to stabilize cement prices. In 1908 it recommended that cement be sold only on the basis of prices at destination, but it did not stop there. In 1910 an association report stated:

> The situation in Michigan is very satisfactory and growing more so. There was a chaotic state there early in the year. There was no unity of action at all among the mills until they formed a little association which

comprises all Michigan mills and one or two across the border. This resulted in a free exchange of views and an understanding to the effect that Lehigh prices should govern the prices out there. This understanding has been observed. The price today, based on the Lehigh price of 80 cents, makes Detroit a price of $1.25 delivered (37 F. T. C., p. 154).

Multiple-basing-point pricing followed when local efforts to establish a single basing point failed. Where local producers could not agree on Lehigh Valley plus, they could agree to observe some local basing point plus. This, however, required: First, concerted action within each basing-point area to use the same base price; and, second, cooperation from producers outside each basing-point area to prevent price competition from other basing-point areas.

BASING-POINT PRICES MADE EFFECTIVE BY ADHERENCE TO SYSTEM

The required concerted action was accomplished by industry-wide observance of an understanding, which constitutes the essence of the basing-point system, namely, that the minimum selling price for cement at any given destination shall be the lowest combination of basing-point price at any recognized basing point plus published rail freight rate from that basing point to the destination. Nothing short of this will attain the basing-point-system objective of identical destination prices. Adherence to this method of pricing necessarily is a matter of systematic observance by each individual company in pricing every invoice.

LEADERS IN CEMENT INDUSTRY GANG UP ON SMALL BUSINESS

In 1915, when multiple-basing-point pricing was definitely established in the area from Illinois to Washington and south to Colorado and Kansas, it was done by agreement among the following three important cement manufacturers:

First. Lehigh Portland Cement Co., with plants at Mason City, Iowa; Iola, Kans.; and Metaline Falls, Wash.

Second. Cement Securities Co. and three subsidiaries—Colorado Portland Cement Co., operating in Colorado; Union Portland Cement Co., in Utah; and Three Forks Portland Cement Co., in Montana.

Third. International Portland Co., Ltd., operating at Irvin, Wash.—37 F. T. C., page 155.

On January 28, 1915, the general sales manager of Colorado Portland Cement Co. instructed his affiliated company, Three Forks Portland Co., how to put the system into effect. He named four controlling basing points to be used throughout the territory and named the base price applicable at each. He outlined the method of computing the destination price at any delivery point as the lowest combination of any one of the four basing-point prices plus freight from that point to the destination. As to what other industry leaders would do, he stated:

> You need have no fear whatever of the Lehigh people taking any business except on this basis, as their Chicago office is now in complete charge of their Spokane factory, and will be responsible for every action of every one of their employees, and you may rest assured that Mr. Brown, as well as the others, understand this perfectly. Mr. Gowan gave me his personal guaranty of this and I in turn gave him my guaranty of our adherence to this. Of course nothing has been said to the International people regarding this, as, in the first place, I have had no opportunity, and, in the second place, our Chicago friends seem very certain that the International people would not quote lower than that basis (37 F. T. C., p. 155).

To cover up and keep this unlawful agreement secret the representative of Three Forks was advised:

> While on this subject I want to call your attention to the fact of not letting anyone know that any understanding, whatever, has been agreed upon, and especially never mention this to any of our customers, but simply say to them that we have reason to believe that no lower price will be named than those we are quoting, because we know the basis to be practically cost to manufacture, at basing points, and no exceedingly high profit can be made by the plants operating at those basing points. Please caution your salesmen particularly in this regard (F. T. C. 37, p. 156).

By such clearly collusive action among leaders of the industry, multiple-basing-point pricing became the established method of pricing practically everywhere in the cement industry prior to the formation of the Cement Institute in 1929. Thereafter it became one of the customs and usages which the institute sought to maintain before, during, and after the code period.

SUPREME COURT, APRIL 26, 1949, UPHOLDS FTC FINDING OF COLLUSION AND RESTRAINT OF TRADE

Based on a record replete with evidence of such concerted activities and their effects, the Federal Trade Commission made its general finding in the Cement Institute case in 1943 that—

> These long-pursued restrains of competition have contributed to, if not created, the belief now generally held by respondents that free and open competition is impracticable for the cement industry and have fostered among the respondents a philosophy of seeking not to excell others in quality or price or in affording terms of sale that would be more attractive to purchasers (37 F. T. C. p. 144).

The Supreme Court's decision, on April 26, 1948, in the cement case, supported both this and the further conclusion that the concerted activities by which the industry established and maintained multiple-basing-point pricing were unlawfully collusive and trade restraining.

Yet, although these facts concerning the collusive character and origin of the basing-point system are clear and indisputable, we find that spokesmen for the basing-point monopolies are trying to convince Members of Congress that they are firmly and resolutely opposed to conspiracy; that they have no thought of legalizing conspiracy, and that they are only seeking a clarification of the law. If this were true, why are these estimable gentlemen moving heaven and earth in order to try to get the Congress of the United States to legalize something which had its origin in unlawful agreements, was nurtured by collusion, and cannot exist without conspiracy.

SMALL BUSINESS CANNOT SURVIVE UNDER BASING-POINT MONOPOLIES

For 50 years small business generally, and especially cement dealers, have been the unwilling victims of this now outlawed conspiracy. To estimate with any degree of accuracy the number of illicit dollars which have poured into the treasury of the Cement Trust, would be wellnigh impossible. But, let us see to it that history does not repeat itself in the cement or any other industry, by passing any law under the guise of clarification which will, in effect, perpetuaute a system so inimical to our economy and to small business in particular.

Development of Synthetic Oil

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Monday, April 18 (legislative day of Monday, April 11), 1949

Mr. MARTIN. Mr. President, we are all very greatly interested in the development of synthetic oil. About a year ago I placed in the RECORD an article concerning a plant erected for this purpose south of Pittsburgh. I now ask unanimous consent to have printed in the Appendix of the RECORD a letter from Mr. E. V. Murphree, president of the Standard Oil Development Co., showing the progress of that installation.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

STANDARD OIL DEVELOPMENT CO.,
New York, N. Y., April 14, 1949.

The Honorable EDWARD MARTIN,
United States Senate,
Washington, D. C.

DEAR SENATOR MARTIN: I note your interest in the research we are carrying out with the Pittsburgh Consolidation Coal Co., as indicated by your reference to it at the February 21 hearings of the Senate Finance Committee on the reciprocal trade bill and oil imports. I therefore welcome the opportunity of reviewing for you briefly some of our activities on this and related projects.

Petroleum substitutes have been of interest to us for many years. Practically from the founding of the Standard Oil Development Co., research affiliate of the Standard Oil Co. (New Jersey), nearly 30 years ago it has engaged in research on possible substitutes for petroleum products derived from nonpetroleum sources of one sort or another. In the early twenties the development company carried out extensive tests on shale oil; and in the late twenties it initiated large-scale work on hydrogenation which, as you know, is a method of converting coal to liquid products, which has been receiving much attention by the Bureau of Mines in recent years.

Research on petroleum substitutes had to give way to more pressing problems during the war. However, it was resumed in 1945, and intensified in the following years in view of the unprecedented postwar petroleum demand. In spite of the fact that the present situation has greatly lessened the urgency of the research and eliminated the economic incentive, research has continued.

Our interest in the Fischer-Tropsch process for converting coal to oil dates back to

1938, soon after commercial application of the process in Germany had been demonstrated. Since that time research has resulted in many improvements in the process. The Fischer-Tropsch process is a two-step process. In the first step coal, or as an alternative natural gas, is converted into a mixture of carbon monoxide and hydrogen, known as synthesis gas. In the second step the synthesis gas is converted by means of a catalyst into oil products. For either coal or natural gas, therefore, there are two phases to the development of the process; one being to develop as cheap a method as possible for making the synthesis gas from coal or natural gas; and the second to improve the process for converting the synthesis gas into oil products. This second step is essentially the same whether natural gas or coal is used for preparation of the synthesis gas. The first step, that of producing the synthesis gas, is quite different, depending on whether coal or natural gas is the raw material.

The Standard Oil Development Co. has done a great deal of work on the second step of the Fischer-Tropsch process involving the conversion of the synthesis gas into oil products. The catalyst originally employed in Germany has been replaced by one permitting the production of high-octane gasoline. Through substitution of the fluidized solids technique developed for catalytic cracking, the cooling surfaces required in a Fischer-Tropsch synthesis unit have been reduced to around 1 percent of their original size, thereby greatly reducing the cost and steel requirements for a plant. The Standard Oil Development Co. also carried out work on the production of synthesis gas from natural gas as well as from coal. Up to the present time the expenditures of the Standard Oil Development Co. on the Fischer-Tropsch process have been around $10,000,000. In 1946 samples of both synthetic gasoline and Diesel fuel, made by the development company on a small scale from natural gas, were tested by the Navy at Annapolis. The fuels were completely satisfactory.

The success of the fluidized-solids technique in catalytic cracking suggests its possible use in coal processing not only for the production of synthesis gas for further conversion to oil products but also for carbonization and gasification processes in which the coal and utility industries are normally interested. Following favorable results of exploratory work on the application of the fluidized-solids technique to coal gasification, the development company and the Pittsburgh Consolidation Coal Co. concluded that a pilot plant was needed to carry the research step further to obtain sounder engineering data.

Library, Pa., was selected as the site for the pilot plant. Contract for the pilot plant was awarded in August 1947 and the installation completed a little over a year later, on October 10, 1948. Except for a few delays incident to usual operational difficulties which have to be overcome when starting up any new pilot plant, experimental work has been progressing satisfactorily.

From an experimental standpoint we feel that the work that has been carried out by ourselves and others on the conversion of synthesis gas into oil products has resulted in the development of a satisfactory process for this step of the operation. We feel that a considerable improvement can be made over existing processes for conversion of coal into synthesis gas and the cooperative research program between Pittsburgh Consolidation Coal Co. and the Standard Oil Development Co. is vigorously pursuing this objective.

From an economic standpoint we do not believe that the processes for conversion of coal into oil products in its present state of development are competitive with the manufacture of such products from petroleum. No commercial plants for making oil from coal are known to be planned or under construction in this county at this time. One commercial plant is reported to be under construction for making synthetic oil products from natural gas. We hope that the information being obtained through the cooperative research program between the Pittsburgh Consolidation Coal Co. and ourselves will make some real improvements in methods for production of synthesis gas and hence in the over-all process for conversion of coal to oil. We do feel, however, that more substantial improvements than those we now foresee are needed to make the production of oil products from coal competitive with their production from petroleum under present price structures.

The petroleum situation in recent months has changed greatly from that of the last few years. Exploration and drilling have proceeded at high rates; intensive refinery expansion has been under way; and refinery output of petroleum products has steadily mounted. (Proven reserves in the United States are now higher than they have ever been before.) Above ground stocks of crude oil and products have been replenished, and production has now largely caught up with demand. The urgency of developing petroleum substitutes has, therefore, diminished. However, the cost of crude-oil production has been increasing and it is possible, should costs continue to mount, that synthetic oil capacity on a large scale will in time become competitive with liquid fuels produced from petroleum. When the time comes, it is expected that many economies in the construction and operation of a commercial oil-from-coal plant will have been realized through development work on improved methods of gasifying coal such as that under way at the Library pilot plant.

Very truly yours,

E. V. MURPHREE.

Foot-and-Mouth Disease

EXTENSION OF REMARKS

OF

HON. EDWARD J. THYE

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Monday, April 18 (legislative day of Monday, April 11), 1949

Mr. THYE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter addressed by Robert J. Kleberg, Jr., to Hon. JOHN H. KERR, chairman of the Deficiency Committee of the Committee on Appropriations. The letter concerns the foot-and-mouth disease in Mexico. I think it presents a very clear statement of the efforts being made to eradicate the disease, and for that reason I ask that it be printed in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

Hon. JOHN H. KERR,

Chairman, Deficiency Committee of Committee on Appropriations, House of Representatives, Washington, D. C.

DEAR SIR: I notice in an Associated Press report that your committee on April 6, rejected a request for money to build a laboratory for research in foot-and-mouth disease.

My interest and the interest of the industry in keeping North America free of foot-and-mouth disease is, of course, very great. For that reason, I though it might be of some help to your committee and that you might even reconsider your action if I could give you my views, which are shared by many other members of the industry.

The campaign against foot-and-mouth disease in Mexico has been very well reorganized and is being carried on very efficiently by the Mexico-United States Commission, and they have in the process succeeded in making a high quality vaccine in immense quantities. I believe that in March they had produced in excess of 2,300,000 doses. They have also carried out the gigantic task of vaccinating 2,400,000 cattle this same month. At the present stage in this war against the dread disease, it has become clear that it is of vast importance to improve the vaccine so that it will confer immunization for a longer period of time; in fact one might even hope that a vaccine that would give permanent immunization would come from these efforts. The present vaccine has been proven to be good for only 4 months under certain conditions, whereas it had been hoped that it would be good for 6 months or longer. No research looking toward the improvement of the vaccine can be carried on in this country at this time as no facilities are available, and even if facilities are provided here it would be at least 2 years before any productive work could be accomplished. Therefore, it is apparent that the best place this work can be done immediately is in Mexico where substantial facilities are available and where the battle is actually being fought.

I am informed that Dr. Clarkson, of the Bureau of Animal Industry, has stated that emphasis has been placed up to now by our research scientists on the production of the necessary vaccine to carry out immunization work in Mexico. Meanwhile research scientists have been working in Europe; but only recently, when it became apparent that a better vaccine was needed, have any of our research scientists gone to work on the ground in Mexico to try to develop it there; that two more of these scientists are due to go to Mexico this month, and in another 6 months more will be sent there. Dr. Clarkson stated quite frankly that enough has not been done along these lines. He also said that the present prospects for eradicating the disease in Mexico are more promising than they have been at any time. The atmosphere of the people in Mexico has been developed favorably to carry on the work and the methods employed up to now have been successful in eradicating outbreaks in outlying areas and it has been possible to contract the quarantine lines so that in many places the northern limits are now farther from our border than they were a year ago. It is my feeling that it would be of great benefit to take advantage of this present atmosphere and organized effort to tremendously speed up our research effort on the ground in Mexico. It is one of my purposes in writing this letter to emphasize that the question of eradicating foot-and-mouth disease in Mexico and the question of building a research laboratory in this country are entirely separate and should be considered separately. Both are very necessary for the immediate action but for entirely separate reasons.

As stated above, we have a war going on in Mexico and the battles are being fought with ammunition that we do not feel is as good as could be produced if sufficient efforts were made in Mexico to improve it. In the case of the proposed building of a laboratory here, the real need for such a laboratory is that we know that the threat of foot-and-mouth disease invading this country is a continuous one, and so far as we can see now an everlasting one. We may have a number of outbreaks in this country that are purely chargeable to negligence at any time. Such outbreaks may have no connection with Mexico, just as the prior outbreaks in this

country had no connection with Mexico—they may be caused by accident, by design, by sabotage, or by war.

It is probable that vaccine will always be used as a supplement to slaughter and burial and quarantine, and for this purpose we would have to manufacture our own vaccine as sufficient vaccine would probably not be available from any other source, and we would also have to be prepared to manufacture vaccines to immunize against any of the known types, which may be different from those which at present exist in Mexico. Therefore there are two entirely different efforts that should be made at once in connection with keeping this country free of foot-and-mouth disease—one is the speeding up by every possible means on-the-ground research in Mexico, and the other the building of a laboratory at the safest possible location to insure the future health of our livestock.

From the Associated Press report yesterday your committee is quoted as saying: "In order to conduct the proposed research it would be necessary to introduce the disease into the United States and thereby increase the hazard of an outbreak among the livestock of the country." One would get the impression from this statement, assuming it to be correct, that the main reason the committee turned down the requested appropriation was that the laboratory was going to be built on the mainland of the United States and proper safeguards would not be afforded. Since the original bill authorizing the construction of a laboratory, provided that it must be located on a coastal island separated from the mainland by deep navigable waters, Dr. Clarkson was asked by telephone if there had been any effort made by the BAI to modify this in order to secure the location of the laboratory on the mainland. Dr. Clarkson stated that the BAI was not seeking to change the location of the plan, but wanted to go ahead with the construction on one of the several islands which they considered satisfactorily located off the northeast coast of the United States. Furthermore he said that the BAI was as anxious as we to have it in a place where there would be adequate safeguards to remove all possible risk of this most infectious virus escaping to the mainland.

I feel satisfied that by locating it on an island as provided for in legislation of April 1948 such adequate safeguards would be provided, but I would not be willing to take the risk of locating similar facilities on the mainland.

I hope that you will take every means at your command to stimulate sending these research scientists to Mexico and reconsider your decision of April 6 with respect to the long-term research laboratory project.

Most sincerely,

ROBERT J. KLEBERG, Jr.

Marshall-Aid Countries Reported Overproducing

EXTENSION OF REMARKS

OF

HON. OWEN BREWSTER

OF MAINE

IN THE SENATE OF THE UNITED STATES

Monday, April 18 (legislative day of Monday, April 11), 1949

Mr. BREWSTER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Marshall-Aid Countries Reported Overproducing," written by Constantine Brown, and published in the Washington Star of yesterday. I think Mr. Brown is a writer of sufficient reputation and responsibility at least to invite attention to his article, particularly his statement as to the so-called Schuman report. Certain of Mr. Brown's statements are inaccurate, for instance, that we now have a high tariff, because we obviously do not.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MARSHALL-AID COUNTRIES REPORTED OVERPRODUCING—EUROPE'S DEMAND RUNS BEHIND EXCESSIVE OUTPUT MADE POSSIBLE BY MACHINES AND EQUIPMENT SENT BY UNITED STATES

(By Constantine Brown)

The European recovery program has been so successful that the countries which have benefited from it today are burdened with overproduction.

Unfortunately, there is not sufficient deman in Europe for the goods which are being produced in excessive quantities and the chances are that they will have to be sold in the United States. Thereby they will have the unexpected effect of increasing unemployment in this country.

These facts come out of a document which French Foreign Minister Schuman presented to Secretary of State Acheson during his visit in Washington to sign the Atlantic Pact. Because of its explosive content the document still is being kept top secret.

Although the great proportion of ERP funds have been utilized to provide consumers' goods, what machinery and equipment we have sent to continental Europe to rehabilitate its light industries have been used effectively.

LUXURY PRODUCTION UP

As a result, the luxury industries of France, Belgium, and Italy have reverted to their prewar level of production. French perfume, Belgian lace, and Italian, French, and Belgian textile industries, which had a place of their own in the world's prewar economy, now are back to what they used to be before 1939.

Lyons and Milan again are producing their fine fabrics, used principally for luxury purposes, and Bruges and Brussels once more are in full swing turning out lace and similar commodities. French vineyards are ready to provide the world with excellent wines, champagnes, and brandies.

Before the war a large part of the production of these goods was consumed in Europe itself, but now financial and currency crises in those countries prevent former consumers from purchasing them. Under the ERP this contingency was taken into consideration when it was provided that the surplus of one nation should be absorbed by the other members of the Marshall plan organization.

French and Italian economists went to London to discuss their problems of overproduction, which within a few months may become acute and cause a scale of unemployment which would play into the hands of native Communist agitators.

Unfortunately, according to the report presented by Mr. Schuman to Mr. Acheson, they found little sympathetic response from the British Government and particularly from Sir Stafford Cripps, the British economic dictator.

CRIPPS EXPLAINS AUSTERITY

The representatives of the principal continental European republics urged the British to relax somewhat their austerity program and accept some of the luxury goods being produced. They expressed their willingness to accept in exchange some of the heavier goods produced in the United Kingdom, including whisky, which normally has only a limited market in continental Europe.

Sir Stafford was adamant. He explained, according to the French, that austerity is necessary to Britain these days and the British people are not ready yet to make use of the fancy goods produced by the Latins. Not only was Stir Stafford unwilling to accept luxury and semiluxury products from the continent, the French say, but the British Government even placed obstacles in the way of exports of butter and fresh vegetables, of which there is a superabundance in France today.

It appears that the harshness and predatory policies of the Nazi occupation forces did not seriously deplete Normandy's stock of cattle, and today their number exceeds that of 1938. Paris and other large cities which could purchase such luxuries as butter, eggs, cheese, and fresh vegetables in adequate quantities only on the black market have them now at relatively low cost. But even now much of the dairy production is wasted, because the quantities available exceed the demand by far and Britain keeps only a crack of its import door open.

The French argument that the ERP agreements provided specifically for the absorption of overproduction had no effect on the stubborn British economic dictator, who remained adamant in his view that the gates of Britain must be kept closed until such time as he decides that the austerity policy can come to an end.

Under these circumstances European countries are preparing to dump their surplus production on the United States. Britain is expected to join them by offering the American people whisky and leather goods at far lower prices than we are paying today.

The reason this program has not yet been adopted is that American tariffs are still high and the Europeans expect that the United States may decide to lower them through reciprocal trade agreements. But even if tariffs are not lowered by next summer we must expect an avalanche of luxury goods in this country, manufactured by the Europeans. Prices may be cut sharply.

From the point of view of the American purchaser who is accustomed to luxury goods this may be good news. But American economists frown at the idea of an influx of foreign goods into the United States at this time.

NEW TEXTILE CRISIS

Our own textile industry is in the midst of a new crisis. Reports from New England and some of the States in the South indicate that mills are slowing down considerably. The distillers over the Nation are disturbed by the fact that they will have to meet the competition of Scotch whisky and French brandies at a price lower than the cheapest American product. Growers in California, New York, and Ohio will worry when they hear that French and Italian wines and champagnes will be offered in the American market at prices with which American producers will have difficulty competing.

The legislators who approved ERP were assured at that time that there was no serious risk of European dumping in the American market, since it was provided in the agreement that the signatories would absorb the overproduction of each other.

Because of certain considerations of a politico-strategic nature Europe was not provided with tools for her heavy industries. But since ERP was not regarded as another UNRRA, and its purpose was to put the beneficiary nations on their feet economically, we did provide them with the machinery to start the wheels of their light industries again. This has been done and has succeeded more quickly than was anticipated.

Unfortunately only a limited market is provided in Europe itself. South America is able to use only a small part of western Europe's output and Asia provides no outlet at all. In the days before the war luxury

and semiluxury goods had a fair market in some parts of China, Singapore, and India. These now are completely closed.

The only present outlet for Europe's goods is the United States, which will have to absorb more than it did before the war if it is to avert an economic crisis in Europe. This comes at a time when he faces a less advantageous position than we held in the past, confronted with an industrial and economic recession and heavier taxes than before.

FRANK TALKS URGED

Thus the fears of some opponents of the Marshall plan may be borne out. That is to say, after we have provided Europe with the means to stage a limited economic comeback, we shall have to consume the goods which we have helped Europe produce, probably at the expense of American labor.

The suggestion is being made in some quarters in Washington that the administration talk frankly to the British Government and warn them that they must live up to the agreement which provides for unhampered exchange of goods among the nations which benefit from ERP appropriations.

What success this will have is uncertain. The British Labor Party is worried about its latest electoral setbacks and is intent on proceeding with even greater nationalization of some industries within the next 2 years. During that time it feels that it must stick to the austerity program, which is part and parcel of its closed economic policy. A change of attitude might jeopardize its position as the government of Britain.

Sir Stafford is known to be an obstinate person who is determined to put through the industrial nationalization program, even if he realizes that the policies he must adopt toward that end might be hurtful to Britain's present allies.

Meanwhile, the economic survey presented by Foreign Minister Schuman is being kept secret lest it influence adversely the American people and the policy of cooperation with western Europe.

Address by Harold Stassen Before Massachusetts Institute of Technology—Comment by George Sokolsky

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES

Monday, April 18 (legislative day of Monday, April 11), 1949

Mr. BRIDGES. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an article by George Sokolsky recently published, commenting upon an address by Mr. Harold Stassen, president of the University of Pennsylvania, at the midcentury convocation at the Massachusetts Institute of Technology. I personally was very much impressed with Mr. Stassen's speech and I thought that Mr. Sokolsky dealt with it in a manner which should interest the Members of this body and the general public.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THESE DAYS

(By George Sokolsky)

A number of notable speeches were delivered at the midcentury convocation at the Massachusetts Institute of Technology, but most of them were overshadowed by Winston Churchill's personality.

Among the addresses that seemed underplayed was that of Harold Stassen, president of the University of Pennsylvania, who approached American problems from the standpoint of a nation with a continuing philosophy of life.

After analyzing the conflict among various ideas of life and government he applied his conclusions to Asia, as follows:

"Relating this inescapable situation to one specific problem before us, we must conclude that we are foolhardy to contribute by our inaction, or by our withdrawal of aid, to the Communist domination of China.

"We should move, and move promptly, to bolster the southern half of China, to assist by materials and by counsel in maintaining the independence of Canton and of the four provinces of Kwantung, Kwangsi, Fukien, Hunan, and of Formosa and Hong Kong."

The argument usually made by the State Department is that it is impossible to support a government ridden by graft. It is the same kind of argument as justified the support of Red fascism to the tune of $11,000,000,000 and the rejection of Spanish fascism.

It is the same kind of argument which makes it right to support British imperialism in the Middle East but to oppose Dutch imperialism in Indonesia. It is a fatuous argument unrelated to reality.

After all, the so-called corruption of the Nationalist Government is a question of the form and character of government. Are we to enforce our concepts of government upon other peoples? We provide Marshall-plan aid to imperialist Holland, to socialistic England, to France whose economic and political system is beyond description in accurate terms.

Nor is the argument sound that we need only aid Europe and that there can be security for us in an Asia completely under Russian control.

I suggested to Winston Churchill recently that Soviet Russia will raise at least 40 divisions among the Chinese to police the satellite countries in Europe.

He pooh-poohed the suggestion, yet nothing is more likely. For some of the Russian satellites and puppets are becoming recalcitrant and it is sound policy for the Kremlin to use Asiatics to keep Europeans in line. Lenin did it when he employed Mongols and Buriats in the early days of the revolution to keep Russians in line.

So when Harold Stassen proposes support to the government of South China, he is sound.

He says: "Giving due consideration to European needs and to our own total economic situation and capacity, we should regularly invest a portion of our resources in Asia for the resistance of communism.

"The amount should be a minimum of a billion dollars a year. It should be administered on an Asia-wide approach, preferably in relation to local provinces and individual projects and in underwriting private endeavor, rather than being funneled through any central, major government.

"Clearly the Marshall plan in Europe has been the most significant single right thing we have done since the end of the war. It is high time that we have a parallel MacArthur plan in Asia."

One of our major difficulties in the pursuit of policy is that the American people have not yet caught up with the role that we actually have assumed in the world. Whether the people approve of that role is another matter.

Whether they would have approved of it, had they known the truth, while it was in the making at a dozen international conferences is neither here nor there. The historic fact is that the United States has, since 1939, become a vast empire.

Such a position involves a universal program and policy. The Monroe Doctrine and the open door policy in China seemed at one time permanent, but they were at most regional programs. "Freedom of the seas" came closest to a universal policy.

Otherwise, we pursued hit-and-miss relationships, generally, but not always, following Great Britain. Our new situation and the decay of the British empire force upon us a new role for which we are not ready. Lacking this, we suffered so severe a defeat in China.

Development of Arkansas, White, and Red River Basins

EXTENSION OF REMARKS
OF
HON. J. WILLIAM FULBRIGHT
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES

Monday, April 18 (legislative day of Monday, April 11), 1949

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial written by C. F. Byrns concerning a bill recently introduced by the Senator from Oklahoma [Mr. KERR] and sponsored by several other Members of the Senate, dealing with the plan for development of the Arkansas, White, and Red River Basins. It is an excellent editorial written by one of the leading editorial writers of Arkansas.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Fort Smith (Ark.) Southwest American Times-Record of April 9, 1949]

OFF THE RECORD

(By C. F. Byrns)

Arkansas' Senators JOHN MCCLELLAN and BILL FULBRIGHT will join as coauthors with Senator ROBERT S. KERR, of Oklahoma, in sponsoring a bill to create a United States commission to make a basin-wide, comprehensive plan of development of the Arkansas, White and Red River Basins. This information comes to me from Don McBride, former head of the Oklahoma Planning and Resources Board, now helping Senator KERR on the new commission plan.

Senator KERR's bill is now in final form and will be introduced soon. In my judgment, it represents the most intelligent approach yet made to the full development of the basins of these three streams which affect the economy of eight States—Arkansas, Louisiana, Missouri, Kansas, New Mexico, Texas, and Colorado.

The United States commission proposal will preserve all the rights of the States and their people and the separate functions of all the Federal agencies dealing with resources—the Corps of Engineers, of the Department of the Army; the Bureau of Reclamations of the Department of the Interior; the Soil Conservation Service of the Department of Agriculture; and the Federal Power Commission. It will achieve a comprehensive program, integrating the plans of all these agencies. It will embrace development projects for the upper reaches of the streams as well as the lower sections which have had most of the attention. It will present to Congress a broad and understandable picture, which can justify the enthusiastic support of all the Senators and Representatives and the people of the eight affected States.

In contrast to this approach is the new Missouri Valley Authority bill recently introduced by Senator MURRAY, of Montana. It would set up an authority appointed by

the President and operating in a world of its own, making its own rules and in the main superseding State and local governments. Patterned after the Tennessee Valley Authority program, it goes considerably further to the left, giving to the proposed authority broader powers and less responsibility to the people, their State governments, and the Federal Government.

I think the people of the Southwest overwhelmingly prefer the approach of the bill which will be offered by Senators KERR, MCCLELLAN, and FULBRIGHT. I know I do.

A serious problem in the development of our rivers has been the diversity of agencies dealing with rivers, forests, and soils, and the electric power which can be generated by river-control projects. That diversity is the chief argument for the authority method of development. Authority advocates believe the way to overcome the difficulty is to put all power in the hands of an appointive board to plan and to construct and to operate, without much regard for the wishes of the people affected.

This new proposal for the Arkansas, White, and Red Basins meets the difficulty of diverse agencies by setting up a commission to integrate the plans of all agencies and to evolve one plan which embraces the parts of all of them which all concerned can agree upon. The detailed planning, the construction and finally the operations would be left in the hands of the established agencies, with all the existing protections of local and State authority and interest. It is a much sounder approach.

The proposed new commission would exist only until its planning work is complete. Then it would go out of existence. It would not supplant any existing agency. It would represent the four Federal agencies involved and the people of the eight States. The President would appoint one person from each of the four Federal agencies and eight persons representing the eight States, and a chairman who lives in the area. The representatives of the States would be nominated by the governors of those States.

The cost of the commission's study is not estimated in the bill. It need not be excessive. The benefits of such a coordinated program can be tremendous, in speeding up construction and in fitting all the parts of a complicated program into a single, integrated program.

Guaranteed Farming

EXTENSION OF REMARKS

OF

HON. EDWARD J. THYE

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Monday, April 18 (legislative day of Monday, April 11), 1949

Mr. THYE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Guaranteed Farming," published in the Washington Post of April 17, 1949.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

GUARANTEED FARMING

In the pressure for space following intermittent suspension of this newspaper, the prize exhibit of the Fair Deal has not yet had our comment. We refer to Secretary Brannan's plan for perpetual prosperity for agriculture. This is a scheme, a most ambitious scheme, that looks like a magical effort to give something to everybody. To farmers he promises subsidy payments designed to equate them with other economic groups. To consumers he promises lower prices by allowing agricultural commodities to find their own market level. To the public he holds out the assurance that this program would cost no more than the present system of price supports by which the Government keeps agricultural prices up artificially.

The hitch, of course, is the two-price system that would be created by the Brannan plan. Mr. Brannan uses as a lure the prospect of buying milk at 15 cents a quart. This might be all the consumer would pay directly. But the Government would then make up to the milk producer the difference between the market price and what, under the Brannan formula, was considered necessary to bring a fair income. The consumer would pay for this, too, through taxes, and to that extent the 15-cent price tag on milk would be deceptive.

There is, to be sure, a superficial plausibility about the Brannan program. For one thing, it would recast the farm parity formula in terms of present-day prices instead of as a percentage of 1909–14 prices. Furthermore, theoretically it would end the squeeze in which the consumer pays high prices and then pays taxes to keep prices high. However, it would substitute for price supports a thorough regimentation of agriculture. Far-reaching production and marketing controls would be necessary over virtually every crop, and if estimates proved faulty the system could become a terrific millstone. The consequences of tampering with the delicate ratios in livestock feeding, for example, could be disastrous. Nor does the plan give any assurance that overproduction would be effectively checked; indeed, subsidies unrelated to supply might encourage gluts.

The Brannan approach would scuttle the long-range Aiken farm program before that program has even been tried. The Aiken law is the first real effort to relate price supports to supply. Beginning in 1950, Government supports will range from 90 percent down to 60 percent of parity, depending on supply. These flexible support provisions have been under constant attack from groups seeking to peg supports of specific commodities at 90 or even 100 percent of parity. In this respect the Brannan program looks like a political sop, for its effect would be to fix most ·upport prices rigidly at above 90 percent of parity.

Farm income has a direct relation to the health of the remainder of the economy, and no one can wish for a return of the days of nonprotection of farm prices. Agricultural price supports are accepted as a necessary compensation for the fact that the farmer, alone of all producers, cannot reduce his production when prices fall. The question is not whether there should be price supports, but whether farmers should be singled out for guaranteed income. The theory behind the Aiken law is to provide a variable floor against depression. If this is to be jettisoned in favor of a rigid system to subsidize farm incomes, how long will it be before other economic groups also demand an income subsidy?

After College, What?

EXTENSION OF REMARKS

OF

HON. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Monday, April 18 (legislative day of Monday, April 11), 1949

Mr. BRIDGES. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an article entitled "After College, What?" written by James P. Lynch, editor of the Exeter News-Letter. It is a very appealing, interesting article which I think is worthy of the attention of the readers of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

AFTER COLLEGE, WHAT?

(The tempo of the times is fast. Men find that their lives seem shorter and shorter. Everyone hurries. There is less and less time for a man to experiment. We have to make decisions earlier in our lives, and economics force us to carry them through. For this reason, and for the old reasons often given that students decide early what they are going to do, the Review is running a series of articles on the various professions. We have asked men prominent in their vocations to write essays, answering such questions as, "What does your vocation offer to young men today?" and "How does your profession fulfill your youthful ambitions and idealism?" The first three of these articles appear in this issue. The purpose of this series of essays, written by men who know their fields well and have gone far in them, is to give the students at Exeter some indication of the possibilities of the vocations open to them. The time for decision for most of us it not very far off, and we cannot afford to choose wrong.)

(By James P. Lynch, of the Exeter News-Letter)

This is your America. The land that offers you so much and asks for so little in return. The land that has become great because its people are great.

To its youth it offers countless opportunities. The avenues of approach to the road to success are many. In fact, because of this, it is rather difficult for some graduates to decide on what avenue they desire to travel.

To those that choose the field of politics they will find before them a field rich in adventure, abundant in fame and opportunities, and last but not least, a chance to help in promoting the political leadership of the American Government.

The political leaders of America look upon college graduates, not as energetic youths with fresh sheepskins seeking a start in life, but rather as young Americans who will soon be running the Nation. They expect a lot from you because this is your America. They know you can do the job equally as well, and probably better, than themselves. They are hoping that you will be active in politics.

To the young man desirous of entering this field he is more fortunate than his forebears. In many of the colleges and universities throughout the Nation he has a chance to join political groups and discuss the topics of importance that are confronting the Nation.

These groups are similar to the many Young Republican and Young Democrat Clubs that are scattered over the 48 States. For a young man starting off in politics these clubs offer an excellent opportunity to learn the fundamentals of politics. In most States many leaders of their respective parties are graduates of the young group.

The clubs play an important part in elections and give the young members a ringside seat for the presidential race. In the last presidential encounter both candidates sought the help and advice of the young groups in their party.

Last year, prior to both conventions, the spotlight was for the most part on the Republican candidates. This was due chiefly because of the number of important candidates. It was surprising to notice the number of young people taking part in this great affair. You must realize that these people

were supporting the candidates individually and not as an organization. No group supports any candidate until after the nomination.

Of all the candidates, Stassen led the field in the support from the younger element.

Editorial From New York Times

EXTENSION OF REMARKS
OF
HON. CLYDE M. REED
OF KANSAS
IN THE SENATE OF THE UNITED STATES
Monday, April 18 (legislative day of Monday, April 11), 1949

Mr. REED. Mr. President, the Senate Committee on Interstate and Foreign Commerce is starting an investigation of the entire domestic transportation situation, including railroads as well as other transportation agencies.

A very timely editorial appeared in the New York Times of April 11 which accurately points out certain important factors in the problem.

I ask unanimous consent to have this editorial printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A TRANSPORTATION POLICY

Laurence F. Whittemore, president of the New York, New Haven & Hartford, asserts that the time has come when American railroads should be relieved of the obligation to furnish local service for which they are no longer the most effective medium. Speaking before the Providence Chamber of Commerce, he declared that the carriers must be freed from the type of regulation and thinking which renders them unable to change their pricing and service to meet changing conditions.

We agree with Mr. Whittemore that our present system of railroad regulation is a good deal of an anachronism. Basically, its philosophy stems back to the nineteenth century. It rests, therefore, to a very considerable degree, on the theory that the railroads are still a natural monopoly instead of a form of transportation that is compelled year after year to face increasing competition, some of it heavily subsidized by the Government itself. Since the Second World War alone a minor revolution has occurred in the movement of the nation's freight. Texas grapefruit, once hauled by rail, now comes North on rubber tires; cotton cloth is trucked from Southern mills to New York's garment center overnight, and fish is carried from Seattle to the east coast in vehicles equipped for refrigeration. The number of class one interstate trucking enterprises has more than doubled since before the war; their total revenues have risen from $700,000,000 in 1939 to more than $2,500,000,000.

To the extent that this development represents progress and evolution through competition it is, of course, to be applauded, and not decried. It is in the interest of the community as a whole to employ whatever form of transportation is most efficient and economical. But there are two other points that should be considered in this connection. The first is that we don't have a fair competition when one competitor is regulated as a monopoly and the other is not. The second is that it is imperative for our railroads to be preserved as a progressive and basic part of our transportation system.

Some will profess to see the answer to this problem in Government ownership of the railroads. But that would merely be to substitute for the present policy of duplication and confusion one of deterioration and decay. What is called for is a genuine national policy which will preserve the inherent advantages of all competing forms of common carriers as a unified and coordinated transportation system. This cannot be achieved until we are prepared to set up a single transportation authority for that purpose.

Cites Dangers in Bipartisan Foreign Policy

EXTENSION OF REMARKS
OF
HON. ROY O. WOODRUFF
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 14, 1949

Mr. WOODRUFF. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following article by Col. Charles L. Hall, United States Army, retired, in the Chicago Daily Tribune of Thursday, April 14, 1949:

CITES DANGERS IN BIPARTISAN FOREIGN POLICY

(Col. Charles L. Hall, son of an Army officer and author of the following article on the Bipartisan Conspiracy, was graduated from West Point in 1908. His entire service was with the corps of engineers. He served on the general staff in France in World War I, receiving the Distinguished Service Medal and the Purple Heart with oak leaf cluster. During World War II, he served as engineer of the Ohio River district. He retired for age in 1947, but remained on active duty until retired for disability in 1948. He was district engineer at Rock Island, Ill., from 1927 to 1930.)

(By Charles L. Hall, colonel, U. S. Army, retired)

Robert Louis Stevenson once said that man did not live by bread alone, but principally by catchwords. The American people are now living by the most singular catchword ever composed: "bipartisan foreign policy."

There is no foreign policy, bipartisan or any other kind.

Try to find out whether Germany is to be put on its feet, or not. Try to find out how the expanded population of Germany is to be supported without either the access of a correspondingly expanded heavy industry to east European markets, or direct and fierce competition with Great Britain and France in non-European markets. Try to find out if western Germany is to have a military force capable of meeting the new east German military police.

What we have now is a bipartisan conspiracy to conceal from the American people the absence of a foreign policy. By stretching the word "policy" to its elastic limit we might say that we have a bipartisan agreement to conceal the fact that we are following two diametrically opposed policies. Neither of these has ever been formally avowed by the executive agents who sponsor them. Public opinion has been given no opportunity to pass on them, or even to know that two divergent policies exist.

OPPOSING THEORIES

To these two opposing policies, or rudimentary foundations for policies, may conveniently be given the terms French and German. Under the French policy the Russian advance is to be resisted by Great Britain, France, and the Low Countries, subsidized by American money and supported by American man power, partly present in Europe and partly in reserve.

Germany is to be kept poor and weak, with just enough strength to support its population and pay the cost of foreign overlordship. There are to be no German soldiers.

Under the German policy the strength of Germany is to be fully developed economically, and partially developed militarily, so as to reduce the constant drain on American strength caused by the expense of the French policy. However, though American subsidies will be smaller under the German policy, nobody expects western Europe to be self-supporting until trade between it and eastern Europe becomes as large as it was before the war.

FRENCH MILITARILY WEAK

The disadvantages of the French policy, which has already been partially adopted, are obvious. France is nearly a third communist, and no serious military student believes that an army with more than a quarter of its strength fifth columnist can be relied on. After all, Hitler conquered France with a loss of 18,000 men, and all historians remember how little use the Czech troops in the Austrian Army were.

The military strength of the alliance will depend on Great Britain and the United States, its economic strength, for the daily business of living, will depend on American help for an indefinite period. Military equipment must either come from the United States or be provided by western Europe in exchange for compensating American materials on a lend-lease basis, since Germany is not to be allowed to furnish either military material or capital goods in excess of the amount required for daily food. We will never get free of the cost of supporting western Europe.

The great advantage of the French policy is that it will never of itself cause a war. Why should it? No matter what blood transfusions we give to a French army the Russians will always laugh it to scorn. The British manpower cannot, in view of the demands of the Navy and of the Colonies, provide much more than a token army in comparison with the Russians.

RUSSIAN ROLE EASY

We already have shown that the American people will not provide a genuine national army for permanent service on the European Continent. All the Russians have to do is to stand by and watch us waste our substance in subsidizing an international force lacking the spiritual vigor to do anything except to put up a delaying defensive while yelling to our country to come to its rescue. The Russians probably could be in Gibraltar before a properly trained American corps at war strength could start for Europe.

The advantage of the German policy is that it puts German economy to work for the benefit of the Continent on terms which will stimulate the German people to action, and that it takes military advantage of German manpower and talent. It voids the stupidity of maintaining what is, in essence, a military coalition without making full use of all potential supporters. It will assuredly reduce American expenses on the Continent and offers a little (not much) hope of enabling us to quit Europe economically, though not militarily, in 1952.

MAJOR HAZARD OBVIOUS

It has one conspicuous disadvantage. It may blow up in our hands like a torpedo. As long as the Russians behave the way they do now the Germans will be on our side as the lesser of two evils. But suppose the Russians, when Germany is gotten part way up on its feet, say something like this:

You have had a very rough deal. Slav solidarity, however, prevents our thinking of returning the eastern provinces. But we recognize that you must have more room. The French birth rate is low. We will be

glad to help you push your frontier a hundred miles into France, the inhabitants of this area to be expelled. We are free to admit that this will help us, since you can no longer hold a grudge against us for what we did to you. But you know how weak France is. With our help this new land can be gotten cheaply. It's better land than the lost eastern provinces. You can't imagine the French or English doing anything to help you get East Prussia back.

What answer will we make? Of course we can say that the Russians are too scared of latent German power ever to permit such a deal. It's better not to be too sure of that.

ATTEMPT TO COMPROMISE

Naturally the American diplomats recognize the inevitable bankruptcy of the French policy and the danger to world peace of a German policy. So they try to compromise.

Between France and Germany there can never be a compromise freely accepted by both sides as a permanent arrangement. From the end of the Franco-Prussian war in 1871 to the beginning of the First World War in 1914, all the men of good will in Europe spent their time looking for some Franco-German compromise. The French were willing to agree to any scheme which assured France of revenge for its defeats in 1870. The Germans were willing to agree to any scheme which protected them against such a revenge. Between the two World Wars the Germans were agreeable to any plan which gave them a free hand in central Europe and the French were prepared to support any scheme which would keep Germany weak.

For us there is of course another policy possible. We can fall back on the doctrine set forth by George Washington in 1796: to allow the status of Europe to be determined by the operation of the purely European forces involved. To this doctrine we can properly give the name of the American policy. Under a government by doughfaces an American policy is not—to put it mildly—very fashionable.

But no matter how weak the adherents of the American policy may be politically, they are not entirely without weapons. The Government is committed to the Atlantic Pact. A treaty of alliance requires a two-thirds vote of the Senate. On a treaty there must be hearings before the Senate Committee on Foreign Relations. One single committee member not a "doughface" can force the official witnesses to say whether the treaty is meant to back up a French foreign policy or a German one.

WEAK GERMANY DOOMS PLAN

Through expert examination of certain readily available professional witnesses it should be possible to show that a military alliance based on the French Army is wholly ineffective. It is, of course, no trick at all to show that a western Europe with a weak Germany can never pay its way.

It is too much to hope that, whatever the skill displayed by the minority, the treaty can be defeated. But if the proponents of an American policy can find one Senator of the stature of the late Philander C. Knox to lead the attack they can accomplish a great deal. They can prove to the American people that the Atlantic Pact—unless accompanied by universal service in America of the pre-1914 German type—is wholly useless as a means of holding western Europe against attack, and merely mortgages our children's lives to prevent the Russians (or more probably a Russo-German task force) from reaching the Pyrenees without precipitating a third world war.

CHANCE TO BE COUNTED

Especially they can make all contemporary American politicians stand up and be counted in daylight.

If those who believe in an American foreign policy stay on the job they can outline the probable future course of events so clearly that no politician who votes for the Atlantic Pact will have any excuse when it blows up.

After that maybe we can again adopt the policy of 1796—George Washington's policy—under which this country prospered for over a century.

What About Federal Aid for Schools?

EXTENSION OF REMARKS
OF
HON. J. WILLIAM FULBRIGHT
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES

Monday, April 18 (legislative day of Monday, April 11), 1949

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "What About Federal Aid for Schools?" by Henry F. and Katherine Pringle, published in the April 16, 1949, issue of the Saturday Evening Post. I have had made an estimate of the cost of printing in the RECORD, which will be $243.75. Notwithstanding the cost, I ask for insertion of the article in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WHAT ABOUT FEDERAL AID FOR SCHOOLS?

(By Henry F. and Katharine Pringle)

(Battered by rising costs, a teacher shortage and a bumper crop of war babies, our vaunted system of free elementary education is slipping badly. The colleges are also hard pressed. Will Uncle Sam have to come to the rescue?)

The connection is direct between Eddie Burns, who lives in a small town in the Middle West, and the current congressional debate on Federal aid to education. Eddie is 17, an alert and pleasant youth employed in a filling station. His grades in grammar school were excellent. He went on to high school, but soon his interest in his studies slumped. The classes were jammed to suffocation, with students perching on window sills. Eddie received little or no personal guidance from poorly trained, hard-pressed teachers. The Burns family needed money, so Eddie took a job at 16.

Sometimes, during the summer months, a sleek convertible slams to a stop in front of one of the filling-station pumps. Susie Smith, also 17, leans out with a "Hi, Eddie, fill her up." Susie is an amiable, extremely attractive girl. She and Eddie were classmates in grammar school, But on finishing the eighth grade she was sent to an excellent private school in the East. There, enough facts and figures are being packed into her pretty head so that her entrance into Vassar a year hence is fairly certain.

What is troubling the more earnest Members of the Senate and the House is the knowledge that there are tens of thousands of Eddies in the United States who ought to go to college, and also tens of thousands of Susies who should probably stay at home. For if Eddie's scholastic abilities had been tested by the methods brought to high efficiency in World War II, he would have been rated extraordinarily intelligent. Susie has no particular talents, except for marrying a nice man, but Eddie was a potential doctor, engineer, or scientist. His talents, now doomed always to remain hidden, are gravely needed in the United States.

"I feel quite certain," President James B. Conant, of Harvard, told a Senate committee last year, "that we are not developing in many sections of the country all the latent talent we should."

Eddie Burns and Susie Smith are imaginary characters, of course. The break-down of American education—the education open to all, which countless orators have hailed as the core of our democratic system—is all too real, however. Badly paid teachers are quitting the elementary grades in unprecedented numbers. High schools do not exist in many rural areas and are overcrowded nearly everywhere. Equality of opportunity for brains, if we ever truly had it, seems to be a gradually vanishing ideal. Even the wealthier States, faced with diminishing sources of taxation, are finding it impossible to appropriate adequate funds. And that is why the idea of Federal aid to education long distasteful because of fear of policy control by Washington, is gaining increased support on Capitol Hill.

The files of presidential commissions, State investigations and congressional committees are packed with case histories which prove that competent children are being incompetently taught; that children unable to benefit clutter the higher grades; that before World War II less than one-third of the boys and girls really eligible for the colleges were enrolled in them; that countless others went to college with few qualifications beyond the bank accounts of their parents.

The University of Minnesota made a study some years ago which demonstrated the tragic loss in able young Americans. Among the students in every typical high-school graduating class are two—let us call them Fred and Bill—who rank among the top 10 percent. Fred's parents are fairly well off, and he will go to college, but the pressure of economics will force Bill into a job. For every high-school graduate in the upper 10 percent who entered college, the Minnesota investigation revealed, another in the same intellectual bracket did not go.

Rising costs of tuition, fees, textbooks, and board and room have nullified, in the words of the President's Commission on Higher Education, "the comfortable idea that any boy can get a college education who has it in him." According to census tabulations, the average American family income in 1947 was $3,000; 4,000,000 families received less than $1,000; and 6,000,000 between $1,000 and $2,000.

It is true, of course, that boys and girls fortunate enough to live near State or city colleges pay low tuition fees, if any, and can be supported at home. It is also true that many ambitious students still wait on table or tend furnaces as they have always done. But the struggle is far harder than in our own college years. A young girl who graduated in February from a New York City high school, so gifted that several of her poems have already been published, announced that she would have to go straight into business. And this was in a city with four tuition-free colleges.

Sometimes, by the accident of fortune, a talented youngster is salvaged in time. In April of 1948, Jesse P. Bogue, of the American Association of Junior Colleges, told a subcommittee of the Senate that he favored financial assistance to the schools. Calling also for a system of Federal scholarships, he related the story of a boy in a mountain district of the South. The lad had displayed striking mathematical ability, but had no money whatever for college. His neighbors, most of them equally poor, managed to finance his 2 years at the State junior college. Then he was drafted, Army aptitude tests confirmed his mental stature. He was assigned to the Massachusetts Institute of Technology for research on rockets and was excused from combat duty. Today he is a

civilian expert at a naval experimental station.

Educational circles appear in the main to be convinced that such fortunate cases are the exception, that increasing waste of our intellectual resources can be avoided only through Federal funds. The United States, they point out, spends only 1.5 percent of its national income on schools. In political circles a conviction is growing that democracy is in danger unless the schools are drastically improved. Senator LISTER HILL, of Alabama, remarking that the principle of States' rights was most zealously regarded by his constituents, nonetheless called for Federal grants and warned of disastrous penalties if educational neglect of millions continued.

"If we cannot achieve a fuller realization of democracy in the United States," warned the President's Commission on Higher Education, "we are not likely to secure its adoption willingly outside the United States."

The burden of educating the Nation's boys and girls will grow heavier in the years ahead, for the simple reason that there will be more of them. The 7,000,000 births anticipated for the years 1941 to 1946, inclusive, soared to 17,000,000. The Census Bureau estimates that an additional 10,000,000 children will be attending our elementary and high schools by 1959. Meanwhile, more than 350,000 teachers have left their posts since 1939, chiefly because of the low pay scales, and upwards of 1,000,000 new ones will be needed within 10 years to handle the rising flood of students.

The friends of Federal aid to education offer staggering columns of statistics to prove their case and, behind the figures, story after story of the vanishing American dream of proper schooling for all who are qualified. In Little Rock, Ark., the wealthiest school district in the State, one class of 30 children had five different teachers in a single year—to their resulting confusion and bewilderment. In the country as a whole, 2,000,000 boys and girls are being taught, if the word can be so used, by teachers who hold no certificate of any kind. Another 2,000,000 children of school age are enrolled nowhere—because the schools are so bad or because bus facilities are not available.

In World War II, 1,200,000 boys were rejected by Selective Service because of educational deficiencies.

The Nation's capital does not hear from grass roots America as often as it likes to imagine. Last year, however, during the investigation into Federal aid to education, it listened to a procession of witnesses from the foxholes of poverty. They were principally teachers.

One witness was Mrs. Flora Harriman, teacher and principal of a three-room school at Hampden, Maine.

She testified, "I am the only teacher of 30 boys and girls. Besides my teaching, I am responsible for part of the janitor work * * * Besides tending the furnace, I must see to the cleaning of our rooms, washing windows, care of our old-fashioned dry toilets, scrubbing the drinking fountain, displaying the flag and looking after the snow that works into the basement—all are mine to do. These extra jobs * * * rob the boys and girls of time that belongs to them."

Another witness was Miss Authelia Gumm, of Summersville, Ky. She said that her salary, one of the highest in the State, was $138.80 monthly for 8 months. For the past 5 years she had supplemented her earnings by making income-tax reports.

Miss Gumm said, "My school is housed in a brick building containing three classrooms. * * * The building is heated by wood stoves. If the weather is extremely cold, the fires must be started at 7 o'clock each morning. * * * The board of education allots only enough funds to buy six cords of wood per room. * * * If the supply runs out, the teacher or the community must supply the amount needed. This is a time which tries the teacher's soul.

"Most people think a teacher's day is from 8 to 3:30. As a matter of fact, my hours are from 7 to 4:30. I arrive an hour early to build fires. I remain an hour after school to clean the building and get it ready for the next day. Isn't it strange that I still love to teach?"

A third witness was Samuel R. Levering, an orchardist from Virginia, who said that he favored the general principle of Federal aid to education.

He went on, "Let me say this frankly: I am not proud of the school record of my own State of Virginia. We are fortieth in the relative effort we have made, relative to our income. * * * This is our situation in my home county. We have a school there which is supposed to have a principal, a high-school teacher * * * and three grade-school teachers. At this time and for this year we have no principal, no high-school teacher * * * [and] of the three grade-school teachers, only one has a certificate; the other two are qualified only to the extent of graduation from this poor rural school.

"The only way that some of us see to get decent education is to send our children away to private school or perhaps have them live in Washington with relatives and attend the Washington schools. * * * We would much prefer to build up the schools in our own locality, because it is not fair * * * for our neighbors to have no education for their children."

Then there was Mrs. Nannie Rucker, who said she was typical of many teachers in the Negro primary schools of Tennessee. Her own school, in Rutherford County, was in a share-crop area where most of the families had from 4 to 12 children. Many of them, said Mrs. Rucker, had never seen a post office or a train and had never been in a town. She regarded broadening their horizons as part of her duties. Her salary was $133 a month for 8 months, although an increase was pending.

Mrs. Rucker described the temptation to abandon her profession, "Many of my fellow teachers * * * have left to accept better-paying jobs elsewhere. I have been sorely tempted. Only recently I was offered a position as a maid for an elderly lady, which would have paid me considerably more than I now make. * * * I have remained in the teaching profession because I believe it is my calling. I enjoy working with children."

The facts appear to be beyond controversy. But why can't the schools be improved without sacrificing the American principle that basic education is the function of the village, the town, the city and, at last resort, the State? The answer lies in the inequities in the income, or wealth, of various sections of the Nation and in the drying up of State sources of taxation. Four years ago, Senator ROBERT A. TAFT, of Ohio, opposed Federal assistance. At this session of Congress, however, as in the Eightieth, he is sponsoring legislation which would provide $300,000,000 in aid, most of it to go to the poorer States.

"Today the States are exercising every power they can exercise," he has declared. "They have sales taxes, they have every form of tax they can think of. * * * A State has no access to the principal sources of taxation."

Some of the States would have to abandon highway, health, and many other services if they were to spend sufficient sums on their schools. Arkansas, as an example, devotes a slightly greater percentage of its income to education than does New York. Yet, New York expends an average of about $200 per year per child, while Arkansas can spend only $60. Another example: Mississippi apportions 3.41 percent of its income for education, with its schools far down on the list in quality. New York, with excellent schools, allocates only 2.61 percent of its annual income. The South, contrary to popular belief, has made more energetic attempts than the United States as a whole to divert increased tax funds to education. But enough money is simply not to be had.

The friends of Federal aid argue with persuasive evidence that education can no longer be regarded as a local problem. Some 8,000,000 Americans moved out of their home States during the war years. Dr. Conant pointed out during his testimony in the Senate hearings that we are a mobile people.

"The future citizens of many of our wealthy cities are now being educated in our poorer States," the head of Harvard observed. "In terms of self-interest of these relatively prosperous communities, money is well spent in the education of their future residents."

At one point in the hearings the scene shifted to Kentucky, to an area of the State where migrant workers pick strawberries and other crops. Hardly a third of the children had finished the first grade, investigation disclosed, although their ages ranged from 12 to 15. Many of these forlorn youngsters had received less schooling than their parents, a shocking reversal of the American boast that each new generation is better educated than the last.

Senator J. WILLIAM FULBRIGHT, of Arkansas, stated that "the people at home" simply could not comprehend, because of their limited education, such problems as the importance of assistance to Europe. They persisted, he said, in believing that everything we do is for charity. General understanding of the Marshall plan and of American foreign policies in general, said the Senator, is the only hope for the survival of western civilization. To me, that is an all-important consideration in support of this bill.

No measure providing for financial assistance to the schools can conceivably be passed by the Eighty-first Congress, or by any session of the discernible future, without ironclad stipulations that the funds are to be spent by the States without control or interference—except for auditing—by Washington. A bipartisan measure, which was introduced last year and was passed by the Senate, expressly forbade Federal dictation of any kind. So does an identical proposal, now under debate.

On the other hand, the States will not be permitted to reduce their own school allocations, nor will local communities. Details of the current bill are still subject to revision. But the final bill is certain to specify that a minimum percentage of the State's total income—that is to say, the annual income of all its citizens—must be spent for the schools. Nothing is said about segregated schools, in the South or in the District of Columbia. But the measure most likely to pass in this session provides that "a just and equable apportionment of funds" must be made where schools for minority races exist. So the bill will most certainly be a major forward step in the education of Negroes.

Fear of Federal interference with the Nation's schools has probably been exaggerated. Education is not mentioned in the Constitution, but Washington has been involved in educational matters from its earliest days. Public lands were ordered to be used for the support of schools. Other large areas provided endowments for land-grant colleges. More recently the Smith-Hughes Act assisted the States in setting up vocational-training programs. Uncle Sam has been spending hundreds of millions for the highly successful GI college program. All in all, the Bureau of the Budget has estimated, a total of $1,772,000,000 was spent in 1946–47 for post-high-school education. The Federal-aid bill now under discussion reverses, if it does anything, a trend toward a degree of control. The measure offers no inducement for agricultural or vocational training.

Several States have scholarship systems, and there is no evidence that they have been

tainted by politics. New York has for many years awarded scholarships to high-school graduates on a competitive basis, with no restriction on the institution to be attended, so long as it is located in New York. We asked the presidents of Cornell and Syracuse Universities, the chancelor of New York University, and the former acting president of Columbia University whether they had ever experienced any interference on the part of State authorities. All answered in the negative.

"I do not feel there need necessarily be any interference in connection with the extension of Federal aid to the colleges and universities," commented President Edmund E. Day, of Cornell. "The scholarship programs of New York State and of the National Youth Administration and the GI program have created no trouble so far as I know."

"New York University has had wide experience with Federal scholarships," stated Dr. Harry Woodburn Chase, of New York University, "and there has never been any interference, nor has there been any from Albany in the case of the New York scholarships."

"I have no concern at all about such a proposal," declared Dr. Frank D. Fackenthal, of Columbia. "I have never been aware of any interference in Albany."

No such unanimity greets the possibility that the bipartisan bill for Federal aid to the country's schools may be amended to include private schools. In Vermont a small percentage of the high schools are technically private but receive public support. The real issue, of course, is whether Federal funds can be paid to parochial schools. The Catholics who support these schools have a case. All the children of school age in the State, not merely the non-Catholics, are counted as one of the bases for determining the size of the Federal grant to a State. In some communities Federal and State funds are used for school lunches in parochial schools and also for bus services. Veterans are allowed to attend denominational institutions of higher learning. The use of Federal funds by the States to increase teaching salaries in private schools is almost certainly, however, in violation of the first amendment. In any event, interjection of the religious issue may endanger passage of the measure.

A much broader, if less immediate, issue is how far spending Federal money for local education will ultimately go. In the summer of 1946 President Truman appointed a group of prominent Americans to a Commission on Higher Education and requested that they consider "ways and means of expanding educational opportunities for all able young people" and, in general, examine the adequacy of higher education in the United States. Eighteen months later the Commission issued a series of voluminous reports which called for a greatly expanded Federal program. Enrollment in high schools and colleges had shown phenomenal growth since 1900, the Commission announced, "but we are forced to admit * * * that the educational attainments of the American people are still substantially below what is necessary either for effective individual living or for the welfare of our society."

"In 1947," the Commission continued, "the people of the country spent $1,000,000,000 for their colleges and universities, but this sum represented less than one-half of 1 percent of the value of the gross national product. And it did not provide equality of opportunity."

"For the great majority of our boys and girls," one section of the report declared, "the kind and amount of education they may hope to attain depends not on their own abilities but on the family or community into which they happened to be born or, worse still, on the color of their skin or the religion of their parents."

A major goal of American democracy, according to the Commission, is "equal educational opportunity for all persons, to the maximum of their individual abilities and without regard to economic status, race, creed, color, sex, national origin, or ancestry." But this, the Commission made clear, does not mean "equal or identical education for all individuals." The Commission's plan does mean, however, that in due course the Federal Government will be asked to foot a large part of the bill.

Probably the most important recommendation of the President's Commission is for the creation of Federal scholarships, to be awarded on the basis of merit and financial need. Because of the pressure of other business and the cost of such a scholarship program, action is not likely at this session of the Eighty-first Congress. But the proposal has already won wide support, including that of the immensely influential National Education Association. As in the case of aid to lower education, no kind of Federal control would be tolerated in connection with the scholarships. For an estimated cost of $100,000,000 for the first year, according to the NEA, college doors would be opened to between 200,000 and 250,000 students.

Funds now available at public and private colleges for scholarships and fellowships are woefully low. In 1946–47 slightly more than $21,000,000 was awarded to 113,000 students—an average award of $187. The President's Commission goes further than the NEA. It suggests an initial appropriation of $120,000,000 and assistance to about 300,000 boys and girls. Again, the States would administer the grants, with the number of scholarships assigned to each depending on the number of high-school graduates and on the proportion of 18- to 21-year-olds in the State. Winners of the awards would be allowed to attend any institution of higher learning, whether public or private.

How, in actual operation, will the plan work? Let us return to Eddie Burns, of the filling station. If the system of Federal scholarships had been in existence, he would have had a compelling incentive to finish high school. At some point in his senior year he would have consulted his principal about his possible chances. The principal would have had at hand application blanks from the scholarship board which the President's Commission suggests should be established in each State. Eddie would probably have had to prove that he had little chance of going to college without an award. And this question of need, as everybody admits, is a tricky one. The youngster with a number of brothers and sisters of college age is obviously more eligible for financial help than an only son or daughter, unless the family income is quite large. A father with three qualifying sons and an income of $6,000 has a greater burden than a parent with one child who makes only $4,000.

Such details, however, must be worked out by the State agencies recommended by the President's Commission. In any event Eddie Burns would be required to submit data on the grades he received in high school. His principal and teachers would send in letters commenting on his personal qualities and potentialities. He would take scholastic and aptitude tests. The award, in the words of the Commission's report, would depend upon the applicant's "ability, character, sense of responsibility, and such other factors as may be adjudged pertinent." If Eddie happened to live in a State where educational standards were below the national average, it is conceivable that less might be asked of him on the various tests than in the top-ranking States. In any case, however, his higher education would be assured if he was one of the fortunate recipients of a scholarship.

No discrimination as to race or creed will be tolerated in the proposed scholarship program. A ceiling of $800 will probably be placed on the grant for any one college year. But Eddie Burns can go on to graduate work at a higher stipend, if he is qualified, according to the Commission's plans. And he can enroll at the University of Illinois, Harvard, Yale, or any other institution at which he can meet the entrance requirements. If he likes, he can matriculate at Columbia and so be near Susie Smith, who certainly would not qualify for any Federal scholarship at all.

The merits of the proposed scholarships are perfectly obvious. It seems to us, however, that there is danger of wrecking all plans for Federal aid to education by asking for too much. The President's Commission believes, for example, that expenditures for higher education must reach $2,500,000,000 by 1960. And in addition to this, it proposes enormous sums for new buildings to take care of greatly expanded enrollments. The buildings and other equipment of American colleges were valued at about $4,000,000,000 in 1947. In 10 years, the Commission calculates, some $12,800,000,000 in physical plant will be required. The United States Office of Education submits an even more alarming figure. By next year, it has asserted, 265,000,000 additional square feet will be needed to provide accommodations for the expected students.

Even the most fervent advocates of equal opportunity for brains will also be likely to question the Commission's pronouncement that the Nation must plan immediately for a minimum college-and-university enrollment of 4,600,000 students by 1960—double the number of boys and girls in attendance in 1946–47. The Commission believes that there is no dearth of potential talent and it insists that there will be plenty of professional and semiprofessional jobs open in another decade to absorb the greatly increased number of college graduates.

On the consummation of this bright hope the experts differ sharply, however. The able minority will always get the jobs they want. But will there be openings enough for so very many holders of bachelor's degrees? The 1940 census indicated that barely 5 percent of all the jobs in our entire labor market attracted college men and women. The Veterans' Administration has already issued a warning that 50,000 engineers will receive degrees next year, with positions assured for barely 7,000 of them. Chemistry and the law are similarly overcrowded. So are executive posts. Even teaching, great as is the need, may not be able to accommodate all the young people who seek to enter that profession.

It is a safe bet that today most boys and girls go to college with the hope of improving themselves economically and with the conviction that they will land well-paying white-collar jobs along with their diplomas. The sincere, well-meaning proponents of higher education will do the young people of the country no real service if, in their zeal they exaggerate the numbers who should attend college. Frustration and unhappiness lie ahead for some college students if they are misled into searching for goals which do not exist.

The President's Commission is aware of this problem, but its answer probably will not satisfy the more realistic voters. The danger, it has declared, is not that individuals may have too much education, but that they may obtain the wrong kind. Education should not be limited to an intellectual elite. Nor should it be denied those who do not look toward professional careers. The goal, as the Commission defines it, is "education for a fuller realization of democracy in every phase of living."

The fact remains that in all probability there will not be jobs for all the college graduates and that there will be cruel disappointments. The college man who has to drive a laundry truck for a living may take a dim view of his education "for a fuller realization of democracy."

Future of the Republican Party

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES

Monday, April 18 (legislative day of Monday, April 11), 1949

Mr. WILEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the text of an article which I prepared and which has been published in the March-April issue of the Northwest Republican, issued in Minneapolis, Minn. The subject of the article is the Future of the Republican Party.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

What's right and what's wrong with the Republican Party? Everybody seems to have their own idea as to what is wrong with the Republican Party. Obviously, the basic thing that is wrong with us is that we have been licked four successive times in presidential elections and that we lost control of the Congress after but a single session of control.

Any party, however, that can win the loyal support of 22,000,000 voters, that can elect 42 United States Senators and 171 Representatives, any party that can fight as hard as the GOP is fighting against the pell-mell rush to state socialism, any party that achieves a constructive program as we did in the Eightieth Congress—any party like that—can't possibly be as bad as all the critics say we are.

But there is no blinking at the fact that we have not produced a program to win the support of the overwhelming mass of our people, and we have got to get busy in doing so.

What do we need, therefore? Briefly, I humbly think these points:

1. A constructive, conservative forward-looking specific program of national legislation based upon the legitimate needs of all segments of American society—labor, management, agriculture, old folks, young folks, men and women, veterans, and others.

2. Less me-too-itis, less trying to mimic the Fair Deal program of radical, alien-minded suggestions.

3. On the other hand, less practice of being "agin" everything simply because it is recommended by the other fellow; but rather a careful sifting out of those items on which bipartisan support would be a farce and a fraud from those items on which we can unite with the Democrats.

4. Healthy, constructive criticism within the party, but insofar as possible, unity in our ranks in our relation to the administration.

5. More grass roots, doorbell ringing and less hot air in a few sterile meetings in which we convert only ourselves and other folks who are already Republicans.

6. A vigorous, continuous public-relations program to sell our constructive Republican policy to the American people.

7. More free debate, more real constructive grass roots sessions within our party, evaluating the Republican program, rather than allowing simply a few leaders to try to tell the party what it should or should not do.

8. More teamwork, less backbiting, sniping, and movie-star theatrics by a few Republican leaders who are more interested in their own personal fortunes than in the welfare of the party.

These are but a few suggestions. What do you think, fellow Republicans?

A Moratorium for the Basing-Point System

EXTENSION OF REMARKS
OF
HON. GEORGE G. SADOWSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 13, 1949

Mr. SADOWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following article by W. K. Kelsey that appeared in the Detroit News of April 5, 1949:

THE COMMENTATOR
(By W. K. Kelsey)

A MORATORIUM FOR THE BASING-POINT SYSTEM

Last week a subcommittee of the Senate Judiciary Committee finished hearings on a bill introduced by Senator MYERS, of Pennsylvania, which calls for a 2-year moratorium on the enforcement of the basing-point system of price quotations.

The Justice Department has informed the committee that it has no objections to the Myers bill. However, three of the four members of the Federal Trade Commission are opposed to the moratorium. It is only a few weeks less than a year since the Supreme Court upheld the FTC in a long-fought, hard-fought case against the basing-point system in the cement industry.

The reason and excuse for the Myers bill is to give Congress time to consider legislation which would legalize the basing-point system where there is no price conspiracy. In other words, industries employing the basing-point system, found illegal by the Supreme Court, could continue to operate under it for 2 years without coming to grips with the Federal Trade Commission or with the courts. Meanwhile these industries would bring pressure on Congress to make the basing-point system lawful.

The basing-point system is this: One or many basing points are recognized by the industry, at which the delivered price of its product is fixed at the same price to the purchaser, no matter how far he may be from the mill.

That is to say, if the mill were at Adrian, the price quoted to the Detroit purchaser and the price quoted to the Cheboygan purchaser would be exactly the same, though Detroit is much nearer the mill than Cheboygan.

In other words, the producer absorbs the freight rate, whatever it may be. Actually, the nearby customer helps pay the freight to the distant customer.

FOUND ILLEGAL BY THE SUPREME COURT

The Supreme Court's decision was six to one, Justice Burton dissenting, and Justices Douglas and Jackson taking no part. The majority was impressed by the findings of the FTC on the evidence:

"When the Commission rendered its decision there were about 80 cement manufacturing companies in the United States operating about 150 mills. Ten companies controlled more than half the mills and there were substantial corporate affiliations among many of the others. This concentration of productive capacity made concerted action far less difficult than it otherwise would have been. * * * The use of the multiple basing-point delivered price system by the cement producers has been coincident with a situation whereby for many years, with rare exception, cement has been offered for sale in every given locality at identical prices and terms by all producers. Thousands of secret sealed bids have been received by public agencies which corresponded in prices down to a fractional part of a penny."

One of the exhibits quoted contained the bids for cement to be delivered to the Government at Tucumcari, N. Mex. There were 11 bidders, and each bid the same price per barrel—$3.286854.

The Court also quoted an instance in which, during the depression, a cement producer went out of line to get business. So the others ganged up on him, making his plant an involuntary base point, and cutting their prices to meet his. He fought. Gradually the base price fell from $1.45 a barrel to 75 cents, an unprofitable figure for the culprit. So he gave up and promised to be good. Cement in that locality then bounced back to $1.15, later to $1.35, and finally to $1.75.

Small business, which is fighting the Myers bill and will continue to fight against the basing-point system, asks: "Where's the competition under that system? Where's the American system of free enterprise? Why shouldn't a purchaser at the very door of a plant be able to buy the product more cheaply than one hundreds of miles away? That would promote decentralization and real competition between producers."

THE QUESTION OF MONOPOLY

On the other hand, Senator JOHNSON of Colorado, author of another of several bills introduced to legalize the basing-point system, told the Senate subcommittee that since, in accord with the Supreme Court's decision, the cement industry has quoted prices f. o. b. mill, they have gone up nearly 30 percent. To whom? To the nearby purchaser? If so, an explanation should be given.

Senator JOHNSON added that the decision has encouraged monopoly, because buyers now have no choice but to purchase at the nearby plant. In the old days before the founding of the Cement Institute, this would have meant one of two things, if buyers thought they were being held up by the local company. They would have shopped around among plants a little farther away, to see if one or more of them would not undercut the local boy to steal some of his business. Or some bright chap, seeing the possibility of profit, would have built another mill. In either case there would have been competition, not monopoly.

But if the basing-point system is made legal "where there is no price conspiracy"—and such conspiracy is hard to prove, since it is conducted secretly and often by tacit understanding, as when one company raises or lowers its price and the rest follow automatically—competition will go out the window and monopoly will be stronger than ever. That is why small business fights the Myers bill. It wants to continue in operation without becoming a mere agent for a trust.

Federal Income Tax Laws—United States Tax Court

EXTENSION OF REMARKS
OF
HON. JAMES C. DAVIS
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 14, 1949

Mr. DAVIS of Georgia. Mr. Speaker, at its regular monthly meeting on April 8, 1949, the Lawyers Club of Atlanta adopted a resolution in behalf of House bill H. R. 3113, and a resolution in behalf of House bill H. R. 3224. Hon. E. Smythe

Gambrell, president of the club, forwarded these resolutions to me, and under leave previously granted, I insert these resolutions herewith:

Whereas the Federal income-tax laws have discriminated in many respects against earned income; and

Whereas employees and officers of corporations may have the tax benefits of a qualified pension plan, which plan, however, is not available to professional men and other wage earners; and

Whereas there has been introduced in the Eighty-first Congress H. R. 3224 to allow a deduction up to $10,000 but no more than 15 percent of a taxpayer's earned income if he invests such sum in special non-assignable United States Government bonds. When the bonds are redeemed they would be income in such later year redemption, thus allowing individual wage earners and professional people to establish a pension plan for themselves: Now, therefore, be it

Resolved, upon recommendation of the executive committee and upon vote of the members of the Lawyers Club of America, Inc., That the club does hereby approve H. R. 3224; be it further

Resolved, That the president of the club is hereby directed to forward to all Georgia Senators and Representatives a copy of this resolution.

Whereas there is now pending in the Eighty-first Congress a bill, H. R. 3113, which would change the United States Tax Court from an independent executive agency to a statutory court of record; and

Whereas it is in the public interest that the United States Tax Court should be a statutory court of record not unlike the other Federal courts: Therefore, be it

Resolved, That the Lawyers Club of Atlanta, Inc., upon the recommendation of its executive committee and upon vote by the members of the club, does hereby approve changing the United States Tax Court from independent executive agency to a statutory court of record; be it further

Resolved, That the president of the club be directed to write each of the Members of the House of Representatives and Members of the Senate from Georgia enclosing a copy of this resolution and urging that the Georgia Congressmen support H. R. 3113.

Money Spent by the United States for Foreign Aid Since World War I

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES

Monday, April 18 (legislative day of Monday, April 11), 1949

Mr. BRIDGES. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an article by John O'Donnell showing the amount of money spent by the country for foreign aid since World War I.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CAPITOL STUFF

(By John O'Donnell)

If any of you Americans happen to be interested in how much you've been tapped on your personal United States bank roll to save foreigners since Woodrow Wilson decided we should make the world safe for democracy and Franklin Roosevelt ordered that we should impose the four freedoms everywhere in our time, we commend attention to an official bank statement.

We got the bad news just as Mr. Harry Burke of the United States Senate secretariat was getting into a taxi on Capitol Hill, all hell-bent for the White House where President Truman was waiting to put his signature on the $5,500,000,000 grab on the Treasury to carry on the Marshall plan until June 30, 1950.

The bad news is that every citizen of the United States of America, and this includes infants, jailed criminals, the insane and the senile and the incurable invalids are being slugged $650 a head of United States cash to help out foreigners.

The Government figured that the average United States family consists of five—father, mother, and three children. This means that the average head of a United States family kicks in $3,200 to carry out the overseas policies of Wilson and F. D. R.

For the up-to-date statistics on our operations as world-savers we are indebted to Representative JAMES E. VAN ZANDT, a Pennsylvania Republican, who incidentally fought in both World Wars and three times was commander in chief of the Veterans of Foreign Wars.

The statistics produced by VAN ZANDT to let the American taxpayer get an honest accounting were assembled by the House of Representatives official information staff. They show that the present over-all cost of our foreign-aid program is $92,169,478,135.

And if this cost of $650 a head is peanuts in these inflated days, remember that even in 1948 the cost of running this Government was only forty billions, or $268 per capita. And in balmier, more tranquil days—like 1915, the cost of running the Federal establishment before we got snarled with blood in Woodrow Wilsons's foreign entanglements, was only $7.56 per each citizen.

Of that ninety-two billions in hand-outs, about seventy billions has been outright grants—gifts is the proper word. The other twenty-two billions gets the prettier classification of loans. That listing is of course silly, for of that twenty-two billions more than fifteen billions is the money (on paper) still due us on unpaid balances of World War No. 1 loans.

Lend-lease $50,205,229,787; Marshall plan (through June 1950) $9,254,000,000; relief in occupied areas, displaced persons, etc., $4,251,000,000; Treasury loan to Britain (1947–48) $3,750,000,000; UNRRA $2,700,000,000 and Greek, Turkish, China aid $1,127,000,000.

Who got the bulk of this United States largesse? Well $44,679,000,000 went to save the British economy for socialism and $12,793,000,000 went to the Soviet Union.

Here are the official figures provided for our congressional guidance. Read them and, we suggest, weep:

Tables I and II follow:

TABLE I.—*A recapitulation of United States loans and grants to foreign nations (April 1949)*

Unpaid balances due on World War I loans (January 1948)	$15,460,248,348
Lend-lease (through March 31, 1948)	50,205,229,787
Marshall plan (through June 1950)	9,254,000,000
Army relief in occupied areas (through June 1950)	[1] 3,774,000,000
Treasury loan to Britain (1947 and 1948)	3,750,000,000
UNRRA (through March 1947)	$2,700,000,000
Export-Import Bank loans (through June 1950)	2,007,000,000
Treasury subscription to international bank and reconstruction fund (1946 and 1947)	1,585,000,000
Surplus war goods (liquidation agreements)	[2] 1,148,000,000
Philippine aid and war damages (through June 1950)	682,000,000
Greek-Turkish aid act (through June 1950)	607,000,000
China aid act (through June 1950)	520,000,000
Displaced persons, International Refugee Organization, contributions to United Nations, Palestine refugees, and other assistance programs (through June 1950)	477,000,000
Total	92,169,478,135

[1] This figure does not include any part of our direct occupation costs, only the civilian relief extended through the military services.

[2] In addition, the armed services disposed of some $6,434,000,000 of surplus goods and stores overseas, for which no liquidation agreements have yet been reported. In most cases these goods were furnished directly into foreign-relief and reconstruction channels; but in other cases, liquidation agreements still are in process of negotiation.

TABLE II.—*Total distribution of United States loans, grants, and aids overseas, including unpaid balances on World War I loans (includes all Marshall plan estimates for fiscal 1950, but does not include any funds for rearmament under North Atlantic Pact)*

1. Austria	$885,118,000
2. Armenia	39,942,000
3. Belgium and Luxemburg	1,744,000,000
4. British Empire	44,679,000,000
5. China	3,446,000,000
6. Czechoslovakia	17,348,000
7. Denmark	234,792,000
8. Egypt	59,700,000
9. Estonia	25,903,079
10. Ethiopia	16,447,000
11. France and possessions	3,371,000,000
12. Finland	24,600,056
13. Germany (Bizonia)	3,260,000,000
14. Greece	681,000,000
15. Hungary	64,000,000
16. Iceland	20,900,000
17. Israel	63,009,000
18. Italy	4,700,000,000
19. Iran	23,100,000
20. Iraq	7,805,000
21. Ireland	142,703,000
22. Japan	1,891,000,000
23. Korea	89,469,000
24. Latvia	10,713,000
25. Liberia	14,829,000
26. Lithuania	9,603,059
27. Netherlands and possessions	979,000,000
28. Norway	345,000,000
29. Philippine Islands	708,000,000
30. Poland	373,600,000
31. Portugal	11,647,000
32. Rumania	79,435,000
33. Russia	12,793,400,000
34. Saudia Arabia	46,200,000
35. Sweden	104,100,000
36. Trieste	35,200,000
37. Turkey	305,400,000
38. Yugoslavia	117,200,000
39. American Republics (13)	1,651,392,000

Peace and War

EXTENSION OF REMARKS
OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, April 19 (legislative day of Monday, April 11), 1949

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address on the subject of peace and war, delivered by Hon. William O. Douglas, Associate Justice of the Supreme Court of the United States, at a dinner forum under the auspices of the Nation Associates, in New York City on April 7, 1949.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Peace is more than an absence of war. Peace is a method of solving problems by amicable means. Peace is the substitution of law for force, the use of conciliation and adjudication in lieu of armed conflict.

When the problems within a nation simmer and boil and go uncared for, revolution follows. That was the course we took in the birth of this Nation. And so it will be throughout time.

Government is the most advanced form of social cooperation. Where there is a government that is responsive to the needs of the people, there is peace. If the government of a nation is not responsive, there may be law and order and the outward appearance of peace. But the inner tensions feed the forces of revolt.

As between sovereign states war has always been an instrument of policy. It will remain such in spite of increasing horrors until a system of law can take its place. In other words, it will remain such until a form of government is fashioned on a world scale to handle the quarrels and disputes of peoples and nations. Until such a system of law is provided, no nation would hazard the sacrifice of its right to wage war. A proposal to abolish war without more ado is to proclaim that there is nothing worth fighting for. But there always will be something for which men will give their lives so long as freedom is insecure. And freedom will always be insecure where there is no machinery of government to administer justice and effectuate peaceful settlement of disputes and to allow for bloodless change. In other words, law is the only known substitute for war.

But even though there is today no system of world law that can be substituted for force, we need not sit supinely by and accept war as inevitable. There are instruments at hand that can go far to eliminate the conditions under which conflicts and tensions develop between peoples of the world.

The world is on the edge of great change. On all continents a spirit of unrest stirs the people and makes rulers uneasy. It is a protest against illiteracy, disease, poverty, and misgovernment. It sweeps the world, proclaiming against injustice and feeding on discontent.

That spirit of unrest has received great impetus from the democratic countries, particularly from the United States. We, the democrats, have not been purposeful instigators or promoters of the movement. We have not had agents abroad fomenting discord and revolt. But the influence we have exerted has had that effect in two respects.

1. The ideals of liberty and brotherhood which democratic people espouse are contagious. The people of the world have been aroused by them. They have whetted the appetitie for freedom the world over.

2. Through our mastery of the machine and the free-enterprise system, we in the United States have produced a great abundance of material goods. We represent the land of plenty where poverty can be abolished and where the lowliest of men can have the comforts of life. Other people, too, want an economy of abundance.

We represent, in other words, a system where the common man can live in relative freedom and receive a fair share of the bounty of the earth.

And so we exert a powerful force in the world. We are agents of change, though perhaps unwitting ones.

But while we have given impetus and drive to the forces of unrest in the world, the Soviets have capitalized on them and sought to turn them into a revolution along class lines. They have activated those forces with an ideology and with propaganda; they have employed a vast network of agents to promote revolution.

Lasting peace requires that the democracies regain the initiative. Under democratic influences the world-wide spirit of unrest can be the means of building cooperative habits of peaceful collaboration. War in this atomic age will never become an instrument of aggression under truly democratic regimes. It will become such only under the domination and direction of totalitarian management.

If the democratic forces are to direct the unrest of the world into peaceful and constructive channels, a positive program is needed. That program must operate at two levels—it must supply the ideology for the movement and implement it with popular understanding and organization; it must fashion concrete and specific measures to deal with the social injustices on which the forces of revolt thrive.

First. An example of the first of these—the ideology—is illustrated by the adoption of the Universal Declaration of Human Rights by the General Assembly of the United Nations. The Assembly represents all tongues and all races. It is, indeed, the people of the world expressing their hopes and desires. It serves as a meeting ground where the representatives of all nations and races can develop sympathy and understanding of common problems and establish cooperative habits of work.

The declaration marks the revolt of man against his loss of freedom to the totalitarian god of authority. It is a universal bill of rights. It recognizes that there are limits beyond which a state may not go in regulating the conduct of individuals. It seeks to preserve for man his dignity, his privacy, and his conscience. It proclaims his right to religious liberty and to free speech and expression, his right to vote, his right to work and to free choice of employment, his right to education, to fair trials, and to equal justice under the law. It is a twentieth-century declaration of independence for peoples of all nations. It reflects democratic, not totalitarian, values.

The principles endorsed by the declaration have, of course, no legal sanction, for there is no instrument of government to enforce them. The manner in which these rights will be implemented in the various nations that approved the declaration will vary. They will have greater vitality in some than in others. But the declaration has great value, though there is no law to enforce it. It supplies a program behind which the democratic influence can be mustered the world around. It can help give a rich spiritual content to the forces of change that sweeps the world. It crystallizes the ideals of justice in democratic terms.

The struggle for justice is a never-ending business. There will be a struggle to attain it as long as men lust for power. It is the power of a few men over many which is the source of injustice. It may be landlords or cartels or banks on the one hand, or a political clique or a political party or a ruling class on the other. The eternal struggle of man for justice is the fight to keep any one group, whether in government or out of government, from being too powerful. It is the struggle to keep political and economic power diffused among many groups and to prevent its concentration in the hands of a single clique.

The ability of a people to attain justice for themselves is dependent on their capacity for self-help. A benevolent totalitarianism, if such a thing can be imagined, may proclaim that justice can be superimposed from above. But the history of the world shows that power is a heady thing and that if it is to be exercised with tolerance and understanding, it must be constantly reclaimed by the people and granted anew to different hands.

These are some of the ideas to which the declaration gives great impetus. The principles of the declaration reflect democratic values and can give democratic direction to the change which the world faces.

We in the United States have work to do at home in order to make these principles vital components of our community life. The fact that we are progressively narrowing the areas of injustice makes us alert to the problems of others. Thus the United States has a special responsibility to promote these principles among the international community.

Second. But if the democratic nations are to take from the Soviets control of the direction of the forces of unrest, more is needed. General principles must be furnished with specific programs of political action. Ideas of justice and freedom must be at work in the daily lives of men if they are to be meaningful.

We must therefore encourage and promote measures that will relieve the tensions and conflicts which result in unbalance and upheaval. We must translate principles of freedom and justice into specific and concrete ideas—into ideas as definite as bread and land.

Gandhi said, "It is the fundamental law of nature, without exception, that nature produces enough for our wants from day to day; and if only everybody took enough for himself and nothing more there would be no pauperism in this world; there would be no man dying of starvation."

That idea will not be denied. It presses for acceptance in every continent. It underlies the seething unrest throughout the world.

That problem carries back to the land—to a fair distribution of its bounty, to nurturing and conserving the earth against the forces that destroy its fertility.

Top soil is the main source of the world's food supply. It is only in top soil that the green leaf flourishes—the leaf that transforms energy from the sun through the magic of chlorophyl. The world's top soil is becoming precariously thin, as the experts have shown. The world's food supply is dangerously low. We live on a narrow margin of safety if the people of the world are to be put on an adequate diet.

The loss of top soil has been tragic. Overgrazing and unscientific methods of farming have deprived great segments of the earth of its fertility. That has been going on apace with the increase of the world's population. In Israel 3 feet of top soil were through the years washed into the Mediterranean. As Lowdermilk shows, it took all the miracles of science to reclaim that desert and transform it into a garden. It has been done and Israel

flourishes. But it took a high order of intelligence and organization, as well as large investments, to accomplish it.

It will take the same degree of intelligence and forward planning to salvage other deserts of the world and to prevent the further depletion of the rich valleys and hillsides of the earth.

The world's problem of poverty and hunger also goes back to things other than land—to wages, housing, exploitation of natural resources, and all the many factors that bear on the standard of living of a people. This means at times vast hydroelectric, irrigation, and reclamation projects. It means industrialization, new methods of farming, and the use of science and technology to exploit the raw materials of a nation.

Some of these undertakings require outside capital; many more require the import of technicians and entail supervision and direction at the professional level. They are all part of what the President has called "a bold new program for making the benefits of our scientific advances and industrial progress available for the improvement and growth of underdeveloped areas."

As we give our aid in these programs of reconstruction and rehabilitation let's make certain that they promote democratic solutions of the problems. We can negotiate bankers' terms for loans that will put the projects on a sound business basis. We can also negotiate terms that will put these undertakings on a sound democratic basis so far as human rights are concerned. We can take steps to have the dollars or technical skills that we offer directed against the forces of poverty, illiteracy, disease, and misgovernment. The new industrialization or reclamation project must be utilized for the benefit of the multitude, not merely for a few at the top. If land reform is involved, others may be persuaded to take a leaf from our own book of experience in the homesteading of public lands or in the 40-acre law and to insist that the holdings of any one person be restricted. We can back local democratic groups by requiring that some profits from new industrial projects be reinvested in the land where they were made for education, housing, and the like. We can take measures to avoid the creation of new misery through growth of sweatshops. We can tie soil conservation and reforestation to reclamation and hydroelectric projects.

We can, with foresight and shrewdness, do much to make sure that our dollars work in the democratic cause the world over. We can do much to make sure that the terms which we exact for our commitments protect human rights as well as our investment.

If we neglect these things, we let the Soviets retain the initiative in marshaling and directing the forces of unrest loose in the world.

Ideas are even more important than dollars in this undertaking. It is the weight of our prestige and influence that is significant. If we throw it on the side of human rights the world over, the tide will turn and we will salvage even the wastelands of the world for the democratic cause. If we throw it on the side of reaction and vested interests, the democratic cause will lose as steadily in all areas as it has in China since the war.

As a result of Soviet tactics, the democratic forces of the world have been drawn more closely together in days of peace than ever before. The challenge we face is to use this new solidarity to give direction to the unrest at work in the world. If those forces can be guided into democratic channels, the prospects of collaboration among the peoples of the earth in the works of peace will become immeasurably brighter.

Salute to Burma

EXTENSION OF REMARKS

OF

HON. ELBERT D. THOMAS

OF UTAH

IN THE SENATE OF THE UNITED STATES

Tuesday, April 19 (legislative day of Monday, April 11), 1949

Mr. THOMAS of Utah. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD a salute to Burma, which I made in commemoration of her first anniversary of independence, April 16, 1949. This salute was broadcast to the Burmese people through our State Department.

There being no objection, the matter referred to was ordered to be printed in the RECORD, as follows:

SALUTE TO BURMA

In this world of great thrills and unexpected happenings on such a grand scale, sometimes we fail to note very important events. When I saw the first delegation from the new state of Burma come to the International Labor Organization Conference in San Francisco last summer I realized that I was seeing what I have often thought the French people saw when they noticed for the first time our Benjamin Franklin and our Thomas Jefferson.

The birth of a new nation means much to the people of the world, as much as to the people of that nation. Burma's growth and her past history both teach us that an independent Burma can and will take her proper place in the sisterhood of nations. She has much to contribute and also much to learn. What nation has not?

My hope for the great cosmopolitan world is that each nation will retain those things which have made it great, but also be in a position to receive from other nations those things which have made them great. The different cultures of the earth should be preserved. A unified spirit should be sought.

I congratulate Burma on her first anniversary (April 16, 1949). I believe that she and her people will preserve their own culture and lend to the nations of the world what in it is good, and that she and her people, in turn, will take the good things which the other peoples of the world have to offer.

The Need for More Electric Power

EXTENSION OF REMARKS

OF

HON. GEORGE D. AIKEN

OF VERMONT

IN THE SENATE OF THE UNITED STATES

Tuesday, April 19 (legislative day of Monday, April 11), 1949

Mr. AIKEN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address entitled "We Need More Electric Power," delivered by Assistant Secretary of the Interior C. Girard Davidson, before the Economic Action Conference, at Washington, D. C., on April 11, 1949.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

WE NEED MORE ELECTRIC POWER

Now that the one-cent sales have returned to the supermarket, I am reminded of another standard advertising practice of an earlier day which we haven't seen for a long time.

I am thinking of those electric utilities company ads urging us to banish drudgery from our lives for all time. What happened to those posters promising the completely electrified kitchen and the fully electrified farm? Where are those four-color oil reproductions depicting the new life of leisure in which men and women are freed for fun and cultural pursuits while machines and appliances—running on electric power—milk the cows and prepare the evening meals? I also miss the chamber of commerce and State Development Commission ads wooing new industries with promises of plenty of cheap power.

The fact that these billboards have disappeared and have not yet returned should be proof enough that we have a power shortage. Obviously no utility company is encouraging anyone to use more power. They don't have the power to offer to new customers and for new uses. They don't have even enough to supply their present customers.

Of course, we are hearing some part of this story from the electric appliance people. Their washing machines, refrigerators, toasters, and ranges aren't selling too well at present prices. But they can't aspire to the strident pitch of the old days. Because of the power shortages, too many people in too many sections of the country are being asked to cut down on use of these appliances.

I want it understood that I am not belittling these ads painting a rosy future for America. I believe in them and sincerely regret their passing. They represent a faith in America and in America's capacity to grow. It would be a dangerous thing if these ads did not come back. They are one of the signposts of a prosperous economy.

Prosperity is not something that can be achieved and then nailed down and kept without further effort. A prosperous economy has to keep moving forward or else it goes into a tailspin. There is a parallel with the airplane which is a useless collection of nuts and bolts standing still on the ground. When moving forward in the air, however, it comes into its own and serves a useful function. To stay up it has to keep going forward. If it doesn't move, it sinks—and it can't move backward.

To keep our prosperity in flight, we have to keep moving forward toward the rosy future that used to be suggested in the utilities ads. Today's level of production won't provide sufficient goods for the increased population next year and next decade. There will be more people needing goods and each person will use more goods as his standard of living advances. What was good enough for grandpa is not good enough for us. Nor will our grandchildren be satisfied with what we accept today.

There are some materials we call basic commodities because each of them is indispensable to the manufacture of thousands of other commodities. Steel is a good example, and so also are aluminum, oil, coal, and electric power among others. If we are short of these basic commodities, industries which use them cannot operate at capacity, cannot employ as many workers as they might. These workers without pay checks can't buy as much as they would like. Retailers can't sell as much, so they cut down their orders to manufacturers. Manufacturers of cloth-

ing, shoes, household furnishings, and other consumer goods cut down production and throw more workers out of jobs. This is the spiral path leading to depression. A shortage of steel or coal or oil or electric power can force us onto that downward path.

That is why electric power in adequate quantities and at reasonable rates is one of the main requisites for maintaining true prosperity. In determining what are adequate quantities of electric power these utilities ads can help us. They portray the kind of life Americans want. They represent a dream which unfortunately can't be translated into kilowatts this decade or the next. But that dream should be in our minds as an ultimate aim while we are setting the realistic goals for the next few years.

It is on that basis that I want to start this examination of how much more electric power we need. Certainly we can't measure our real needs merely by the unmet demands of this year, large as they are.

Today we are using an average of about 1,500 kilowatt-hours of electricity annually in those houses and farms over the Nation which have electricity. Some don't, you know. And don't forget that many millions of people have to be using a lot less than 1,500 kilowatt-hours to make that a national average. In some areas we are using as little as a few hundred kilowatt-hours. In others, such as around Tacoma, Seattle, and Chattanooga where cheap power prevails, we are using between four and five thousand kilowatt-hours. The States using little power are far from realizing the dream of life without drudgery. Even the areas with the highest average power consumption have a long way to go in making the fullest use of electricity. House heating by electricity is known there but not widely practiced. The same is true of hot-water heaters. So, bringing the national average consumption up to the Tacoma rate is a realistic goal.

About 30 percent of our farms and a goodly number of homes still have no electricity at all. There the oil lamp and the kerosene stove, the hand pump and the spring house for perishables still survive. Certainly bringing electricity at last to such places is a realistic goal.

Industrial requirements provide another yardstick. Even including the great depression of the thirties, production in this country has increased on the average of 2½ percent a year for the last 30 years. At the same time production and consumption of electric power has doubled every 10 years. If we are to maintain full employment for our expanding population we shall have to maintain an even higher rate of growth. This means an increase of perhaps one-third in total production in the next decade. If we are to turn out a third more goods in 1960, we must again double our power capacity by that date.

Certainly we don't want a recurrence of the present situation in which many industries cannot meet their full quotas of production simply because power is not available. You are all familiar with the plight of the aluminum industry which had to cut its production 1,000,000,000 pounds or almost 50 percent because the plants couldn't get economical electric power. You are also aware that there is a critical shortage of aluminum and that aluminum producers now want to expand their production by upward of a billion pounds a year—but they can't get an adequate supply of economical power. Unless Congressmen are planning to legislate a substitute for aluminum in planes, their 70-group or even 58-group air force won't get far without greater aluminum production.

To translate these domestic and industrial requirements into real economic demand for power is going to require lower rates than we now have. As long as we pay 3 to 5 cents a kilowatt-hour for electricity in our houses, we are going to have to think twice before using more of it. However, when all of us can have an average residential electricity rate of around 1½ cents a kilowatt-hour, as people in Tacoma, Wash., and in the Tennessee Valley and elsewhere now have, then we can afford to buy electric appliances which will point the way toward a higher standard of living and elimination of drudgery. Until 1947 increased consumption of electricity resulted in a steady lowering of power rates. Since then, however, rates have risen. This is a trend we must reverse so that people can afford electric brooders and milkers, deep-freeze units and mixers, and so that industries will continue to expand in cheap power areas.

For a good example of how lower rates increase consumption look at the area served by the TVA where people are using almost 80 percent more electricity than the national average. They are paying less money for this larger amount than the Nation elsewhere has to pay for less power. In the TVA region the average residential electric bill is $41 a year for almost 2,700 kilowatt-hours; in the Nation as a whole householders have to pay $46 for only 1,500 kilowatt-hours. In Chattanooga, Tenn., a small business enterprise—say, a large laundry—which uses 100,000 kilowatt-hours of electricity a month, will pay a monthly electric bill of $1,010. In New Haven, Conn., the same bill would come to more than twice as much, or $2,113.

Another measurement of power requirements is the reserves of generating capacity. The power industry has generally considered 15 percent of the total generating capacity as the minimum adequate reserve. Even during World War II class I utility systems maintained 18 to 19 percent reserve capacity. Over the Nation today the reserve generating capacity has shrunk to less than 5 percent. The amount of generating capacity needed to more than triple our present reserve position must also be considered in estimating our requirements.

In assessing requirements we must always keep in mind the needs for national security. War consumes unbelievable amounts of power. If we hadn't had available the millions of kilowatts of capacity at TVA's projects, Grand Coulee and Bonneville—which up to that time had been characterized by some as white elephants—there is no telling where we would have found the electricity to make possible much of our aluminum, shipbuilding, and atomic-energy production. Today we have no such leeway. If suddenly, for security reasons, we should need large blocks of electric power, we could obtain it only by reducing the supply to thousands of homes, farms, and factories. In America that just won't work. Americans are already well into the electric age; it is too late to turn off the power now.

These are some of the measurements for totaling up our requirements for additional electric power. Let me repeat them:

1. Electric service available to every home and farm and each consumer using enough electricity to eliminate much of the toil in our daily lives.

2. Sufficient electricity to enable industries to maintain that rising level of production which guarantees to all of us full employment and a higher standard of living.

3. Consistently lower rates to make possible the purchase of large blocks of electric power for these uses.

4. Safe margin of reserve capacity—at least 15 percent.

5. An additional margin of capacity available if needed for security reasons.

All these requirements must be added to the amount of power being produced today to estimate how much power we will need in the next 10 or 20 years.

It is obvious that we cannot measure our power needs by shortages alone, intense as they have been for the last two winters. These shortages are only a measure of how seriously behind we are in meeting our power requirements. But the amount of shortage is an inadequate measurement of how much more power we need.

Let me take a moment, however, to remind you of the magnitude of last winter's shortages so that you will be aware of how far behind we are.

Let us take the situation in the Pacific Northwest as an example because there is a region where the use of electric power is so widespread that a shortage has particularly severe repercussions. If the public had not been urged to cut its consumption of electricity during late afternoon hours last winter, there is no question but what the overloaded power network covering four States would have broken down completely. This appeal for voluntary restriction was made only after the utilities had already discouraged new customers, had refused to sell power for house heating, had forced lumber mills and other industries to curtail output, and had cut the supply of power to aluminum plants by more than 10 percent.

Bonneville Power Administration, the public agency which distributes all power from federally constructed dams in the region, had to turn down inquiries from over 20 companies who required about half a million kilowatts of power. These companies, if able to expand as they wished, would have employed about 3,000 workers directly and their operations would have resulted in employment of another 3,000 indirectly. Inasmuch as unemployment in the area is running about three times the national average, the loss of these job opportunities was a serious blow to the regional economy.

Temporarily the crisis in the Pacific Northwest has passed. But it will return again this winter and every winter through 1953 at least. Dams and power plants under construction and proposed won't be ready to produce until that date. Here's a measure of how long it takes to build a hydroplant. Let's remember that lesson and start building now for the years ahead.

In up-State New York the largest electric utility was forced to reduce power to all major users by 15 percent last winter. In Cleveland 350 large power users were asked by the electric utility voluntarily to reduce by 15 percent their consumption of power during peak periods. The country lost 72,000,000 pounds of aluminum because half of an aluminum plant in Arkansas was idle all year for lack of power.

In California a State emergency power director was appointed by the Governor, and the legislature continued daylight-saving time through the winter to reduce power demands. Electricity delivered to consumers was cut by 10 to 20 percent and many manufacturing plants were forced to reduce the workweek to 4 days. There were intermittent suspensions of irrigation pumping because of interruptions in power delivery.

In 1948 total capacity of the Nation's power system for production of power was about 55,000,000 kilowatts. A realistic summing up of our requirements indicates that we must double that capacity in the next 10 years, just as we have doubled it each decade for the last 40 years. By 1960 the United States must have a generating capacity of well over 100,000,000 kilowatts.

In producing this additional power we should be giving considerable thought to what kind of fuel we use. Today about 70 percent of our power comes from steam plants fueled with coal or petroleum, both exhaustible products which are becoming

scarcer every year. Only about 30 percent of our electricity is generated from water power. We have, however, approximately 77,000,000 kilowatts of undeveloped water power now wasting into the oceans. Much of this power could be developed in connection with multipurpose dams which also serve irrigation, navigation, and flood-control purposes. This water power is inexhaustible—it will never run out. We should use it extensively for generating electricity and save the scarce petroleum for the planes and motor vehicles, which won't accept substitutes.

In making up our power program, therefore, we should figure that at least fifteen to twenty million out of the 60,000,000 kilowatts or so to be added ought to be developed in hydroelectric projects. Most of that work will be done by the Federal Government in connection with multipurpose dams. Most of these dams are so large that they take 5 years to build and sometimes up to 10 years for complete installation of generating plants. Obviously, then, if we are to meet this kind of goal we have to start acting now.

When the Federal Government first concerned itself with supplying power from huge dams there was considerable hue and cry from big business with the usual accusations of communism and socialism. Since then dollars-and-cents accounting has forced business to risk the charges of association with what they have labeled communism. In actual fact, big business interests have been among the first to rush into the areas which are now served by cheap public power. You might say that they have been unduly eager and somewhat hoggish. They have taken as much of this low-cost power as they could get; to some extent they have crowded out the smaller businessmen who are not so well prepared financially to move in on a good thing so quickly.

The proper role of the Federal Government is to smooth the road so that all the competitors in free enterprise will have an equal opportunity to move forward. One of the things that industry, big and little, needs is electric power. Therefore, the Federal Government's job in the power field is to make sure that everyone—domestic users, farmers, and industrialists—has an equal opportunity to get as much power as he needs and to get it at reasonable rates. Then free competition can freely operate, and we can resume our progress toward the age of electricity.

Even during the height of the power shortage there were utility executives who claimed that we had adequate power-generating capacity. Perhaps they have lost faith in the rosy future for America which was depicted in their old-time ads. We haven't. We plan to go ahead. We want to make real the slogans of "better living, less drudgery," "more jobs and more production," which we used to see in those advertisements. We have faith in a growing America.

The Missouri Valley Authority

EXTENSION OF REMARKS
OF
HON. JAMES E. MURRAY
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Tuesday, April 19 (legislative day of Monday, April 11), 1949

Mr. MURRAY. Mr. President, the recent reports filed by the Commission on Organization of the Executive Branch of the Government have had an effective influence on the trend of public opinion concerning river valley development. These reports clearly show that the present rival operations of the Army engineers and the Bureau of Reclamation, along with other smaller Federal bureaus, are producing very injurious results.

In this connection I have just received two editorials dated, respectively, January 20 and January 28, 1949, dealing with the subject, and appearing in the Montana Kaimin, a publication of the students of Montana State University. Sometimes youth, free from the economic prejudices and ingrained political maneuverings of their elders, can see more clearly the vital issues confronting our country. I therefore commend these thoughtful editorials and ask that they be printed in the Appendix of the CONGRESSIONAL RECORD.

There being no objection, the matter referred to was ordered to be printed in the RECORD, as follows:

[From the Montana Kaimin of January 20, 1949]

MVA To CONTINUE BATTLE

This newspaper received correspondence earlier in the week from Senator JAMES E. MURRAY. Of special interest to the Kaimin was the postscript on his letter which said that it was Senator MURRAY'S intention to reintroduce the MVA bill again in the near future.

Not only the Kaimin is interested in this news but we presume a number of other papers around the State will take special interest in the Senator's statement. The last time the Missouri Valley Authority was on the docket a number of dailies were instrumental in defeating the measure by playing down its favorable aspects. However, Senator MURRAY and a number of other congressional leaders have been working for this proposal since the Seventy-ninth Congress and it will be introduced again. The Authority has been modified several times since then and has been subjected to numerous subcommittee debates and many hearings.

ORIGINAL MVA PLAN

The original MVA called for "unified water control and resource development on the Missouri River and surrounding region in the interest of the control and prevention of floods; the promotion of family type farming; the development of the recreational possibilities and the promotion of the general welfare of the area; the strengthening of the national defense, and other purposes."

The proposal would have provided additional electric power and at reduced rates. One of the main arguments for MVA in some manner of its original form was to make the State of Montana and the entire Missouri Valley more conducive to industry. With the power and facilities the Authority provided much could have been done toward making this industry a reality.

The bill didn't receive a favorable press in Montana but back in 1945 at a Senate subcommittee hearing of the Committee on Irrigation and Reclamation, Senator CHAN GURNEY (Republican, South Dakota), opposing the bill, said he had never seen so much propaganda. Senator MURRAY explained the reason as follows:

"That is the only way we have of offsetting them * * * (company presses). Do you want us to lie down and quit because the power people have all these newspapers? * * * All papers dominated and controlled by the power interests are against the Missouri Valley."

He specifically mentioned papers in Butte, Billings, and Missoula.

COVERAGE PROMISED

Congressional records and subcommittee hearings which are on the record have never been utilized by the Montana press. In view of the fact that Senator MURRAY plans on revitalizing the issue the Kaimin will actively cover the aspects, all of them, of the MVA, including testimony and information taken from congressional hearings.

The passage of MVA, as Joseph Kinsey Howard, prominent author said, "would be the biggest thing that has happened for Montana since a half-breed named Beneetse stumbled upon gold there nearly a hundred years ago; because it reestablishes and reunites, as a regional concept, the western frontier."—P. A. H.

[From the Montana Kaimin of January 28, 1949]

PICK-SLOAN WEDDING NOT WORKING

The great Missouri River Valley, potentially one of the Nation's greatest resource basins, is being mismanaged at the present time by slap-dash, jealous, back-biting competition. The main reason for this situation is because two big bureaus and more than 10 separate smaller Federal agencies are continually getting in each other's hair.

These two large bureaus, the Army engineers and the Bureau of Reclamation, have attempted in the past several years to combine talents and work toward a common end—development of the Missouri Valley. The unique working agreement, primarily a flood-control plan, goes under the label of Pick-Sloan, General Pick representing the Army faction and Sloan the Bureau. Two separate plans now exist instead of the intended one, and the political generals and political water engineers are continuing to fight each other to a scoreless tie.

Many of the proponents of the Pick-Sloan plan, at least those who knocked Senator MURRAY'S MVA proposals, are beginning to realize after several years of mismanagement and confusion under this coordinated policy that many basic problems of the big Missouri have not been adequately answered. There is practically no major part of the irrigation program, the navigation program, and the flood-control program that is not subject to serious questioning from many residents of the region. The costs resulting from bungled planning have been questioned.

In addition to these, the lack of a program for industrialization, soil conservation, and forest work, as essential parts of the entire development of the valley, has been questioned. The question of whether the Montana Power Co., politically strong in this area, will pay enough for the enormous increase in firm energy that it will get if it takes over the Canyon Ferry Dam is still unsettled and has been almost practically ignored. There are other problems, at least a dozen, that haven't been adequately studied or answered because of the shotgun wedding of the Pick-Sloan plan.

The whole job of the Missouri Valley development should be looked at again by a single board which is above the existing self-interested agencies. It should recommend a single plan and a single development master that will do the best job for everybody concerned—a plan that will bring industrial and agricultural development to the State of Montana.—P. A. H.

Suggested Changes in the Post Office Department

EXTENSION OF REMARKS
OF
HON. HARLEY M. KILGORE
OF WEST VIRGINIA
IN THE SENATE OF THE UNITED STATES
Tuesday, April 19 (legislative day of Monday, April 11), 1949

Mr. KILGORE. Mr. President, Mr. Henry Hoke, who has had wide experi-

ence in the field of direct-mail advertising, has sent to me an article he has prepared on suggested changes in the Post Office Department. I ask unanimous consent to have it printed in the RECORD and have it referred to the Committee on Post Office and Civil Service, which is presently concerned with a proposed increase in postal rates.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

A LETTER FROM HENRY HOKE

DEAR CONGRESSMAN: You must get terribly bored with the anguished wails of the ax grinders. No matter what you do, you are deluged with complaints from those who think that what you do will hurt them.

Your discussions of postal rate changes have set off a verbal and editorial barrage of wailing from so many seemingly unrelated sources; it's a wonder you can hide your impatience or bewilderment as well as you do.

All sorts of organizations are raising war funds for lobbying in Washington, for making drives to stop rate increases. Editorials, news columns, and bulletins carry dire warnings that this group will be put out of business, that group will be put out of business. You'll be put out of Congress, and what not. Individuals, representing these groups, appear before your hearings all singing the same tiresome dirge: "We'll be put out of business; you can't do this to us."

I think the members of the committees have shown remarkable calm, patience, and statesmanship in asking these moaners "What do you suggest?" But the suggestions have been few and far between. Nobody seems willing to suggest, to compromise or to help you and the post office solve a really serious problem. If we could all start planning for all of us instead of just for me.

It all reminds me of the hearing some years back when the theatrical people brought Walter Hampden and other stars to warn you that your amusement taxes would darken the marquees of every theater, throw thousands out of work. The fur people, the jewelry people staged similar, but not so glamorous, melodramas. None of the predictions came true.

No matter what you do about postal rates, within the reasonable limits possible under legislative procedure, no one will go out of business solely because of postal rates. If postal rates are the determining factors for staying in business, then there is something wrong with business. What you may do about rates may make business uncomfortable, may force readjustments, may make business more difficult, but we'll all survive somehow.

I think it's high time for all users of the mail to stop howling about being put out of business and instead to join with you, their representatives, in working out some sensible plan for the post office.

Someone should speak in defense of the post office, in defense of Congress, for there are two sides to every argument.

At the risk of being labeled a traitor to my side (whatever that is) I respectfully submit a few suggestions which might help to clear the air.

First. An optimistic note.

A post office department can actually be operated on a balanced budget. I can prove it. I am reproducing below the itemized figures from the 1948 report of another post office department.

Better than sixty-three million profit in 8 years.

That's the Canadian Post Office Department. Since 1902, a space of 46 years, the Canadian Post Office has lost money in only 10 years. 1915, 1922, 1925, 1927 to 1932, and 1939. But the total losses in those 10 years were not as great as the profit during only the last two fiscal years (1947 and 1948).

Report of the Deputy Postmaster General

Fiscal year	Net revenue	Expenditure	Deficit	Surplus
1941	$40,383,366.45	$38,699,673.76		$1,683,692.69
1942	45,993,871.83	41,501,869.04		4,492,002.79
1943	48,868,762.24	44,741,987.13		4,126,775.11
1944	61,070,919.37	48,485,008.65		12,585,910.72
1945	66,071,815.89	54,629,281.07		11,442,534.82
1946	68,635,559.07	57,729,645.67		10,905,913.40
1947	72,986,624.19	64,213,049.78		8,773,574.41
1948	77,770,967.33	67,943,475.57		9,827,491.7

Of course, Canada is smaller. A population of about 13,000,000 compared with our approximately 145,000,000. About one-eleventh our size. And their gross postal revenue is only about one-seventeenth of ours. But Canada needs 11,982 post offices to take care of its people, compared to our 42,000 post offices. That is, Canada needs a bigger plant, in terms of population, than we do, and yet it has learned to run its post office department on a better than balanced budget. It's true that Canada does not have the masses of low-rate mail nor some of our complexities, but it has elements within its service which deserve most serious consideration on your part. American ingenuity should be able to devise a system whereby our Postmaster General could submit a comparatively satisfactory annual report. I suggest that our friendly neighbors be invited and urged to show you how they do it.

Second. I would like to suggest three specific steps or methods of tackling our post office problems.

Step one: Set up, once and for all, a definite method of dividing the functions of the post office into two groups.

(a) Those covered by appropriations out of general taxes.

(b) Those covered by income from the users of mail.

Much of all our trouble lies in the absence of any such structure.

The Department of Agriculture, for example, costs the Government approximately $840,000,000 a year—but that is not considered a loss. The Congress fixes an appropriation to cover that cost.

The Post Office Department is a necessary adjunct of Government. The Government could not function without the post office.

There are some 42,000 post offices in the country. One hundred and twenty-nine of those offices account for more than 63 percent of the total postal volume.

There are 33,614 third- and fourth-class offices in the country, where the total revenue rarely, if ever, is enough to pay for salaries, let alone the cost of supplies and overhead. No one knows for sure, but there are only a thousand or so post offices where receipts are enough to pay bare operating costs. But could all the rest be eliminated? Surely not. All or most of the offices are necessary to keep Government functioning.

How much is the post office worth to the Government? How much of the post-office work should be covered by appropriations? Why not find out?

There are three groups of post-office governmental functions:

(a) Service for other agencies.

(b) Handling mail for executive branches.

(c) Handling mail for Congress.

Postmasters are custodians of Federal buildings in which post offices are located. They are landlords for other agencies. Postmasters conduct civil-service examinations for all agencies. They sell stamps and bonds for the Treasury. They post bulletins for other agencies. The Post Office Department is errand boy and general flunky for nearly every other agency of the Government, and yet it is supposed to charge the public enough to pay for all these services. The post office should be reimbursed by definite appropriations for these services, in some such way as Canadian postmasters are reimbursed in commissions for some of their work.

The same system should apply to mail handled for executive branches and for the Congress. Not only in Washington, but all over the country, the post office is deluged with free mail. I'm not disputing its worth. Let's admit it is all necessary. In every hamlet. county agents mail important bulletins to farmers. Other agencies keep up the flow of contact between Government and citizens.

Surely, we have enough brains in this country to find out how much of the cost of post-office service should be allocated to the appropriations of other executive branches. Once you find out what the figure or percentage should be—10 percent, 20 percent, 30 percent, etc.—then you can proceed to step No. 2 with some semblance of sanity.

Once you find out how much Congress should appropriate for the congressional frank, there will not be so much criticism of the widespread use of the franking privilege. But you shouldn't ask commercial buyers of mail service to pay for far-flung functions of Government. That is a job for all the taxpayers, including you and me and everyone else.

In brief, set up the post-office accounting system in two parts:

(a) Operations covered by appropriations which should be fixed by appropriation committee of the Congress.

(b) Operations covered by revenue (which should be self-supporting).

Step two: Fix rates for the various classes of mail by a businesslike rate-fixing, permanent commission instead of by legislation.

This would avoid the high-pressure ballyhoo which surrounds the rate-fixing of Congress.

The public-servicing function of the Post Office Department is a business, just like freight, passenger, or public utility rate-fixing. Congressmen, and this is not disrespectful, are too busy to enter into every detail of intricate rate-fixing. An experienced commission, working with Government and the public, could establish equitable rates subject to checks in procedure and personnel by Congress.

Consider the present confused situation.

In an effort to meet a deficit, it is proposed to raise the lowly postal card from 1 to 2 cents.

And yet postal cards are part of first-class mail which pays a tidy profit each year. Who knows for sure whether they should be raised or not?

Post and postal cards are the poor man's method of communication. They are used by thousands of small-business people as the only method of telling prospects and customers about goods or services for sale.

Let's look at it this way: There are 190 1-cent Government-stamped postal cards to each pound. The post office gets $1.90 for each pound of cards used. And yet some selfish ax-grinders howl that they will be put out of business if they must pay a mini-

mum of one-fourth cent per piece, or if their rate is raised from 1½ to 2 cents a pound.

Suppose, for example, there are four pieces of a typical second-class publication to a pound. Would a minimum postal rate of $2.50 per 1,000 pieces (which weigh 250 pounds) be too extreme when compared with $10 for 1,000 postal cards which weigh just over 5 pounds? Sounds sorta silly, but that's what a lot of people are howling about.

Until rates of various cl sses can be adjusted equitably * * * why tax the poor man's postal card an extra cent when 5 pounds of them now bring in $10, while 50 times more in bulk of another class bring in a lot less per thousand?

Consider third class: Who knows exactly what the rate should be? Canada seems to get along very nicely on a 1-cent minimum. And why, without very serious study, should the Post Office discontinue the commercial bulk rate which has saved millions of man-hours in sorting, facing, handling, and dispatching? It doesn't make sense. But if a serious commission studied those rates, adjusted the inequalities, I'd predict that the commercial users of the mail would accept those rates and make them work.

It is certainly unjust to ask one group of advertising users to accept a $10 per thousand (piece) boost when another group howls against a $2.50 or $5 per thousand boost. Especially when there can be no comparison in weight. The costlier rate weighs less than the lower Alice in Wonderland would be confused, too.

The second-class rate situation is a mess. I don't know what the rates should be. No one does. I'm not fighting the publishers. I'm a publisher myself, in a small way. But I think the publishers' representatives before your hearings made a ridiculous showing when they pleaded for no increases whatsoever.

My trade publication runs about 3½ copies to the pound. We mail about 4,500 per month. My postal bill runs about $24 per month, or just a trifle over one-half cent per copy.

That is, we mail 4½ ounces for one-half cent. That weight is equivalent to 54 postal cards which at present rates brings the Government 54 cents. For delivering 54 of my magazines (weighing 243 ounces or fifteen-plus pounds) the post office collects 27 cents, while the post office gets 54 cents for 54 postal cards weighing 4½ ounces, or 54 cents for 54 third-class mailing pieces weighing about 60 ounces. It just doesn't make sense.

I'm ashamed of my postal bill each month, and I think a lot of second-class permit holders feel likewise if they had the nerve to speak out.

A long, long time ago, a former Third Assistant Postmaster General confided in me, "Henry, second-class rates are a parasitical growth on the structure of government, and nothing can be done about it." I've never forgotten that description, but I think it's time for the publishing industry to grow up.

All this talk about second-class rates being established to promote education and culture is as outmoded as the horse and buggy. All this high talk about publishers being interested solely in informing the public, increasing culture, improving education, is downright dishonest. The old myth that magazines are produced for the readers is what it is—a myth. The real truth is that publishers are in business to make money. Most magazines are produced for the advertisers. All arguments that a free press demands a subsidy are silly. All arguments that any increase in postal charges will fall on the readers of publications are absurd. The increase, whatever is justified, should be borne by the advertiser. For him the vehicle was created.

I don't know what the second-class rates should be. Surely it's evident they should be higher. My rate should be higher. Why doesn't the publishing industry stop grafting on the Government and help work out a satisfactory rate?

The Postmaster General seems to be on the right track in his recommended sliding scale (which has caused the most howls). The more advertising, the larger the rate. Why not? The less education, culture, and information.

Publishers generally might be agreeable to a new rate for "red-tag service." Users of penny postal cards, threatened with a 1-cent (100 percent) increase would be boiling mad if they knew all the inside dope about magazines of urgent news interest which get red-tag service, which means better than first-class mail service. And yet those magazines weigh 1,000 percent more than the postal cards and pay about the same or little more than the postal-card rate.

Concerning all the inane hullabaloo over small religious, fraternal, etc., publications being forced out of the mail if they have to pay a decent postal rate—that's a debatable question. If any organization can't stand $2.50 minimum for a thousand copies it mails then perhaps it should go out of business. It costs a lot more to mail a postal card.

Some of my publisher friends will dislike these statements. But if they would face the facts and the truth, this rate situation could be licked. Everyone should want to pay his own way—the postal card and third-class mail users should pay their own way, but that way cannot be estimated until step one (previously mentioned) is taken and until the loss-producing subsidy on second class is adjusted sanely. One group should not be taxed at the expense of another for political or any other kind of expediency.

Mr. Congressman, it's a mess which only a rate-fixing commission can handle. That would relieve you of almost all political pressure.

You already have such a plan before you in H. R. 1008, presented January 6, 1949, by Mrs. ST. GEORGE. Why not consider that resolution at once before the rate situation gets into more of a mess than it is now?

Step three: Authorize the establishment in the Post Office of a sales and publicity department.

That's where you can learn many things from our Canadian neighbors.

The Canadian Post Office has such a department. Sixteen public relations officers are stationed throughout the Dominion. These men and their assistants contact all commercial users of the mail. Show them the newest wrinkles, teach them how to use the mails properly. Give them case histories. They sell directory services and handle householder mailings. In other words, there's a special department to promote sales.

They work on the simple principles of all business that increased production reduces cost per piece. Increased revenue decreases overhead. It has brought tangible results in Canada.

Why can't we have such a set-up in the United States Post Office? Why not bulletins like the one pictured here? Every Member of the Congress should try to get hold of a copy of the Canadian sales bulletin.

Take the strings off the post office. The post office has tried at times to be promotion-minded, but every time some selfish lobby has stopped it, claiming the post office had no right to sell a form of advertising. That is the bunk. The mails are used by all types of advertisers including those who advertise in publications. Let's grow up. Be modern. Let's sell the post-office services just like any other business.

These three steps, Mr. Congressman, if taken soberly and sanely would solve a lot of the headaches:

1. A balanced structure between governmental functions and service to the public.
2. Equitable rate-fixing by a commission.
3. Establishment of a sales and public-relations division.

These are my suggestions—after 30 years of using the mail, after more than 20 years of close and friendly contact with the post office, and after attending countless hearings where the ax grinders wailed and moaned.

Sincerely,

HENRY HOKE.

Federal Aid to Education

EXTENSION OF REMARKS
OF
HON. ELBERT D. THOMAS
OF UTAH
IN THE SENATE OF THE UNITED STATES

Tuesday, April 19 (legislative day of Monday, April 11), 1949

Mr. THOMAS of Utah. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter dated March 30, 1949, which I received from Mr. Le Grand P. Backman, president of the Board of Education of Salt Lake City, concerning Federal aid to education, and also my letter in reply dated April 9, 1949.

There being no objection, the matter referred to was ordered to be printed in the RECORD, as follows:

SALT LAKE CITY, UTAH. *March 30, 1949.*

Hon. ELBERT D. THOMAS,
Senator from Utah, Washington, D. C.

DEAR SIR: The Board of Education of Salt Lake City at a regular meeting of the board has made it a matter of record that the members of said board are unanimously opposed to the proposed Federal aid for education. It is the consensus of opinion of the board that Federal aid for education is but an additional infringement of the Federal Government on individual rights and one more step of socialization of the American way of life.

Local autonomy and complete supervision, control, and administration of our own schools will preserve our national heritage and keep our children unhampered from regimentation, and will act as a bulwark against the aggression of foreign influences and ideologies that are contrary to our God-given rights of free agency, and the desires and hopes of the founders of our great Nation.

We trust that your influence will be exercised against any legislation contrary to this expression.

Assuring you of our best wishes in your important calling to serve the people of this fair State.

Yours very truly,
LE GRAND P. BACKMAN,
President of the Board of Education of Salt Lake City.

UNITED STATES SENATE,
COMMITTEE ON LABOR
AND PUBLIC WELFARE,
April 9, 1949.

MR. LE GRAND P. BACKMAN,
President, Board of Education of Salt Lake City, Salt Lake City, Utah.

MY DEAR LE GRAND: I have your letter of March 30 in which you inform me of the

board's unanimous opposition to the proposed Federal aid to education program.

First of all, I have been a sponsor of the Federal aid to education bill for 14 or 15 years. Therefore, you may rest assured that I will not do as you suggest, use my influence against this legislation. I am for it because it is necessary and essential to the welfare of the Nation. The Salt Lake City Board of Education should know that if the Federal aid to education bill becomes law, it does not have to receive any money from the Federal Government. Nothing is forced upon the States and I am sure the States will force nothing upon the districts or the cities that do not want it. I am happy that Salt Lake City does not in any way need Federal aid, but for Salt Lake City to be opposed to this legislation because they do not need it where the rest of the country needs it so badly seems to me to be a little bit inconsiderate.

Your letter is one of hundreds I have received on this subject and many of them are from the State of Utah, showing the need for this legislation. I have probably received thousands and thousands of letters both for and against Federal aid to education, but never do I remember receiving anything quite like your second paragraph. To assume that the United States, in recognizing the fact that a trained citizenry is essential to our democracy, would pass a law which would permit "aggression of foreign influences and ideologies that are contrary to our God-given rights of free agency" is startling. Does the United States exist to destroy itself? The bill specifically provides that the Federal Government will have nothing to do with the administration of the schools. It merely grants aid to the schools and leaves the administration to the States.

If receiving money from the Federal Government has an ill influence upon the school systems of our country, they would have been ruined long ago because the schools of the Nation have from the very beginning received grants-in-aid from the sale of public lands. Our Utah State Agricultural College receives financial support every year and has done so since it was established. As an administrator of the fiscal functions of the University of Utah I received hundreds of thousands of dollars from the Federal Government for various purposes on the campus. I have on my desk now a letter from the United States Public Health Service which states that "the University of Utah has received $1,250,000 since 1946 for use in its medical school." The Salt Lake City Board of Education has approved the ROTC program in some of the Salt Lake City schools. The University of Utah, the Utah State Agricultural College, and the Brigham Young University, and, I am sure, several of our high schools and our junior colleges are today receiving thousands and thousands of Federal dollars in return for instruction given under the soldiers' education bill. You may recall that I was the author and original sponsor of this act which eventually became a part of the GI bill of rights. Never once have I seen or have I heard it suggested that any official of any of these institutions has ever felt coerced or dominated by any suggestion of Federal control. I am sure when I became responsible for the establishment of the ROTC unit in the University of Utah, no member of the Salt Lake City Board of Education or no member of the teaching staff of the Salt Lake City schools came and warned me that this cooperation with the Federal Government would bring about Federal control.

I am afraid that the facts and the experiences of the 48 States in the Union are all against the opinion of the Salt Lake City Board of Education. Let me repeat, Salt Lake City has never had ROTC forced upon it, and I am sure that no member of the University of Utah faculty has ever felt under restraint because of such Federal aid. Not one cent of Federal money has been imposed upon any school. The school need not in any single way cooperate with the Federal aid to education bill if it becomes a law. Any institution can withdraw at any time if it wants to. The Federal Government offers cooperation. There is no pressure, no force, no desire to dominate either the theory or the practice of the States in their educational processes.

Two world wars and the administration of a Selective Service Act in each of them has taught us more conclusively than anything else that our country's outstanding need is education and an equalization of educational opportunities. The Selective Service System has been spoken of and the democratic way in that every young man becomes equal to the call with all others. That is all right in theory, but in fact it was not borne out because certain standards were set up before persons became eligible to be called. Because of these standards, taking the Nation as a whole, 5 out of every 10 men called were rejected for some cause or another, sometimes for health, but more often than anything else for an inability to read or write. At the first of the Second World War no illiterate was accepted. This cut into the list of persons called so strongly in some States that protests were made and the Army had to accept some men who could not read and write. These persons had to be put in Army schools at a tremendous cost to the Government compared with the cost of ordinary fourth- and fifth-grade education. Our statistics show that in those States like Utah and the other Intermountain States where public education has been in existence even longer than statehood, 7 out of every 10 boys called under the Selective Service Act were accepted. That proves that education benefits health and aids in the development of the student. But in those States where educational standards are not good, only 3 out of every 10 boys called were accepted. The trained boys have to bear a greater proportion of the liability to serve in wartime. Under the peacetime draft that is going to be the same. The knowledge of this has brought about almost universal support for the equalization theories in the Federal aid to education bill.

I thank you for your last sentence wherein you say "assuring you of our best wishes in your important calling to serve the people of this fair State." I know of no way I can serve the people of Utah or the people of the Nation better than by giving them the opportunities which will come to them as a result of the passage of the Federal aid to education bill and its coordinate companion bill, the national school health services bill. As I told the people of Utah in my broadcast over KSL on the night of April 6, I can conceive of no legislation that will benefit the people of our country in the next generation more than the three bills which I am sponsoring, the National Science Foundation bill, the Federal aid to education bill, and the national school health services bill, if they become law.

I trust that the board of education will not refuse to affiliate with the benefits of the National Science Foundation when that activity is established. I trust it will not refuse the Federal money to bring about proper examination of all of the pupils and all of the students in the State of Utah, which will be provided by the school health services bill. If the board of education refuses to cooperate it is only the people of Salt Lake City and their children that will be hurt.

Thanks for writing to me, Le Grand. I am sorry to say I cannot agree with your letter.

Most sincerely yours,

ELBERT D. THOMAS.

Hoover Commission's Analysis of the Pick-Sloan Plan

EXTENSION OF REMARKS

OF

HON. JAMES E. MURRAY

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Tuesday, April 19 (legislative day of Monday, April 11), 1949

Mr. MURRAY. Mr. President, few things have aroused the interest of the people of the Missouri Basin States so much as the Hoover Commission's analysis of the Pick-Sloan plan for Missouri Basin development.

The tone of newspaper comments on the Pick-Sloan program has changed tremendously. Editors who once felt that perhaps the criticism aimed at the Pick-Sloan program was partisan are now taking a different attitude. Recent editorial comments range from surprise to bitterness over the hoax which that program has imposed on the public. I am advised that only two Governors—Peterson, of Nebraska, and Mickelson, of South Dakota—have appeared in support of the Army engineers' request for appropriations.

I have just received an article dated April 6, 1949, taken from the State Journal, of Lincoln, Nebr., which reflects this new attitude. I ask unanimous consent to have this article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BLASTING PICK-SLOAN

(By Roscoe Fleming)

HOOVER COMMISSION HEAPS CRITICISM

Never has a major United States program been so riddled as the Hoover Commission task force on natural resources has riddled the Pick-Sloan project in the Missouri Basin. All past criticism pales, compared with that in the detailed analysis now out.

Our little local and congressional politicians have defended Pick-Sloan and even extolled it. Our little governors have stood up and praised it like children reciting for candy. Critics have been ordered to go 'way back and sit down, and loftily told they didn't know what they were talking about.

Now a body that includes such members as former Governor Carr, of Colorado, and Miller, of Wyoming, doubles all previous criticism in spades. The best they can say for it is that Pick-Sloan will do some good.

They say in effect that this gigantic project, which can mean progress or stagnation throughout one-sixth of the Nation's area, is run by people so bedeviled by haste and lack of data that it's almost a miracle when they are as much as 75 percent right. (And as we know, these mistakes always result in underestimated cost and overestimated benefits.)

They say that present estimates indicate a cost of $6,300,000,000, or $20 an acre for the whole basin area, on a project that started out at $1,368,000,000. (NOTE.—If all Agriculture Department recommendations are included, the cost may be nearer $10,000,000,000. And some irrigation plans may cost $500 an acre. One actually is estimated at $263.)

They say Pick-Sloan was no more planned than if a group of architects, each assigned to work separately on his own wing of a big

building, should decide later to join up their sections and "lay on facilities for heat, water, electricity, and elevators after the rest had been planned."

They are talking, remember, about the most gigantic land-and-water rehabilitation scheme in human history. Its good or bad accomplishment can mean permanent progress, or stagnation, for our valley. It will also affect the Nation's safety.

Yet the report portrays 24 "participating" Federal agencies as pulling and hauling all over the basin, duplicating, contradicting, back-biting; each having to go back to Washington for final instructions, and in many cases clear to Congress. There are so many thousands of Federal workers that they almost stumble over each other.

We hardly realize either, here in the semi-arid West, that out of this anarchy one agency has seized a sort of temporary dictatorship. (The report, more polite, calls it "dominance.") This "dominant" agency is the Corps of Army Engineers, perhaps least fit of all to understand, to appreciate, or to "dominate" the problems and the solutions of our arid West, where water conservation is all-important.

Maybe we'll realize at last why down-river interests centered at Omaha and Kansas City, which have always regarded the Missouri River as their private property, have had that smug cat-that-ate-the-canary air about the way this Pick-Sloan thing has gone so far.

We westerners have relied on the so-called O'Mahoney-Millikin amendment which purports to save for dry-land uses water that originates west of the ninety-eighth meridian. But the report points out that no one can tell whether this provision is indeed constitutional and can be enforced—barring a court test which is sure to come.

So far the enormous and tragic meaning—for the West—of the report seems to have fallen on deaf ears. For example, Gov. Val Peterson, of Nebraska, merely says all that's wrong with Pick-Sloan is that neither the Army nor the Bureau of Reclamation has enough men or money to give Nebraska everything it wants. Heaven help the West, if such statesmen represent its best defense.

Genocide

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES

Tuesday, April 19 (legislative day of Monday, April 11), 1949

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Genocide," written by Raphael Lemkin and published in the March 1949 issue of the World Alliance News Record.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

GENOCIDE

(By Raphael Lemkin, Yale University Law School)

An event of great importance to the civilized world took place at the recent session of the United Nations in Paris, when, under the leadership of the American and Australian delegations, the convention on the crime of genocide was unanimously adopted by a jubilant Assembly. The hideous crime of destroying religious, racial, national, and ethnical groups was finally outlawed by international action.

Throughout history, men blinded by hatred and intolerance inflicted death and tortures on other men only because they believed in another God, adhered to another culture, or belonged to another nationality or race. The attempt made by Rome to destroy the early Christians was the first great challenge of organized brutality to the free spirit of man. Christianity came forth from this ordeal victorious. True though it may be that religion cannot be destroyed, it is equally true that persons belonging to religious groups can be burnt alive, quartered, hanged, and mutilated. This mass destruction, directed against members of religious groups, may be so thorough and systematic that the group may cease to exist. Many instances of destruction of religious groups could be cited not only in different periods of history but also in different parts of the world right at the present time.

Every type of genocide, whether directed against a religious, racial, ethnical, or national group, is detrimental to humanity, not only because it shocks the human conscience but also because it deprives the world of the potential moral and cultural contributions of the human group slated for annihilation. We should never have had a Bible if the Jews had been exterminated before creating it. We should never have had the philosophy of the French enlightenment, which laid the foundation for modern democracy, if the French nation had been slaughtered through an act of genocide. Such examples could be repeated. In the present crisis, the losses which the world might suffer from a mass destruction, especially of religious groups, could be especially costly. True religion engenders peace in the heart of man. The cooperation and solidarity of millions of peaceful hearts throughout the world is the best guaranty of international peace. Genocide is, therefore, a danger to peace.

The convention on genocide is the product of 2 years of work and long discussion in the United Nations. The authors of the convention took into consideration the historical examples of the techniques of mass destruction and also the realities of international life. In the convention a human group is considered as an organic entity, and as such can be eliminated either by acts of violence leading to the immediate death of its members or by measures designed brutally to interrupt its continuity. To the first group belong such measures as killings, mutilations, incarceration in concentration camps in conditions endangering life, etc. This is physical genocide. To the second groups belong such acts as compulsory sterilization, abortions, and stealing of children. This is biological genocide. From the point of view of genocide, there is little difference between direct killings and such techniques which, like a time bomb, destroy by delayed action.

As to implementation, the General Assembly had to follow a wise course, taking into consideration, on the one hand, the existing sensitiveness of states regarding their sovereignty and, on the other hand, the necessity of impressing upon the world that genocide must be dealt with by effective measures. Legal institutions already accepted by all civilized nations and familiar to them were chosen for implementation, existing law being adapted to cover the newly formulated international crime of genocide. It should be noted that the provisions concerning the eventual international penal court are left for future decision and their implementation will actually depend on the gradual growth of international life. Under the convention, every nation undertakes the obligation to punish cases of genocide by its own existing courts. If a contracting party fails to do so, it faces the disapproval of the International Court of Justice, which, under international law, has power to pronounce itself on treaty violations. Moreover, all organs of the United Nations and not only the Security Council will act for the prevention and suppression of genocide.

The convention as it now stands is a great step forward because it translates human decency into law and, especially in the field of international law, gives expression to universal conscience. The convention is now subject to ratification by the parliaments of the world. Public opinion throughout the world supports the genocide convention. The interest in this action is especially great in the United States, where it is based not only on the great generosity and compassion of the American people but also on the tradition of United States foreign policy, which has always been opposed to mass violence in international life. In 1902 Theodore Roosevelt denounced the trade agreement with the Russian Czar in protest against the pogroms against the Jews. President Wilson tried hard, both during and after the First World War, to save the Armenians. If men and women of good will throughout the world will lend their support to the convention now in this crucial stage of ratification, it will become a living force in our civilizaton—a force of lasting significance.

An Old and Evil Scheme Seeks To End Our Liberty

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES

Tuesday, April 19 (legislative day of Monday, April 11), 1949

Mr. MARTIN. Mr. President, E. T. Leech, editor of the Pittsburgh Press, in his Sunday's paper, has a signed editor's comment which I feel should be read by every American.

He refers to some things under the head of fancy bait such as security, socialized medicine, bonuses, guaranty of a job, and special favors to special groups.

He brings out the point that the advocacy of such things is not liberalism, but that real liberalism is the preservation of the freedom and dignity of the individual.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

EDITOR'S COMMENT—AN OLD AND EVIL SCHEME SEEKS TO END OUR LIBERTY

(By E. T. Leech, editor, the Pittsburgh Press)

Those who love and want to keep our way of life forever are making a bad error. They talk about getting back to the American system, or returning to the American way, or similar phrases. They mean well; but such talk is harmful and inaccurate.

It carries the idea of retracing our steps, of returning to something which is past. Actually just the opposite is meant. For the American kind of government has involved constant change—always going ahead and making progress. Never going backward.

It is the strong central state—the one which runs people's affairs and upon which they must depend for benefits and decisions—

which represents going backward. The American scheme is the easiest in the world under which to go forward.

No other government ever has changed so rapidly or so much as ours has under the Constitution. Immense alterations have been carried out. Only once—in abolishing slavery—did these reforms come through violence. No other nation can show such a record.

OLDEST FRAUD

But now we are beset by what is called a new philosophy. It calls for a powerful central state to do our planning, run our affairs, and dole out our benefits—the latter by collecting and spending our money. This scheme, which has swept much of the world, is pictured as something new and progressive. It is nothing of the kind. It is the oldest fraud in history.

From the time when man emerged from savagery he was under the rule of the state. The whole story of civilization has been one of individuals struggling to free themselves from the tyranny of government. Not until the American Constitution was established did this ever happen on any large or long-time scale.

Under this system of free individuals, America outdistanced the whole world. Yet now we are asked to give it up—to go back to the ancient plan of the all-powerful state; to let Government run our affairs and assume responsibility for our security.

NEW FRILLS

The scheme is dolled up with new frills and fancy phrases. Tempting bait is used to attract public support. Government, we are told, will give us security through law. It will pay our doctor bills, give us bounties and bonuses, guarantee our jobs, care for our old age, and grant special favors to special groups.

To do all this, Government has to run things. It must take more and more of our income through taxes to pay for what it thinks we should have. The price of this system is surrender of personal freedom.

Most of the world never had freedom, or has surrendered it. Much of it looks to us—who still have the strength which only freedom can give—for help and support. It is our rugged, free economy which today bears the burden of keeping liberty alive.

Yet even at home we are under great pressure to kill the goose that laid the golden eggs—to go far backward to the old curse of the all-powerful state. Loud voices cry for us to adopt some form of the old plan which has done, and is doing, such a miserable job elsewhere.

IT ALWAYS FAILS

The biggest problem in combating this scheme is to get Americans to realize that it isn't either new or liberal. It has been tried under every variety of names and trimmings. But basically it's always the same—state control. And it always has failed in the end.

America's first radicals and liberals knew this. They feared government. They wanted the bare minimum of it. Jefferson, Paine, Jackson, and Lincoln were of that school. Liberalism in this country was founded on supremacy of individuals over the state.

Young people in particular are tempted by change. The swing to an all-planning, all-bestowing state is in truth a vast change. But not a liberal one. It means going back—far back—to the sort of think which this Government was created to prevent.

Preservation of our basic way of living, of our personal freedom, and our sense of individual self-reliance and responsibility is a great cause. It is a noble and progressive cause. For it means defending the dignity of man and his personal freedom to improve and go forward.

Yet this cause of late has lacked strong leadership. No party has upheld it. Politicians have been flirting with state controls as a lure to get votes. But there are many signs that millions of Americans yearn for leadership in a struggle to save our free life from a plunge into the old morass of state domination.

The Coyote

EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, April 19 (legislative day of Monday, April 11), 1949

Mr. MUNDT. Mr. President, the last session of the State Legislature of South Dakota passed legislation designating the coyote as the official animal of South Dakota. Long known as the Sunshine State, South Dakota thus is also destined to be known in some quarters as the Coyote State.

Mr. President, in many respects the coyote is a completely misunderstood animal. Some fail to understand its good characteristics. For that reason I take pleasure in calling attention to a story from the pen of Badger Clark, and published in the Huron (S. Dak.) Plainsman. Mr. Clark, in addition to being a great poet, is a noted naturalist and a learned observer of animal and bird life.

There being no objection, the matter was ordered to be printed in the RECORD, as follows:

BADGER CLARK DEFENDS COYOTE AS STATE ANIMAL

Badger Clark in letter to Huron Plainsman: "I note that you are grieved at the legislature's adoption of the coyote as a State animal. On the contrary, I think it an excellent choice.

"The prejudice against the coyote is based on his failure to conduct himself like a civilized man, and respect the rights of property, which is a little absurd. The only law he knows is the law of his fathers, that game belongs to him who gets it. Slinking beast? Naturally, for he is in the enemy's country. A military scout in hostile country slinks, for the slinkin'er he is, the more likely he is to complete his mission and return to headquarters for commendation and decoration.

"In the matter of killing, I think that the coyote is a more moral fellow than the average man. When he picks up a chicken, or other piece of animated fresh meat, it is because he is hungry, or knows that his family is hungry at home. A sportsman, on the other hand, takes his gun and goes out to the field full of good food up to his Adam's apple, and then kills to the limit that the law allows, not that he needs the meat but just because of the savage delight that he takes in killing.

"The coyote's private life is above reproach. You suggest the bull as a possible State animal. The bull! Horrors. What a critter to represent us before the world. An amoral and utterly irresponsible character, who has a hundred mistresses and doesn't care a hoot for any of them, while he regards their (and his) offspring with contemptuous indifference.

"But the coyote marries monogamously. I don't know whether there is any ceremony or not, but the partnership lasts longer than some I've seen that started with a big church wedding. His wife is his equal, his soul mate, his alter ego, and they hunt together, often cooperating, it is said, in running down a long-winded jackrabbit. And when the missus has to stay at home with the babies, Mr. Coyote hunts not only for himself, but for his family.

"He is keenly intelligent. Not long ago, here in the State park, a coyote crossed my trail. He stopped in front of me, not a hundred feet away, and looked me over and grinned at me. Then he trotted on for some distance and paused to grin at me again. Finally, just before he vanished into a line of woods, he looked over his shoulder and gave me a deliberate farewell grin. He knew perfectly well that I was unarmed and harmless.

"To me the most attractive thing about a coyote is his voice. I always go to the door and listen when I hear him at night. His notes seem to soar up to the stars and give an indescribable impression of wildness and freedom—the voice of the old West, the voice of a younger world. In our unhappy, overcrowded century, when the slow, steel tentacles of collectivism are gradually closing about us all and freedom is fading away, the coyote's song is as sweet and as sad as any music I know.

"Most of the coyote's traits of character have survival value, as the scientific people say. Above all, he is tough and resourceful, taking the slings and arrows of outrageous fortune in his stride. For three-quarters of a century every man's hand has been against him, yet he not only survives but has extended his range.

"Whatever comes, he can take it and nothing can down him. Considering this, and calling up memories of my fellow citizens as I knew them during the dry and dreary thirties, it seems to me that the coyote has the marks of a real South Dakotan."

Clare Boothe Luce First To Suggest Atlantic Pact

EXTENSION OF REMARKS

OF

HON. RAYMOND E. BALDWIN

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Tuesday, April 19 (legislative day of Monday, April 11), 1949

Mr. BALDWIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a news article entitled "Clare Boothe Luce Broached Idea for Atlantic Pact in 1943," published in the Bridgeport (Conn.) Post of April 13, 1949. This article concerns the contribution made by one of our leading citizens in the field of foreign affairs.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CLARE LUCE BROACHED IDEA FOR ATLANTIC PACT IN 1943

WASHINGTON, April 13.—Who was the first to suggest the Atlantic Pact?

The question came up at a gathering of newspaper people here and the answer—verified by records—surprised some who had forgotten.

It was not Franklin Roosevelt, not Winston Churchill, not Secretary Marshall, not Harry Truman.

It was Clare Boothe Luce, Congresswoman from the Fourth Connecticut District (Fairfield County).

The idea was suggested by her on the floor of Congress in one of the early speeches in her first term. It is reported in the CONGRESSIONAL RECORD of June 25, 1943.

It was an unexpected speech in which Mrs. Luce, taking the floor, began by criticizing the lack of any consistent foreign policy by the United States and then urged that Americans stop thinking of their frontier as the Nation's shoreline or water's edge, but think rather of their frontier as being the other shores which that ocean touched.

LET'S LOOK AT MAP

"Look, please, at the map," Mrs. Luce declared at that time, "and remember * * * this is an air world we are living in and that, in the future, we shall need to surround ourselves with as wide a margin of physical protection as we can."

She pointed out, "The British Empire is America's natural buffer state," and added:

"As France has stood between England and Germany for centuries; as Poland, Czechoslovakia, and the Balkans have stood between Russia and Germany, so there, my colleagues, on the globe stands the farflung British Empire between the United States and all its real or potential enemies in Europe," which is exactly how the Atlantic Pact, signed April 4 by 12 nations in Washington, would affect the United States.

It is interesting to note that newspapers the next day reported catcalls and rebel yells punctuated the House session while Mrs. Luce spoke, so that she was unable to complete her 30-minute prepared talk because of interruptions from Republicans who liked her remarks and Democrats who objected.

HOT DEBATE FOLLOWS

A spirited debate followed with Luther A. Johnson, veteran Representative, her principal critic, who charged that once again Mrs. Luce had come before the House with "beautiful and devastating phrases based largely on her own views and frequently unsupported by logic or facts."

This was not the first instance in which ideas offered for consideration by the former Congresswoman, ignored or criticized at the time they were propounded, were used later minus any credit line.

Mrs. Luce preceded former Secretary of State Marshall by 2 years with an over-all plan for saving Europe, and the proof may be found in the CONGRESSIONAL RECORD of October 4, 1945.

Another case of Mrs. Luce "getting in Dutch" for being ahead of the bandwagon was her recommendation to Congress January 18, 1945, following her visit to the Italian front, in which she asked that a limit be put on front-line duty for the ground troops just as there was for men of the Air Force.

Her male colleagues in the House laughed and tittered at the idea of a woman going overseas and coming back with notions on how to run the Army. And the Army itself "raised Cain."

(A prophet is not without honor, save in his own country, and in his own house.)

SUGGESTION FINDS FAVOR

But what happened a year and a half later in September 1946? Out came a report by psychiatrists of the War Department which showed that the toll of psychoneurotic cases among the infantrymen could be reduced in the next war by a 120-day limit on front-line duty.

The New York Sun, which printed the report in detail on September 11, 1946, headed the story: "Breaking point of combat GI's was learned too late by Army." What Mrs. Luce had reported to Congress on the Fifth Army soldiers in Italy, and what she had recommended, were one and the same found in the War Department document.

The Dutch Problem

EXTENSION OF REMARKS
OF
HON. WAYNE MORSE
OF OREGON
IN THE SENATE OF THE UNITED STATES

Tuesday, April 19 (legislative day of Monday, April 11), 1949

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Dutch Problem," from the Washington Post of April 2, 1949.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

DUTCH PROBLEM

It is heartening to note the Acheson effort to take advantage of the presence in Washington of Foreign Minister Dirk Stikker and promote a Netherlands-Indonesian meeting. Indonesia is a sizable cloud over both the Marshall plan and the North Atlantic security pact. Subsidies of goods and arms to Holland are hard to justify while Holland is keeping up a military blockade in Indonesia. The misgivings on Capitol Hill are loud enough, surely, to be heard by Netherlands officials in America.

Whether the Dutch people are equally receptive is another matter. On the basis of evidence, they are probably in a state of ignorance, as they are about both the facts of the police action and the circumstances of the underlying dispute. Newsprint is short in the Netherlands, and honesty of reporting from Indonesia has been suspect ever since the Dutch delegation at Lake Success stood revealed before the world as the victims of misinformation. The point is pertinent because most American newspapers are in periodical receipt of private and public communications from the Netherlands aimed at enlightenment. Most often they contain tales of misconduct by the UN Good Offices Committee which we find quite at variance with truth.

The air of injured innocence which is accompanying these myths out of Holland is pathetic. However, it is said to be dissolving rapidly as a major fact is impinging upon Dutch consciousness. This is that the Dutch have a bull by the tail. They have hitherto insisted that the animal is a bear with a big B, but the pretense, though swallowed avidly enough by diehards of a dying imperialism and by commiphobiacs, is invalidated by the evidence of all American officialdom in contact with Indonesia. Nowadays the real shape of the animal is coming to be appreciated in Holland. In other words, the people are beginning to ask questions about the line on which they have been fed, and to wonder why the Indonesians refuse to be pacified by bayonets. This is all to the good. It will help to soften the stubbornness that the Security Council has encountered from the Dutch in the effort to return Indonesia to peace and start the parties afresh on the path to the working out of Indonesian independence.

The position of the Security Council is now based on a resolution accepted on the proposal of Canada. Canada, always a quester for formulas at international gatherings, wanted a preliminary round table conference of Dutch and Indonesian Republicans with UN officials in attendance. Such a proposal would have been doomed from the start if left to be carried out by Dutch officials in Indonesia. If the Netherlands, in spite of international recognition of the Indonesian Republic, think of the trouble in Indonesia as an internal problem for the Dutch themselves, the Dutch in Indonesia appear to think of it as an internal problem for the Dutch in Indonesia. The tail has been wagging the dog in this matter on several occasions.

Perhaps the dispatch to Indonesia of Dr. J. H. van Royen is a sign of a fresh determination on the part of the Dutch to join authoritatively in the quest for a solution. Dr. Van Royen is the man for the job. In spite of being the unconscious carrier of misinformation, he has suffered no detraction from the general esteem in which he is held by his Lake Success colleagues. But there can be no approach to a solution till one party regains the freedom enjoyed by the other—till, in short, the captured Indonesian leaders are released, enabled to talk freely with their colleagues, and allowed to return for consultation to their capital at Jogjakarta.

M. D. Anderson Cancer Foundation, Houston, Tex.

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES

Tuesday, April 19 (legislative day of Monday, April 11), 1949

Mr. JOHNSON of Texas. Mr. President, out of the raw material of an intense and trying personal encounter with the quiet ruthlessness of cancer, Mr. Paul Bolton, one of Texas' outstanding newspapermen and radio commentators, recently fashioned a sensitive and eloquent broadcast. In simple but persuasive terms, the broadcast presents a convincing plea for assistance to such fine research institutions as Texas' own M. D. Anderson Cancer Foundation in Houston, where the battle against cancer is being waged today. I ask unanimous consent to place Mr. Bolton's broadcast script in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

This evening, I am going to make a special report on cancer. To make it, some rules must be broken. Such as the rule that broadcasts — soap operas excepted — must avoid unpleasant subjects. And the rule that news reports should not dwell more than 2 or 3 minutes on a single subject. And the rule that personal opinion should not be reflected in news reports.

This is a report on legislation which may not survive the current economy movement in the legislature—legislation to make available to Texans a cancer treatment which, otherwise, they must go to New York, Boston, Minnesota, or California to get.

I personally believe this legislation should survive. To explain, I shall have to tell parts of a personal history, as impersonally as I can.

First of all, I have no selfish interest in this legislation. The shock of the word malignant sent us flying to the Mayo clinic, in Rochester, Minn., a thousand miles to the north. Whatever the legislature does will come too late to help or hinder me or mine.

The legislation is this: The State board of control recommended that $1,000,000 be spent to build, at the M. D. Anderson cancer foundation in Houston, a specialized research building; that some three hundred and twenty-five thousand dollars be spent to equip it.

This recommendation, at this time, lacks legislative approval.

Research would be in the field of radioactive isotopes. Two big words which meant very little to me until a few months ago. My hope tonight is to cut those two big words down to our size by telling you what they meant in one case.

Before deciding to make this attempt, I sought encouragement from the mother of a child afflicted with cerebral palsy. She has become a vigorous, effective worker for all crippled children. I told her of my doubts. Her reply went like this:

"That's how we felt; some sense of false pride, a sort of prigishness about discussing our personal affairs. Then we decided, 'Why not try to turn our own worry and misery into constructive channels, and perhaps help some other family to avoid them?'"

I fervently hope her advice is good.

Cancer struck a member of our family. Without warning, without pain. It struck the thyroid gland. The thyroid lies like a butterfly on each side of your Adam's apple. It controls your energy. Too much, and you're overactive. Too little, you suffer from chronic fatigue. A faulty thyroid may develop what is called goiter. A goiter may be malignant.

I speak, you understand, in layman's language. In this case, the malignancy was discovered by very fine surgery, here in Austin. After two more surgical explorations, the specialists at Mayo's decided to use radioactive isotopes of iodine.

Now, you must understand that the thyroid gland absorbs iodine—grabs it up out of the bloodstream. When we made the atom bomb, at a cost of some $2,000,000,000, other discoveries were made. One was that certain elements could be made radioactive. To explain what this means, I could quote from learned scientific reports; but the explanation which served me best came in a letter, intended to make the meaning clear to my 8-year-old son. This letter to Christy starts off like this:

"I am still in the hospital, after drinking a glass full of what tasted like water, but was called radioactive iodine. I'm not sick; I'm dressed and up and doing things. But all the time the radioactive iodine is changing things in my body.

"It is a long story," the letter goes on; "you know, we all start out from two cells, which split and grow until there are millions of cells, all joined together to make the human body. We don't know why these two cells divide and divide and make up all the different parts of the body. That's something which makes life mysterious and wonderful.

"Sometimes some of the cells start acting up. It is as though they went crazy. They start dividing again, and growing, for no reason. Where there are supposed to be only 10 cells, suddenly there are 20. That's what made the lumps in my neck."

The letter continues: "When you think of how many people there are in the world, this doesn't happen very often, and that's surprising, too, when you think of all the different parts of the body, each made up of cells. Remember, we don't know what makes these cells grow. When they do start acting up, we want to have the growing part cut out, because it is something that wasn't meant to be there. But doctors can't see the individual cells while they are operating. They're too small to see except under a microscope. So they don't always get all the cells out. And if one cell is left, one wild cell, it will start dividing and growing and make another lump. That's what happened to me. Each time the doctors left something they couldn't see. It grew. So the doctors decided to try something else to get rid of those cells."

Here the letter to my son explains how the thyroid gland absorbs iodine, and the cells which started growing in the thyroid gland have that same craving for iodine. "Iodine," the letter goes on, "is an element. Everything in the world is made up of elements. It used to be that man thought these elements didn't ever change. Then they discovered that some of them are constantly changing. There was another surprise. They found that as these elements change they give off energy—energy like the heat of a fire burning. Radioactive isotopes is a way to describe an element changing. Radioactive iodine is called radioactive because it's giving off active rays. It's giving off energy all the time. You can feel the heat given off by a fire. Doctors have a machine called the Geiger counter which can feel the waves which the energy makes around my neck, where the radioactive iodine has been grabbed up by these hungry cells."

Then, in language which anyone can understand, the letter says: "This radioactive iodine plays a dirty trick on the thyroid cells. It kills them dead. They can't stand the radioactiveness of the iodine. Nobody knows why.

"Scientists have known for a long time where to get elements. They haven't known very long where to get elements changing. Now, some of these elements changing—these radioactive isotopes—are being made. They are doing this at one of the biggest plants in the world, Oak Ridge, where they made the atom bomb. The atom bomb, you know, was made of another element changing—uranium."

Then the letter, from which I have quoted only portions, concludes: "Elements changing means that they are shooting off things the scientists call neutrons and electrons which are bombarding the wild cells in my neck."

Now you must understand that any element which has been made radioactive is potentially harmful; at least, scientists can't afford to take chances. Radioiodine is shipped from Oak Ridge in lead containers because lead is the only thing which holds in the rays. It's shipped by special airplane. Only a small amount is kept on hand at any hospital. That small amount is protected by lead shields. It is kept in a laboraotry isolated from other parts of the hospital. Those who work in the laboratory wear sensitive recording devices on their wrists which tell them when they are picking up too much of the radiation from the very air. When doctors handle a glassful, to give to a patient, they use forceps 3 feet long. The patient who drinks that glassful is temporarily isolated. The waste materials from the patient's body must be carefully disposed of, because the scientists don't know what effect radioactive materials might have on marine life if those wastes got into water streams. Nobody knows very much about them, so every precaution must be taken; that's why a special place must be provided if Texas is to have access to this treatment.

And a reason for research is, that the surface has only been scratched. Some success has been achieved with iodine, but at Mayo's, one of the Nation's leading centers, only some 40 cases have been treated—including, incidentally, several from Texas. A doctor at Anderson's put it like this: "When the first oil well was drilled, the people who drilled it knew they had something, but they didn't quite know what. In the use of radioactive isotopes, we have drilled only the first oil well."

Perhaps the first oil well could be called the still experimental use of radioactive iodine. Scientists are experimenting with the use of radioactivated gold, calcium, phosphorus. But the trouble with the simile of the oil well is that men who drill for oil get rich rewards in terms of cash. They could use the cash to drill more wells. In exploring the use of radioactive isotopes, you get back no cash returns. The State's investment will be repaid only in terms of human lives, and in cutting down fear and heartbreak. It is not the type of endeavor to which we could look to free enterprise to back with its capital. We can look only to private charity—and the State.

A sort of case could be made out for cash return on this investment. I'm told that one doctor in Dallas is using radioactive iodine in limited fashion; at Galveston and Houston they are experimenting; but for the State, its use is limited. That goes for the entire Southwest. We have the opportunity to make Texas a research and treatment center for the South and West. It would be a new and important industry, drawing customer-patients from all surrounding States. That's one example of cash return. Another approach is to figure the earning capacity of individuals. I am told 10 patients now await radioactive treatment at Houston. If each had an earning capacity of $100,000, by saving them you have restored to the economy the cost of the special building.

But it is futile, and indecent, to attempt to justify this expenditure in terms of dollar return. It can be justified on the theory that the State, any unit of government, is simply an agency through which the people accomplish those objectives for human betterment which would not otherwise be accomplished or which would be insufferably delayed. The atom bomb's only justification which I have ever heard is that it saved the lives of many American boys who otherwise would have died. In the war, 280,000 Americans were killed in battle. And during the war years, 607,000 Americans died of cancer.

As for the cost, Texas does not, of course, have the $2,000,000,000 which all America spent to make the atom bomb; and Texas is asked by this legislation, to spend only $1,325,000. Always comparisons are odious; yet, let's measure this expenditure in terms of others more familiar. It's proposed to spend just a little more than the legislature has voted to spend each month, from now on, for farm roads. It's proposed to spend approximately one-sixth of what we spent, last month, on old-age pensions or other public welfare. It's proposed to spend approximately one-third of what we are spending on renovating the State prison system. It's proposed to spend less than we take in, in any single month, from the sales tax on cigarettes; the approximate amount which we Texans pay to the State each month as the tax on whisky.

I appreciate, almost as well as a member of the legislature, the intensely difficult job of fitting outgo to income. I have been watching that process for almost a score of years.

I started writing this broadcast some 2 weeks ago. Rereading it, I find a misstatement. At the beginning, I said: "I have no selfish interest in this legislation; whatever the legislature does comes too late to help me or mine."

During the 2 weeks since I first put down those words, I have realized why I do have a selfish interest. I was brought up to repay all my debts, financial and otherwise. In 6 months, I have piled up an enormous debt, one most difficult to repay: Gratitude to surgeons and their skill with their hands; to doctors, technicians, to friends who offered me their blank checks, to the scientists I will never know whose research finally led to radioactive iodine, to whatever divine providence there be who provided me with the funds when the need was urgent. Those people who now wait at Houston for treatment—no one with cancer would wait if any other course were open to him, and I realize that except for the grace of God, we would be standing there with them waiting. So my selfish motive tonight is to rid myself of at least a part of the debt I owe.

"An Idea Whose Time Has Come"

EXTENSION OF REMARKS
OF
HON. ELBERT D. THOMAS
OF UTAH
IN THE SENATE OF THE UNITED STATES

Tuesday, April 19 (legislative day of Monday, April 11), 1949

Mr. THOMAS of Utah. Mr. President, Mrs. Eleanor B. Allen, member of the Board of Education, Los Angeles Schools, has written an article entitled "An Idea Whose Time Has Come." It is thoughtful and it plans community responsibility in our schools for sentiment of the heart as well as the mind. It is worthy of widespread distribution, and, therefore, I ask unanimous consent to have it printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Los Angeles School Journal of January 10, 1949]

"AN IDEA WHOSE TIME HAS COME"

(By Eleanor B. Allen, member, Board of Education, Los Angeles City Schools)

Victor Hugo: "Nothing is so powerful as an idea whose time has come."

What is it that is arousing millions and setting them on the march? As totalitarian forces endeavor to shackle the democratic idea, freemen have become alerted the world over.

We are conscious, as never before, that the conflicts between individuals in the home and community and between groups on the national and international level have, through the ages, been a conflict of ideologies. On the community level, the results are broken homes and shattered relationships. On the international level, these conflicts result in wars, "cold" and "hot."

"Ideology" is a word we have had to learn to understand today as we learned in the thirties the meaning of totalitarianism. An ideology is ideas in action. It is that concept of a way of life which mobilizes men and nations. An ideology is to nations what faith is to an individual. It is a way of life which inspires a people and for which men will live and die.

Today, two basic ideologies are at war. They are called by various names: right versus wrong; principle versus self-interest; God-inspired democracy versus atheistic materialism. Each of us in our daily living, consciously or unconsciously, contributes to one of these ideologies.

We have witnessed the result of youth fired with an idea. Germany trained young Nazis willing to die for a doctrine of superrace and human slavery. Russia has produced a race fired with the doctrine of superclass which ends in slave camps. "Militant materialism," Lenin called the doctrine of communism. Youth, both inside and outside of Russia, trained in nondemocratic philosophy, live and fight and are ready to die for communism.

For what are democratic free nations of the world training their youth? Are we creating a passionate devotion to democratic principles in our young people? Are we making our youth pioneers of a great idea? Can we match the passion and plan of the totalitarian idea?

Free public education in America was established to perpetuate the idea of democracy. Public schools with compulsory attendance exist so that increasing numbers of individuals may have the opportunity to know and assume the duties that come with the privileges of a free society.

Education in a democracy must create and develop the type of citizen capable of bringing to a reality the idea of a government of free peoples, who, under God, can live together regardless of their color, creed, or class, in mutual benefit allowing each other equal privileges to pursue life, liberty, and happiness.

We have taught our children a great deal about democracy, but to have an ideology means ideas must be translated into action.

Individuals and groups of people have converged on public education demanding better cultural relations, greater world vision, increased human understanding or—to put it simply—people are demanding that we teach our children how to live together.

People are realizing that in an age of educational skills, human behavior and attitudes have not kept pace with scientific advance.

Education has done a matchless job of equipping us to make a living and surmount material obstacles. However, in so doing, without developing equally the intangible characteristics of unselfishness and neighborliness, we have played into the hands of the materialistic philosophy of "get."

Science has advanced to get us all the short cuts to easy living. (Even radio boasts a program of Easy Listening.) Science has advanced to get us things. Science has advanced to get us places quickly. Science has done its crowning best by getting us the split atom. Science has now got us a world we are afraid to live in.

We think it is the disintegrated atom we fear. What we really ought to fear is the disintegrated Adam. In a mad race to get things and places, education has not kept pace in getting us the kind of a whole, integrated, sane, moral, and unselfish Adam capable of handling the tools sharpened by science.

We must not minimize the fine character-building programs sincere educators have untiringly worked for. But, we do honestly face that their effectiveness has not outweighed or even balanced the materialistic side of education. Somewhere along the line, we have failed to make these high ideals real in the hearts of youth.

A program of learning is only real when it results in satisfactory behavior and attitudes. We have obviously been teaching the mind. Now, we are learning we must change the heart.

Materialism, which exists wherever there is self-interest in any of us, has been capturing the imagination of many unsuspecting educators. It has subtly and quietly deflected the true purpose of education from the idea of making a life in a democracy to making a living in a society where "everyone for himself and the devil take the hindmost" is a doctrine. Such a society must eventually create the police state to save us from each other.

An education system which fails to deal with what is dishonest, impure, and selfish in a child, leaves him not free to think or act, but a slave. He will be a slave to his own desires and self-interests. He is at the mercy of all propaganda because he will have no power of discrimination.

The age of free thinking and free self-expression, without developing spiritual convictions through education is gone. Our children have a right to be taught not only how to think but to be taught the moral and spiritual standards by which they are to measure what to think.

We must never teach our children what to think. But we can teach them the principles of a free society—honesty, unselfishness, neighborliness, moral cleanliness, and obedience to God—as guides for their thinking and actions.

Recently a high-school girl attended an "aud" call in her school. The young people themselves undertook the job of facing the problem of dishonesty in their school, and finding what to do about it. This girl was convicted of her own dishonesty as she listened. Encouraged by the other young people, she went to her girls' counselor. She returned a hall pass and absent excuse she had been given after bringing a note with her mother's signature which she had forged. The counselor reports this girl has become an outstanding leader in her class where up until that time she was the counselor's outstanding problem.

In another school two girls, arch enemies, whose leadership had divided their school into warring cliques, were in the same class in orientation. One day they stood up before the class, hand in hand, and said, "What we have been studying about together has made us see that our fight here in school is part of the trouble with the world, and if we want the world to be different we've got to start being different ourselves." The girls had decided to make up and the counselor reports an about-face in the girls' attitude.

Where democratic principles become real in the hearts of children we know the world will be different. Learning programs that reach the heart change them as well.

This is an area of education that we have failed to develop adequately until now. Previously, people believed it the prerogative of home and church. But today, the power of an idea taking hold in the minds of men, as they see their freedom threatened, has resulted in the upsurgence of a public demand that our schools change their direction and take responsibility for moral and spiritual training.

Our sound educators have long and patiently awaited this demand from the public, and this assurance of support from the home and community. They want to go to grips with the weaknesses of curricula which teach well the learning skills of the head and hands, but which leave the hearts of too many of our children selfish, greedy, calculating and unloving. A few teachers are pioneering and finding the secret of how to do this.

Democracy is coming into its great hour as educators, parents, and citizens begin to understand that democracy is not a political concept but a way of life. It is not a process of government in some far-off capital, but is a matter of how a citizen lives where he is.

Democracy depends not only on governmental structure, but on the structure of sound homes maintained by husbands and wives who are honest with each other and their children. Democracy lives not in signed documents and peace treaties, but it lives when individuals can work together in harmony and as a team in factories, offices, stores, and schools, trusting one another.

Democracy does not only depend on the honesty of men in office, but its very existence depends on whether sweaters and lunch boxes, pens and nickels can be found where they were last left, and whether John is willing to admit he cribbed in the exam and decides not to do it again.

Democracy doesn't depend on who is elected to Washington, but whether our children in school elect to be clean-living in their thoughts and actions. Democracy depends on the youth in our schools deciding that it's smart to apply in their own lives the faith in God that our great men and documents of history claimed for our Nation.

In some schools, a moment of devotion—when teachers and pupils bow their heads as God's blessing is invoked on the events of the day—has been lauded by teachers as one of the most enriching additions to the school experience. Quiet consideration of the plans for the day, and each child's responsibility in them, has promoted efficiency and friendly school spirit. In the NEA National Journal, the article entitled "When Children

Listen," reports that such procedures have eliminated cheating in an arithmetic class, and increased skills in others. Following one such occasion, a high-school boy was convicted by his conscience for taking money from his teacher's drawer. He returned it to her.

We have too long made democracy a thing of the head when in reality it must become a fighting faith of the heart.

The hour has come when we realize that education for freedom is not barren of religion and faith but is one with the rich spiritual depths of every-day living. We no longer bend the knee to the bigot and defer to the atheist. We realize that to deny our school children the teaching in their classroom that the will of God must be their will and His commandments their yardstick, is to open our Nation to the onslaught of human dictatorship and the rule of tyrants.

"Nothing is so powerful as an idea whose time has come."

Building Armed Services Into a Team

EXTENSION OF REMARKS

OF

HON. WAYNE MORSE

OF OREGON

IN THE SENATE OF THE UNITED STATES

Tuesday, April 19 (legislative day of Monday, April 11), 1949

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Building Armed Services Into a Team," by Roscoe Drummond, chief of the Washington Bureau of the Christian Science Monitor, which appeared in the Christian Science Monitor on April 5, 1949.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

STATE OF THE NATION

(By Roscoe Drummond)

BUILDING ARMED SERVICES INTO A TEAM

WASHINGTON.—One of the most asked and least answered questions in Washington is: How can the joint military chiefs be brought to function more as a team and less as a group of competing attorneys, each pleading for all he can get for his own service?

Before he resigned as Secretary of Defense, James Forrestal once remarked in conversation that under normal circumstances it would be reasonable to expect that it would take three or four generations of Joint Chiefs—that is, three or four sets of Joint Chiefs serving over a span of a dozen years—before the topmost leaders of the three services outgrew the limitations of one-service prejudice and one-service thinking and really began functioning as national defense chiefs, with a loyalty to the national defense establishment even greater than their loyalty to the three services which make up that establishment.

Mr. Forrestal is asking for a lot, but he is not asking for too much, and, furthermore, the Nation can't afford to wait for three or four generations of Joint Chiefs to bring this about. One adequate reason the Nation can't afford to wait is that we are not living in normal circumstances. We are simply not a normal world and certainly not a peaceful world. The need for a really integrated team of Joint Chiefs is so great that its development has got to be speeded up.

How? That's the question.

Now, since the present members of the Joint Chiefs are preeminently honest, competent, and patriotic men, it must be that there is something in the military system itself which makes breadth of view extremely difficult to attain. If this assumption is correct—and there is ample evidence that it is—then can't some steps be taken, where they will do the most good, to promote a national defense loyalty over and above a service loyalty?

The central problem is that from the moment a young man decides to begin training to be an officer in the Army, Navy, or Air Force, nearly everything conceivable is done to breed into him a one-service mentality and virtually nothing is done to train him to have the breadth and grasp and understanding and loyalty to a national defense concept, to a national defense team.

The result is that young officers are given a one-service indoctrination before they have even started at the bottom of their careers, and by the time they have reached the top it's almost too late.

No one questions that there is great merit in preserving service entity and service esprit de corps in the operation of the Army, Navy, and Air Force. While preserving separateness in operation, the need is to achieve real unification at the top and train young men at the bottom to the concept and to a loyalty as national defense officers.

How to do this?

1. Take the uniforms off the officers when they begin their service at the top as members of the Joint Chiefs. Appoint senior officers to the Joint Chiefs who are not the operating heads of the services and who, being ready for retirement after this highest service, will not be looking for service preferment in the future.

2. Don't put any uniform—unless it be a national defense uniform—on the officers-to-be during the period of training. Give all future officers the same basic technical and educational training at West Point, at Annapolis, and at a third military academy which would be necessary to produce sufficient officer material for the three services. Then turn over one-third of each of the graduating classes of the national defense academies to the Army, Navy, and Air Force—so far as possible in accordance with the choice of the graduates themselves.

Obviously there will be service leaders who will hold up their hands and scream bloody murder at these suggestions. Some Navy or Air Force partisans will say you have got to train a naval officer or an Air Force officer from the time he is out of rompers. This is buncombe, and I can give you highly placed military men who know and will say it is buncombe.

The need is to remove service pride and service prejudice from the top and from the bottom. The need is to unify at the level of combined strategy-making and to train future officers in the spirit of unification before they are put into the three services.

Frankly, these are not my ideas. They are ideas I have heard favorably discussed by military leaders who have achieved a rank of independence. It seems to me that they deserve to be more than just discussed. They deserve to be acted upon.

Assistance to Veterans

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Tuesday, April 19 (legislative day of Monday, April 11), 1949

Mr. WILEY. Mr. President, we all recognize that one of the most important challenges facing our Nation is securing justice and equity for our ex-servicemen.

In this connection I ask unanimous consent that there be printed in the Appendix of the RECORD the text of a statement by Mr. Fraser S. Gardner, as published in the Army and Navy Union News.

Mr. Gardner is national legislative chairman of that organization and is an authority on veterans' affairs, having served as past national officer of major veterans' organizations in addition to having discussed veterans' affairs on the radio and elsewhere.

I believe that Mr. Gardner's comments will be of interest to my colleagues and to all American ex-servicemen.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ON THE LEGAL SIDE

(By Fraser S. Gardner)

There are 10,000,000 things a man in uniform can never forget—10,000,000 things he cannot discard along with his uniform. He could not explain these things to you in words of 2 or 10 syllables. They are the things that have changed him. They are the things which can separate him forever from you, unless you understand that even though he is home, without a uniform, he is still a soldier or sailor, and is different—and may be so forevermore.

Any man who has been in the armed forces of his country, whether or not he has suffered a wound, an injury, a disability, has undergone a basic change in his entire mode of living. He has been removed from all home and family responsibility. He has been responsible only to his superior officers. His law has been the law of war—to kill or be killed. To obey orders and to destroy the enemy. This has been his life and his purpose in life. It is a far cry from normal life and normal responsibility, such as we daily experience, and yet I firmly believe to the servicemen and veteran, home, wherever it is, is the most sacred spot in all the world. Home is where his thoughts and his love, his dreams, and hopes are centered. They came back again to take up life where they left it, and they expected to find things the same. For they thought of themselves as being still the same boys who went out from our homes, but they are not the same boys who were proudly waved away.

Since last they saw their homes they have seen a new world. They have visited lands of which some had never even heard, and have lived among people of strange customs and observed their cultures, studied their lives, and judged their views.

They have lived through lonely, tragic days and seen horrors, and experienced never-to-be-forgotten moments. They have seen men killed and some have killed men. They have come back to our homes, to our towns and our farms, to our shops, and offices, and they have brought to our smug communities a cosmopolitan outlook such as we have never known before.

They are not the same boys who went out from our homes and no amount of wishful thinking will make them so. Our boys have now become our men. Though they returned to the things of which they dreamed while they were away, they unconsciously expected some of those things to have kept pace with their own changed views. Having analyzed political attitudes from the vantage point of distance, they have dared to suggest changes.

They do not hesitate to see that their voice is heard in political issues. They have witnessed economic structures in many phases, and now are determined that the future shall be more wisely planned. After having experienced life on varied levels, they have formed new opinions of the social order.

They have come to grips with life and death and formed new estimates thereof. Although they came back to give all a chance, they are ready to reject that which does not satisfy them. These young men are the potential leaders of this country. They are the potential strength and backbone of the new world they fought for. That one simple truth we all must realize.

Rightly, our young veterans have expected jobs that would assure them financial stability, for, during the years they had been away, they had no opportunity to establish a home and to raise a family. While he was away, others were assured of the security of their homes and their jobs, by the very fact that he was fighting to protect them. After all, the men whose lot it was to be away in service had no more personal responsibility for the safeguarding of America than did those whose lot it was, for one reason or another, to remain at home. As to the disabled ex-member of the armed forces, we have heard much, and will hear more, about the various rehabilitation programs of the military and naval service, as well as the Veteran's Administration program in the same field. Thanks to the progress of medical science, blood plasma, penicillin, and sulfa, comparatively many more lives were saved in the just past war than in any war in history. The rehabilitation program of all Government sources takes care of the disabled men who came back, returning them to their homes in as normal a condition as their disabilities will permit. According to the War and Navy Departments, and the Veteran's Administration, the goal of their rehabilitation program is to restore the disabled individual, as far as possible, physically, mentally, and economically. And that takes more than just good medical treatment. Modern medical care and surgical skill may have saved the life of the soldier wounded in battle, but the obligation does not end there. To rehabilitate means to restore to a former rate, rank, state, or privilege.

That demands our going all the way. We must help the disabled veteran to overcome all mental hazards, as well as his physical handicaps and restore him to a full and useful life. Rehabilitation of the disabled veteran must be continued long after discharge by agencies equipped to serve, by family and friends, and by the public in general. They will be rather keyed up, in many cases, because they lived and led an insane kind of life, a life understood only by those who lived it. It is my firm belief the one thing, a big thing, these men will always welcome, probably more than anything else, will be to get hold of a broad, warm understanding hand, a hand that will actually help him make contact with things that are real and genuine, peace and quiet, communion with nature, security, independence, and a chance to create his own destiny. Nothing, no sense of pride or self-consciousness, or doubt, should make any of us hesitant or reluctant in our effort to understand the new veteran—the World War II Johnny who has come marching home.

It is indeed our duty to help him completely through the transition period, be it 10 days or 10 years, from an active fighting life to that of a dignified, proud, self-sustained, successful citizen. Remember, there are almost 150,000 veterans in Veterans' Administration hospitals alone. This does not include the hundreds of cases of veterans not yet completely restored to the way of life they seek and deserve. Your understanding, in action, will be a total success if you understand that he expects to be treated in the same manner you would treat any other normal human being, just as you would be treated.

"When he comes back," was on the lips of millions who remained at home during the latest war. It was said in many languages by people of many lands, by mothers and fathers, by wives and sweethearts, by brothers and sisters, and by little children. It was the preface to millions of hopes. It entered the language of our prayers. It called up cherished pictures of the past. It set us to making plans. At the thought we should renew our promises, unspoken but hallowed by a thousand repetitions in our minds, to make real, and make stick, the home and peace and freedom and opportunity for which the veteran fought. Done with danger, horror, and fear, he will turn zestfully, with your understanding and mine, to school and friends or to his work and family and again find happiness and security. Tomorrow belongs to those who prepare for it today.

The Medway Plan for World Peace Through World Brotherhood

EXTENSION OF REMARKS
OF
HON. BURNET R. MAYBANK
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES

Tuesday, April 19 (legislative day of Monday, April 11), 1949

Mr. MAYBANK. Mr. President, I ask unanimous consent to have printed in the RECORD an address entitled "The Medway Plan," delivered by Rt. Rev. Joseph L. O'Brien, pastor of St. Patrick's Church, Charleston, S. C., and director of education, diocese of Charleston, S. C., at the summer sessions at Misericordia College, Dallas, Pa.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE MEDWAY PLAN

(By Rt. Rev. Joseph L. O'Brien, S. T. D.; LL. D., director of education, diocese of Charleston, S. C.; founder and rector emeritus of the Bishop England High School; special lecturer (summer sessions) Misericordia College, Dallas, Pa.; pastor, Saint Patrick's Church, Charleston, S. C.)

Sweet, indeed, has been the incense rising, these years back, to heaven's gates, the incense of brotherly love manifested by the people of these United States to their brethren in the war-ravaged countries of Europe during the harrowing years we have been trying to find a road back to peace.

Many and various organizations have joined hearts and hands in swinging golden censers laden with prayers and gifts, and citizens of all ranks, men, women, and children have rejoiced greatly in the opportunities offered to bring some little comfort and cheer to their brethren overseas still living in the shadows of devastation and want. And all this is only the living up to the tribute paid to Americans by James Bryce in his great book, the American Commonwealth, published in 1888, wherein we read: "There is in the United States a sort of kindness, a sense of human fellowship, a recognition of the duty of mutual help owed by man to man, stronger than anywhere in the Old World."

Various plans of raising money and supplies for distribution among the needy were worked out and carried through in earnestness and enthusiasm under the leadership of great-hearted men and women bringing grace and blessings to the givers and comfort and solace to the recipients.

Of a truth, the American people have been father and mother, sister and brother to their fellow men in the earth-scorched lands of invasion and ruin.

Among these many relief plans, there is one, unique in its Christlike basis, in its manner of operation, in its personalized service, and in its simplicity of contact. It is the fruit of the labor and prayer of a big man with a big heart who was fortunate in finding a few friends to work with him and to guide him by their earnest cooperation and enthusiastic support, men who knew the European scene at first hand and who understood the depths of despair into which the souls of men had fallen.

This plan is known as the Medway plan, founded, organized, and developed by Mr. William Montgomery Bennett, of Woodbury, Conn., and Charleston, S. C., a retired economist, who in the days of his retirement—which he could have rightly counted on as twilight days of easeful peace—has used his time and his energy and his means to bring about the biggest work of his long and useful career.

The Medway plan has passed the experimental stage. It has proved its worth. What Charleston, what Columbia, and other cities and towns in the South have done; what cities and towns in various other parts of the country have done prove the workability of the plan and its success in spreading the doctrine of brotherhood, a word that has gone out of fashion in the Old World—among the surviving victims of the whirlwind.

There is a spectre overshadowing Europe today—the spectre of communism—backed by the might and power of the U. S. S. R.

Communism will not be stayed or defeated by the atom bomb, or any other scientific weapon aborning in the minds of men. Communism, especially the European brand, takes root and thrives in the wake of decadent Christianity in lands once fair, now dunged with rotten death. Communism is naught but the evidence of the unfulfilled tasks of Christianity. Communism is hate, violent hate, and atheism, and bloody revolution. There is only one cure for violent hate; and that is ardent love. The Medway plan is a heart-warming exemplification of love, at once ardent and practical. Through the Medway plan, heart speaks to heart and loving hands reach out across the seas in open generosity.

From Flers-de-l'Orne, the town in France adopted by Charleston, S. C., Mr. Bennett has a letter which shows how love wins out in a hate-inspired conflict. Red Day in May was being celebrated in the town. The Communists gathered in one end of a park to celebrate the day in their manner. Another crowd gathered at a distance in another area. For Flers like all France has been a battleground in a cold war of ideas between French tradition and Soviet communism. Where the year before the town was about evenly divided in allegiance, on this day an audience of only 30 was gathered around the loud-speaker blaring the glories of communism. The traditionalists to the number of 2,500 attentively listened to their several speakers extol the virtues of free government and world peace; they heard how their brothers far across the sea, in Charleston, S. C., had sent them help in the name of democracy and of democracy's god. Love, brotherly love, was winning in the battle of ideas.

There are those who would make the United States the arsenal of democracy, and those who would make the United States the bread basket of democracy, and still others who would make the United States the banking house of democracy, and on such pillars they would build the battlements of the new unity of mankind. And there are those, and they of the Medway plan are of them, who would go beyond all that and make the United States the foster mother of world democracy, the international alma mater of a broken, hungry, naked, homeless, disillusioned, and dispirited world—the mother whose foster-children in adopted villages, towns, and cities the world over would learn through the personalized interest and brotherly touch of

their brothers and sisters in the United States the lessons of love needed to reestablish peace and good will again on earth.

Always and ever after a war the attempts to secure peace and good will among men and nations is carried on by those who fought for and controlled the destinies of the nations involved; by men who were weary and worn, old and tired, disillusioned and suspicious, and only lately at one another's throats. They set to work from no common ground of understanding, friendship, or love. History attests that all such efforts for lasting peace are foredoomed from the start to failure.

It is time for us to take the long view and start the search for peace early enough—with the children of the world; to give the children of the nations of the earth the opportunity of becoming friends, foster brothers and sisters of the cherishing mother of this broken world of ours—the United States of America. The friendship, knowledge, sympathetic interests and understanding begun now will grow in a few short years into such unbreakable bonds of brotherhood and love that there will be no room for war and conflict in their hearts and minds.

A vehicle is at hand to help the children of the world to reach into each other's hearts; to grow together—not apart; to come to understand each other; to promote that spiritual atmosphere in which, alone, true helpfulness, tolerance, friendship, and a firm determination to work together for human freedom everywhere can grow with any hope of a fruitful harvest,—through negotiation, not war. That vehicle is the program of action sponsored by the Medway plan, already adopted in some 60 American cities. Medway plan is not an agency or an organization. It is simply a mode of action already at hand for every American citizen to take to heart.

There are those who think we are now at the start of the next war cycle. The United Nations carries the world's hopes and prayers for world peace, implemented now by the North Atlantic Pact. Now is the hour for us all to start to condition the future makers and the keepers of peace by doing what never was tried before—the gathering of the children of all nations into one growing family under the one God of all men. Growing up in that one-world-family they will gradually learn the true meaning of human freedom and world peace. They will possess at maturity what we now lack. They will know what health, food, clothing, and shelter mean; they will understand how their world must find peace, love, faith, light, and joy. The children can start now as active partners in building their world of tomorrow. That is the new way, the only way to find the road to peace, for the children of today are the peacemakers of tomorrow. It has been said that there is a gate in every wall. May it now be true that the children of tomorrow will march through the gateway to world peace breeched through the wall of human stupidity by the good will developed in the world family by the foster children of mother America?

A children's crusade carried through with all the enthusiasm of youth under the guidance of men and women who still retain a spark of the enthusiasm and idealism of their own youth.

Is that ideal beyond our reach?

It can be done, if we have the will to do it. The children of today can be led along the highway of peace, if we of this confused generation set out resolutely to lead them. If every family with children in our grade and high schools would, through its own beloved young ones, get in touch with the children of other countries and take two or three of them into the family circle through letters and little gifts of basic needs; if this adoption was carried on and on in the continuity of family interest rather than in the spasmodic and sentimental way so characteristic of much of our effort at international altruism; if we canalized the potential power and love latent in the boys and girls in the schools of the areas devastated by the whirlwind of war, beyond all doubt we should eventually sow in the hearts and souls of the children now growing up in the war-ravaged countries the seeds of liberty and freedom, the foundations of the American ideal which is the heritage of our own boys and girls, and thereby we should be laying the foundations of world peace through world brotherhood.

"Every American who helps at least one European to understand America, her objectives, and her methods of achieving them, has made a personal contribution to the most vital cause of our time," says Andre Visson in his analysis of international misunderstanding in respect to the United States in his recent work, As Others See Us.

The most vital cause of our time, what is it? Visson continues: "To make Europeans realize—and incidentally confirm it to ourselves—that while America and western Europe frequently speak a different economic language and travel along different cultural roads, they are steadily moving toward the same political and even moral objectives. We must understand that what brings us together is our common belief in human dignity and in man's right to freedom."

Let us begin with the children. And the Medway plan did begin with the children and to date has 25,000 of them under its care and in touch with their foster brothers and sisters in the United States. The Medway plan has on hand now the names and addresses of 30,000 more youngsters in war-torn lands waiting for you and your friends and your friends' friends throughout our land of peace and prosperity to take them to heart, to stretch their hands to them, to take them into their family circles through correspondence carried on by our American boys and girls who will give them an intimate picture of the American belief in "human dignity and in man's right to freedom." The opportunity for this form of brotherly cooperation challenges us Americans today. It is our manifest destiny. For weal or for woe, history will irrevocably record our decision.

Atlantic Pact and the United Nations

EXTENSION OF REMARKS

OF

HON. WAYNE MORSE

OF OREGON

IN THE SENATE OF THE UNITED STATES

Tuesday, April 19 (legislative day of Monday, April 11), 1949

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Atlantic Pact and the United Nations," by Roscoe Drummond, chief of the Washington bureau of the Christian Science Monitor, which appeared in the Christian Science Monitor on March 30, 1949.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

STATE OF THE NATION

(By Roscoe Drummond)

ATLANTIC PACT AND THE UNITED NATIONS

WASHINGTON.—Clark M. Eichelberger, than whom there is no stronger American supporter of the United Nations, does not view the North Atlantic security pact as injurious to the UN nor as out of keeping with it.

Writing in the Nation magazine, Mr. Eichelberger, who is director of the American Association for the United Nations, makes this useful appraisal of the relationship of the pact to the UN:

"The effect of the Atlantic Pact upon the United Nations will partly be determined by the arguments used in presenting it in the Senate. There will be universal support of the major objective of the pact—to give assurance to the nations of western Europe that if they are attacked, this country will not wait for a *Lusitania* or a Pearl Harbor.

"Such assurance, however, must not be given in a way to increase insecurity in the rest of the world, for that would weaken the security of the Western Hemisphere. On the other hand, if the pact is so defined and presented as to strengthen the security systems of the entire world, the security of western Europe will be doubly enhanced."

In effect, Mr. Eichelberger is saying that, in his judgment, the Atlantic Pact will be a source of strength to the UN if its signatories, in announcing that they will join in the common defense of the Atlantic community, are not thereby announcing that they intend to leave other independent nations undefended if attacked.

There are three developments which contribute an answer to Mr. Eichelberger's question:

The text of the proposed treaty, which was not available when Mr. Eichelberger wrote his article, shows that the 12 nations signing it explicitly reaffirmed their responsibilities under the Charter.

In his exposition of the pact, Secretary of State Acheson was careful to emphasize that neither the United States nor any of the signatories are reducing their obligations to come to the aid of an attacked country so far as the veto-laden Security Council permits them to do so.

For the United States, particularly, Mr. Acheson has publicly taken note of the possibility that America's special concern in the security of the North Atlantic area might be misinterpreted as implying a lessening of American interest in the security of countries in other areas. To this he replied:

"In the compact world of today, the security of the United States cannot be defined in terms of boundaries and frontiers. A serious threat to international peace and security anywhere in the world is a direct concern to this country. Therefore, it is our policy to help free peoples to maintain their integrity and independence not only in western Europe or the Americas but wherever the aid we are able to provide can be effective."

Some questions have been raised as to why the proposed treaty relates itself only to article 51 of the Charter and omits reference to the regional arrangements articles of the Charter despite the fact that the pact is described officially as a regional agreement.

The official explanation of the State Department is that article 51 makes express provision for individual and collective self-defense. Since the dominant purpose of the pact is individual and collective self-defense, its framers chose to rest it on that charter provision which most exactly describes its purpose.

The right to create the Atlantic security pact does not stem from the Charter. Self-defense is an inherent right of nations, and the Charter simply declares that nothing in its provisions shall impair this inherent right.

It is quite likely that there is a further incentive for not linking the Atlantic collective defense pact to the regional agreements chapter of the Charter. Here it is stipulated that the Security Council must be kept fully informed of activities undertaken or in contemplation under regional arrangements. What constitutes activities under

this clause never has been defined. If it means advising the council when consultation takes place among the Atlantic Pact members or when measures of defense must be taken, the signatories bind themselves to keep the council fully informed. But the Atlantic nations are not obligating themselves to inform any potential aggressor in advance what are its strategic plans for defense.

The pact is designed to increase stability in an unpeaceful world. To achieve that end will be to help create conditions under which the United Nations can function more effectively.

Chief Joseph Dam on Columbia River

EXTENSION OF REMARKS
OF
HON. HARRY P. CAIN
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES

Tuesday, April 18 (legislative day of Monday, April 11), 1949

Mr. CAIN. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD a statement I made last week before the Senate Appropriations Committee in support of sufficient funds for Chief Joseph Dam on the Columbia River in Washington State.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

CHIEF JOSEPH DAM, COLUMBIA RIVER, WASH.

(Testimony by Hon. HARRY P. CAIN, Senator from the State of Washington, before the Senate Appropriations Committee, United States Capitol, April 1949, on the need of an appropriation in the amount of $21,375,000 for construction of Chief Joseph Dam during fiscal year 1950)

The continuing shortage of power in the Pacific Northwest represents a serious impediment to the expanding needs of the civilian economy and is a very serious handicap to production which is essential to national security.

The effect of this shortage will not only hamper and discourage industrial development but will also prevent full utilization of electrical conveniences in the home and on the farm.

During World War II, the Pacific Northwest expanded in industrial activity, bringing about an increase in population and small businesses which serve the people of the area. All these factors increased the demand for electric power. It was expected that this demand would drop sharply after termination of hostilities, because of curtailment of operations designed to further the war effort. However, such has not been the case.

Except for a brief decline after World War II, there has been a steady growth in power demand since 1935. During this period commercial energy requirements increased from 558,800,000 kilowatt hours in 1935 to 1,639,973,000 kilowatt hours in 1946. Energy requirements of rural and residential customers increased in even larger percentages over the same period from 743,579,000 to 3,151,776,000 kilowatt hours. The demand for power generation had increased to 2,988,000 kilowatts in 1946 and in 1947 reached a figure of 3,647,000 kilowatts.

In December 1948, the peak month, nearly 200,000 kilowatts of peak loads could not be met. Assuming a normal growth in population and industrial activity, it is conservatively estimated that 4,500,000 kilowatts of additional generating capacity will be needed by 1960.

In addition to the commercial and domestic aspects, there is also the national defense side of the picture.

Aluminum is one of the materials that would be needed in large quantities in case of an emergency. At the present time, aluminum is being produced at four times the prewar rate, and still falls short of total demands for the product. Of a total of approximately 600,000 tons of pig and ingot aluminum produced in 1948, about 280,000 tons came from plants in the Pacific Northwest. The output cannot be increased and, at the same time, a price close to the present market maintained because of lack of low-cost electrical energy. Any increase in price will be felt in the national-defense program, particularly in the cost of a 70-group air force.

The Munitions Board and the National Security Resources Board have concluded that the best solution to the problem is to expedite construction of power projects in the Columbia River Basin where the power potential is enormous.

One of the most outstanding of these projects is the Chief Joseph Dam, located on the Columbia River about 50 miles below Grand Coulee. An initial capacity of 960,000 kilowatts is planned, with provision for expansion of the powerhouse to 1,600,000 kilowatts, if and when required. The project is particularly attractive in that there are no irrigable lands to be inundated by its pool, nor is there any fish-passing problem. Plans already are being laid to use Chief Joseph power, mostly secondary power, for irrigation purposes. Thousands of acres of land can be irrigated in the area as far south as Wenatchee, where rich soil awaits only water pumped from the Columbia and Wenatchee Rivers. The water would be pumped directly to the land.

Being immediately downstream from Grand Coulee, Chief Joseph will produce substantial reregulating benefits. Grand Coulee should be operated on a relatively low load factor in order to make maximum use of its installed generating capacity and large water storage. Without the Chief Joseph Reservoir to reregulate the Grand Coulee releases, low-load-factor operation will create large waves in the river which might do extensive damage at downstream points.

The President's budget for some unknown reason only included $5,000,000 for initiation of construction of the Chief Joseph Dam project during the fiscal year 1950.

This amount will permit only minor operations to be commenced. With this sum and adequate appropriations in subsequent years, 192,000 kilowatts of power can be placed on the line in December 1956. This date is 1 year later than that which the Bonneville Power Administration estimates power from this project should be available to be of greatest assistance in alleviating the power shortage. After 1956, the present program of the Corps of Engineers contemplates placing there three generators, each with 64,000 kilowatts capacity, on the line each year until a total of 960,000 kilowatts has been installed.

In order to meet the Bonneville Power Administration schedule date of December 1955, an appropriation of $21,375,000 will be needed in fiscal year 1950.

This would permit award of a contract for a substantial amount of work on the dam itself, in addition to the minor operations, such as access roads, temporary housing for construction employees, and land acquisition, which would be accomplished with the $5,000,000 recommended by the President. The Munitions Board, the National Security Resources Board, the Secretary of the Interior, the Bonneville Power Administration, and private power interests in the area all recommend an immediate start on this project.

The availability of a large block of power from Chief Joseph Dam in December 1955 will be of immense value in alleviating the shortage of electrical energy.

It has been estimated that a delay of 1 year on Chief Joseph Dam might possibly prolong the shortage for at least 2 years more.

In view of the retarding effect of prolonging the existing power shortage on industry, national defense, and the needs of the general public, I recommend that the Corps of Engineers be provided with funds in the amount of $21,375,000 for fiscal year 1950 for application to the expeditious construction of the Chief Joseph Dam.

Before concluding my testimony, it may interest my colleagues to know that this potentially great multiple-use dam, which will be more than 200 feet high and 1,628 feet long, is named for the most famous Indian chief in the history of the Pacific Northwest and one of the greatest in American history.

American Army officers often have termed Chief Joseph the "Indian Napoleon."

World Peace?

EXTENSION OF REMARKS
OF
HON. GEORGE D. AIKEN
OF VERMONT
IN THE SENATE OF THE UNITED STATES

Wednesday, April 20 (legislative day of Monday, April 11), 1949

Mr. AIKEN. Madam President, I ask unanimous consent to have printed in the Appendix of the RECORD a radio interview of the junior Senator from Maine [Mrs. SMITH] by commentator Ed Hart, on the subject World Peace? on April 17, 1949.

There being no objection, the matter referred to was ordered to be printed in the RECORD, as follows:

This is Ed Hart speaking from Washington. Peace, Eastertime, cold war, fifteen billion military budget—peace, Eastertime. Throughout the ages man has been seeking a formula for peace. Yet, in a little over a generation 50,000,000 people have been slaughtered. We've seen a League of Nations die, to be replaced by a frail United Nations. Were our hopes born only to die again? Is there any formula for peace?

To discuss the subject our guest is Senator MARGARET CHASE SMITH, of Maine. Though diminutive in size, she is anything but that in charm and considered judgment. Why is it, Senator SMITH, that man can build atomic bombs and $165,000,000 airplane carriers, but he can't seem to erect a firm foundation for peace?

Senator SMITH. It seems to me that technologically we are several hundred years ahead of ourselves socially, morally, and even spiritually. Our human progress has just not kept up with the pace of our machine progress. Science has run ahead of our hearts.

Mr. HART. Well, are there any practical steps that we can take to catch up with ourselves—so that we might permit ourselves to live a little longer?

Senator SMITH. This is an era of challenge, Mr. Hart. It is a time for soul searching—a time for self-appraisal and a time for hard, earnest thinking. The hopes and threats created by the atomic bomb call for action.

1. A long-term course directed toward the establishment of world government.

2. An intermediate course directed toward the support of the United Nations.

3. A short-term course directed toward the use of diplomacy, public and private, for the easing and reduction of international tensions.

Mr. HART. You mention world government first. Isn't that a bit impractical at this stage of world history?

Senator SMITH. Well, to be realistic, we must recognize the fact that world government requires as its foundation a moral and psychological sense of world community, and that foundation does not presently exist. To impose or to negotiate a world government under existing conditions of prejudice and hate would do nothing more than set the stage for world civil war. Our minds and hearts are not yet prepared for a world of law, justice, and mercy.

Mr. HART. Is that why the United Nations doesn't seem to be doing so well?

Senator SMITH. Give it time. After all, the United Nations is a living symbol of world association and cooperation.

Mr. HART. Cooperation? There are some discordant tones emanating from Lake Success fairly frequently.

Senator SMITH. Yes, Mr. Hart; but at Lake Success we do have a forum where all nations can engage in even the bitterest of arguments and thrash out their differences through practical compromise—rather than resort to war.

Mr. HART. Who knows, Senator SMITH, maybe someone would veto war.

Senator SMITH, here in Washington we recently witnessed the signing of the Atlantic Pact by a host of foreign ministers—a military defense pact. Harold Stassen has suggested an Asiatic pact. In your opinion, are these military pacts definite steps on the road to world peace?

Senator SMITH. I regret that they are necessary in today's world—but not tomorrow's world. They are at best only stopgaps on the way to peace—like UNRRA and ECA have been. One is lifesaving, one is military, but both are necessary.

The broad objectives of peaceful living cannot be accomplished by diplomatic and governmental contacts working alone. They must be supported by the establishment of relationships among individuals and among their cultural and commercial organizations which must provide the means of reconstruction, economic security, and improvement in the material standard of life.

Mr. HART. Former French Prime Minister Herriot once pointed out to me the tremendous cost of peace. Do you think that the average American, Englishman, Frenchman, or Russian, realizes that peace has a price tag? That peace, like war, costs something?—and do you think that the average citizen of any great nation is prepared spiritually and mentally to pay that price?

Senator SMITH. Peace does have a cost, Mr. Hart. Like anything of value the price is high. It involves individual and national sacrifice—not appeasement, sacrifice—by every great nation and by every individual that lives in those great nations.

But seldom do we make sacrifices for strangers. We cannot know our neighbors by locking the doors of our houses and barring them from our homes.

Mr. HART. You're asking us, Mrs. SMITH, to give up some preconceived notions. What a sacrifice.

Senator SMITH. Yes, but there is too much hate between races, creeds, and colors, and even inside the groups themselves. The moral and psychological basis for world peace does not yet exist even here at home. There must be a profound change in human attitudes if we are to succeed in establishing a just and durable peace. No longer can we afford the luxury of private indulgence in hatred, prejudice, and contempt for other human beings. If the preparation of the necessary moral and psychological basis for world peace seems impossible, then world peace itself is impossible.

Mr. HART. Mrs. SMITH, aren't you asking that we abandon our prejudices—and even our hatreds? Mrs. SMITH, that price is too much.

Senator SMITH. Mr. Hart, we need the fearlessness to lay aside our comfortable old prejudices. We need the tolerance to let others live by their lights as we try to live by ours. We need to stop living by fear.

Mr. HART. But it is said, Mrs. SMITH, the Russians just won't let us do that—that you just can't do business with Stalin.

Senator SMITH. I admit the job seems insurmountable. Maybe it is insurmountable. But I'm not so sure that we have exhausted all explorations. You know, Mr. Hart, you never accomplish anything if at the outset you say it can't be done. We in Maine don't make friends of our neighbors by harsh name calling or throwing brickbats at each other.

Mr. HART. Do you think it's worth while doing some more tedious exploring?

Senator SMITH. I do if we could just find some common ground to begin with—perhaps seemingly insignificant common ground, and then work hard from there.

Mr. HART. Mrs. SMITH, do you feel that women are meeting their responsibilities in the matter of war or peace?

Senator SMITH. I must admit that they are not, Mr. Hart. There aren't enough in public life. Generally speaking, they lack interest and aggressiveness—the necessary ingredients of leadership. They cannot become leaders of the world until they become leaders within their own nation. It is regrettable that so few women have been chosen to participate in the United Nations. It is amazing when one realizes that women constitute at least one-half of the world's population.

Mr. HART. You, speaking as a woman and a leader, have said publicly that "We need to stop living by fear." What concrete steps might be taken by women to keep the world from living by fear?

Senator SMITH. Wars are man-made. Peace could be woman-made. But the blunt truth is that women have merely echoed the same fears of men who make war. I just have a notion—maybe it's a woman's hunch—that were there a half dozen outstanding American women—women versed in world affairs—to sit down with a similar group of women from France, England—and, yes, even Russia—to discuss means of attaining world peace—that they could get somewhere. They might avoid the seemingly dangerous impass that men have created to the moment.

Mr. HART. Maybe, Senator SMITH, you've started something. Perhaps you've hit upon an idea that is well worth exploring—and yes, even carrying out.

Senator SMITH. It seems to me that the women of each major nation could select representatives to a women's world group that would meet, say in Paris or Geneva——

Mr. HART. And that they hold a world peace conference of their own——

Senator SMITH. Yes; the agenda would be to determine specific ways and means of moving in the direction of world peace.

Mr. HART. Mrs. SMITH, without appearing too skeptical, would they produce more than the pious platitudes of men—platitudes from alleged statesmen that we have heard so frequently in the not too distant past; platitudes immersed in hypocrisy?

Senator SMITH. Well, I don't know, Mr. Hart. But the men have been given their chance, why not let the women have theirs? At least it's worth a try, for were it to do nothing else it would bring to the women as never before an awareness of their own individual responsibility in this matter of avoiding war and securing peace, of halting world suicide and making peace a reality instead of just a hope.

Mr. HART. Mrs. SMITH, if I were a Senator, I would offer a resolution. Thank you, Senator MARGARET CHASE SMITH, of Maine. If more women, yes, if more men thought as clearly about war and peace as you, ours would be a better world.

This is Ed Hart saying good-by from Washington.

What Lewis and Clark Could Not Have Known

EXTENSION OF REMARKS
OF
HON. FRANCIS CASE
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES

Monday, March 28, 1949

Mr. CASE of South Dakota. Mr. Speaker, under leave to extend my remarks, I include the following enlightening study on the place of the Middle Border in the growth of our country.

WHAT LEWIS AND CLARK COULD NOT HAVE KNOWN

A SURVEY OF MIDDLE BORDER REGIONALISM

Many definitions have been given for the middle border region since the late Hamlin Garland furnished the name to be applied to that part of the country. All are to some degree inaccurate since it is impossible to settle regional boundaries as we would that of a particular State. The heart of the middle border consists of the three States of North Dakota, South Dakota, and Nebraska in their entirety, with an eastern and western half-circle drawn around them having within its limits portions of western Minnesota and Iowa, and eastern Montana and Wyoming. It is the upper Great Plains region—an area surrounding the greater portion of the Missouri River. The particular historical stage of cultural development should enter into our definition and in keeping with this, perhaps the best definition that can be made of the middle border, or of any region, for that matter, is that it is a state of mind, or, better still, a way of life.

With the historical evidence available to us we cannot be at all certain as to just who the first white men were who traveled over these plains. We do know that such French explorers as the Verendrye brothers, Francois, and Louis-Joseph, and Jean Baptiste Truteau explored this region before it passed into the hands of the American people through the Louisiana Purchase. It remained, however, for the governmental exploring team of Meriwether Lewis and William Clark, with a small group of 43 men, to furnish us with the first descriptions of the area to prove of value. Between the years 1804–06 these intrepid explorers, following the natural waterway of the Missouri, bisected the middle border and came into contact with many of the Indians then inhabiting the region. Even a hasty perusual of their journals will make evident the fact that the dryness of the country made an impression upon them. The word "treeless" was often set down, and they seemed to feel that much of the soil was sterile. They did avoid the use of a word which was later mistakingly applied to the region because it was new to the experience of Americans—the word "desert." They aften mentioned the wind and culturally speaking were annoyed by the music of the Sioux.

The pathway which Lewis and Clark blazed was followed in the years to come by thousands. The beginning trickles of mountain

men up this river is one of the most glamorous and intriguing historical events in frontier history. Manuel Lisa and the leader of the Astorians, Walter Price Hunt, were in the field within several years of the Lewis and Clark expedition. They were followed by Ashley's men, including the neglected but justly outstanding Jedediah Strong Smith. And what American studying the fur traders has not thrilled to the story of Hugh Glass and his struggle with the grizzly in Dakota in 1823?

Close upon the footsteps of these early traders came a group of frontier artists who followed the path of the Missouri across the prairies and brought to the region its first tradition of formal art—an art that has developed into something distinctly the middle border's own. The first to arrive was George Catlin, who traveled up the "Old Muddy" in 1832 on the now famous steamboat *Yellowstone,* which had made the first steamboat trip to the upper Missouri the year before. Catlin visited extensively at Fort Pierre, Fort Union, and Fort Clark. The following year the young Swiss painter, Charles Bodmer, accompanying the distinguished scientific naturalist, Prince Maximilian, of Wied-Neuwied, painted many scenes around Fort Pierre and Fort Union. Rudolph Kurz, another Swiss, painted on the middle border in the forties. "Near-sighted and speaking with a German accent, he was referred to as 'the Dutchman' because he was more interested in painting Indians than in cheating them out of their furs." [1] Charles Wimar, youngest of the first generation of Indian painters, and perhaps the most accurate, made at least three trips up the Missouri in the early fifties before his tragic death at the age of 34. John James Audubon, the great naturalist, spent some time at Fort Pierre and Fort Union in 1843 painting many of his famous bird studies. In later years came Edwin Willard Deming, who is said to have been able to paint "what the Indians thought but did not tell in the days before they lost their heritage." And finally, one cannot overlook the justly world-famous Frederic Remington nor the cowboy artist Charlie Russell. These art beginnings have been followed down to the present with the works of such famous native sons of the middle border as Harvey Dunn, Levon West, and Charles Hargens, while those of other westerners, Nancy Coonsman Hahn, Ben Albert Benson, and Grant Wood, have found a place for themselves in the Friends of the Middle Border Art Gallery.

Although it is necessary, in order to have a better idea of this region, to discuss the main points in its history, it will not prove possible to enumerate in any detail the points of resistance of the Sioux Nation to white pressure and their eventual defeat and placement within the reservation system. This drive was, however, unique in the history of the United States. Before it had been a matter of pushing the Indian farther west. Such was not the case here. The bypassing of the rich, although seemingly barren prairie lands, for the more familiar habitat of the west coast meant that this region when it could eventually be settled would be done by an advancing tide of miners and cattlemen from the West, and with an ever greater number of immigrant farmers pushing out over the Mississippi River from the East. The middle border was truly America's last great frontier.

The prairie country whether approached from the East or the West offered such a violent contrast to the land previously conquered as to bring about marked changes in the manner of pioneering and of living. There was nothing in the experience of the frontiersmen to guide them as they crossed the Mississippi onto the Great Plains. Thus the middle border could not be conquered until new techniques were developed to overcome the lack of trees and the semiarid character of the land.[2]

Railroads were necessary as an adequate network of rivers for transportation was lacking. Materials for homes were nonexistent until the homesteader turned to the natural soil and erected his sod houses. The farming frontier could only advance at the expense of the cattle frontier and this meant fencing. The wooden fences of the East were impossible. In 1870 it was estimated by the Government that it would cost as much as $8 an acre to fence in land in Texas. And even then the dryness of the atmosphere gave them a life expectancy of only 10 years. In 1873 the way was made clear by the invention of the two-strand barbwire fence by Joseph Glidden in De Kalb, Ill. Water was essential, and, since springs were too few and too muddy, the pioneers had to wait for well-driving or well-digging equipment. Here the curse of the country—the ever-present wind—proved a blessing, for windmills, though relatively expensive, could be used.

And finally settlement had to await adequate farm machinery. Farming on the middle border was extensive, not intensive, with a short harvest season; and improved farm machinery was necessary. Iron plowshares proved too brittle for the tough prairie sod. In 1868 James Oliver came along with the answer—the chilled steel plow. The farmer had to be mounted and in the early seventies the sulky plow was introduced, followed in the middle seventies by the gang plow. The McCormick reaper, while better than a cradle scythe, was still too slow for the plains and a mechanical tying device was needed. In 1873 the first improvement was made with the wire binder, but since the wire had to be removed before threshing it remained for the twine binder in 1878 to solve the problem. The header came in the late seventies, while the combine did not reach the plains until the nineties.

Even then man had to reckon with the caprices of nature. Prairie fires, grasshopper visitations, drought, blizzards, and the bleak monotony of the barren landscape took their toll. This vast, undulating prairie, which writers have likened to the sea, made a definite though hard to define impression upon the souls of the people who inhabited it. Can anyone having read Ole Rolvaag's epic Giants in the Earth, ever forget Beret Hansa's pathetic outcry upon first seeing the country? "Why there isn't even a thing that one can hide behind."[3] This was no easily conquered region and as much as it thrilled and attracted some so it also repelled many a sensitive woman. It took time to adjust; and the loneliness, the howling of the wind, and the unbroken expanse of level land as far as the eye could reach proved a maddening thing to combat. Moreover, the average woman who had been used to an immaculate house never felt at home in a hole in the ground or in a home made of dirt above the surface, and it was not easy to get used to the lack of trees, of shrubbery, of flowers. It has left its mark upon all.

One of the most prized possessions of Friends of the Middle Border is a magnificent painting by Dakota-born Harvey Dunn, called Dakota Woman. It is the sort of painting that comes from the very soul of the region. The women who homesteaded Dakota Territory, were long on work and short on culture as we know it, but they would have understood what Harvey Dunn was trying to say in this painting. The finest word description of it is by Elmo Scott Watson, who says: "I think you sense the real greatness of these people when you gaze upon Harvey Dunn's Dakota Woman. For here is symbolized the American pioneer spirit—the courage to face every danger in the westward push across the continent, the cheerful endurance of hardship and privation, the resilience and never-say-die quality which rose above every reverse and every disaster and kept alive hope for a better day tomorrow. Dakota Woman is a tired woman, a woman worn with the unceasing toil and monotony of her drab life. But she is not a beaten woman. Her chin is up. Oblivious to the bleak and barren prairies that stretch endlessly before her, she gazes into the distance and sees there a future for her child that will be a better life than she has ever known.[4]

Perhaps too sad, too gloomy a picture of life on the middle-border frontier has been painted. For those who seek it, and especially for those who were born there, there is a beauty that is as great as any that can be shown in the East. As Theodore Blegen has phrased it [5]—the blood-red sunsets, rain that leaves the prairie fresh with the promise of growth, winds that turn fields of broad-bladed wheat into billowing seas, the sight of prairie flowers, the sound of meadowlarks. And then there are our beloved Black Hills—the sacred mountains of the Sioux—that mountain cluster on the western side of the Bad Lands that is loved so much, perhaps because the rest of the land is so level and so treeless.

This regional approach not only to history, but to all of the social sciences is becoming more significant in modern life. Each region has a history of its own, a distinct way of life determined by the character both of its inhabitants and of its physical environment. Each of these regions within these United States is different from the rest. All of them together produce something different from that of Europe. The influence of geography is not all important but it is so important that when you take the easterner, and the immigrant from Scandinavia, and from Germany, and the Russian Ukraine and place them out on the prairies, despite the influence of their old environment they will become distinct members of middle-border society. Today we have a middle border which taken together with that of the other regions goes to make up a distinctive American culture. Each region has made its contribution to the whole. Or as Stanley Pargellis has phrased it, "True patriotism springs from the soil and the streets where a man lives, from the rocks and the rills he knows. If that local affection is wanting, the larger national affection, in any sense which is real and lasting, must be wanting, too." [6]

Mitchell, S. Dak., is located within the middle-border region near the Jim and Missouri rivers, on one of the main highways from the East to the Black Hills, Yellowstone, and the far West. It is in many ways a gateway to the West. In 1939, a group of men devoted to the American dream of creative self-development, gathered in Mitchell to found friends of the middle border. Among this group was the late Hamlin Garland, then dean of American Letters, a man who could remember his own youth on a Dakota homestead; the western novelist, Stewart Edward White, who started his career in the Black Hills; James Truslow Adams, the famous American historian; Paul Harris, founder of Rotary International; John Dewey, American philosopher of pragmatism; Badger Clark, poet laureate of South Dakota; Leland Case, editor of the Rotarian magazine; Gutzon Borglum, sculptor of the Rushmore Memo-

rial; Clinton Anderson, Dakota-born former Secretary of Agriculture, now United States Senator from New Mexico, and many local friends.

Since then, within the framework set up by these men, there has been assembled visual evidences of the historical and cultural development of the region. The most unique development has been that of the art gallery. It is now the only one within the States of Montana and North and South Dakota. Representative works from the artists already mentioned have been gathered, as well as such collections as one showing the design and beauty of native Sioux beaded work. The gallery's scope and significance has been greatly enhanced by the result of a letter from James Truslow Adams to fellow members of the American Academy of Arts and Letters. It said in part: "The movement came straight out of the grass roots in the good old American fashion * * * the growth has been vigorous and indicates that both the movement and need are vital." [7] The amount of color and romance that such exhibits can bring into the lives of people—most of whom have never seen an art gallery is extremely important. And it is impossible to measure its effect upon the lives of the children, who have never seen a good picture or statue, and who suddenly realize that this culture is a part of their own heritage—not just a European or eastern importation.

A great deal of research is going into the rediscovery of the musical heritage of the region. Songs of the Sioux, folk songs of the Canadian voyageur; barrack-room ballads of soldiers stationed up and down the Missouri in frontier forts; the folk songs of the homesteaders; the songs the cowboys sang to their cattle; religious and secular songs of the German and Norwegian immigrant; as well as the more modern compositions of such composers as Clarence Loomis, distinguished for his operas and harmonizations of Stephen Foster's melodies.

The library is being set up so that it will lend itself to the person attempting to do research. The idea being the preservation of books for use. The museum includes such long-range plans as a "Middle Border Village" with a Sioux encampment nearby. Also contemplated is a memorial chapel in honor of Jedediah Smith and "Preacher" Smith, two notable religious figures in the early history of the West.

The concept behind the Friends of the Middle Border that "from what we have we make what we want," is at its most fruitful if it can be brought to bear upon the lives of our youth—the so-called growing edge of society. This attempt to make the institute a constantly growing medium in the lives of the people will be expanded in the future to enter the classrooms of not only the colleges of the region but down through the secondary and primary levels as well. The motto, "What is past is prologue," is being brought to bear upon the entire spiritual and cultural heritage of the area.

An independent nonprofit organization, the Friends of the Middle Border has been content over the past 10 years to grow steadily, building up its collections, expanding its contacts. Events of the past few months have drastically changed this picture and made possible the great expansion of the future. James Earle Fraser, the distinguished sculptor, whose statue The End of the Trail has thrilled all, has been interested in the work of the FMB from an early date. Many of the experiences he had as a boy at Mitchell helped to inspire his statues as well as the "buffalo nickel" which he designed.

Now he is so thrilled at the work that is being done that he has agreed to place in the gallery the 16-inch original of The End of the Trail, that he is doing for the Metropolitan Art Museum. Nor is this all, as he has also volunteered to place a number of plaster casts of his famous statues in the art gallery. A recent letter mentioned one of Meriwether Lewis: "A standing figure which was done from my memory of a trapper who stood at the top of a mill dam on the Jim River. The mill was east of Mitchell. * * * I think it is one of my best works." [8]

Harvey Dunn, a native South Dakotan, and one of the foremost illustrators in America today, has made the magnificent offer of giving to the Friends of the Middle Border a representative collection of his paintings as soon as a building is erected to exhibit them in.

In the face of these truly outstanding gifts, those of Fraser's and Dunn's will make it one of the most important regional collections in America, the friends of the organization have launched a financial campaign of $30,000 so that the first unit of the proposed building will be up by spring, in time for the tourist trade. An important factor is that due to the small admission fee that will be charged tourists, the institute should be self-supporting from the start.

Thus we have an organization growing upon the middle border that is truly amazing not only in its concept of its responsibility to the people of that region but in its attempt to take what is available and by using the resources of the American pioneer to grow from there. It seeks to enrich and guide the cultural pattern within the lives of the people of the region by making them aware of their own cultural past and by encouraging them to cultivate their own peculiar regional talents. It will point the way of life for our people, serving them for their own particular needs, molding their ideals, perpetuating their dreams and aspirations, thereby creating, forming, and developing a middle-border type. It seeks to correct a serious psychological condition common to second- and third-generation descendants of pioneers in a country not favored economically. It is the green-pasture complex. A feeling that since the Indians and the soil have been subdued, one must go elsewhere for the thrill of achievement.

It will try to maintain within the lives of the sons and daughters of the middle-border pioneers the solid virtues hammered into a pattern of conduct by the natural forces of the region, so that the self-reliance, the neighborliness, the fortitude, the courage of the frontiersman may continue to be turned to the further uses of American society within the framework of a world society.

As Elmo Scott Watson has phrased it: "There Americans of all classes and creeds will come and find a fountain of inspiration from which to refresh their faith in their heritage." [9]

The Taft-Hartley Law

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Wednesday, April 20 (legislative day of Monday, April 11), 1949

Mr. MARTIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Keep Taft-Hartley Gains in Labor Law Revision," from the Philadelphia Inquirer of April 17, 1949.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

KEEP TAFT-HARTLEY GAINS IN LABOR LAW REVISION

When it returns to Washington after the Easter recess, the House of Representatives will have an opportunity to write a sane and sensible labor law, and help end the uncertainty in the ranks of both labor and management about the future regulation of their relations with one another.

Action on this question is long overdue, whether the Taft-Hartley Act is retained in substance, or modifications are voted. Until the question of revision is decided, bargaining over labor relations will be hindered by the possibility of a sudden and important change in the rules.

Experience under the Taft-Hartley law during the past 2 years has indicated that some changes are desirable. But it has by no means borne out the contention of the administration that the entire law should be scrapped, and labor relations returned to the unfair and uneven conditions prevailing under the old Wagner Act.

Instead of the administration bill, which amounts to a slightly watered-down Wagner Act, the House would do well to use as a basis for discussion the measures offered last week by Representative JOHN S. WOOD. While seeking to get rid of some of the cumbersome provisions of the Taft-Hartley law, this bill would retain many of the protections for both sides embodied in the present law.

The Wood measure would keep the weapon of injunctions against national emergency strikes. It would keep the anti-Communist affidavit, and extend its requirement to employers. It would keep an independent conciliation service. All these have proven beneficial in the past, and all would be thrown out if the administration measure is enacted.

The American people are not so much interested in extremist campaign slogans as they are in a just labor law which will permit uninterrupted employment and production. Abuses of power by some labor leaders led to passage of the Taft-Hartley bill, and those abuses could be revived if the law is discarded.

Progress in stable labor relations should be Congress' goal. It does not lie in turning the clock back in labor legislation, but in recognizing the demonstrated benefits of the Taft-Hartley law, and acting to get rid of its shortcomings.

The Dutch-Indonesian Controversy

EXTENSION OF REMARKS
OF
HON. OWEN BREWSTER
OF MAINE
IN THE SENATE OF THE UNITED STATES
Wednesday, April 20 (legislative day of Monday, April 11), 1949

Mr. BREWSTER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD copy of a letter regarding United Nations action in the Dutch-Indonesian controversy, sent by 25 Senators to the President of the United States.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

UNITED STATES SENATE,
Washington, D. C., April 18, 1949.

The PRESIDENT,
The White House,
Washington, D. C.

SIR: The Senate has amended the Economic Cooperation Administration Act to provide that assistance shall not be given to any state "against which the United Nations is taking preventive or enforcement action."

In the debate preceding the passage of this amendment it was the overwhelming expression of the Senate that the Netherlands Government has acted improperly and against the interests of world peace and security in the employment of military force in Indonesia and in the consistent refusal to comply with Security Council resolutions calling for cessation of hostilities and other steps for peaceful settlement of the dispute in Indonesia.

In view of these facts, we, the undersigned Members of the Senate, respectfully urge that you direct the Secretary of State and the United States delegation to the United Nations to take immediately those steps necessary to assure United Nations enforcement of its resolutions pertaining to the Dutch-Indonesian conflict.

Very truly yours,

ROBERT C. HENDRICKSON, GEORGE W. MALONE, OWEN BREWSTER, ANDREW F. SCHOEPPEL, IRVING M. IVES, KENNETH S. WHERRY, ZALES N. ECTON, HUGH BUTLER, STYLES BRIDGES, WILLIAM F. KNOWLAND, HARRY P. CAIN, CHARLES W. TOBEY, WILLIAM E. JENNER, HOMER E. CAPEHART, WAYNE MORSE, MARGARET CHASE SMITH, GEORGE D. AIKEN, WILLIAM LANGER, EDWARD J. THYE, RALPH E. FLANDERS, RAYMOND E. BALDWIN, GUY CORDON, JOSEPH R. MCCARTHY.

Public Gags on Propaganda

EXTENSION OF REMARKS
OF
HON. GEORGE P. MILLER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 11, 1949

Mr. MILLER of California. Mr. Speaker, the controversy over the location of a second crossing of San Francisco Bay is still acute.

The following editorial from the Observer of April 2, 1949, a weekly newspaper published in Oakland, is pertinent to the issue.

The Observer occupies a niche in the life of the East Bay section that is best evidenced by the fact that it will soon be 40 years old. It is an independent paper that I have always found fair and hard-hitting.

PUBLIC GAGS ON PROPAGANDA

The flagrancy with which the California toll-bridge authority has jammed its recommendation for a twin bridge down the public throat has at last aroused sufficient indignation to instigate further investigation into the whys and wherefores of their determined action.

The rank and file of citizens have never had an opportunity to evaluate impartially the two types of crossing. From the first, Alameda County residents have had their information biased and the working models of the bridges as presented by the State were rigged for the benefit of the State's favored crossing. Two incidents this last week have inflamed civic associations and citizens—who resent being used as dupes for selfish interests—to a white heat. At the opening of the so-called public hearing of the State toll-bridge authority held in Sacramento last week newsmen were handed mimeographed releases of the recommendation that would be made. That this release was prepared well in advance of the hearing and newsmen were requested not to make it public until the meeting was adjourned, is typical of the high-handed methods that have been used for the last 3 years by the State authority.

Action taken by Senator KNOWLAND and Congressman JOHN ALLEN in Washington the following morning requesting that a permanent right-of-way be granted across Yerba Buena Island is indicative of their certainty of the results. These proposals were put before both Houses despite the fact that three local Congressmen—MILLER, WELCH, and HAVENNER—have asked Army, Navy, and defense offices to make a further investigation of local conditions.

These, as well as many other incidents, have whipped up active resentment to the public-be-damned attitude, so that now civic associations have requested an inquiry be made into the ulterior motive behind the twin span. The last-minute switch that was made by the San Francisco Chamber of Commerce favoring the parallel span was almost as much of a surprise as the spineless backing down of Alameda City officials, Times Star, and chamber of commerce. That influences invisible to the naked eye were boring into these, as well as many other, groups, is an obvious conclusion. The construction of the next crossing to San Francisco Bay has vital bearing on the economic and physical well-being of nearly 2,000,000 people—these factors must not be disregarded by the machinations of selfish interests. It is our belief that further investigation, which will be made by the committee appointed at the request of Assemblyman Dolwig, of San Francisco, the newly aroused interest of Assemblyman Randall Dickey and Francis Dunn, of Alameda County, and others who have taken up cudgels in the bridge fracas, may unearth damaging evidence of collusion to bilk the people.

In the meantime Mayor Robinson, of San Francisco, 500 civic associations on both sides of the bay, and the recently formed Bay Bridge Commuters' Committee have urged that President Truman give attention to the controversy from a national defense and safety point of view.

Sunday in the Constitution of the United States

EXTENSION OF REMARKS
OF
HON. H. ALEXANDER SMITH
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Wednesday, April 20 (legislative day of Monday, April 11), 1949

Mr. SMITH of New Jersey. Mr. President, at the request of a valued friend of mine of many years, Mr. Harry L. Bowlby, D. D., who is general secretary of the Lord's Day Alliance in the United States, I ask unanimous consent to have published in the Appendix of the RECORD a statement issued by the Lord's Day Alliance of the United States entitled "Sunday in the Constitution of the United States—The United States a Christian Nation."

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

SUNDAY IN THE CONSTITUTION OF THE UNITED STATES—THE UNITED STATES A CHRISTIAN NATION

The Christian Sabbath, under the common name of Sunday, is in the Constitution of the United States. It was by no mere chance or coincidence that this institution was embodied in that charter of the Federal Government, article I, section 7, paragraph 2. It was not accidental that on February 29, 1892, the United States Supreme Court, in an opinion handed down in the case of *Holy Trinity Church* v. *The United States Government*, declared that our Republic is a Christian nation.

What does the Constitution of the United States say about our Sunday? In article I, which deals with the legislative and law-making processes, section 7, paragraph 2, is defined the powers of the President as to signing or vetoing bills passed by Congress: "Every bill which shall have passed the House of Representatives and the Senate, shall, before it becomes a law, be presented to the President of the United States; if he approves he shall sign it, but if not he shall return it, with his objections to the House in which it shall have originated. * * * If any bill shall not be returned by the President within 10 days (Sundays excepted) after it shall have been presented to him, the same shall be a law, in like manner as if he had signed it, unless Congress by their adjournment prevent its return, in which case it shall not be a law."

HISTORY OF THE NATION SO ATTESTS

The entire history of our country from 1620 to the beginning of the twentieth century in particular, gives convincing evidence that it is a Christian Nation. The framers of the Constitution had a background of Christianity that could not be ignored or bypassed. Just as the discovery of the New World in 1492 opened a new epoch in history, so the landing of the Pilgrims in the *Mayflower* vessel at Plymouth Bay, began a new era in world history. It was that event which gave the religious flavor to the Colonies; it was that little band of a few more than 100 men and women who began to shape the course of things to come in the Northern Hemisphere. Visits to the New World had been made before that historic date, 1620, but they did not give the color and show the true character of the Christian faith. Ponce de Leon came in 1512 in search of the fountain of perpetual youth, the French Huguenots in 1562, the Spanish traders in 1564, the English colonizers in 1586, and the English settlers to Jamestown, Va., in 1607. None of these ventures gave a distinctive religious complexion to the Colonies.

What did happen when the *Mayflower* with its more than 100 souls dropped anchor in Plymouth Bay? It was Saturday evening. They remained aboard the ship, held their seasons of prayer that night in preparation for the Sabbath day. Nor did they leave the boat though hungry for land that Sabbath Day, they remembered the day and kept it holy. They had brought the Lord's Day with them. They, and others who came here in that formative period, set up their homes and built their churches and from that beginning sanctuaries and schools sprang up over the land named New England. The Sabbath and the sanctuary became foundation stones in the colonial life and chiefly upon them and

the Word of God in due course, the superstructure of this Republic was erected. So thus early the Christian religion became established in the Colonies, later to spread throughout the Northern Hemisphere of the New World.

In these far back generations men of God, ministers of the gospel, established academies and colleges for the primary purpose of educating young men for the ministry. All higher institutions of learning for more than 150 years were the creations of a Protestant clergy up and down the Atlantic coast—Harvard, 1636; William and Mary, 1693; Yale, 1701; Princeton, 1746; University of Pennsylvania, 1751; Rutgers, 1755; Columbia University (King's College), 1753.

It is also a significant fact of present-day moment that, following an ardent appeal for the strengthening of the provision in which Sunday was included in the New Jersey 100-year-old constitution, the Governor being given 5 days in which to consider bills, Sundays excepted, the constitutional revision convention recommended the following which is incorporated in the new constitution of that State adopted by the people in the general election on November 4, 1947: Article V, executive, section I, 14 (a) If a bill shall not be returned by the Governor within 10 days, Sundays excepted, after that it shall have been presented to him, the same shall become a law on the tenth day unless the house of origin shall on that day be in adjournment. (b) If on the tenth day the legislature is in adjournment sine die, the bill shall become a law if the Governor shall sign it within 45 days, Sundays excepted, after such adjournment.

OUR REPUBLIC, HOW FORMED

It should be readily seen that this great Republic, now considered by practically all the nations of the world the greatest nation on earth, was conceived in Christian faith, born to Christian precepts, cradled in Christian hope, nurtured in Christian culture, matured in the practice of Christian ideals, waxed strong in Christian and civic service and power, and has put to flight the enemies of the right to the pursuit of life, liberty, and happiness. Those men of God, knowing how rightly to divide the word of truth, understood and practiced the faith once delivered to the saints.

Classic prose and poetry attest the valor and virtue of those who builded better than they knew; who made full proof of the truth expressed in the Thirty-third Psalm: "Blessed is the nation whose God is the Lord, and the people whom He hath chosen for His own inheritance." Literature is filled with references to the savoring influence of the faith of the founding fathers. The immortal spirit of liberty, the watchword of the colonists and builders of the young republic, brooded over the Declaration of Independence, and the triad of life, law, and love imbedded therein, gave it everlasting life. Daniel Webster in 1834 emphasized that truth when in the Congress of the United States with deep emotion and in silvery tones he proclaimed "Liberty and union, now and forever, one and inseparable." Our national hymn, exalts it:

"My Country 'tis of thee,
Sweet land of liberty,
Of thee I sing.
Land where my fathers died,
Land of the Pilgrim's pride,
From every mountain side,
Let freedom ring!"

In her poem Landing of the Pilgrim Fathers, Felicia D. Hemans sings:

"What sought they thus afar?
Bright jewels of the mine,
The wealth of seas, the spoils of war?
They sought a faith's pure shrine."

HOLD FAST, GUARD WELL, THESE INSTITUTIONS

As the Christian Sabbath and the Christian Church are the bulwarks of the Christian faith, what shall the present day answer be to the perils of these priceless institutions? Let that answer be found in their removal. The future of the Christian inheritance depends on the protection of these institutions. The welfare of home, community, State, and Nation, is involved. If we save our Sabbath, we shall make secure our sanctuaries. The people of the Nation have a stake in the Sabbath and the sanctuary. Our highest Court has declared "this is a Christian Nation." It is ours to prove it a reality.

How Much Can We Do With Safety?

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Wednesday, April 20 (legislative day of Monday, April 11), 1949

Mr. MARTIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "How Much Can We Do With Safety?" from the Washington (Pa.) Observer of April 14, 1949.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

HOW MUCH CAN WE DO WITH SAFETY?

As one ponders the spending program being urged upon Congress, the adjectives used in ballyhooing a circus come to mind—most stupendous, gigantic, and colossal.

The proposals for using the funds of the people of the Nation are all of these and more, too.

The House has just approved a defense program which calls for the spending of more than $15,000,000,000, an unheard of sum in this country during times of peace.

The Marshall plan expenditure of more than $5,000,000,000 has been authorized.

The Department of Agriculture proposes a new farm program, estimates on the cost of which are not available. Even if it should be adopted with its possibilities of hundreds of millions, if not a few billion, the farm program in effect now carries obligations of about $2,500,000,000—with $4,000,000,000 in prospect.

A proposal that the European nations signing the Atlantic treaty be rearmed means an expenditure of billions more. Cost figures mentioned tentatively are $1,250,000,000 or even $2,000,000,000, but that will just be a start.

The interest on the public debt of $252,000,000,000 will amount to roughly $5,000,000,000.

Then there are more billions for the care of war veterans.

Then hundreds of millions more for Federal aid to schools, for medical care, and numerous other schemes.

It is easy to spend money if you have it.

The ordinary citizen must shape his plans according to the size of his purse.

The Government, of course, does not need to be quite as careful as the ordinary person in the matter of finances, but it does seem there is or should be a limit.

The sensible thing for the Government to do at this stage of the game would seemingly be for the leaders to study the situation and then decide where the money available can be spent to the best advantage.

More and more taxes will be necessary if some such course is not followed.

Due to world conditions, especially the aggressiveness of the Soviet Union, billions must be spent for adequate defense. Aid to European nations is held necessary. Now additional billions will be required for rearming Atlantic treaty nations. This, too, has general approval.

In view of the financial plight of the United States, with a public debt of $252,000,000,000 and obligations for a budget already exceeding $40,000,000,000 annually, it would seem that the time has come for a bit of paring of appropriations all along the line to furnish the funds needed for vital things.

Unless something of the kind is done, we are headed seemingly for the most gigantic, stupendous, and colossal bust in the history of the world.

British Drive To Promote Sales in the United States

EXTENSION OF REMARKS
OF
HON. OWEN BREWSTER
OF MAINE
IN THE SENATE OF THE UNITED STATES
Wednesday, April 20 (legislative day of Monday, April 11), 1949

Mr. BREWSTER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "British Map Drive To Push Sales Here," by Clifton Daniel, from the New York Times of April 12, 1949.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BRITISH MAP DRIVE TO PUSH SALES HERE—LONDON PLEDGES FAVORITISM TO EXPORTERS IN DOLLAR MOVE—PROMOTION OUTLAY SET

(By Clifton Daniel)

LONDON, April 11.—An unprecedented effort to sell British goods in North America—the most difficult market in the world—was announced in the House of Commons today by Harold Wilson, president of the board of trade. He was promised generous Government support for the campaign.

Reminding the House that Britain's main trade objective this year was to increase sales to dollar countries he called for vigor, aggressiveness, and imagination in the dollar drive and said that the Government would show open favorititsm and outright discrimination to exporters dealing with the United States and Canada.

"The task of expanding our exports to North America," he said, "is one of the greatest challenges in all our history to the merchant venturing spirit of our traders."

The 33-year-old boss of Britain's production and export drive was speaking in renewed debate on the misery budget for 1949–50 introduced in the House last Wednesday. For a short time at least Mr. Wilson diverted attention from the harsh realities of the budget. He pointed instead to new horizons of accomplishment for British industry, which already has achieved prodigies of output.

In March, Mr. Wilson said, total exports were £159,900,000 ($640,000,000) and represented another new monthly record for Britain. However, it was still imperative, he added, to seek a solution of Britain's dollar shortage by increasing exports to North America.

The proportion of Britain's total exports to North America, he added, was only 7 percent—lower than before the war. He said that British sales to North America amounted to only £1 against nearly £19 in Australia.

With the objective of raising those percentages, Mr. Wilson outlined a program of eight points. They were:

1. The Government would give industry and trade a clear lead as to the importance of the North American market.

2. Specific export objectives for various commodities would be fixed.

3. The Government would give every assistance and even open favoritism to those selling to North America.

4. The Government would provide improved service to exporters, including installation of a trade consul in each of four major regions in the United States. He said that consuls who already were at work would receive the support of experienced business men and that an adviser for the New York region, C. D. McCarthy, already had departed for his post. Mr. McCarthy was lent to the Government by the Property Investment Co. He has oil and shipping interests.

5. Reasonable allocations of dollars would be given for sales promotion in the United States and Canada.

6. Additional export credits would be provided.

7. Government assistance would be given for market research in an effort to open new markets in the West and South and to sell to a wider section of the American public.

8. A special publicity campaign would be undertaken to encourage sales to America and a conference of all concerned would be held after Easter.

From Zion's Hill

EXTENSION OF REMARKS
OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Wednesday, April 20 (legislative day of Monday, April 11), 1949

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the RECORD a sermon entitled "From Zion's Hill," delivered by Rabbi Morris Gordon at the Hennepin Avenue Methodist Church, Minneapolis, Minn., on February 20, 1949.

There being no objection, the sermon was ordered to be printed in the RECORD, as follows:

FROM ZION'S HILL

Our service this morning commemorates three important national occasions—Washington's Birthday, Lincoln's Birthday, and Brotherhood Week. These three, in their chronological order, depict three basic stages in the development of our democracy.

In the first instance, we gained our independence; this gave us the right to be free. Under Lincoln's inspired leadership, we guaranteed the right of freedom to every member of our society, regardless of the color of his skin. From the heart of the great humanitarian Roosevelt came the first brotherhood proclamation, striking at the very soul of freedom. It is not enough to grant men the right to be free; it is not enough to put that promise on paper. We must put it to work in our places of business; we must fashion it in our homes and apply it to daily living with our hearts. We must so live together as Americans that we recognize that every one of us is created in the image of the Divine; that in every human being there beats a spark of the eternal soul; that all of us are children of one Father in heaven; and that the fatherhood of God has meaning only in the brotherhood of man.

These three pillars in the progress of American destiny have been closely paralleled in modern times in the newest, and in some sense oldest, little democracy on the face of the earth—the state of Israel. This morning let us discuss the similarity in struggle. Let us note the promise in both to the present. Let us read the signposts pointing to tomorrow.

STRUGGLES FOR INDEPENDENCE—PILGRIMS AND PIONEERS

Our Pilgrim Fathers were propelled to this continent because they were persecuted; because they were refugees; because they were pioneers. Tempest-tossed they came to light their lamp of liberty but there was no golden door to bid them enter. Of these three factors of their common fate, their refugeeism served more than any other to forge the iron of their soul into the steel of indomitable character. The renowned historian Lecky says: "Great moral causes lie at the root of the greatness of nations. It is probable that no nation ever started on its career with a larger proportion of strong characters than the English colonists in America. * * * America was preeminently the home of the refugee and this fact is perhaps the most important in its history." Whichever fact may have been the most important in weaving the fabric of their faith, their faith was expressed best in their death-defying pioneering spirit. A less hardy lot, facing winter's icy indifference; penetrating cold, lacking food and warmth; seeing fathers, mothers, children die; losing half of their number in their first year in a new land; would have packed their paltry belongings to return rather to face persecution than decimation. But not our Pilgrim Fathers. They met every obstacle as a challenge to achievement; to show the stuff they were made of. They stayed on to create a continent which became a blessing to millions of refugees who came to its hospitable shores.

How strikingly similar the story of Israel. Jews came to this little land, fleeing from the most horrescent persecution ever plotted in history. Even the 98 cents worth of chemicals which are found in every human body were not allowed to be interred with their bones. A new soap appeared on the market—human soap. A new material for lamp shades—human skin. Out of the horrible nightmare of the Nazi continent, only a few brands were plucked from the fire. Out of 7,200,000 Jews, 1,200,000 now remain alive in all of Europe. Is it a wonder that these refugees, even when they were denied entrance to their only haven of refuge on earth, Palestine, kept coming in leaky boats, in unseaworthy ships, and when barred by bombs and bullets, they plunged into the sea to swim—and some to drown in the very sight of the land of their hopes.

The spirit of pioneering gained new significance in Israel, for here it was tried on an arid portion of the world's globe which had stubbornly refused to submit to man throughout the ages. The fiery champions of freedom in the UN, Granados of Guatamala, in his new book, The Birth of Israel, depicts a scene capturing the spirit of the pioneers of the desert. He describes how he and a group of UN officials took their first trip from the cool climate of Jerusalem to the blistering heat of the desert of Judea. As they rode along they had to cover their faces to protect them against the unbearable heat of the grueling sun. The blinding sand stretched on for miles with no sign of life to break the suffocating monotony. Suddenly they seemed to behold a mirage in the distance. They blinked their eyes, opened them again and found the miracle still there. There was a sign in Hebrew: "House in the Desert." They were welcomed by youngsters whose courage defies the imagination of man. Scientists had proclaimed this sand unproductive; this wilderness uninhabitable. Young people with faith in their hearts and strength in their hands defied the portentous predictions of science to make the desert blossom like the rose. Every settlement is an act of faith. Every settler is a prayer in action.

Dr. W. C. Lowdermilk, American Research Chief of our Department of Agriculture, states that Jewish effort in this respect is the most remarkable he has seen:

"We are astonished. The far-reaching works of reclamation now being conducted in Israel not only provide an example to other countries in their need to restore wasted lands, but are vitally important for hundreds of thousands for whom they mean the only chance for security and human existence."

Persecution, refugeeism, pioneering—these were the prongs which molded our Pilgrim Fathers into a people; which spurred them to revolt under Washington, a puny handful pitted against a might foe. With the slogan of the Bible on their lips—"Rebellion to tyrants spells obedience to God"—they cut the navel cord binding them to their Mother Empire and gained a new birth of freedom, which God willing, may never perish from the earth.

In like manner, a handful of Jews, propelled by the same basic principles, standing alone in a world of indifference; less than three-quarters of a million against 31,000,000 Arabs, armed with planes, tanks, and guns by the very Empire from which our American forefathers had to free themselves by force; rose to defend the honor of the UN; to protect that little portion of Palestine which was guaranteed to it by the highest tribunal in the world.

The slogan of the Israeli soldiers, sung in the language of the Bible as they marched to battle was: "Nevertheless and in spite of everything we will win through to victory."

The heroes of our Revolutionary War fought beneath our flag of red, white, and blue. The heroes of Israel fought 'neath a banner of white and blue. Yet when this flag covered the body of a soldier on the battlefield it was tinged with the blood of his wounds and it took on the colors of our ensign—red, white, and blue.

The law of human achievement seems to proclaim that nothing worthwhile is gained without effort; no great ideal realized without struggle. Surely the struggles for independence, in America in 1776, and in Israel in 1949, though separated by time, could never have been more closely related in spirit.

FREEDOM'S NEW DIMENSIONS—SLAVES AND SOULS

Abraham Lincoln was not satisfied with the state of our country's independence. Though it gave us the right to be free, some exploited this right to deny others their liberty. With impassioned fury he cried aloud "a State cannot exist half slave and half free." Like Moses of old he pleaded that a people be liberated from bondage. America climbs another rung on the ladder of liberty and grants physical freedom to its slaves.

Israel, too, has its slaves. Men, women, and children still shackled by the Nazi chains of degrading emotions; by illusions of fear, and hatred; by obsessions of ghosts of loved ones who continue to stalk in the hidden lairs of their memory. To them Israel brings a new type of liberation—psychic freedom. Freeing the mind from mental misery; healing the heart of its wounds; bringing hope to the hopeless; this is the noblest project of human rehabilitation that can be fashioned on earth.

Israel lavishes its greatest love on its children. In every colony the most beautiful building, the best equipment, the most tender care is given to the young. Here the

Montessori system is followed. The children's rooms are cut down to their size; the showers, the beds, the mops, the brooms, the spades, and the shovels—are all made so that the children can use them. They learn to become useful citizens of their new State even as tiny tots.

Here is David, a refugee child. We find him busy making shoes. "Why did you decide to become a shoemaker, David?" Then as you look down at his feet you see you shouldn't have asked this question—for he has no feet. David had walked practically halfway around the world to get to Israel. He literally wore off the bottom of his feet by walking. Now he finds release for the pent-up emotions of his lifeless limbs by seeing other children run around in the shoes he makes for them.

Here in a "kibbutz," in a farming settlement in Israel we see the miracle of a soil transforming a soul. Children with faces frozen by fright, free to laugh again; arms hanging heavy with hunger—free to love again; hearts deprived of every vestige of human dignity—free to live again. To live, to love, and to laugh—gifts our youngsters take for granted—gifts—these orphans of humanity have always dreamt about, now given them in the land of their dreams.

Lincoln brought freedom to slaves. Israel brought freedom to souls. Both added new dimensions to the destiny of one of democracy's noblest ideals.

BROTHERHOOD BORN—NOW REBORN

The crowning concept of our country's quest for liberty is real brotherhood—the kind that cuts through the superficial layers of pronouncements on brotherly love and touches the very heart of daily human relations. It reaches into religion, it weaves its way into every nook and cranny of society.

To religion it says: It is high time we begin to recognize that not only my religion is worthy of reverence, but my brother's religion is worthy of respect too. There is no monopoly on eternal truths. Remember Micah's warning: "Walk humbly with thy God."

There is a story of a group of mountain climbers who were told that at the top of a certain mountain one can catch a glimpse of a beautiful golden sunrise. They formed a circle around the mountain and each began to ascend toward the summit. Suddenly one chap beckoned to another and said: "Come on my path, it's straighter than yours." A third fellow called to the two of them and said: "Come here, try mine." Soon the leader noticed what was happening and called out: "Say there, if you keep zig-zagging back and forth you'll never get to the top. Keep climbing straight ahead and we will all meet at the golden summit at the same time."

And so each religion is but a pathway leading to the golden gates of the Divine. The gates are open wide enough to receive all who have clean hands and a pure heart. Let each of us then walk on his own path, but let us keep the circle intact; let us walk hand in hand on the highway to heaven.

When we speak of religious brotherhood, we think of the land of Israel. It was here on the hills of Zion that brotherhood was born. It was from the fiery lips of inspired prophets that its teachings were imparted to the heart of man. Malachi caught the kernel of the entire message when he said: "Have we not all one father, hath not one God created us all, why then do we deal treacherously every man against his neighbor?"

But brotherhood is not something which is limited to the past. It is guaranteed by the newly adopted constitution of Israel, one of the most advanced social texts of our time. It grants equality to every man, woman and child within its borders, be he Arab, Christian or Jew. It is interesting to note that Arab men and women voted in the recent elections. For Arab women it was the first time they voted in history. Some day Arab children will bless the children of Israel for bringing a measure of freedom to them ever denied their fathers.

Religious brotherhood was evinced when Israeli soldiers guarded shrines sacred to all religions at the risk of their own lives. Fights ensued between soldiers whose curiosity got the better of them and the guards, but on no condition was anyone allowed to desecrate a holy shrine.

In fact a young Jewish officer was assigned to guard the city of Nazareth. Today we should pay him tribute for the fact that the pastoral beauty of this holy city has come through untarnished in a surrounding of terror.

Brotherhood in Israel has reached into the center of its economic pattern. It touches at the very heart of the problem which faces mankind—to evolve a pattern of life giving man a proper combination of liberty and security. Totalitarian states give security without freedom. Democratic states give freedom but too little security. In Israel, in the kibbutzim and moshavor, in the colonies and settlements, a new way of life is slowly emerging, endeavoring to reach a medium between the two.

Ellen Thorbecke, a noted English writer, has this to say in her latest book entitled the "Promised Land":

"In Palestine many thousands are living a new form of social life and have made a success of it. New it is because people put an ideal above their personal interest. New it is because of the far-reaching social rights of the individual. It is the realization of the wisdom of the prophets and the teachings of Jesus which were meant to save mankind. People are waiting and hoping for something that will fill their hearts with hope; that will give them back their belief that man is good; that will give them courage to build up something worth while and lift them beyond the mere struggle for existence. In Israel there has been brought into being a form of life that answers the deep hopes of so many men and women in Europe, in America, and elsewhere. Can it be that the light will once again come from the East?"

AN AMERICAN SPEAKS

Friends, even as I speak here this morning, I can see a question being formulated in the minds of some of you: "What relationship do I in this country have with this distant land? How does my status as an American tie in with the state of Israel?

I know that I speak for every Jew; I know that I speak for every Zionist when I say—I am an American. This is the only land which claims my allegiance. This is the land in which I live and will continue to live. This is the land for which I fought and, God forbid, if need be, I would fight for it again.

My American heritage has taught me to cherish independence, freedom, brotherhood, in the never-ending progress of our democratic dream. I applaud the efforts of any people that would make these principles more meaningful to me. The gallant little state of Israel has brought new daring, new depth, new dignity to the concepts I hold dear. It makes me a better American because it reaffirms my faith; it strengthens my determination to keep my country moving forward until it reaches the highest potentials of its own promise.

Independence, freedom, brotherhood are infectious. No borders can contain them; no barriers restrain them. Rising out of my country's heart they can reach into any corner of the world; rising up in any corner of the world they can reach back into my country's heart. There are those who think that the little land which once brought religion to humanity can now point the way in applying its truths to the art of daily living.

Pierre van Paassen phrased this thought so beautifully when he said:

"The ancient lamps on Zion's hill are being rekindled as a light to all mankind."

The prophet Isaiah, standing on one of these hills in Judea, over 2,000 years ago, spoke these immortal lines:

"For out of Zion shall go forth the law and the word of God from Jerusalem."

The day will yet come when: "They shall beat their swords into plowshares and their spears into pruning hooks; nation shall not lift up sword against nation; neither shall they learn war any more."

Pennsylvania's Flood Control and Waterways Projects

EXTENSION OF REMARKS

OF

HON. FRANCIS J. MYERS

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Thursday, April 21 (legislative day of Monday, April 11), 1949

Mr. MYERS. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD the testimony I presented yesterday morning to the Civil Functions Subcommittee of the Senate Appropriations Committee in regard to appropriations for flood control and rivers and harbors work in Pennsylvania in the coming fiscal year beginning July 1.

There being no objection, the testimony was ordered to be printed in the RECORD, as follows:

PENNSYLVANIA'S FLOOD CONTROL AND WATERWAYS PROJECTS

(Testimony by United States Senator FRANCIS J. MYERS, Democrat, of Pennsylvania, before Senate Appropriations Subcommittee considering H. R. 3734, civil-functions appropriations bill for 1950 fiscal year (beginning July 1 1949), Wednesday, April 20, 1949)

INDEX TO STATEMENT

1. Effect of House of Representatives cuts in budget recommendations—flood-control construction: Conemaugh Reservoir; East Branch, Clarion Reservoir; Punxsutawney; Sunbury; Wilkes-Barre, Hanover Township; Williamsport. River-harbor construction: Monongahela Lock No. 2; Schuylkill River culm removal; Morgantown Lock and Dam.

2. Need for restoration of cuts in above projects.

3. Other budget items—Flood-control planning: Bear Creek Reservoir; Prompton Reservoir; Shenango Reservoir. Flood-control maintenance: Crooked Creek, Loyalhanna, Mahoning Creek, Tionesta and Youghiogheny Reservoirs, Johnstown, York, Codorus Creek, and Indian Rock Dam. River and harbor maintenance: Schuylkill and Monongahela Rivers, Erie Harbor, Delaware River. Examinations and surveys. Lock maintenance and care: Ohio, Allegheny, Monongahela.

4. Overbudget or nonbudget requests: Williamsport flood control, Delaware River maintenance, Bradford flood control.

The members of this committee over the years have demonstrated many times their broad recognition of the importance of the civil functions program in relation to the lives and safety and health and welfare of our people and of the commerce of the Nation.

The people of Pennsylvania, particularly those in areas subject to or susceptible to floods owe this subcommittee of the Senate

their heartfelt gratitude for the many instances, particularly since I have been in the Senate, in which the Civil Functions Subcommittee of the Senate Appropriations Committee has saved important Pennsylvania projects from reductions in funds or from being left out of some of the bills entirely.

To cite just a few such instances: The immense Conemaugh River Reservoir which is the most important single link in the chain of reservoirs being thrown around Pittsburgh to protect it from devastating floods might not yet have been started if the Senate, at the request of Senator Guffey and myself, had not insisted on putting this project in the first list of flood-control projects to be started after the war. The deficiency bill which contained an initial appropriation for this project in late 1945 or early 1946 had passed the House without any provision for the Conemaugh Reservoir.

Nearly all of our going projects for flood control in Pennsylvania suffered severe cuts in the House last year and the year before and the Senate restored the money, sometimes successfully, sometimes, like last year, only partially successfully due to refusal of the House conferees to go along with the full amount.

I want you to know that I appreciate what you have done for us in those past years and I know that the people of Pennsylvania who suffer from these periodic floods recognize that this subcommittee of the Senate has been a great and good friend to our State and to the lives and safety of our people.

In my testimony today, I am asking first for a complete restoration of all of the funds for flood control and rivers and harbors projects in Pennsylvania as cut by the House Appropriations Committee and sustained by the House. I am familiar with the fact that in enforcing an across-the-board cut of 15 percent in appropriations for this work, the House committee did so on the theory that construction costs in the coming fiscal year will drop approximately that degree and that, therefore, every bit of work contemplated on these projects in the original budget recommendations could still be accomplished. I recognize that it is the intent of the House committee, as shown in their report, that the engineers should do every bit of the work under this reduced appropriation that they had contemplated doing under the original budget recommendations, and that if they find they cannot do so, they are not only authorized to—they are directed to—come before the House committee for a deficiency appropriation to enable them to complete that amount of work in the coming fiscal year of July 1, 1949, to June 30, 1950.

Since the same subcommittee of the House handles civil functions and deficiencies—as in the case here in the Senate of your subcommittee—it sounds on the surface to be a reasonable enough sort of position to take and is based certainly on no animosity toward the civil-functions program or the contemplated work schedules of the Army engineers in the coming fiscal year. The House committee, in fact, goes so far as to say that they believe just about all of the work in civil functions next year, as recommended by the Army engineers and the Budget Bureau, has their full accord. That is reassuring.

However, in proceeding further to recapture into the Treasury substantial funds which the House committee anticipates will remain in a category of unobligated funds as of this coming June 30, the House committee completely disrupts the whole program of the Army engineers and thereby enforces, as the engineers' spokesman have already testified before you, a reduction in available funds for flood-control and waterways projects this coming fiscal year far in excess of 15 percent. The over-all reduction, according to General Pick, comes to 23.36 percent and is the equivalent of a 26-percent reduction on flood-control funds and a 37-percent reduction on river and harbor construction projects.

I think the engineers' explanation before you of how this cut operates is clear enough to you, but I think this one point should be emphasized:

In recapturing what are presumed to be unobligated balances—although the engineers insist that under their methods of bookkeeping these funds are not unobligated but are actually clearly earmarked for specific work on specific projects—the House apparently felt that where there was what it regarded to be an unobligated balance on a specific project, it should be recaptured from that project, although it did, of course, allow the engineers some leeway.

But this is what happens: So-called unobligated balances taken from specific projects are then spread out over all of the projects. The engineers insist on doing a specific amount of work on each of the projects in the bill. They do not agree to reduce the amount of work they plan on this or that specific project merely because there is or might be some present funds earmarked for that project which would be recaptured under the House bill. As a result, we will find that on flood-control projects where there will be no significant unobligated balance as of June 30 of this year, even under the House method of determining what constitutes unobligated balance, the engineers will proceed to enforce this same across-the-board cut approximating 26 percent in order to take money and transfer it to other projects which would be cut much more than 26 percent in the absence of such an evening-up process.

Conemaugh Reservoir

Specifically, in regard to Pennsylvania projects, taking the biggest one first, Conemaugh River Reservoir, for which the budget provides $8,500,000, the estimated unobligated balance on June 30 of 1949, according to page 351 of the House hearings, would be about $334,800. Under the House committee's reasoning, then, this appropriation should have been reduced by that amount, leaving $8,165,200 and then a 15-percent reduction of that would leave just about $7,000,000, or actually $6,940,420. The engineers, however, report that they will be forced under the House action, and unless it is reversed by the Senate, to cut this project to $6,324,800, or a total reduction under the budget of $2,175,200 and an amount $615,620 less than the House report indicates this project was to be cut.

What happens to that $615,620? It would go to some other project or projects with proportionately larger unobligated balances as of June 30 of this year, in order to bring other projects into a form of parity in relation to the budget requests with Conemaugh and others with proportionately smaller unobligated balances. This is merely spreading the poverty.

Now let us look for a moment at what constitutes unobligated balance as applied to this $334,800 in the case of Conemaugh. Unobligated balance is defined by the engineers as consisting of funds which are reserved for (a) Government costs of supervision and inspection on contract work under way; or (b) force-account work now under way; or (c) land acquisition needed to coordinate with the construction work under way; or (d) additional contracts for supplies and equipment to be furnished by the Government in connection with work now under way.

How funds so earmarked can be regarded as surplus in this fiscal year, I do not understand. Taking away this money, not only in the case of Conemaugh but in all of the projects so affected, must inevitably result in the reduction of work which can be accomplished in the coming fiscal year. When the House committee therefore says that the engineers should do the same amount of work as they had originally contemplated with 26 percent less money, they are ordering the engineers to perform a miracle, and that is not generally regarded as a function of the Engineering Corps.

The hearings and the debates in the Congress on civil functions always reflect the highest kind of congressional praise for the work of the engineers, for their fidelity and loyalty, for their conscientiousness, and for their determination to get value received for the tax moneys they spend. This bill, however, in effect, says to the engineers that although we like you fine, and think you're wonderful, we don't trust you to have some money lying around in various accounts and so we will take back from you all of the appropriations that you do not actually spend in this fiscal year—that you do not actually pay out by check, that is—and then when you run short sometime during the coming fiscal year, run out of money, you come to us and we will dole you out an occasional dollar to make up for what we are taking away from you now. This sort of piecemeal hand-out of money prevents the engineers, under Budget Bureau supervision, from counting on any of this money until it is actually appropriated, and, as a result, they cannot plan ahead with any degree of efficiency, but can only schedule work which they actually have the money in hand to pay for. In addition to making for inefficiency and no doubt for higher ultimate costs, this type of financing will inevitably cause delay in the progress of work during the next fiscal year as the engineers are required to wait before proceeding on new work until one or another deficiency request has been approved by the budget, submitted to the Congress, subjected to examinations and hearings, and finally, perhaps acted on long after the construction season in which it could have been used might have passed.

So I heartily concur in the request of the engineers that you let them function as they have functioned so splendidly in the past, scheduling their work as they find it efficient to do so, and proceeding as rapidly as possible on the work load they face.

Other projects

I mentioned the effect of the House action on Conemaugh Reservoir in cutting it back from $8,500,000 to $6,324,800. Let me list the other cuts in Pennsylvania under a House bill which presumably would permit the same speed of construction which the budget figures originally contemplated:

East Branch Clarion River Reservoir would be cut from $2,500,000 to $1,860,200;

Punxsutawney dikes, cut from the budget figure of $810,000, which is the amount regarded as necessary to complete a project which has already had $3,020,000 spent on it, to $602,700;

The Sunbury diking system, an estimated $7,300,000 project on which $4,256,300 has been spent, would be cut from $2,000,000 to $1,488,200;

The Wilkes Barre-Hanover Township dikes, for which $380,000 was requested in order to finish a $4,000,000 project, finish it completely, would get only $282,800, which manifestly would not be enough to do what the budget thought $380,000 was necessary to accomplish;

The Williamsport dikes, estimated to cost altogether $17,000,000, would be cut in this fiscal year under the House bill from a budget recommendation of $2,110,000 to $1,570,100.

They are flood-control projects in Pennsylvania affected by these cuts.

On rivers and harbors work in Pennsylvania, or of vital interest to Pennsylvania:

The work in the coming fiscal year on Lock No. 2 in the Monongahela River at Braddock, Pa., would get only $3,091,000 instead of $4,500,000 as recommended in the budget,

and which would have speeded up this $12,000,000 project substantially toward completion;

On the Schuylkill River, a project which is very close to my heart, since I was sponsor of the legislation which authorized it, an initial $500,000 appropriation is being cut to $343,000 for a start of Federal activity on a long-range Federal-State culm removal program, estimated to cost the Federal Government altogether some $17,000,000 and the State of Pennsylvania perhaps twice that much;

Another project, this one located in West Virginia, but of extreme importance to Pittsburgh and western Pennsylvania coal and steel industries particularly, will be seriously affected by the House bill. It would cut the appropriation for the coming fiscal year on the $8,400,000 Morgantown Lock and Dam in the Monongahela River from nearly $4,000,000—actually $3,953,700 under the budget—to only $2,716,000.

Need for restoration of reductions

As I said, my first purpose here today is to request the restoration of these cuts, and from the engineers' testimony it appears that the only sure way of accomplishing that is by reversing the whole philosophy of the House action, not only by eliminating the 15 percent across the board cut on the total construction fund, but by striking out of the bill any references to the recapture of so-called unobligated balances on the books as of June 30 of this year.

In other words, if we want these projects to be prosecuted at the pace the Budget Bureau recommended and the Army recommends—and the House committee does, too—then the full amount requested by the engineers and budget must be made available.

I myself do not think that the engineers will refuse to award contracts to the lowest bidders merely because they have enough money to pay a higher cost on any of these projects. I do not think the engineers would become extravagant with their appropriation in case construction costs should actually drop while their fund remains at the original recommended figure. I have enough confidence in the engineers and I think the members of this committee do, too, to be convinced that they will take advantage of every opportunity to cut costs wherever possible and to save money wherever possible.

The argument of the House committee on this appropriation reminds us of the argument that was used in the Senate recently in behalf of an amendment to reduce the authorization for the European recovery program, the Marshall plan, by 10 percent on the theory that costs would probably drop by that percentage. The Marshall-plan bill, to which we devoted so much debate, of course, carried no funds with it, but merely set a ceiling on the amounts which could be appropriated for this program in the coming fiscal year. What the proponents of the 10-percent cut wanted us to do was to take a chance that costs would drop by 10 percent or so and to bind the hands of Congress for the next 15 months or so from providing any funds for ECA over and above the proposed reduced ceiling.

I think when the Appropriations Committee finishes its review of ECA requests, it will do very little cutting because our price structure, while leveling off in many respects, is still far from a substantial decline. I would like to think that costs for flood control will fall quite a bit in the coming fiscal year, but it should be remembered that much of the work which will be done in the coming fiscal year is under contracts now in effect—contracts which would continue and which would not be influenced either by an increase or a decrease in construction costs. Any long-range construction program operates in substantially that fashion.

It must particularly be remembered that practically none of the work contemplated under the Budget recommendations for civil functions is for brand-new projects. We are seeking now to complete projects which have been under construction since the end of the war, or, in some cases, since before the start of the war—projects which were interrupted by the war.

To recapitulate on this phase of my testimony, I want you to know that I vigorously support the full Budget amount for the following flood-control projects in Pennsylvania: Conemaugh River Reservoir, which will do as much for Pittsburgh and the whole Ohio Valley, providing defense against future floods, as all six of the existing reservoirs combined now accomplish in flood protection for that area. The work on Conemaugh up to now has been largely the relocation of railroad tracks and bridges, but actual construction work is scheduled to start very shortly after a gala ground-breaking ceremony sponsored by the Pittsburgh Chamber of Commerce on May 9. If all of the members of this subcommittee have not received engraved invitations, and offers of a special railroad car or a special plane to take you to that event, then the Pittsburgh chamber has been most derelict in showing its gratitude to its real friends.

East Branch Clarion River Reservoir, a project of great importance to the people of Elk County, Pa., who, like the people of Pittsburgh, can thank the Senate of the United States for having reversed the action of the House of Representatives several years ago and for having placed this project on the approved list for construction funds shortly before the Budget Bureau clamped down an almost iron-clad rule against any new construction projects of sizable scope. It got in just under the wire and has been maintained at a fast construction pace only because of Senate understanding and generosity.

Sunbury, Pa., a project which, in 1947, was cut severely by the House, but, thanks to the Senate that year, received its full appropriation. The justification on this project clearly shows its importance. With the full appropriation this year—the 1950 fiscal year—this project can be completed and in effective operation sometime before June of 1951. It will begin then to pay us real dividends in the protection of lives and property.

Wilkes-Barre-Hanover Township dikes, for which only $380,000 is necessary to complete an already worth-while project, one which has already saved the city of Wilkes-Barre millions of dollars in recent threatened floods. Congressman DANIEL J. FLOOD, who represents that area in the House, gave a most graphic account of the necessity of the completion of this project to its original recommended height at page 878 of the House hearings, telling in there of the magnificent efforts on the part of the local citizens to sandbag the dikes at Wilkes-Barre an additional few feet when floods threaten. As he pointed out, however, with every employee of the city of Wilkes-Barre working 24 hours a day, and with 1,000 additional emergency workers pitching in to help out, it would still be impossible for the local community to sandbag the wall to the necessary height after receiving warning of a pending flood.

Similarly, the appropriation in full budget amount will complete the Punxsutawney dikes in the coming year.

Williamsport dikes, Pennsylvania, about which I will have more to say later in this presentation. As I pointed out, the House bill means a cut on this work from $2,110,000 to $1,570,100, and I particularly want this cut restored, but I have a further request to make, which I shall tell you about in a few minutes.

On rivers and harbors work, I particularly ask that the full budget amount for the Monongahela River lock No. 2 replacement work at Braddock, for the Morgantown lock and dam in the Monongahela in West Virginia, and for the Schuylkill River culm-removal program be restored.

The Schuylkill River budget request of $500,000, which is, of course, a very modest amount in relation to the total estimated Federal cost of $17,000,000, is for work which cannot be started until the State of Pennsylvania has accomplished at least one half of the vast amount of work it must do in cleaning up the foul-smelling, coal-saturated Schuylkill River under its phase of the program. I urged the administration to include a modest initial appropriation for the Schuylkill for the fiscal year starting July 1 so that the Army engineers could go into action immediately when the State had complied with its required preliminary work. It will probably be late into the fiscal year before the State can comply with the requirement set out in the enabling legislation, and that would probably be too late to enable us to get a deficiency so that there would be an unnecessary delay in the initiation of the Federal phase of the project. Therefore, I most vigorously urge, not only that the project be retained in the bill, but that the full budget amount be granted.

As I said earlier, I consider this project a very close and personal one to me not only because I was sponsor of the original enabling legislation and appeared before both the House and Senate Committees in the Seventy-ninth Congress to obtain its approval, but because I am a resident of Philadelphia, and like all residents of Philadelphia, look forward hopefully to the day when this abominably neglected and abused river is restored to some of the beauty and cleanliness it once enjoyed.

Although the House did not disturb budget recommendations for other civil functions activities in which I am interested, I want to be sure to call to the attention of this committee my interest in them and my hope that this committee will also approve at least the full budget recommendations for flood control and rivers and harbors maintenance, for lock management and care, for preliminary examinations and surveys and contingencies.

In the previous 2 years there were some serious cuts made in these items by the House but the money was restored by the Senate, and although we could not always get the full amount through conference for each item, this committee has always been most understanding of the importance of this work and has done its best to give us the necessary funds for it. Since there were no important House cuts this year on these items, the big hurdle in past years of obtaining House approval for the budget recommendations is removed.

Planning

Just for the record, I want to be recorded as endorsing the full amount in the budget for flood control planning which means, among other things, $90,000 for Bear Creek Reservoir, which will bring the plans to about 80 percent completion; $65,000 for the Prompton Reservoir in the Lackawaxen River flood system which will complete 90 percent of the planning work; and $50,000 for the Shenango Reservoir, which will bring the planning work on that project to 50 percent of completion. All of these projects are extremely important to those areas and I hope we can get them into construction as soon as possible.

Maintenance

The flood control maintenance fund—an irreducible fund which provides for the operation of projects now in use—includes

$65,000 for Crooked Creek, $60,000 for Loyalhanna, $56,000 for Mahoning Creek, $56,000 for Tionesta, and $80,000 for Youghiogheny River reservoirs, all in the Pittsburgh-Western Pennsylvania chain of effective reservoirs, and also $4,000 for Johnstown and $12,000 for York, Codorus Creek and Indian Rock Dam in the York area.

The river-and-harbor maintenance fund, in addition to the Delaware River item which I discuss a little later in my statement, includes, among items of particular interest to my State, $570,000 for continued maintenance dredging on the Schuylkill at Philadelphia, $125,000 for the Monongahela, and $58,000 for Erie harbor.

Other activities

There is $19,000 in the budget for examinations and surveys to be conducted by the Philadelphia district on river and harbor work and $65,000 for contingencies, while the Pittsburgh district will get $25,400 for contingencies on river and harbor work. Of the total budget for lock management and care, $6,367,900 is allocated to Ohio River locks and dams, $302,900 to Allegheny River, and $1,109,600 to Monongahela River locks and dams through which pass annually simply incredible tonnages of coal to the Pittsburgh area steel mills. All of these items are, of course, important to a free-flowing commerce on our waterways.

Special requests

Up to now I have been devoting my testimony to a plea for general restoration of cuts made by the House in budget recommendations. I have a few special requests to make which go beyond the budget. I think they can be fully justified and I would indeed appreciate any help given by this committee toward obtaining these additional funds.

I shall not list them by importance or priority because they are all important.

Williamsport dikes

First, I respectfully urge an additional appropriation of approximately $2,000,000 for the dikes at Williamsport, Pa. The House heard testimony on this item at page 1102 of the House hearings from E. L. Gosnell, chief engineer of the Reading Co. He discussed the request from the standpoint of its importance not only to the Reading Railroad but to the Pennsylvania, the New York Central, and the Erie.

The current budget recommendation for Williamsport of $2,110,000 will complete just about all of the flood-wall construction for the city of Williamsport proper and for South Williamsport across the river. If only the full budget amount is granted—and I say we need at least that much as a minimum—there will be needed in future years $7,245,300 for the Newberry section on the right bank of Lycoming Creek. The flood wall around Williamsport proper could well divert stream flow in high water into the Newberry section and wash out all of the railroad lines and threaten a great many residences. The railroads themselves have already expended large sums in raising and protecting their tracks, but until the levees are built on the Lycoming Creek, the health of the city remains in danger because of the disruption of transportation and supply lines. And, as I said, many residences are in danger.

I have promised the people of Williamsport I will do my utmost to expedite the completion of the Williamsport project well ahead of the present schedule completion date which would be by about the end of the 1952 fiscal year. We can speed that up by a whole year if this committee will grant my request for the additional appropriation I seek of $2,000,000, making a total this coming fiscal year of $4,110,000, so that a lesser amount of about $3,500,000 would complete the project by mid-1951.

The members of this subcommittee would, I am sure, be deeply gratified to know how appreciative the city of Williamsport is to the Federal Government and to the Congress and particularly to this committee of the Senate for what has already been done for them on flood-control protection. Their dikes are still virtually useless against floods because of the closures which remain to be completed in the coming fiscal year, and although they had the distressing experience in 1946 of seeing heavy floods pour through the gaps in their uncompleted dikes, they have been most patient, and are most grateful for the progress which has been made.

A community such as that has a real understanding of the problems of the Congress in expending Federal funds and recognizes that it takes tax funds in large amounts to do this kind of work not only in Williamsport but in the other communities included in past and present flood-control appropriations.

Delaware River Channel

Second, I request that the subcommittee add $4,000,000 to the item of rivers and harbors maintenance to be earmarked for the present and contemplated channel maintenance work in the Delaware River at Philadelphia. There is at present allocated out of the $53,000,000 maintenance fund for rivers and harbors an amount of $4,110,000 for this work. My request, therefore, would just about double the budget amount.

You are justified in looking skeptically at such a large request. I hope you will look carefully. You will find that although the authorized channel in the Delaware River below Philadelphia is 40 feet, the present controlling depth is only 34 feet. There are circumstances in which it goes down to even less, to 32½ feet.

I have quite a comprehensive report here explaining what this means in terms of the newer deep-draft tankers which are now being constructed and which Philadelphia of course will want to be able to accommodate in our waterway system. Oil imports to the port of Philadelphia now come to 50,000,000 barrels a year on which taxes in the form of customs total $5,500,000—or enough, more than enough, in 1 year to provide for this additional fund that I am asking.

The channel was completed in 1942 and during the war was allowed to shoal up until it is now in its deplorable situation where we face a possible maritime disaster in case a ship should get stuck on these shoals and turn around in the channel, swing around and block the channel. A 660-foot tanker could just about close up that channel completely and it could set off a disastrous explosion if it should slew around into another tanker.

This matter was called to the attention of Philadelphia Members of Congress too late for them to take it up with the House Appropriations Subcommittee which had just completed hearings on the civil-functions bill. An attempt was thereupon made by Congressman GREEN, of Philadelphia, to add an additional $4,000,000 to the bill by amendment from the floor. I believe that if there had been a full attendance in the House that day the amendment would have been agreed to. Instead, it was defeated by a vote of 38 yeas and 54 nays—substantially less than a quorum—in the Committee of the Whole House.

According to Maj. Gen. R. C. Crawford, former Acting Chief of Engineers, in a letter to Congressman GREEN, the $4,110,000 now allocated in the maintenance fund for the Delaware River channel will not complete the restoration of the authorized 40-foot channel. He reports that to accomplish such a program of maintenance dredging, additional funds in an amount of approximately $4,000,000 would be required.

He also stated that Army engineer experts will be prepared to answer any questions from members of this committee concerning this work and I ask now that you direct such an inquiry to the engineer representatives who are here today.

Bradford flood project

Third, I am today asking this committee to write into the item for flood-control planning an additional amount to provide for extensive planning work on a flood-control project at Bradford, Pa. This project, like so many in Pennsylvania, is important not merely to the protection of property, but primarily to the protection of lives. Bradford is an important producing area and refining area of that great crude oil, Pennsylvania crude. Floods in this area are extremely dangerous since they float on top of the water great quantities of oil which, if ignited, could cause the most horrible kind of tragedy.

Strictly speaking—and I know I must be honest with you on a matter like this—this project has not yet been formally authorized by Congress. That is because of a technicality. It will, I am sure, be included in the next authorization bill. I have introduced a bill, S. 625, to authorize it. I introduced a similar bill last year. According to the ranking members of the Senate Public Works Committee of last year, it was not included in the omnibus bill only because it had not yet been cleared by the Bureau of the Budget.

The reason this urgent emergency project had not cleared the Budget Bureau in time was that after a survey had been made of flood damages in Bradford and vicinity under a resolution I had introduced in the Seventy-ninth Congress, and just as the engineers were about to make their preliminary report on it, a new flood, just 2 years ago this month, on April 5, 1947, swept down Main Street of Bradford to a depth of 6 feet, spreading over 650 acres of the business and residential sections of Bradford. A year ago another flood swept into Bradford. These floods were responsible for a delay on the part of the engineers to provide them time to resurvey the damage in order to have all of the relevant data on the need for this project. When the report was finally submitted, it was too late for routine clearance by the Budget Bureau prior to action by the Senate Public Works Committee on the omnibus bill.

However, the committee did hear testimony from the engineers on this project and members of the committee told me later they were sure it was worth while and would be included in the next bill. But if we wait until authorization legislation passes, it will mean a delay of at least another year before the engineers can even begin planning work on this very urgent lifesaving work. In view of the danger to safety and in view of the succession of damaging floods which have occurred in Bradford in recent years, I do not think we dare wait another year to start the planning work.

This project, as Senator MCCLELLAN no doubt remembers, has a class 1 endorsement by the Rivers and Harbors Congress, of which the Senator from Arkansas is president. I think the people from Bradford have been in frequent communication with him on this project. An attempt was made in the House to obtain an initial appropriation of $1,500,000 for the Bradford project, but, unfortunately, most of the debate on the proposal seemed to have been devoted to critical references to the super-economy views of the sponsor of the amendment, Congressman RICH, in whose district Bradford is located, and very little attention was paid to the merits of his amendment. The people in Bradford are informed that it will take about 9 months to do the necessary engineering and planning work for the project, planning work which would cost, I un-

derstand, about $400,000. If, at the same time, funds were available for the actual start of construction work on the lower part of the project, which is, I understand, a straight channelling job composed almost entirely of dirt removal, it would save the community in any one flood just about dollar for dollar on the entire cost of that phase of the work—dollar for dollar, that is, in each flood, for it would lower the flood level by at least 3 feet.

There is a further factor here which has been called to the attention of Senator McCLELLAN, I understand, and it has also been called to my attention, and that is that before a request can be made to the State of Pennsylvania to share a substantial proportion of the $1,500,000 non-Federal cost of this project—the State may participate up to 50 percent of the non-Federal costs—the Corps of Engineers must first have designed the working plans for the project and appropriations must have been provided by Congress.

Therefore, if we can get an appropriation in this bill, particularly for planning, but also for some initial construction, we will have saved a further delay in Bradford's dealings with the Commonwealth of Pennsylvania.

Appropriation of planning funds for projects which have not yet been authorized is, I concede, rare and unusual, but it has happened, it has been done several times in recent years in connection with emergency work, and this is certainly an emergency job.

While no new projects generally speaking are included in the present bill for initial construction funds, I believe this committee would be performing a most worthy public service to a fine community and to Americans whose lives are in danger if it can provide for this one phase of the work on the lower project which I described. Perhaps it can be done under the emergency features of the bill. I leave the mechanics of that to the committee knowing it will do its best. As I said, the figure of $1,500,000 is the one I have been asked to submit to the committee on behalf of Bradford and I certainly endorse it.

CONCLUSION

In conclusion, I want to thank once again the members of this subcommittee and through them the members of the Senate Appropriations Committee not only for the opportunity to be heard on these appropriation items which so intimately affect so many people in my State, but for the fine way over the years in which I have been in the Senate in which you have responded to my requests on behalf of the people of Pennsylvania for adequate appropriations to protect the lives and health and safety of our people and to maintain the flow of commerce on our rivers.

Citizen Diplomacy

EXTENSION OF REMARKS

OF

HON. JAMES E. MURRAY

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Thursday, April 21 (legislative day of Monday, April 11), 1949

Mr. MURRAY. Mr. President, I ask unanimous consent to have printed in the Appendix of the CONGRESSIONAL RECORD a very able article by James Marshall, of New York, a distinguished American educator, published in the American Political Science Review for February 1949. Mr. Marshall here presents a valuable study of international affairs and the growing part being taken by citizens of the country in the field of diplomacy.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the American Political Science Review of February 1949]

INTERNATIONAL AFFAIRS

CITIZEN DIPLOMACY

(By James Marshall, United States National Commission for UNESCO)

One wonders what the ghosts of Talleyrand and Franklin would say were they to visit the diplomatic conferences of today. Where is the suave approach, the graceful phrase concealing bloody warnings dropped by a king to the music of a minuet or passed by an ambassador to a minister of state over the after-dinner port? How surprised they would be at the blunt Bevin with his frequently unconcealed ill humor, at Molotov, rude and blustering, at Byrnes publicly changing his course in midstream, at Marshall announcing state policy in speeches rather than to plenipotentiaries or through official documents.

How surprised Talleyrand and Franklin would be to think of international relations carried on pursuant to slogans such as "open covenants openly arrived at." How their shrewd eyes would have twinkled at the credulity of people who believed that they had democratized foreign affairs through such a slogan. The old-school diplomats would scarcely have confused headlines which report in large black type the speeches of the diplomats, or the political gossip columns which purport to repeat the whispered asides of statesmen, with covenants democratically negotiated.

The fact is that although we have gained publicity for foreign affairs, and that in itself is important, we have not democratized foreign affairs. They are still the business of technicians. They remain the preserve of foreign offices.

Of all administrative departments, the diplomatic and the military have been the least receptive of democratic patterns. As to foreign relations, this has been the result of two fallacies: (1) the idea that things diplomatic are necessarily and essentially top secret; (2) the misconception that the Bevins, the Molotovs, the Byrneses, and the Marshalls can conduct foreign relations without being required to give a blow by blow accounting to public opinion. The former is untrue; the latter no longer possible. But we still romanticize about the confidential character of the material of diplomacy and the skillful intrigue which we deem to be the art of the statesman.

There are, however, in certain democratic countries roots from which more democratic foreign relations could grow. The great institution of the question put by a member of the House of Commons to the Prime Minister or the Minister of Foreign Affairs not merely brings information to the public, but inevitably humbles any would-be autocrat in the British Foreign Office. The equally important institution of congressional hearings also has a sobering effect on administrative officers. For a congressional committee can not only call the Department of State on the carpet, it can give an opportunity to the interested public to express its views concerning the principles of foreign policy and the conduct of foreign relations.

Such parliamentary questions and committee studies represent one aspect of democratizing administration. They afford the opportunity for a public canvassing and examination of the acts and aims of the administrators. They make the public partners in knowledge; they give to the public the facts upon which they may base critical analyses and make recommendations to the administrators. They fall short, however, of a most fundamental element in democratic procedure. For to be able to question administrators after the fact, after they have acted, is insufficient. Action itself remains untouched by the democratic process. Not until there is broader participation in the planning, the development, and the execution of foreign policy can it be said that the people take part in their own foreign relations.

Occasionally, in especially dramatic situations, the people make their opinions felt. Thus it was the strong popular reaction to the bypassing of the United Nations by President Truman that resulted in the Vandenberg amendments to the proposals to aid Greece and Turkey. But in most situations it is the middle levels of foreign offices which, untouched to any great degree by the lay public, mark the trails which become the roads of international policy.

"How can you expect the layman to take part in the planning, development, and execution of foreign policy?" the foreign-office official will inquire. That is the question asked by technicians in all fields. The jurist asked it as to lay arbitrators; yet we know today that commercial transactions are facilitated by arbitration, and labor disputes which are sometimes fought but rarely settled in courts are more frequently solved in a satisfactory manner by lay arbitration or mediation. The physician and the psychiatrist often ask similar questions of education; yet we know that public health and mental hygiene cannot progress except as teachers devote themselves to these problems in the schools. The engineer and the plant manager put the same question in industry; yet we know now that the psychological effect of worker participation in planning is to increase efficiency.

Professional pride, professional defensiveness, tends in every field to discount the layman. It tends to build up a cult of expertness, an almost mystical cloud-throne guarded by the cherubim of a special technical language. In the field of politics, in its extreme form, this separatism of technicians leads to the police state with its NKVD's and its Gestapos to liquidate presumptuous laymen. In its more moderate expression, the political technician and the bureaucrat simply treat the layman as one who lives on the wrong side of the tracks of wisdom.

Fortunately, we have had some recent successful experiences in the participation of laymen in foreign relations. These may not supply sufficient criteria for final judgment as to the effectiveness of democratic procedures in that field. But they point a way. Just as we can say that a citizen army can be a topflight instrument of war, we now can add that there is evidence that a citizen diplomacy is a promising implement of peace.

In 1945, the State Department invited three or four voluntary organizations especially interested in the agenda to send representatives to the Chapultepec Conference held in Mexico City by the Western Hemisphere nations. This was a first hesitant experiment in citizen diplomacy. At the San Francisco Conference, the United States made another trial of this new technique. It invited 42 national organizations to send consultants to the conference which was to draw the United Nations Charter. These organizations represented, among others, labor, business, agriculture, education, lawyers, women, veterans, religious, civic, and peace groups. They represented 30 to 40 million Americans associated in voluntary organizations expressive of their interests as private citizens.

Almost daily during the course of the San Francisco Conference these consultants met

with members of the American delegation, their advisers or technical experts, and discussed conference developments with them. They submitted memoranda on various points at the request of the delegation. They gave the delegation the feel of the Nation on issues which arose—a much more personal and direct feel than could be had through the filter of editorial writers and commentators.

These consultants, these laymen participating in the planning and development of critical international relations, made a number of specific proposals to the American delegation which found their way into the Charter. For example, under the leadership of Judge Joseph M. Proskauer, the efforts of the consultants resulted in the inclusion of the human rights provision. The inclusion of education in the field of the Economic and Social Council was in large measure due to the work of the consultants led by Dr. William G. Carr and Dr. George Zook.

The presence and participation of these consultants at San Francisco contributed immeasurably to American understanding of the Charter, to American eagerness to join the United Nations, and to the overwhelming approval of the Charter by the Senate. The support of the UN by the people of this country is largely attributable to the challenge given to the consultants by their invitation to the San Francisco Conference. Furthermore, these consultants, and more indirectly the organizations they represented, had staked out something of a vested interest in the United Nations as a result of the time, thought, and effort they had devoted to the creation of the Charter.

A second instance of the democratization of foreign affairs is to be found in the United States National Commission for UNESCO. This institution grows out of the provision of the UNESCO constitution. Article VII provides that "each member state shall make such arrangements as suit its particular conditions for the purpose of associating its principal bodies interested in educational, scientific, and cultural matters with the work of the organization, preferably by the formation of a national commission broadly representative of the government and such bodies." Such national commissions, or national cooperating bodies, according to the constitution, are to act "in an advisory capacity to their respective delegations to the General Conference and to their governments in matters relating to the organization and shall function as agencies of liaison in all matters of interest to it," and are to be consulted by their governments in the selection of delegates to UNESCO. These clauses stem largely from proposals made in this country and pushed by the United States delegation to the conference in London which prepared the draft of the UNESCO constitution in 1945.

How did the State Department treat the opportunity to apply on a permanent basis the experiences with the consultants at San Francisco? How did it make use of this invitation to gain popular support for UNESCO and bring democratic procedures into one phase of international relations? It drew closer its cloak of bureaucratic pride. It consulted its little entourage of trusted advisers, who regarded not only diplomacy but also education, science, and culture as the domain of the expert. It caused to be introduced into Congress a joint resolution authorizing the Secretary of State to designate, for such periods of service as he may determine, not to exceed 30 persons broadly representative of the educational, scientific, and cultural interests of the United States, to serve on the National Commission.

In other words, the Department of State intended to keep a tight hold on popular participation through hand-picked individuals. But this is quite different from the United States associating its principal bodies interested in educational, scientific, and cultural matters with the work of the Organization. The bodies themselves could be represented only by persons of their own choice.

A number of organizations which had been urging the establishment of UNESCO appeared before Congress to protest this attempt to create a house organ of the State Department out of the opportunity for popular participation in our international cultural relations. The whole point of a national commission would have been missed if the principal bodies in this country interested in educational, scientific, and cultural matters had been omitted. The voice of UNESCO would rarely reach the schoolroom or the woman's club or the laboratory except through the releases of the State Department or the pronouncements of its 30 representative favorites. Nor would the desire of great numbers of people to participate in the development of the UNESCO program, in playing a part in international relations in their own fields, have been tapped by the official plan.

The Congress was induced to change the proposed organization of the United States National Commission for UNESCO. It provided for a National Commission of 100 members, 40 of whom were to be outstanding persons selected by the Secretary of State, including not more than 10 Federal Government employees, not more than 15 representatives of State and local educational, scientific, and cultural interests, and not more than 15 persons chosen at large, and 60 representatives of principal national voluntary organizations interested in educational, scientific, and cultural matters. The Commission is vested with power to review periodically the list of organizations designating representatives in order to achieve a desirable rotation among organizations represented.

In addition, the National Commission is directed to call general conferences for the discussion of matters relating to UNESCO, to which conferences organizations actively interested in the problems of UNESCO shall be invited to send representatives, and special conferences of experts to consider specific matters relating to UNESCO. In this way, representatives of popular organizations and experts, as well as individual national and local leaders, are enabled to take part in the development of policy and the domestic operation of the program of UNESCO.

The first meeting of the National Commission took place in September, 1946, with leadership taken by the representatives of national organizations. The interest was intense, and the National Commission spent the greater part of 3 days in developing a program for the American delegation to the UNESCO conference. At the conclusion of the Commission meeting, the executive committee met with Assistant Secretary of State William Benton to discuss the names of possible delegates to the UNESCO conference to be held in Paris in November, 1946. There was also discussion of the principles to be applied in the selection of the delegation. As selected, the delegation was made up largely of persons who were members of the National Commission and almost entirely of persons who had been discussed and supported by the executive committee.

At the conference of UNESCO held in Paris in 1946, the American delegation was in large measure successful in establishing its point of view on the program of the organization. This does not mean, of course, that the American delegation had its own way in everything. It did not. But because of the preparation that had been made by the National Commission and the staff of the State Department, it was one of the best prepared, if not the best prepared delegations at the conference on matters of program and policy. Where the United States delegation failed was on points that had not been discussed by the National Commission—the matter of administration, the matter of budgeting, the matter of the appointment of the Director-General.

The failure of the United States delegation in these respects was due in part to the inadequacy of the State Department's political preparations, that is, its understanding of the temper of other delegations. But above all, it was due to the fact that the delegation itself was not adequately prepared. And in the case of the director-generalship it can hardly be said that the delegation had its heart in supporting the American candidate. There was no one who did not respect him, but there was unquestionable resentment in the delegation that the important matter of policy involved in the selection of a Director-General had never been discussed with the National Commission. The Department had therefore failed to gain both the immediate wholehearted support of its delegation and the support of the people at home who must play a fundamental role in making UNESCO effective in this country.

At the Mexico City Conference in 1947, there was another example of the danger of leaving cultural relations to State Department determination. The United States abstained from voting on the resolution to admit Hungary to membership in UNESCO. Although the United States delegation was almost unanimously opposed to bringing into UNESCO the political problems that beset the United Nations, State Department policy overrode these objections and directed the delegation to refrain from voting because United States policy in the United Nations had opposed the admission of Hungary. This was an unfortunate introduction of power politics into the cultural field, which most of the law members of the delegation and some of the departmental advisers appreciated. It is unfortunate that the United States National Commission did not have an opportunity to express its view on this point.

Certainly the lesson of the consultants of San Francisco had application here. Their participation demonstrated the strength of the following that could be developed throughout the country when representatives of great popular organizations took part in the conference.

There are, of course, thousands of organizations in this country which cannot find a place in the limited membership of the national commission for UNESCO. They, too, have a part to play in broadening international understanding through education, science, and culture. Under the provisions of the enabling act, there have been a national conference in Philadelphia and regional conferences in Denver and San Francisco in which members of these organizations found opportunities to become acquainted with the work of UNESCO and to bring to the national commission their views on the policy which the United States should pursue. The conferences were successful, hundreds of organizations and thousands of people having participated.

In connection with UNESCO, as at the San Francisco Conference, the United States has set up a pilot plant on citizen diplomacy. Other nations have been slower to create national commissions. Some of them are working with "national cooperating bodies" interested in educational, scientific, and cultural matters. But great interest has been shown in the United States National Commission. Just prior to the 1948 meeting of UNESCO in Beirut, a meeting of representatives of national commissions was held. It was presided over by Milton S. Eisenhower, chairman of the United States National Commission.

Votes or plebiscites on the question of war or peace are impractical. Events move at times too rapidly to make them appropriate. Momentary passions may even make them dangerous. Nevertheless, if we believe in the democratic principle that in the long run the people themselves rather than those who occupy places in their governments are the best judges of what is good for people, we must give the public better access to technicians of foreign affairs. This can best be done by admitting the people themselves more and more to the planning stages of foreign relations and to greater participation in international conferences. Secretary Byrnes would have been greatly strengthened in Paris at the meeting of Foreign Ministers if he had been accompanied by a group of consultants such as was present by invitation at San Francisco. General Marshall would have benefited in Moscow from a similar arrangement.

Such participation must be inadequate when limited to hand-picked individuals. Such persons will inevitably tend to represent views which the appointing officials wish to hear. Courtiers and kitchen cabinets soon lose their sensitivity to the pulse and heartbeats of the mass of the people. Where there are voluntary bodies, their representatives will give a more genuine picture of the ideas of the people themselves. Such voluntary bodies will prove the backbone of any organized popular participation in international affairs.

The Information and Educational Exchange Act (the Smith-Mundt bill) recently adopted by Congress provides for the participation of laymen in the informational and cultural relations of the State Department. Two commissions are set up to represent the public interest, the commission on information and the commission on educational exchange. They are, among other things, directed to "formulate and recommend to the Secretary policies and programs for the carrying out of this act." Thus for the second time Congress expressed its confidence in laymen to help formulate foreign policy.

Again, in the Foreign Assistance Act, provision has been made for a Public Advisory Board consisting of the Administrator and 12 additional members appointed by the President subject to senatorial approval. It is unfortunate that neither act goes one step further, permitting voluntary organizations to nominate members of the two Commissions and of the Public Advisory Board.

Both at the San Francisco Conference and in the United States National Commission for UNESCO, business, agriculture, labor, education, science, the arts, higher learning in the various fields of culture, the churches, and women's groups have demonstrated their capacity to bring to the responsible public officials the voice and support of the American people. These experiments—and the provisions of the Smith-Mundt bill—indicate the road to democratizing foreign relations, one of the most resistant fields to the entry of the layman.

It is questionable whether peace can be preserved by the efforts of technicians, even the most high-minded. They sit alternately on pedestals and in anxious seats, neither of which is favorable to a free flow of understanding with the public in whose name they purport to speak. If, however, as the constitution of UNESCO proclaims, "wars begin in the minds of men, and it is in the minds of men that the defenses of peace must be constructed," the great resource of the minds of laymen must be tapped and conduits prepared through which their energies may flow to the maintenance of an affirmative peace.

If, as we commonly believe today, it is men rather than states that are the ultimate foundations of good will, then every possible means must be explored to enable men to plan and participate in the expression of international good will. We shall continue to require the skills of Talleyrands and Franklins. But to be effective in maintaining peace, they must now speak the minds of citizen diplomats, of great masses of people, rather than of dynasties, political parties, or ruling groups.

Retirement of Maj. Gen. Wilton B. Persons, United States Army

EXTENSION OF REMARKS

OF

HON. LISTER HILL

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Thursday, April 21 (legislative day of Monday, April 11), 1949

Mr. HILL. Mr. President, the Secretary of Defense, Louis Johnson, has announced with regrets the retirement of Maj. Gen. Wilton B. Persons from the United States Army.

As a member and later chairman of the House Committee on Military Affairs, and as a member of the Senate Committee on Military Affairs, and later a member of the Senate Committee on Armed Services, I have had long and intimate contact with General Persons as he served through the years, first in the position of Chief of the Army's Legislative and Liaison Division and afterward in the position of Director of Legislative Liaison for the Office of the Secretary of Defense.

General Persons was preeminently qualified for the delicate and difficult work of liaison between the Army and the National Defense Establishment on the one hand and the Congress on the other hand. He possessed the genius of tactful approach, of sympathetic understanding, of reconciling differences and attaining the objective. No man could have been more devoted to his task or more indefatigable in his efforts.

There is no way to measure the fine and exceptional service that he rendered the country. We know that during the war years, when it was of the utmost importance that there be the closest of cooperation between the Congress and the Military Establishment, he contributed greatly to such an accord and to the wonderful results that the effective cooperation meant in the winning of the war. He was the Military Establishment's general on the legislative front, and this front never failed to do the needful and to make its full contribution.

Since the war General Persons has continued his outstanding service amidst the tremendous and difficult problems that have confronted the Military Establishment. As one Member of Congress, I am loathe to see this fine soldier, patriot, and American leave the Military Establishment. He richly deserves the thanks of our country.

I ask unanimous consent to have printed in the Appendix of the RECORD the release of the National Military Establishment, Office of the Secretary of Defense, under date of April 4, 1949, and the release of the National Military Establishment, Department of the Army, April 5, 1949, with reference to General Persons' retirement.

There being no objection, the releases were ordered to be printed in the RECORD, as follows:

NATIONAL MILITARY ESTABLISHMENT,
OFFICE, SECRETARY OF DEFENSE,
Washington, D. C., April 4, 1949.

GENERAL PERSONS TO RETIRE IN JULY; SERVED AS DIRECTOR OF LEGISLATIVE LIAISON FOR OSD

Secretary of Defense Louis Johnson announced today that Maj. Gen. Wilton B. Persons, United States Army, Director of Legislative Liaison for the Office of the Secretary of Defense, will retire in July after 32 years of service in the Army to accept the position of superintendent of Staunton Military Academy at Staunton, Va.

"I will be sorry to lose General Persons' services in this office, but I feel that I should not insist that he alter his arrangements with Staunton Military Academy, which had been completed before I became Secretary of Defense," Mr. Johnson said.

"General Persons had intended to retire about the 1st of June in order to take over his new responsibility at the earliest possible date. He has agreed to remain for approximately a month longer, so as to continue his liaison with the Congress on the important legislative program for the National Military Establishment. Staunton Military Academy, which has a distinguished tradition and reputation, is fortunate in obtaining the services of General Persons as its next superintendent."

General Persons was born in Montgomery, Ala., and was graduated from the Alabama Polytechnic Institute with a degree of bachelor of science in electrical engineering in 1916. He also holds the degree of master of business administration from the Harvard Graduate School of Business Administration.

He entered the Army as a second lieutenant, Coast Artillery Reserve, during World War I, and served as a battery commander on the western front in France and later with the occupation forces in Germany. He was commissioner in the Regular Army in 1917.

Under his guidance, the first integrated legislative program for the Army, Navy, and Air Force has been prepared and presented to the Congress this year. Before he became Director, Legislative Liaison of the Office of the Secretary of Defense, he served in a similar capacity in the Department of the Army, including the entire period of World War II. He was awarded the Distinguished Service Medal and the Legion of Merit for his services during the war, and he also has the decorations of Grand Officer of the Cross of the Sun (Brazil), the Order of Abdon Calderon (Ecuador), and the Medal of War (Brazil).

NATIONAL MILITARY ESTABLISHMENT,
DEPARTMENT OF THE ARMY,
Washington, D. C., April 5, 1949.

MEMORANDUM FOR THE PRESS

Secretary of the Army Kenneth C. Royall today expressed 1 'gh appreciation for the 32 years of service of Maj. Gen. Wilton B. Persons, who will retire from the Army in July to become superintendent of Staunton Military Academy at Staunton, Va.

Following announcement of General Person's imminent retirement by Secretary of Defense Louis Johnson, Mr. Royall said:

"On General Persons' re'irement from the United States Army after a distinguished career spanning two World Wars and 32 years I wish to express my high appreciation for his services to his country and to the Army. Qualities of leadership, perseverance, fortitude and high professional skill mark his lifetime of devotion to duty.

"I cannot overestimate the importance and value of his contribution to the war and

post-war work of the Army as chief of the Army's Legislative and Liaison Division in the crucial years between March 1942 and July 1948. He has demonstrated that same high competence and devotion since he assumed the duties of director of Legislative and Liaison for the Office of the Secretary of Defense in July, 1948.

"General Persons' executive ability and professional skills have been of enormous value in the establishment and maintenance of an understanding relationship between the Congress and the Armed Services. It is, of course, unnecessary for me to state how supremely important such understanding is at the present juncture of world affairs.

"I know that General Persons can be relied upon for assistance and advice to both the Army and the entire National Military Establishment should future need arise."

Southern Textiles

EXTENSION OF REMARKS
OF
HON. OLIN D. JOHNSTON
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES

Thursday, April 21 (legislative day of Monday, April 11), 1949

Mr. JOHNSTON of South Carolina. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial entitled "Massachusetts Editor Takes Honest Look at Southern Textiles," published in the Daily Mail, of Anderson, S. C., of the issue of April 20, 1949.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

MASSACHUSETTS EDITOR TAKES HONEST LOOK AT SOUTHERN TEXTILES

(EDITOR'S NOTE.—The following editorial is from the Berkshire Evening Eagle, published at Pittsfield, Mass., in the heart of the New England textile district. It is a refreshingly candid statement of the obvious advantages of the South as an industrial area, and answers northern critics who have lambasted the South each time a new industrial plant has taken wings from New England to this area.)

There is very little comfort for Berkshire County or any other part of New England in the report in Thursday's Eagle by John E. Kelly on the textile industry in the South, particularly South Carolina. The tendency of cotton mills to move South has been understandable; it seems only logical for the mills to be established near the source of supply, and avoid unnecessary shipping. But in woolen manufacturing the Southeast has no great advantage in proximity to raw material and it is impossible to rationalize the competition.

The chief value of Mr. Kelly's article, unpleasant as it is, will be to induce us to stop kidding ourselves, and to face the truth. It is evidently false that southern mills are obsolete and unsanitary, ramshackle relics of the reconstruction era; on the contrary, a large proportion are new. It is untrue that southern mills pay starvation wages, the wages seem to be almost, if not quite, on a par with wages elsewhere. This means, in effect, that they are higher in purchasing power, because of the milder climate. This fact is always minimized by those who demand a uniform wage country-wide. But it stands to reason that living costs are cheaper where gardeners plant peas in January, and where peach trees bloom in February, than in New England where the March mud is 2 feet deep and where freezing temperatures and snowstorms are not infrequent in April. The need for less clothing for individuals, and for less fuel in the factories and homes is a factor that is of great financial importance.

There are, finally, the lower taxes and the different attitude of the powers that be. The attitude taken all too often by labor and by national administrations in Washington that are favorable to labor is that industry is a rapacious monster whose principal duties are to pay most of the taxes, to provide jobs for the workers whether it makes any money or not and whose desire for profits is a form of depravity that must be discouraged as much as possible. In the circumstances, it is understandable why businessmen seeing welfare and unemployment benefits constantly rising in the regions where they are situated, turn a responsive ear to the blandishments of communities where their taxes and other expenses will be less and where they are not only welcome but ardently desired.

Statement by Hon. John C. Stennis, of Mississippi, Before Senate Appropriations Subcommittee on Agriculture

EXTENSION OF REMARKS
OF
HON. JOHN C. STENNIS
OF MISSISSIPPI
IN THE SENATE OF THE UNITED STATES

Friday, April 22 (legislative day of Monday, April 11), 1949

Mr. STENNIS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement I made yesterday before the Subcommittee on Agriculture of the Senate Appropriations Committee.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

Mr. STENNIS. Mr. Chairman, along with other Members of the Senate, who have a major interest in agricultural problems, I have been highly pleased with the appropriation bill for the Department of Agriculture as approved by the House of Representatives.

4–H CLUBS

Most of the great programs conducted by the Department for the benefit of the American farmer and the general public have been granted adequate funds to continue successful operation, and a sound expansion has been outlined for some of them. I have been particularly pleased with the $1,000,000 increase in payments to States for the extension service. These funds will be largely used to provide better support for 4–H Club activities. There can be no better investment of public funds than for work such as this, which is producing better farmers and homemakers and better all-around citizens among our rural youth.

In voting this increased appropriation which completes the final increment of the Bankhead-Flannagan Act and brings to a total of $26,966,950 annual funds available for payments to States for extension service, it is my suggestion that the Congress call upon the Department for a full report of these areas in the country where 4–H work is not available for every rural youth.

The Extension Service not only needs sufficient personnel to carry on this work, but it needs highly trained, highly capable personnel. The agents and the assistant agents who handle the 4–H programs should be real leaders in their community, capable of offering a real incentive to the farm youth to become the most active type of useful citizen. If a survey by the Department shows any field where this item of our extension work is not adequate, the next session of this Congress should eliminate the deficiency.

The allowance of the full budget recommendations for provisions of the Research and Marketing Act is another demonstration that the present Congress is a firm friend of the American farmer and well responsive to the needs of developing our farm economy to a basis of equality with other phases of our economic life.

SOIL CONSERVATION

In this connection I hope that the committee will see fit to increase the allocation for soil-conservation research made by the House. The budget estimate was reduced in this case by $657,000, and I believe that the greater part of these funds could be very profitably expended during the coming year. We have made great progress in soil-conservation research, but there are still many unknowns that need to be explored for the very detailed benefit of our farm land. In those areas where our land is still wasting away despite the adoption of the most modern conservation practices, there must be a field for broader knowledge.

EXPERIMENT STATION RECORD

I note that the budget allowance for experiment stations has been approved. In this connection, however, I would like to ask the committee to add one small item that was originally omitted when the Congress failed to provide funds in 1947. I refer to the publication of the Experiment Station Record. This publication, a complete index to the experiment station work in all 48 States, once provided an invaluable service not only to research workers in the field, but to all agricultural students. Perhaps its publication can be resumed without any specific appropriation, but whatever step is necessary, I hope the committee will look into the matter.

FORESTRY

The House has reduced by $1,518,500 the amount estimated for national forest protection and management, and the total approved is more than $200,000 less than the sum appropriated in 1948. I ask this committee to give serious consideration to restoring at least the major part of the budget estimate.

In my section of the country we do not have national forests on the order of the great reservations in the West, but we do have some very fine areas, several in my State, which have just begun to reach a stage of development which demonstrates conclusively the worth of these great programs for the conservation of our natural resources. This stage of their progress is no time to retrench our activities in the field.

To provide a specific illustration, it has been the example of the development of the national forests in the southern part of my State which has provided the major incentive for the establishment and rapid growth of a system of forest farming on much of the worn-out farm land of that area. Today farmers who never received an adequate return from regular farm operations on this land are leading the way in timber production. If this development of forest farming continues over Mississippi, our State will progress to a much richer and more balanced agricultural economy. The demonstration of what could be done in the national forests can take major credit for this most laudable development.

The House very wisely increased the funds for private forestry cooperation, but this over-

all development should not be neglected. At the same time, there should be a larger appropriation for forest development, roads and trails, and for forest-fire cooperation. One of the greatest aids in the development of private forestry which the committee can supply is more adequate cooperation with State and local government, and private interests, in preventing forest fires.

COTTON CLASSING

On page 53, line 2, of the appropriation bill, the House established the following legislative provision in the bill: "*Provided*, That hereafter appropriations available for classing or grading any agricultural commodity without charge to the producers thereof may be reimbursed from nonadministrative funds of the Commodity Credit Corporation for the cost of classing or grading any such commodity for producers who obtain Commodity Credit Corporation price support."

It is my understanding that action was taken to alleviate the acute cotton-classing bottleneck that developed during the harvesting and marketing of the 1948 crop.

I can report from personal knowledge that the classing services provided by the Department during this period were simply not sufficient to come close to meeting the great demand without very trying delays. The few available classing stations were swamped with samples for classification, and many farmers living long distances from the stations could not afford to take the long trips necessary to cut down some of the delay. As you know, cotton must be properly classed before it can be placed on a Commodity Credit Corporation loan. The CCC loans of last year saved the cotton producers of the Nation from a disastrous price season, but many small cotton farmers had to sell their cotton outside the loan system, at a loss of several cents per pound, because they could not afford to wait through the long period for classing.

When the small cotton farmer in the South picks and gins a bale or two of cotton, usually he needs the money right away for food and clothing for his family. If we are going to give him the benefit of price supports for his product, we should not deprive him of this benefit through failure to properly adapt the system to his needs.

I have been informed that the legislative provision written into this appropriation bill by the House will take care of the shortage of cotton-classing stations. I urge this committee to carefully investigate this matter, and receive the same assurance before it takes final action on the appropriation for the service.

If the committee is not fully satisfied, I urge it to make an appropriation adequate to meet the needs of expanding the classing service. It has been estimated that $400,000 would be needed.

Some action should be taken to remedy the situation, or the Congress will have failed in its responsibility to the small cotton farmer.

Reclamation

EXTENSION OF REMARKS

OF

HON. ERNEST W. McFARLAND

OF ARIZONA

IN THE SENATE OF THE UNITED STATES

Friday, April 22 (legislative day of Monday, April 11), 1949

Mr. McFARLAND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address concerning reclamation, delivered by the junior Senator from Oklahoma [Mr. KERR] before the seventeenth annual convention banquet of the National Reclamation Association, on November 18, 1948, in Oklahoma City, Okla.:

There being no objection, the address was ordered to be printed in the RECORD, as follows:

This is certainly one of the greatest associations that I have ever had the opportunity of being acquainted with and learning of your wonderful program. You and I are conscious of the fact that Oklahoma and the West and America are the product of two things: people and resources.

You and I know that the Oklahoma and the West and the America of tomorrow will be the product of two things: people and resources.

As people become better educated and better trained—as they increase their knowledge and develop wisdom, they are able to more profitably use and develop their natural resources.

As our natural resources are more fully developed and properly conserved, they will provide better opportunities for the progress, prosperity, and security of the people.

As Americans we live in the midst of and are blessed by the greatest variety and most abundant quantities of natural resources in the most favorable environment of any people in the world.

The greatest and most important of these resources are soil and water.

For over 300 years we have traveled happily, but carelessly, along the high road to prosperity, too little aware that our objectives, no matter how desirable, were being gained at a cost far too high, and unnecessarily so.

I would like to take a leaf from the history of the American Indian. He was the world's greatest natural conservationist. I do not know how many thousand years unnumbered tribes lived in and off of the natural resources of this continent.

When the White Man came, took possession and began to use these resources, they had been so completely conserved that their use over thousands of years had not depleted or destroyed, but conserved and added to.

Today, after 300 years of the White Man's occupation our Indian brothers can properly inquire: What of the millions of acres of top soil, eroded and lost? What of the streams, polluted and silted? What of the timber, used but not replaced?

Under the Indian's rule, soil and water lived together as friends. The soil uneroded by the water. The water unpolluted by the soil. Today the White Men and Indians live together as brothers, but for 300 years we have seen unceasing conflict between soil and water. We have permitted the water to attack, erode and destroy and wash away millions of acres of our most valuable soil. We have seen the soil wash into and fill the channels of streams, thus making certain that every recurring rain or flood would do it damage sooner and easier and to a greater extent.

Every year there is some flooding everywhere and terrible floods somewhere.

Every gallon of water that moves across and out of a State without having been properly used is a public loss.

Every particle of soil carried away is a public tragedy.

To permit continued erosion of soil by uncontrolled water and the ensuing loss of both the soil and the water is to encourage general poverty and invite national disaster.

On the other hand, by adequate conversation and rebuilding of the soil and through proper conservation and use of water we can guarantee for ourselves and our children the essential elements that will insure improved health—increasing wealth—and enlarged national security.

I was Governor of Oklahoma in May 1943, when the most devastating floods I have ever seen invaded northeast Oklahoma. Your distinguished secretary-manager, Don McBride, and other farsighted men interested in the future of Oklahoma and its people went with me as I visited the valleys where these awful floods had struck with such terrible fury.

We saw the floodwater recede. We saw the lands dry out. We saw the farm families who had been compelled to flee their homes, as from a pestilence, return—repair the soil and plant a second crop. We saw June and July come and give promise of harvest. But in the latter part of July and August we saw a withering drought burn up and destroy the second crop as completely as the floods had ruined the first.

We asked ourselves then and have continued to repeat the question since "How long before the intelligent, enlightened people of Oklahoma and across the Nation will arise in their wisdom and power and develop a program to prevent the destruction by water in flood times, and control and save it for its life-giving value in dry times?"

One time the great Sam Jones was asked the question: "How do you know that you have religion?" He answered: "I was there when I got it."

You and I have been there when the destruction from uncontrolled water took place, and when the loss of production because of the lack of water was happening.

In the light of this knowledge and its significance, we cannot escape our responsibility to solve this great and pressing problem.

Yonder in the twenty-sixth chapter of Genesis we learn in the early dawn of the life of the race, water was a controlling factor. "And Isaac digged again the wells of water, which they had digged in the days of Abraham, his father.

"And Isaac's servants digged in the valley, and found there a well of springing water.

"And the herdsmen of Gerar did strive with Isaac's herdsmen, saying 'The water is ours.'

"And they digged another well and strove for that also.

"And he removed from thence, and digged another well; and for that they strove not; and he called the name of it Rehoboth; and he said, 'For now the Lord hath made room for us, and we shall be fruitful in the land.'"

We have such an abundance of water that if we will adequately conserve it and equitably use it, we do not need to waste our substance or time in striving with each other for it.

There is enough for all, and to spare.

I want to congratulate your great association upon your realization of the enormous value of the proper use of water and upon your purposes to develop that use. I commend you for your spirit of willingness to cooperate with our great Bureau of Reclamation and every other appropriate agency of the Government and other associations and individuals seeking to conserve and utilize our water resources.

You come from many places, all of which are interested specifically in the development of their own projects and generally in the development of all worthy projects. We here are vitally concerned with the vast watersheds of the Arkansas and the Red and their tributaries. We are dedicated to bring about their development on a basis commensurate with their value and importance and as a part of the over-all program for the development of the resources of the Nation. We believe that here, as on the mighty Missouri, the program must be basin-wide in scope, but comprehensive enough to insure the development of the small projects simultaneously with the larger and greater ones.

As a private citizen and as a public official, I have come to know, to like, and respect

the capable men who make up the Corps of Engineers—the Reclamation Service and those in and out of our Government, who are striving and working for the conservation and rebuilding of the soil.

It is our purpose and the purpose of our people to work with these existing agencies of Government in the development of our soil and water resources.

We are aware that these agencies of Government are entitled to public support to the extent, but only to the extent, that they are willing and able to effectively and cooperatively serve the interest and welfare of the people.

Saving and rebuilding the soil and conserving and using the water are so important in the life of this Nation as to be almost, if not entirely, sacred. They should and, in my opinion, will be lifted above the level of human jealousy or partisan identification.

There is, in my opinion, a justification for the development of a bipartisan program to insure these objectives as great as the necessity and justification for a bipartisan program with reference to our foreign policy.

I thank God for the wisdom of the American people that has led them in seeking and finding the patriotic goal of a united effort to achieve peace in the world.

I pray that a similar wisdom will show us the necessity and the opportunity for a united effort and purpose to achieve the most important objective of our peacetime domestic economy, namely: adequate conservation and rebuilding of soil, complete conservation and use of water.

My fellow Americans, there is a rainbow across the western sky. There is a star high above the Western World. It is the rainbow of reclamation and irrigation. It is the star of a wonder program to harness and control, conserve and use the mighty tides of the Nation's priceless water.

Godspeed to you in the accomplishments of your worthy purposes.

What Are We Being Spent Into?

EXTENSION OF REMARKS

OF

HON. KENNETH S. WHERRY

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Friday, April 22 (legislative day of Monday, April 11), 1949

Mr. WHERRY. Mr. President, I ask unanimous consent to insert in the RECORD an article entitled "What Are We Being Spent Into?" written by the junior Senator from Virginia [Mr. ROBERTSON] and published in the Reader's Digest for May 1949, together with a cogent editorial entitled "One Brave Man," from the Omaha World-Herald for April 20, 1949.

The article is a timely and an illuminating discussion of a subject vital to the welfare of all Americans, and particularly significant because of the concern existing at this time in the minds of so many Americans as to the future financial course of Government.

There being no objection, the article and editorial were ordered to be printed in the RECORD, as follows:

[From the Reader's Digest of May 1949]

WHAT ARE WE BEING SPENT INTO?

(By Hon. A. WILLIS ROBERTSON, United States Senator from Virginia)

Two facts vitally affect the income, the savings, and the future of every American: The increasing rate of speed at which the Government spends what we make;

The Government's plans to spend not less of what we make but vastly more.

Spending measures are now before Congress which—looking innocently small at first glance—are due to amass, for us and our children, the most gigantic bills in the peacetime history of any nation.

Disarmingly labeled "A bill to provide a national health-insurance and public-health program" Senate bill (S. 5) provides that, to all intents and purposes, the Government put doctors on the Federal pay roll and provide free medical care for 85 percent of the people of the country. Collected in pay-roll taxes, the cost of this free program, in the first year, will be about $4,000,000,000. Eventually it is due to cost, every year, $10,000,000,000 to $14,000,000,000.

With a relatively modest $300,000,000, it is proposed this year to launch a program of Federal aid to education. After 1950 the annual cost will rise sharply and, as the States shift their educational responsibilities to the Federal Government, it may reach three billion a year.

Launched as an emergency depression measure, the Federal school-lunch program has become, like most emergency measures, a permanent Government policy. Last year it cost $70,000,000. Now the Secretary of Agriculture reportedly wants free lunches for every school child in the land. That would cost nearly half a billion dollars in 1950 and at least $550,000,000 annually by 1955.

For the less well-to-do American families—adults as well as children—the administration is backing a free-food program. The first year's cost of that undertaking is estimated at $1,000,000,000.

The plan before Congress to expand the public-housing program calls for a maximum of only $185,000,000 in the first year. It could end up costing us billions.

With powerful veteran backing, a veterans' pension bill has been offered which would require, in 1950, an estimated $120,000,000. This would boost the annual cost of veterans' benefits not so many years ahead to an estimated eight to ten billion dollars.

A 7-year reclamation plan, lately unveiled by the Department of the Interior, would cost us only $312,000,000 in the first year, but almost four billion by the end of the seventh. In January 1948 the total cost of the proposed waterways development in the Missouri River Basin was officially put at four and one-half billion dollars. In July 1948 the official total was put at six and one-half billions—a $2,000,000,000 jump in 6 months. Last year, for the development of the water resources of our river basins, Congress appropriated a little more than $1,000,000,000. Plans have now been officially blueprinted which, to complete, will cost at least fifty-seven billions.

The spending propagandists declare that 75 percent of this year's Federal budget is for national defense, foreign aid, and to pay the cost of past wars. Statesmanship will fail disastrously if it does not find the road to peace and a consequent reduction of these expenditures.

But the real threat to our earnings and our future is in the remaining 25 percent. And, as my grandfather used to say, the tendency of everything is to become more so. Once under way, the foot-in-the-door proposals concealed in that 25 percent could easily cost us more—in addition to defense, foreign aid, and war—than this year's total budget.

There is a point at which, by taking out of the hands of the people so much of the fruit of their labors and the means for increasing their production, the very size of government spending becomes a menace to a free economy and, thereby, to all freedom. How far past that danger spot is our Government prepared to take us? What sort of America are we being spent into?

The burden of proof, says Henry Hazlitt in Newsweek, is on the spenders. "And it is not enough for them to prove, even if they could do so, that everything that these expenditures will buy is needed. They must prove that the citizens of the country need each of these things even more than they need the things for which they would spend their own money if it were not taken away from them in taxes."

In his first campaign for the Presidency, Franklin D. Roosevelt expressed great alarm at the dangerous and appalling increase in the Federal Government's spending. "The most reckless and extravagant," he called it, "that I have been able to discover in the statistical record of any peacetime government anywhere, any time." The increase which so stirred Mr. Roosevelt's wrath in 1932 amounted to $1,000,000,000 in 4 years—an average, per year, of $250,000,000. One billion dollars is more than our entire Federal Government spent in any peacetime year up to 1917. But with our national debt now past the quarter-trillion mark, $1,000,000,000, as Federal spending goes, has ceased to be a startling statistic.

As for the $250,000,000 annual increase which Mr. Roosevelt so vehemently deplored: This year, 1949, the Government proposes to increase its spending over last year not by a mere quarter of a billion dollars but by 25 times that amount. This year's increase in spending—the increase alone—totals more than the Government spent for all purposes in any peacetime year up to 1934 save one.

By the puny standards of those days, the most alarming period of New Deal spending was in the 5 years from 1935 through 1939. This year's proposed $42,000,000,000 budget is more than was spent in all those 5 years. It is more than the total national income of the United States in the year that Mr. Roosevelt was first elected.

On a per capita basis that much spending is equivalent to a burden—in this one year—of $1,420 for a family of five. That is almost half as much as the average American family earns in a year. It is more than the entire annual earnings of 6,000,000 families.

With an argument as sound today and as unheeded as it was in 1932, Mr. Roosevelt said: "Taxes are paid in the sweat of every man who labors because they are a burden on production and are paid through production. Our workers may never see a tax bill, but they pay. They pay in deductions from wages, in increased cost of what they buy, or in broad unemployment throughout the land."

Last year our national income was the highest in our history. Does that mean that we are increasing our earnings at a faster rate than the Government is increasing its consumption of them? On the contrary, every year the Government takes away from us not only a larger number of the dollars we have earned but a larger proportion of our total earnings.

Frankly conceding we are now paying for past wars and future defense, the fact remains that what the Government took away from us in 1939 amounted to $37 for every man, woman, and child in the country. Last year it took more than seven times that much. Did our national income in those 10 years go up by seven times? Not at all. It increased by only three times. Thus, for every additional dollar we earned, the Government took two and one-third dollars. Its spending of our money, in other words, was increasing at a rate two and one-third times faster than our earnings.

The Government's biggest slice of what we make comes from personal income taxes. There the Government is gaining on the citizen with truly giant strides. Almost half of our income taxes comes out of those whose annual earnings are under $6,000.

For every dollar paid in income taxes in 1940, the Government this year will take about $14. The Federal budget this year will almost equal the total 1947 earnings of all the people living in the 17 States comprising the western half of the United States and including California and Texas.

Thus the boundaries of our economic freedom and of our right to the pursuit of happiness are shrinking. Every year less and less is left to us to use as our own, to buy a home or a life-insurance policy, to invest, set up a business, or save for the rainy day. The figures reveal a startling story of the draining dry of the springs of increased production and prosperity.

As the Government takes more and more of our total earnings, each year the amount of money which is left over and can be productively employed for the maintenance and expansion of our economy is dangerously diminishing. Out of our total income in 1944, the American people had $34,000,000,000 left—after taxes and the tax-inflated cost of living—to save and put to productive use. In 1945 we had the same income but the amount left over had been cut to $26,500,000,000. In 1946, it was down to $11,800,000,000. In 1947, though our income was the highest in our history, an even smaller amount of it—$8,800,000,000—was left over to save, invest, to expand production.

No plan can, overnight, bring Government spending down to a safe level. We are committed to the expenditure of vast sums for foreign aid. Prudence requires the strengthening of our national defense. We are engaged in many undertakings here at home which we could not and would not choose to liquidate.

But what a spur it would be to America's confidence, energies, and productive genius if our national administration were to announce its determined purpose:

1. To make the saving of the people's money a major objective of government;

2. To spend, henceforth, solely for projects which are demonstrably necessary, which cannot be postponed or done for less, and which only the Federal Government can undertake;

3. To seek to safeguard and enlarge the area in which every law-abiding American is free to do with his own—his money and abilities—what he chooses to do.

The crucial requirement is not that the Government's spending, this year, should be reduced by any specific amount, but that the trend toward increased spending should be resolutely resisted and, by cutting down, postponing, and cutting out wherever possible, definitely reversed. This can be wisely done only by insisting, as a Senate colleague recently said, "that every dollar spent by the Government is not only a dollar well spent, but a dollar necessarily spent."

The Nation owes a debt of lasting gratitude to disabled war veterans, and has the duty of providing adequate care for them. But is it necessary to provide for hospitalization for a major portion of all our people? The scores of new construction projects proposed by the Reclamation Bureau and the Army engineers may all be good. But at a time when the costs of such construction are far above normal, are they necessary? The Interior Department's plan to double the croplands irrigated by its reclamation projects in the Northwest is probably desirable. But in a period when our crops are already so large that the Government is paying out money to keep prices up, is it necessary?

There is probably not a single item in the whole, vast list of Federal spending projects where the test of necessity, if honestly applied, would not produce confidence-inspiring savings. For every dollar thus saved the American people would be, by that much, a freer people, and a more soundly productive America would be that much stronger in the cause of freedom.

[From the Omaha (Nebr.) Evening World-Herald of April 20, 1949]

ONE BRAVE MAN

Senator ROBERTSON, Democrat, of Virginia, comes forward, in the Reader's Digest, with a firm conviction:

"What a spur it would be to American confidence, energies, and productive genius if our national administration were to announce its determined purpose"—to do what?

Simply this:

"To spend, henceforth, solely for projects which are demonstrably necessary, which cannot be postponed or done for less, and which only the Federal Government can undertake."

That is a drastic proposal. It would cut public spending to the very bone. If adopted and put into effect not alone by the national administration but by the governments of States, municipalities, and other local spending units, it would save to the people not alone billions but tens of billions of dollars which now are taken out of their pockets and turned over to government to spend.

There is no hope, it must be admitted, that our national administration will give any consideration at all to the proposal of this economy-minded Virginian. And very little that it will be adopted as a guiding rule by many States and cities.

And this not because it is an unsound proposal. But because practically all government in the United States, from the lowest unit to the highest, is carried along by a tempestuous spending and taxing spree. A spree during which little or no thougnt is given to the future of the Republic.

Senator ROBERTSON calls attention to the increasing rate at which the Government spends what we make, and to the Government's plans to spend not less of what we make but vastly more.

As late as 1944, he tells, after taxes and inflated living costs, the people had $34,000,000,000 left to save and put to productive use. Only 3 years later, in 1947, though our income had mounted to the highest in our history, less than $9,000,000,000 was left. Since 1940 collections from income taxes have been multiplied 14 times.

Such is the hurricane of spending that threatens to sweep away the earnings and the instruments and means of production of the American people.

Right now the Congress is considering enormously increased spending for public health, education, and housing. Even Senator WHERRY thinks this program desirable, though he is fearful of plunging the Government into red ink.

And Senator TAFT, fighting a rear-guard action, temporizes with bills of his own to increase the spending, only on a more modest scale than Mr. Truman demands.

But no one, apparently, stops to ask, as Senator ROBERTSON urges: "Is it demonstrably necessary? Can it be postponed? Can only Government undertake this project?"

Americans are not hard-hearted Hannahs. They have a highly developed social conscience. They are giving right now for social welfare immensely more than ever before, immensely more than any people on earth ever have done. And they are doing it at a time when there is more nearly full employment, at higher wages, than has hitherto been dreamed of. They are doing it when there is less of grinding poverty, when the public health is better, when education is on a higher plane, when there is far less hardship than ever before.

They are faced now with plans for enormous additional spending to eliminate hardship entirely, though it was in hardship and its brave endurance that this Republic was built and out of which the resolution, courage, and independence of Americans grew to make them great. Plans to compel the industrious and thrifty to support, in assured comfort, the indolent, the shiftless, the profligate, even though they make no effort to support themselves. And plans, in doing this, to spread public and private bankruptcy broadcast, so that none can longer suppport either themselves or others.

That is the situation. It is plain and undeniable. Everyone can see it. Yet there are very few in public life, too few even in private life, to heed such warnings as Senator ROBERTSON'S or to give so much as faint-hearted support to his proposals for calling a halt. Even those known as conservative leaders, such as Senator TAFT, temporize, while others shrink from speaking out. The fear of the pressure groups—who unwittingly threaten their own destruction—has become all but universal.

Fear, not courage, is in the ascendancy.

But it is heartening that one man in public life, a Democratic Senator at that, dares to brave the devastating storm.

Achievements of Home-Demonstration Agents in the South

EXTENSION OF REMARKS

OF

HON. JOHN C. STENNIS

OF MISSISSIPPI

IN THE SENATE OF THE UNITED STATES

Friday, April 22 (legislative day of Monday, April 11), 1949

Mr. STENNIS. Mr. President, in a recent issue of the Progressive Farmer, Miss Sallie Hill, home department editor, reviewed some of the great achievements of the many fine home-demonstration agents in the South. I ask unanimous consent that this article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Progressive Farmer of March 1949]

FARM FOLK CAN LIVE BETTER

(By Sallie Hill, editor, home department)

At the outset, perhaps I should tell you that I have a double purpose in writing this article. I want to pay tribute to the leaders of a new type of farm-home education—the largest volunteer adult education program for women in the world. Home-demonstration work, which started about 35 years ago, is taken for granted by most of us southern farm folks. Therefore, I was genuinely shocked recently, when a radio commentator remarked, "I never heard of a home-demonstration agent." Accepting this gentleman's woeful lack of information as a sort of challenge, I am dedicating this page to a brief presentation of home-demonstration agents and their work.

To give you an idea of the varied subject matter and far-reaching effect of this program, we give you a few excerpts from the annual report of Home Agent Rowena I. Sullivan, Simpson County, Ky. From demonstrations presented in farm homes and sponsored by the home agent, 206 enrollees accomplished the following.

They slip-covered 61 pieces of furniture and repaired 62 pieces. Ninety-four rooms in Simpson County homes were completely rearranged to make them more attractive. Woodwork was painted in 225 rooms; walls

were refinished in 164; and floors were refinished in 282.

With so much improvement, the natural follow-up was new and better furnishings. This included 99 new rugs, 195 new or reconditioned window shades, and 149 pairs of curtains, and 69 pairs of draperies made by the homemakers. They also added 69 pieces of new furniture and 92 pieces of refinished furniture. They made 56 rugs.

Home management was not overlooked by these 206 homemakers, either. They remodeled 30 kitchens and improved 13 others. New equipment was added, too—147 major items and 197 smaller articles. The homemakers are also striving to improve their working habits. Now, 156 of them have learned to sit for most of their work and 83 eliminate unnecessary tasks from their daily routines.

Good cooks welcome new recipes, and Simpson County homemakers tried 1,011 new recipes, 183 plan meals ahead, 206 plan their menus to include more green and yellow leafy vegetables, and 183 plan their meals to include all basic seven foods. They canned 10,861 quarts of meat, fruit, and vegetables; froze 5,583 pounds of meat and 1,181 quarts of vegetables; and put up 2,494 pints of jams, jellies, and preserves.

In their landscaping, 26 improved walks and drives, 36 added lawn furniture, 23 repaired or painted outbuildings, 93 put their names on mail boxes, and 18 improved the entrances to their farms. These 206 rural women set 935 shrubs and rosebushes and 140 trees.

Sewing is a regular job of these farm homemakers. They made 1,262 new garments, remodeled and mended 3,061 articles, and made 230 items of household linens.

These rural women read approximately 20,858 magazine articles, probably made possible by their exchange of 1,152 magazines. Sixty of them read their Bible daily.

Let us remember, too, that the activities of these 206 volunteer members are far-reaching—they serve as object lessons for their friends and neighbors. Many of their projects "catch fire" and spread throughout an entire county.

Take the case of Eva Minix in Rockingham County, Va. With praiseworthy efficiency, this agent campaigned for better kitchens. I recently visited that county and saw some remarkable results—375 families remodeled or improved their kitchens. At the same time, 370 families improved other rooms. Some 2,000 pieces of major equipment were added—ranges, home freezers, washing machines, refrigerators, etc.

Down in Coahoma County, Miss., home freezers have caught on to such an extent that Home Agent Judson Purvis can point to 236 new ones purchased this past year.

We take you now to Halifax County, N. C., for Home Agent Florence Cox's report of the Women's Curb Market. There $17,384.94 worth of home products were sold on the market, and $20,921.23 worth of products were sold by club members outside the market.

Looking in on Anna Heist, St. Johns County, Fla., we learn that 164 homes were electrified in 1948 and that 650 pieces of home equipment were added, much of it electrical.

Passers-by in Kershaw County, S. C., may well ask, "Whose attractive farm home is this?" Margaret Fewell, the agent, reports that 750 families have improved their grounds. Home improvement was a chief concern of Elizabeth Tuttle, of Forsyth County, N. C.; 1,548 homes were improved, 18 families were assisted in constructing a house, and 130 others helped with remodeling.

Gayle Roberts, of Tarrant County, Tex., reports that 112 women have applied work-simplification methods to their household tasks. And five women have met the irksome dishwashing job by purchasing electric dishwashers.

In El Paso County, Tex., Home Agent Irma Sealy reports that 318 families now have home freezing units to help preserve their food.

Homemakers of Stewart County, Tenn., have been turning to art, according to Ophelia Elam, home agent. They etched 777 glass articles; made 228 corsages, 428 aluminum trays, and 337 pieces of shell jewelry. In addition, 256 new homes were built in the county. Pine Hill, a community of 50 families in Knox County, Tenn., was an active center for improvement, too. Ruby McKeel, home agent, reports that 15 rooms were papered, 12 houses screened, and 36 major pieces of home equipment were purchased.

SEEN AND HEARD

Like a brisk March wind, community-improvement contests have swept across 619 Tennessee communities. And what is it all about? Simply this: farm families are engaged in a program which fosters community planning, organization, beautification, and development. Businessmen in Knoxville, Nashville, Chattanooga, and other cities offer prizes for high records. Both farm folks and businessmen acknowledge the splendid yeoman service of the Tennessee Extension Department in achieving their enviable records. The annual dinner and award celebration in Knoxville honored 190 east Tennessee communities in 25 counties. Relph McDade, Tennessee extension worker who had served as a judge in the counties, made these meaningful comments: "We saw the democratic process at work * * * a lot of grass roots. We felt the impact of a rural purchasing power * * * we got a feeling of a reserve of fertility * * * of a sound system of farming. * * * If this country has hardships, these farm families have a reserve of power and ability to get along. We saw communities cleaning up the countryside * * * and they will do much more. In Washington County, I saw 22 improved kitchens on which about $24,000 had been spent."

ON TO NASHVILLE

"I wish that the results of this contest could be spread across the land." The foregoing statement was made by the Honorable Chester C. Davis, president, Federal Reserve Bank of St. Louis, as he addressed some 600 farm folk and businessmen at the middle Tennessee community improvement award dinner in Nashville recently. "Two things are important," Mr. Davis continued, "being good neighbors and taking care of our land to get full use of our resources."

Sponsored by the Farmers Club of the Nashville Chamber of Commerce, the dinner honored representatives of 200 communities and 37 middle Tennessee counties. Just here we shall let the record speak—we refer to the 1948 report as compared to the 1947 record from these 8,226 farm families: Church and Sunday school attendance, which is listed first in community planning, shows more than a 10-percent increase. As for general civic and community work, more than 20 percent more individuals took part this past year. For their family food supply middle Tennessee farm folk did almost 69 percent more quick freezing this past year. At the same time, they kept up their high record of food production and canning.

Can farmers afford to improve their farms and homes? Just listen to the astounding answer from these enterprising folks: In 1948, 45 percent more families installed running water. As for bathrooms, there was more than a 69-percent increase in installation. And who can deny that these are high-voltage folk—107 percent more families installed electricity in 1948.

It all cost money, of course, and here is the astounding account as rendered: 79 percent or more, or $3,734,077, was spent for all buildings and repairs. The purchase of electrical appliances adds up to almost 46 percent and set farm folks' bank accounts back $1,109,932. And now comes the breath-taking part of our story: Furniture and home furnishings involved a cost of $1,325,-165, or an increase of 144 percent. To put it another way: the average family spent $750 for improvements, or twice as much as they did for farm machinery. Did we forget to add that the sponsoring groups awarded generous prizes? But most of all, I keep remembering the spirit of unity and the joy of accomplishment expressed by these farm folk.

Economic Situation in Europe and the United States Under the Marshall Plan

EXTENSION OF REMARKS

OF

HON. OWEN BREWSTER

OF MAINE

IN THE SENATE OF THE UNITED STATES

Friday, April 22 (legislative day of Monday, April 11), 1949

Mr. BREWSTER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "The Marshall Plan Letter," written by Harold G. Stagg and published on March 17, 1949. The article deals with the economic situation in Europe and the United States under the Marshall plan.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TRADE CRISIS?

United States traders should take close look at long-range outlook for American trade.

Analysis by the Marshall Plan Letter of export-import picture as related to major ERP countries, other United States markets, indicates that although short-range outlook is good compared to prewar years but not 1947 bonanza, long-range outlook holds serious threat to United States exports which will become increasingly evident in 1950; reach acute stage by 1952.

European recovery objectives, which in final showdown involve reducing imports from United States by thumping 40 percent, capturing half of United States markets in Latin America, are probably overambitious. But fact remains that impact of trade shifts in next 3 years will be an acute shock to present United States trade pattern; require some difficult decisions.

Government trade experts predict that United States exports in 1949 will average $1,000,000,000 a month—close to 1948 levels—although sharper competition will face American traders in almost all world markets.

Trade pattern of last half of 1948 is likely to continue for next year as result of heavy spending of ERP dollars, although thereafter drives of all western European countries to cut imports from this country will become matter of urgent concern not only to producers already suffering from end of extraordinary 1947 demand but to entire domestic economy.

Price declines in United States will have little effect on the short-range picture. Although European buying in this country is encouraged by price decreases here, this is offset for most part by fact that European exporters will receive less for their products sold here; supply of earned dollars is proportionately reduced.

ECA is also committed to reducing its appropriation request if price declines continue this year. Economy advocates in Senate, headed by Senator WALTER F. GEORGE, Democrat, Georgia, will demand that ECA review, reduce its spending plans in June if con-

tinued slump in commodity prices is then evident.

Trade problem is complicated by fact that Europe is aiming, not only at reducing imports from United States, but at increasing its exports to this country and to rest of Western Hemisphere.

This export campaign is already causing trouble. Some United States suppliers complain they are losing markets in Latin America; some domestic producers have become concerned at threat of European competition in United States.

Despite fact that increase in European exports to United States is one of keystones of Marshall plan, hot tug of war will occur in Senate over upcoming extension, strengthening of President's powers to negotiate tariff reductions under reciprocal-trade program.

The administration is adjusting slowly to the conclusion that end of postwar shortages in this country requires new assessment of trade policies, and although some tariff reductions will be made at conference next month in France they will not be as far-reaching as desired by ERP countries.

Building long-range markets for United States exports will require aggressive action in next year, as European imports are limited more and more to a few products which can be obtained only in this country.

For example, France plans to cut its imports from United States to about $365,000,000 by 1952, compared to prewar level of about $900,000,000.

France's exceptional postwar imports of coal, bread grains, and dairy products are already being substantially reduced; coarse grains, fats, and machinery will feel the pinch next.

By 1952, France hopes to restrict dollar purchase to oil (from Middle East), $115,000,000; copper, $15,000,000; cotton, $85,000,000; machinery, $55,000,000; leaving only $95,000,000 for other miscellaneous purchases.

Belgium, Netherlands, and Luxemburg are moving rapidly toward economic union; not expected to be completed until mid-1950, and traders should begin analyzing export opportunities to these areas as a unit.

Imports by Benelux from United States will continue at present rate of about $700,000,000—four times prewar rate—for next year then move downward to 1952 goal of about $500,000,000.

Exports to this country from Benelux, on other hand, are programed to rise from present level of about $100,000,000 to nearly $250,000,000.

Italy plans to move rapidly toward a considerable change in its supply markets. Imports from the dollar area, which amounted to 44 percent of total in 1947, will be reduced to 15 percent by 1952, while purchases will be increased in other areas.

Italian exports to this country, now at 6 percent of total, are programed to reach 10 percent of total by 1952.

Bizone Germany, now making nearly 50 percent of its purchases in United States, will begin cutting this proportion late this year, with objective of reducing United States share of imports to about 15 percent of total.

However, United States may be able to continue actual volume of its exports to Germany at a high level, if recovery there proceeds speedily enough to permit planned 75 percent over-all increase in German imports in next 3 years.

United Kingdom, whose trade plans are being urged as guide for other ERP countries, is making giant strides in reducing its purchases from the United States, cutting its imports from this country 42 percent in 1948, now planning further 17 percent reduction by 1952.

These factors will compel Congress to approve continuance of foreign aid after 1952, although emphasis will be placed on guarantees of purchases in United States as prop for domestic economy, and horizon of aid will broaden to encompass backward areas of world, in line with President Truman's point 4.

WORLD PROGRAM

Administration interagency team, making slow, halting progress in blueprinting President's world program, will be spurred, as facts on threatened trade crisis outlined above crystallize.

Feeling in some administration circles that plan is premature is being challenged by economic experts who believe that the program should be rushed before it is too late.

Truman's "bold new program" task force is considering a confidential report of the Organization for European Economic Cooperation which indicates that territories of ERP nations, particularly in Africa, offer alluring possibility of greatly increased exports of United States capital goods in early phase of program, consumer goods later.

Stumbling block, however, is covert resistance of European nations to direct participation of United States private capital.

Report is vague on investment outlook in colonies, implies that mother countries will continue to expand basic industries, leaving secondary fields to private capital.

French, for example, don't want foreign firms to hold controlling interest in any projects in their overseas territories; British will approve only permanent United States investments.

ECA strategic materials division has reported sub rosa that some ERP countries discriminate against United States investors either by legislation, regulation, or obstructionist tactics outside the law, in preserving development of colonial areas for their own nationals. This is in direct violation of equal access clause of bilateral agreements signed by ERP countries as condition for ECA aid.

Officials of the American Trade Association in French Morocco have charged, for example, that French officials are using Marshall plan red tape to freeze out American business interests in that territory.

ECA's official attitude is to deny any discrimination against American traders, but, when pressed, the recovery agency passes the buck to the State Department.

Colonial production plans are focused on world short-supply commodities which Europe now imports from the dollar area and goods which can be sold for dollars.

British and French will boost production of palm oil, vital to United States stock pile, if they can procure enough modern mills and band presses. British West Africa, growing nearly half world supply of cocoa beans, hopes to earn nearly $100,000,000 annually through sales to the United States, but first must conquer "swollen shoot" disease. New planting is being tried experimentally in Malaya and Borneo.

French are hoping to double wheat production in North Africa by 1952, are seeking tractors and heavy agricultural machinery.

French are also laying ground work for intensive cultivation of cotton in equatorial and West Africa, hope to obtain yield of 50,000 tons by 1952.

African exports of timber will be emphasized. Belgian Congo is now planning two new peeling plants, veneer plant, and several pulp factories.

Work on French Guiana lead deposits is beginning, with 250,000-ton annual export to North America contemplated. Madagascar expects to produce 15,000 tons of graphite yearly by 1952. Belgian Congo plans zinc refinery with annual capacity of 35,000 tons of pure zinc.

Integrating United States world recovery program with these projects is only one of important tasks set for Truman's planners. Vast potential scope, importance of point 4 is being slowly realized with good possibility that when it finally emerges, it will loom bigger, broader than the Marshall plan. Action on world-aid program, however, will probably continue to lag until attitude of United States business is clearly defined, and responsibility for developing realistic blueprint is clearly placed, instead of being scattered, as at present, all over the Washington map.

OIL PRICES

Notwithstanding protests from principal United States oil companies that shipper's declarations on United States crude oil imports from Middle East do not represent sales prices, Administrator Hoffman has instructed new team of oil-price investigators to consider prices on shipments to any market, in determining whether ECA is being charged a fair price on oil procured in the Middle East by ERP countries.

Investigators are attempting to discover why price range on shipments from Middle East to the United States range from $1 to $1.75 a barrel while ERP countries are charged $2.03 a barrel.

Although Hoffman will continue to press for lower prices for Middle East oil, he will not approve request of independent oil producers that United States suppliers be given preference, arguing that procurement should continue in Middle East to conserve United States oil resources.

INDUSTRIAL PROGRAM

Imports from United States of industrial items by the principal ERP countries in second year of the recovery program, beginning July 1, 1949, are detailed in chart below. Tabulation is based on official estimates of top ECA industrial experts.

ERP industrial imports from United States are estimated at $2,194,000,000. Column in chart headed "total" shows the over-all imports from this country by Austria, Benelux, Denmark, France, Trizone Germany, Greece, Iceland, Netherlands, Norway, Sweden, Trieste, and United Kingdom. Projected purchases by the six areas which will do the heaviest spending are also listed specifically.

Note that oil purchases from United States companies in the Middle East and other offshore sources are listed as imports from United States.

No tabulation is provided on aluminum imports since ECA intends to bar any such purchases from United States in next fiscal year.

[In millions of dollars]

Commodity	Total	Benelux	France	Trizone Germany	Italy	Netherlands	United Kingdom
Coal	94.3	0	31.3	0	40.0	5.0	0
Oil and products	525.7	32.6	112.2	9.9	38.1	16.5	183.0
Steel raw materials	9.2	3.4	1.2	.6	1.5	.3	.1
Steel products	106.4	2.2	2.4	2.5	7.0	16.5	17.0
Copper	40.4	0	5.2	7.4	5.2	7.3	3.5
Lead	.1	0	0	0	0	0	0
Zinc	8.9	0	.4	.4	0	0	7.6
Pulp and paper	26.2	3.1	2.0	10.0	1.7	.3	6.5
Lumber	38.0	7.2	1.3	6.0	3.6	3.0	10.3
Farm machinery	85.0	4.7	14.4	0	.6	8.3	24.8
Machinery	796.5	78.0	160.0	46.8	115.0	80.9	94.8
Other industrial items	463.4	55.5	51.2	51.1	47.4	33.6	93.8
Total	2,194.1	186.7	381.6	134.7	260.1	171.7	441.4

As noted in MPL (March 3), largest industrial purchases will be machinery and equipment, estimated at $796,000,000.

This procurement will be divided as follows: Iron and steel equipment, $104,500,000; textile machinery, $110,300,000; power plants and transmission machinery, $54,600,000; metalworking machine tools, $75,700,000; coal-mining machinery and construction equipment, $14,300,000; petroleum equipment, $22,900,000; woodworking machinery, $2,600,000; trucks, $20,500,000; other inland transport, $62,600,000; other machinery, $328,500,000.

HAROLD G. STAGG, *Editor.*

Proposed Columbia Valley Administration

EXTENSION OF REMARKS
OF
HON. LESTER C. HUNT
OF WYOMING
IN THE SENATE OF THE UNITED STATES

Friday, April 22 (legislative day of Monday, April 11), 1949

Mr. HUNT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a news article from the Wyoming Eagle, published at Cheyenne, Wyo., April 18, 1949, concerning the Columbia Valley Administration.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CRANE AND BISHOP LASH PROPOSED AUTHORITY AS INVASION OF STATE RIGHTS

CHEYENNE, April 18.—Top Wyoming officials lashed out today at President Truman's proposed Columbia Valley Administration, labeling it "an invasion of States' rights."

Gov. A. G. Crane and State Engineer L. C. Bishop pointed to Wyoming's special interest in Columbia River development and called for undivided opposition to the plan by all Western States.

Dr. Crane commented that in principle he opposes the danger to States' rights and States' action involved in the far-reaching Columbia Authority.

"The States are able by compact and discussion to provide and undertake the development of this vast region," the Governor said.

He added that State action is a somewhat slower process to settle the questions involving water and land but emphasized that that process is a better way of deciding them.

"Water means too much in this territory to allow its development to be handled by a commission, often without any action by the States," Crane said.

"The big rivers of the West rise in Wyoming and this gives Wyoming a special interest. Turning all such questions over to a small commission should be opposed by the Western States."

Bishop said Wyoming has a large stake in the Columbia River Basin and added he will urge the State's congressional delegation to seek recognition of that interest.

Bishop disclosed that Wyoming annually provides some 5,000,000 acre-feet of water for the Columbia River system through the Snake River and its tributaries.

The State engineer called the proposed CVA "another commission to take over all natural resources, including our water" and criticized tentative proposals that would give commission members annual salaries of $20,000.

If the present proposal is to meet with approval in Wyoming, he continued, it must give the State more authority than was given in any legislation proposed previously.

Moreover, he said he will recommend that if there is to be authority legislation, salaries of commissioners should be limited to that drawn by Members of Congress.

Financing Georgia Schools

EXTENSION OF REMARKS
OF
HON. JOHN C. STENNIS
OF MISSISSIPPI
IN THE SENATE OF THE UNITED STATES

Friday, April 22 (legislative day of Monday, April 11), 1949

Mr. STENNIS. Mr. President, there appeared in this morning's issue of the New York Times a letter from a distinguished American educator, Dr. William F. Ogburn, which calls attention to some salient facts about education in Georgia which should be of interest to all of us, in view of the forthcoming discussion of the Federal aid-to-education program. I ask unanimous consent that it be printed in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

FINANCING GEORGIA SCHOOLS—PER CAPITA EXPENDITURE IN RATIO TO INCOME ANALYZED

To the EDITOR OF THE NEW YORK TIMES:

In your editorial of April 10, "Education in Georgia," you cite figures showing the small amount of money spent in public-school education in Georgia and other States, and at the same time point out the large sums spent in New York. You then discuss the behavior of the Georgia State Legislature and of the Governor in negating increased expenditures. The inference is that the people of New York are acting quite handsomely, while the behavior of the Georgians is deplorable.

I am sure that your readers will regret with you that public education in Georgia is so meager. However, it seems to me the impression that Georgia's effort is so pitiful as compared with that of your own State is misleading. For you might have said, truthfully I think, that Georgia's effort to educate her children is as great as New York's as is shown with the following additional data.

The expenditure per pupil in 1947–48 in New York was $251, while in Georgia it was $81. (I do not understand your figure of $58 for Georgia in 1946–47. In 1945 the amount was $65.) But you do not observe that there are many more children to educate per 100 working adults in Georgia than in New York. In Georgia there are 118 such young people 19 years old and younger, while in New York State there are only 78. If 100 of the labor force in Georgia had as few dependents as they have in New York, Georgia could spend $123 per pupil.

INCOMES COMPARED

Furthermore, the per capita income in Georgia is much less than in New York. Poorer people can hardly be expected to spend as much on education as the richer. In Georgia in 1946 the average income payment to a person was $809, while in New York it was twice as much, $1,633. If the Georgians had as much income per person as the New Yorkers and as few young dependents they could have spent $246 per pupil, which is approximately the same as New Yorkers spent. In other words, the people of Georgia are putting forth about as much effort as are the people of New York, in view of their capabilities and responsibilities.

The point is, I think, of more than technical interest. The South's recent appeal to States' rights is a gesture for a let-up in the continuing barrage of criticism from outsiders, that is, those not familiar with conditions in the South, who are telling Southerners how to run affairs in that region. These critics seem to assume that what is feasible in their locality is feasible elsewhere, a phenomenon usually called provincialism.

MIGRANT PUPILS

A sensitive Georgian might remind New York that Georgia not only educates her children but spends millions every year educating the citizens of New York. In 1940 there were 1,500 migrants, net, to New York State who in 1935 lived in Georgia. If around 1,000 adult workers come from Georgia each year to New York and if it costs around $4,000 to rear and educate these workers, then Georgia contributes $4,000,600 to New York, for it would cost New York that much and more to rear and educate in their State this amount of skill. If New York paid Georgia for these imports, then the salaries of the school teachers could be raised 10 or 15 percent.

The message of your editorial is still true that the children of Georgia should get a better education. The answer lies, I think, in grants-in-aid, in birth control, in the southward migration of industry, rather than in exhortation or criticism.

WILLIAM F. OGBURN.

CHICAGO, ILL., *April 18, 1949.*

Address by Hon. Dennis Chavez, of New Mexico, Before National Congress of Rivers and Harbors

EXTENSION OF REMARKS
OF
HON. DENNIS CHAVEZ
OF NEW MEXICO
IN THE SENATE OF THE UNITED STATES

Monday, April 25 (legislative day of Monday, April 11), 1949

Mr. CHAVEZ. Mr. President, I ask unanimous consent to have printed in the RECORD an address delivered by me before the National Congress of Rivers and Harbors at Washington, D. C., on April 8, 1949.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. President, members, and friends, I am deeply appreciative of the opportunity to appear here today. Yours is a hard-working organization which has done much to advance the improvement of our rivers and harbors and to encourage the development of our water resources in the interest of flood protection and other beneficial water uses.

Today let's discuss the program of the Committee on Public Works of the United States Senate. I shall be speaking for all practical purposes on the subject which is of major interest to the National Rivers and Harbors Congress. The legislation concerning flood control, improvement of rivers and harbors, and other water-resources developments makes up the greater part of the work of our committee.

I should like to make it clear at the outset that the legislation which comes before Congress on flood control and rivers and harbors improvement is developed through a process of teamwork—a complete cooperation between the two legislative bodies—the House of Representatives and the Senate.

I can assure you that during my tenure as chairman of the Senate committee there will continue to be wholehearted cooperation and coordination of our efforts with those of our counterpart committee in the House. It will be toward the common objective of beneficial legislation for the advancement of water-resources development.

Without this close teamwork we would be unable to accomplish the good progress that has been made in the past. This unanimity of effort is due in no small part to our very good fortune in having the excellent leadership in the House committee—leadership in the person of an authority on flood control, Congressman WILL WHITTINGTON. I know that you are well acquainted with his abilities. He has been associated with your organization for such a long period. But it gives me heartfelt pleasure to have this opportunity to add my expression of esteem for the dean of water resources leaders in the Congress.

Last year Congress passed an emergency flood-control and river-and-harbor bill containing only a relatively few new projects. These were projects which, for various reasons of urgency, could not await the formulation of a more comprehensive bill.

It is now 3 years since the last comprehensive flood-control and river-and-harbor bill was enacted by Congress. During the intervening period excellent progress has been made by our engineers in carrying forward the authorized program.

Although there is still a substantial backlog of individual authorized projects which have not yet been placed under construction—the progress on most phases of the program has been so satisfactory that there is now a definite need for further authorizations—further authorizations to increase the appropriation ceilings for comprehensive basin-development programs; and to authorize numerous new projects which have been investigated and recommended by the engineers subsequent to passage of the last comprehensive bills.

The number of individual bills for surveys, new projects, and extensions of basin programs now before our committee may be taken as an indication of the need for further authorizations at this time. We now have some twenty-odd bills before our committee. And I believe there are many more bills before the committee in the House of Representatives.

The objective of our committee will be to consider—in full cooperation with the House committee—the additional needs of approved basin programs and all other localities where improved navigation channels, flood protection, and other water resources developments are needed and have been recommended to Congress by the engineers. This will be done with a view of rounding out the previously authorized program in order to permit uninterrupted progress on a Nation-wide basis for a period of 2 or 3 years until the time may come for the next congressional authorizations.

I am sure that the committee will continue its approach to the improvements of our rivers and streams for flood control, navigation, hydroelectric power, and related purposes on the basis of the optimum economic utilization of the water resources of each river basin for all beneficial purposes.

It is gratifying to know that our engineering experts have recognized the need for this river basin or regional development approach. With the rapid growth of our Nation during the past few decades, it has become increasingly apparent that we must conserve our water resources and undertake a carefully coordinated development of those resources if we are to satisfy all of the needs of the people.

We owe a debt of gratitude to our engineering experts for their foresight and wisdom in presenting recommendations to Congress based on this concept of basin-wide conservation and development before any substantial irreplaceable damage could result.

The Corps of Engineers, the Bureau of Reclamation, the Department of Agriculture, and the Federal Power Commission have pooled and coordinated their efforts to develop comprehensive plans for the conservation and development of many of the principal river basins of the country. For example—the Missouri River, the Arkansas and White Rivers—and many others throughout the Nation.

Many of these programs are progressing rapidly. But they are being carried forward with complete flexibility to reflect any further improvements in technique gained by past and current experience, and to include any modifications called for by changes in physical and economic conditions.

Some of these basin programs are still in the study stage. One such program—that of coordinated development of the great Columbia River Basin in the Northwest—has just been completed. It is expected to be available to the Congress for consideration this year.

It is likely we on the Hill will get a bill from the administration dealing with the Columbia Valley. The committee has one for the Missouri Valley and another for the Savannah.

Of course, no one Senator can speak for the Congress in forecasting its future legislative course. But, I can say for my own part, it will be my earnest objective to work in unison with my colleagues in the Senate and in the House of Representatives to bring forth sound and constructive legislation—legislation to supplement the great water resources development program which has already proved its worth to the people of our country.

We have seen the Authority in operation in the Tennessee Valley. The Missouri's Pick-Sloan plan is another approach. The objective is the same. I am interested only in the end result. I want to give any approach a fair look. Of late I have begun to wonder about coordination and integration designed for the small valleys lying in a single State as well as the big ones.

I want just a few minutes to comment here on something on which I know we all have an interest. It is something much in the public eye of late. I am referring to the Hoover Commission's proposal—the proposal to take civil functions out of uniform and combine them with other activities into a single Department of Public Works.

I think we can well understand the anxiety and sincerity of purpose in the Hoover task force. They were men who were irked with some of the overlapping they think they saw in the Government. To combine public construction projects into a single head sounds wonderful. It sounds more realistic.

But I think we want to stop for a moment and look beyond a mere simplification of Government activities in the civilian field. The problem is really a deep one.

In stripping the civil functions from the Army Corps of Engineers, would the desired unification be achieved? Or would such a circumcision be a painful operation to this Nation in her hour of need?

I am thinking now of Australia and of the great Republic of France. We all recall the corps of engineers employed by that military genius, Napoleon. It was a wonderful group of men. Much of Napoleon's prowess on the field of battle came from the strength of that corps. Later on France separated the civilian work from the military engineers, and a few short years saw that civilian engineer organization so enmeshed in French politics that the corps failed to operate at all in the hour of necessity. The task force need have looked no further than to France, Britain, and Australia to see that what the Hoover Commission proposes has a more devastating effect than the good that might come out of it.

In Australia they had a system whereby military engineers were assigned to private construction projects and to construction work of the department of public works. The British have much the same system today.

In Australia they had two military engineers acting as liaison officers in the department of public works. Shortly after the war broke out both officers died. It may sound incredible to you, but when those two men died the Australian Government had no one else well enough posted to make any effective use of the civilian engineers, and they had to depend on the Americans for assistance.

In France the Government once trained both civilian and military engineers. After the civilian engineers were separated from the military, each group was trained only in its own respective field. It was impossible to weld the two into an effective wartime unit. The civilians could not fit into the military requirements. The military had not the broad experience that they would have acquired with the civilians. Neither could operate.

The British assigned their military engineers to private construction jobs and to work with the public-works projects. But the military, under this system, did not get adequate training. It did not shoulder to any degree the responsibility for administration and planning activities.

Time after time in the last great war, the British military engineers were unable to cope with the engineering problems assigned to them. Once again the Americans Corps of Engineers supplied that know-how. Any officer from the Corps of Engineers of our Army will tell you that the lack of ability and training of the British engineers was appalling to them. The British will admit it to a very large extent.

Just before General Wheeler stepped out as Chief of the Corps of Engineers the British Commandant of the British Corps of Engineers came to him. The visitor went into the American corps program very carefully. He said upon leaving for home that he would propose to the British Government that a system just like ours be instituted in England. The purpose—The British corps, like our own, could be a great weapon for the defense of England if the need arises.

Actually, the picture of the Corps of Engineers from the military side in the controversy has been clouded. The corps has about 2,500 commissioned officers who at one time or another are exposed to work of the civil functions during training in the corps. Only about 200 appear on the rolls at any one time in the civil functions activities.

Actually there are two sets of personnel records maintained for the commissioned officers. One set covers his military service. The second covers his service on civil functions. The corps is dedicated to keeping the whole pool to a point where every officer has at least 5 years in major civilian construction.

In the Corps of Engineers for civil functions is a reservoir of 9,000 professional engineers—civilians. Now, this is significant—of that 9,000, the great majority are reserve officers. So, if war brings the occasion, those men will need but change clothes—the suit goes into moth balls, and out comes the uniform—and the military Corps of Engineers—the boys who blasted through the road at Ledo, which the British said could not be done—will be in the field again performing a large number of those miracles that make the American military might a wonderful and outstanding thing.

It seems to me that so long as we have an Army—and so long as there are problems of

military landings and the building of airports and roads and the hundreds of thousands of other things that go into wars and defense—we have got to keep that corps going. If the corps must train itself, then we will have to assume a heavy military budget for the training of this nucleus of experts. We'll spend millions and millions of dollars in keeping them in uniform. Millions in letting them practice heavy-scale construction in a desert or somewhere else on something that is of no value outside of special training. We've got to have the corps. There is just no argument on that.

So why not let the corps do just what—in the way of civil functions—the Congress finds reasonable and necessary.

Actually, I think we are making a great saving of money through the present system. The Hoover Commission's proposal would cost us considerably more. Just weigh the few remarks I have just made.

So far as I am concerned, I want to build those things which are not only feasible but should be had.

I want to thank your president, my colleague in the Senate and on the committee, JOHN L. MCCLELLAND, for the invitation to appear here today. He is a fine man. I lean heavily upon him in the committee.

It was nice to see you. I hope your organization goes on and on and on.

Thanks very, very much.

Capital Life & Health Insurance Co.

EXTENSION OF REMARKS
OF
HON. OLIN D. JOHNSTON
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES

Monday, April 25 (legislative day of Monday, April 11), 1949

Mr. JOHNSTON of South Carolina. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement by Lester L. Bates, president of the Capital Life & Health Insurance Co., celebrating the opening of the new home office building in Columbia, S. C.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

My friends, the Capital Life & Health Insurance Co. is honored to have you join with us today in celebrating the dedication of our new home office building. To each of you we extend a cordial welcome. We appreciate your presence and your participation, which is indicative of your interest in our progress, and the progress of our State and Nation.

We are proud, indeed, of the progress our business has made in the years of its brief existence. But we are prouder still of the democratic system under which we live that has made such progress possible—a system of liberty, justice, and freedom; a system which protects the initiative and energy of the individual—a system of free enterprise.

At another dedication—that of the historic Bunker Hill Monument—the great Daniel Webster said, "Our history proves that the democratic form of government is practicable, and that with wisdom and knowledge men may govern themselves; and the duty incumbent on us is to preserve the consistency of this cheering example, and take care that nothing may weaken its authority with the world, for the last hope of mankind rests with the United States of America."

That is a sobering thought and one which is more true today than when uttered by Webster many years ago. World conditions in this hour are more confused and the threats to our freedom more numerous than in the day of Daniel Webster. An old French philosopher once said, "Every nation must pause from time to time and refresh itself at the wellsprings of its origin lest it perish."

The time has arrived when we should pause and refresh ourselves in the doctrines, principles, and ideals of our founding fathers.

The ideas and ideals upon which democracy rests are the sacred worth of the individual; equality of opportunity and equality before the law; justice, which is the maintenance of that which is right; christian brotherhood, which is the practice of the Golden Rule in everyday life—the promotion of the brotherhood of man under the fatherhood of God; and unselfish service, which is the mark of greatness and freedom.

But no democratic form of government will automatically remain pure and vigorous. Every generation is faced with the necessity of saving society. Its accumulated moral strength will subside and ultimately end in a false democracy, if not actually in a dictatorship, unless its strength is refreshed or renewed in each new generation.

Recall the warning of Daniel Webster, "The last hope of mankind rests with the United States of America." Are we so accustomed to the justice, the tranquillity, the blessings of liberty secured for us and our posterity that we take them for granted or as a matter of course? Will the forces that have ruined former attempts at self-government ruin ours? Are we to lose our freedom?

The primary cause of loss of freedom, as historically demonstrated, is too much regimenting, controlling, and "Santa Clausing" by the government and other agencies. Freedom of choice and freedom of initiative are indispensable to progress. Anything that impairs or restricts individual initiative, independence, or self-reliance leads to a loss of national freedom and democracy. Compare the material progress alone in the United States for the past 150 years with other countries, ages, and civilizations, and you will find that more substantial progress has been made here than was made in the 2,000 years preceding. It is not accurate to say that this is because of our unlimited natural resources, for the savage Indian had the same resources. Neither is the explanation found in our greater industry, for all over the world and through all ages human beings have generally worked harder than Americans work. We cannot claim it is because we are inherently superior, for that is probably not so, even though it flatters our ego to think so.

The true reason lies in the fact that Americans have been free to seek the truth in their own ways; free to worship; free to investigate; free to express opinions; free to reach their own conclusions and to announce their own convictions; free to invent and to make the best possible use of inventions; free to exert their own efforts and apply their energies to their business. It is this freedom of initiative and the virtue of self-reliance that has nerved Americans to create the greatest Nation in the world.

Take away the incentives to excel and to achieve, take away the necessity to dare and to do, take away the freedom to produce and the encouragement to create, and you have taken away the secret of human progress.

This, ladies and gentlemen, is the verdict of history. When the Roman Government began to provide food and amusements for its citizens and to do everything for them, then Rome was on its way out. When the Government of France began to issue orders defining exactly what businessmen might do and not do, then France was on the slide. When Spain became a government of bureaucrats, each bureaucracy limiting and restricting the freedom of its citizens, then Spain had passed the zenith of her power and glory.

So it is with every nation. Self-government is lost because the freedom upon which it rests is lost. When a government undertakes to do every thing for the people—to order their businesses and private lives, to prescribe their economy and their production, then the cost of government mounts. The natural consequence is such an increase in taxation that the nerve of business adventure and business initiative is lost. It is pleasant to have the Government take from us the necessity of arranging our own affairs while we work and to provide for us when we loaf—that is, it seems pleasant until we awaken to the fact that the very Government that we thought was doing everything for us is headed toward the destruction of the blessings of liberty and self-government, which, according to its preamble, the Constitution of the United States was adopted to insure.

The founding fathers of our democracy knew that the soundness of our country's economic structure was interwoven with the protection of the individual citizen's right of free enterprise. The spirit of free enterprise, which has made America the richest and most powerful nation in mankind's history, must not only be preserved but developed in keeping with the demands of the age.

It is to this right of free enterprise that this building is hereby dedicated. May it stand as a monument to the ideals and principles of free and unrestricted initiative, and may the rendition of true and unselfish service be the purpose and goal of the institution for which it stands.

Peace and Security Come First

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES

Monday, April 25 (legislative day of Monday, April 11), 1949

Mr. MARTIN. Mr. President, I ask unanimous consent to have printed in the RECORD an address entitled "Peace and Security Come First," delivered by the Senator from Massachusetts [Mr. SALTONSTALL] at the annual dinner of the Amen Corner, at Pittsburgh, Pa., on April 23, 1949.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I chose as my subject tonight, Peace and Security Come First.

As long as I can remember I have been taught that the original functions of government in our old Massachusetts Bay Colony were threefold. First, the maintenance of a defense against external enemies. Second, the maintenance of security from internal forces. Third, the raising through taxes of money to pay for these two services. The services required of our Government with an ever-increasing population have grown enormously; yet the fundamental responsibilities of government remain unchanged today 300 years later.

Truly today, peace and security must come first. We have won the shooting part of the biggest war that the world has seen in all its turbulent history; yet we do not live in a world at peace. We do not feel secure in our daily lives. That feeling of insecurity has stimulated the leaders of our Government to efforts never conceived by our early colonists in their search for peace. Our

diplomats have formed a pact of mutual assistance with the South American Republics for the collective defense of the Western Hemisphere. We have signed and ratified the Charter of the United Nations. We have high hopes that this body will help us to maintain peace, but we want to remember what is often forgotten—the United Nations was never conceived to obtain peace. Peace treaties are written by countries who have fought a war. The United Nations was conceived by draftsmen to maintain peace in the world after the treaties have been signed. Those treaties are not yet signed. So we must be patient and everlastingly have the will to make the United Nations a truly functioning body. Remember—the more we sit around a table and talk, as we are now doing at Lake Success, the less likely we are to dig ourselves into trenches and shoot.

The economy of England, France, and other European countries was badly damaged by the war. Factories were bombed out. Machinery was worn out. Trade balances throughout the world were decimated. So, the ECA was conceived. As a result, we have in this Congress, and the last, authorized over $10,000,000,000 to help these friendly nations in Europe to help themselves in order that they may again become self-supporting and trade with us and the other nations of the world. We have taken these steps with the fundamental idea of building up our own security so that our way of life may again go forward.

But, we are beginning to feel pretty sure that what we have done up to this time is still far from enough. So, Senator MARTIN and I were privileged to witness in Washington recently 12 foreign ministers sign the North Atlantic Pact. That is the first time so many foreign ministers have been in Washington at one time. We have taken the lead in formulating this pact because we hope that it may become an additional factor in assuring our own security. We in the Senate have yet to ratify it. We have yet to learn whether it is to be implemented with a supply of arms to those signatory countries that request this help. We Senators must exercise our judgment to determine just what the effects of the pact may be upon our destiny. Does it in fact improve our chances for greater security for our people? Does it violate the Constitution by depriving Congress of the right to declare war? Should we in the interest of our own security stretch our strength over the Atlantic—across the Rhine, to the northern tips of Norway—in case of attack? Will it stretch our strength too far? What will it cost? Should we confine our efforts to economic aid? Should we do more in China and Asia? Like many other Senators, the more I think about it, the more questions occur to me. While I am heartily in accord with the pact's aims, I want to know the answers to all of them before I determine how to vote.

But, of one fact we are certain. We know that pacts in and of themselves are not enough. We have come to the reluctant understanding that we must be strong in order to convince certain nations in the world that we mean what we say, that we are willing to battle if necessary to carry out what we believe is right.

We have today in our Army, Navy, and Air Force about 1,600,000 of our boys and girls. The House has appropriated nearly $16,000,000,000 for 1950 to equip these boys properly to fight successfully if they have to fight and to give them the best protection we know how. A B–50 has flown around the world without stopping. A B–36 has attained enormous speeds at 40,000 feet above the earth. Jet planes have flown faster than the speed of sound. Submarines can travel at fast speeds under the water. A schnorkel device permits them to remain under the surface for a week at a time. The Army needs new, up-to-date tanks. We need all these things in quantity if we are to defend ourselves properly. Yet their cost is enormous.

And, in addition, we are asked to appropriate almost a billion dollars for increased production of atomic bombs and the development of atomic energy. Think how the development of that terrific force of destruction increases the dangers of our own destruction in the days to come. At the same time, its peacetime use can lead to a better life for all of us.

We must remain strong if we are to be effective. I visited the death camps at Buchenwald and Dachau while the fighting was on. I saw those piles of human dead. I watched the atom bomb explode at Bikini Lagoon. As a member of the Appropriations Committee of the Senate I visited Trieste, Athens, Berlin, and Munich. Those visits have filled me with the knowledge of what lack of security can mean. We read of the daily possibility of easy fights across the North Pole—of the ever-shortening distance from Maine to Moscow—or of the possibility of guided missiles of death and destruction. I can sense, as you can sense, the emotional feelings that these facts stir within us here in the United States.

We have seen recently in the papers statements from Russia concerning the North Atlantic Pact and how it is built only for war. I would like to remind you of this fact. Since 1945 up to and including April 6, 1948, Soviet Russia has concluded 10 treaties of mutual assistance and cooperation between the Union of Soviet Socalist Republics and other governments. If you will read the language of these treaties, I think you will find it clear that they parallel in many ways the language and purpose of the North Atlantic Pact. How can these countries' leaders complain about our purposes in signing the North Atlantic Pact? If we are to believe in any way in the sincerity of these treaties, they are treaties to strengthen the trading opportunities and the military defenses of the totalitarian governments.

If we are not willing to keep enough of our boys in service—if we are not willing to arm them adequately—if we are not willing to continue effective aid to Europe and at the same time maintain progress in this country both in our industrial program and in the field of agriculture, we may well lose the cold war that we are fighting. Today we must understand, as we did during the war, the need of our unflagging efforts to keep this country strong—to keep it moving forward—to keep it sound in order that we may turn it over to our children with the same security with which our fathers turned it over to us.

If we think of peace and security being our first objective, we must also think of it in connection with protection from internal forces.

Today I construe these forces to mean the efforts of Government to help improve our individual and family life in various communities throughout the length and breadth of our great country. The internal forces from which our Government needs to protect us today are not physical forces as such. The average American citizen wants security. He wants a better family life. He wants better education, better health, better housing and a stable dollar. We all of us want to continue to work to gain those objectives and I, for one, shall do so. Through our industrial system of free enterprise we have gained the highest standard of living the world has ever known and I am sure it will go higher. But, as we face and think of all these objectives, we want to remember that they must be accomplished within the limits of our system of government as we know it—a government of service and not of dictation—a government which permits man to live freely and to think and act as they believe best for them and for their family. But as we seek these objectives we know they cannot be maintained without peace and security in the world.

Finally we come to that third function of government—the payment of taxes. Our country will never keep its strength, will never remain a world power—our enemies will win the cold war—if we do not keep the cost of our Government within the ability of our citizens to pay. Today our over-all Government costs us some 52 billions of dollars a year. With the productive economy running at 260 billions of dollars, we are paying out approximately 20 percent to maintain our services of government. To reach 260 billions in the last few years our productive economy has been stimulated first by the war effort and then by replenishing the lack of peacetime products exhausted through the war years. We cannot expect this high demand for our products to remain thus forever. It is already slowing up all along the line. What may become our normal peacetime productive capacity is yet to be determined. On the other hand, the increasing demands of our Government are becoming only too clear. Our system of free private enterprise and freedom of opportunity for all will be carried on with ever-increasing difficulty if Government takes too great a proportion of our annual earnings and leaves too little in the hands of our citizens. Then the initiative, freedom, and energy of our individual citizen is lost and the Government soon becomes the dominating force rather than an instrument of service. That is the philosophy that we who are in this room tonight know and feel only too strongly.

There is no group who comprehends more deeply the problems that involve our Government today to obtain the security of our country and the peace of the world than you good people. You understand, as do we who are in Congress, the responsibilities that we in this great country, as citizens of the strongest nation in the world today, have toward mankind. We want people in other nations to understand us. We need them as friends. We want them to respect our way of life and to believe that this system is an example which is worthy of their effort.

In the hearts of all of us lies the hope that the iron curtain will fall back if we work together—if we continue to try to give the opportunities that come from life in a free country to all people who want to think and act and live as they want to live in a country where people build their governments to serve them.

We must continue to do our part to see that these people are encouraged to resist domination by force and be told what they shall do, what they shall think, and what they shall see. That is the goal that we who are in responsible positions in Government must constantly keep before us. That is the objective toward which we need your help if we are to succeed.

We and the other peace-loving nations of the world must try and persuade those who might seek war that—in the words of Livy—"Better a certain peace than a hope for victory."

Long-Range Program for Agriculture

EXTENSION OF REMARKS

OF

HON. EDWARD J. THYE

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Monday, April 25 (legislative day of Monday, April 11), 1949

Mr. THYE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement

on the long-range program for agriculture, prepared by me and presented in a radio interview broadcast by Upton Close on the Washington Watchman broadcast, on April 24, 1949.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

As a member of the Senate Committee on Agriculture I am glad to consider our long-range farm program in the light of the proposals the Secretary of Agriculture presented to Congress when he appeared before a joint session of the House and Senate Agriculture Committees on April 7.

We are all concerned about the future of the American farmer because our entire national economy is so dependent upon a stable and productive agriculture. Basically, we must build an agriculture that is sound as a means of livelihood and that assures the type of farm life which is both attractive and secure.

Agriculture, in turn, depends upon other segments of our economic life. When men and women have full employment there is a good demand for food and fiber produced on the farm. Under such conditions business and industry likewise prosper.

An ample supply of the products of the farm, at stable prices to the consumer, is a primary objective of any so-called farm program. In fact, we recognize that one of the factors in the demand for farm products is the improvement of the nutritional standards and food consumption of the American people as a whole.

The desirability of these objectives is readily acceptable. To us in Congress, charged with the responsibility of putting them into law, the mechanics of attaining these ends are important. We realize that it is one thing to describe a desirable economic goal; it is another thing to reach it.

Great advances have been made through the years in working out a national farm program with these objectives in mind. The parity-price support program has developed from the recognition that farming is hazardous and uncertain with severe fluctuations of production and income. Experience has shown that even a small surplus can ruin the farmer's market.

The end of the wartime period required a reexamination of the entire agricultural program and this was done in the Eightieth Congress. In the passage of the Agricultural Act of 1948, Congress recognized the continued need of placing a floor under agricultural prices and of replacing wartime legislation which was more for the specific purpose of increasing production than of establishing a permanent farm program. The most significant feature of the new legislation is that the price supports are provided on a flexible basis which is intended to be self-adjusting to the supply of farm products. This plan does not go into effect until January 1950, and we have not had an opportunity to see how well it will work for the good of the producers and consumers of this country. Unfortunately, the Aiken Act is not properly understood. In fact it was thrown into eclipse by a political smoke screen in the fall of 1948. And now, before its provisions have been tried, we are offered a new farm plan involving direct subsidy payments to the producers to assure them parity income while seeming to hold out the promise of lower prices to the consumer in the market price. This may be a better program. It may prove to be a desirable supplement to the present laws. That is what we are trying to determine.

In considering the new recommendations which the Secretary of Agriculture has offered, it is important to determine exactly how his farm plan differs from or fits into those already enacted. I should like to have clearly brought out why Secretary Brannan feels that his new program is superior to the provisions of the Aiken Act, which the Department of Agriculture strongly approved last year. I should like to have him indicate specifically in what manner his income support standard differs from the parity formula in the law passed in the Eightieth Congress and why it is better, if it is better. I think it is extremely important to have some idea what the relative cost of this subsidy program will be.

Does the new plan mean more regimentation for the farmer. How does the Secretary of Agriculture propose to audit the operations of 6,000,000 farmers in order to determine whether they have sold in excess of 1,800 units in accordance wtih the formula he presented the committee on April 7? What conditions as to accepted farm practices and soil conservation does the administration expect to impose before the farmer becomes eligible for the support-standard payments?

Only a sound study afforded through public hearings will bring out the answers to the searching questions that must be asked.

If the plan proposed by Secretary Brannan appears to be a further improvement in our agricultural program for the benefit of all, I will support it; but first, I want to be quite certain what it is likely to do and how it will work.

Address by Adela Thomas Before Pan-American Liaison Committee

EXTENSION OF REMARKS
OF
HON. DENNIS CHAVEZ
OF NEW MEXICO
IN THE SENATE OF THE UNITED STATES

Monday, April 25 (legislative day of Monday, April 11), 1949

Mr. CHAVEZ. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by Adela Thomas, from the Argentine Republic, before the Pan-American Liaison Committee on March 24, 1949.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mrs. President, distinguished ladies, in the first place may I ask you to be patient and kind with me in my effort to speak to you in view of my poor knowledge of your language. I am not an intellectual woman, but only an Argentine woman just like thousands of women in my country, who long, with all their hearts, for closer ties, and for a better understanding between our two peoples, so far apart yet so similar in many respects.

Only because of this longing and because of the fact that a well-merited homage is being paid to a distinguished fellow countrywoman of mine, Mrs. Enrique P. Corominas, have I been unable to refuse the kind and cordial invitation of Mrs. Thomas Burke to give you a short talk this afternoon on the cultural development and the aspirations of the Argentine woman.

Our two countries, the United States and the Argentine Republic, are similar but situated on opposite sides of the Equator. Both have the same climate, the same flora, and the same fauna. They differ in the fact that your country was colonized by men of the Saxon race and ours by men of Spanish blood.

But down there, just the same as up here, people from all parts of the world flocked to its welcoming shores, determined to develop with their honest toil and to seek profit from its immense natural resources. And, under the protection of the preamble of our Constitution, they began a new life.

What was in the beginning an honorable Spanish tradition gradually came under the influence of traditions from other lands, and the early patriarchal life was slowly transformed into the modern dynamic and strenuous life of the new Argentina.

Down there, just as up here, a new race was formed, made up of the conglomerate of immigrants from all the nations of the world.

Woman, the center of the life of man and of the home, could not escape this evolution, and, naturally, the woman who, as mother, wife, or sister, conceived of her world as being within the walls of the large patriarchal house moved step by step toward the realization of her aspirations for a more modern life and one more useful to her kind.

Many years ago she began to feel the need, the spiritual urge, to know more than the frivolous novel read in the security of her home. In the early years of this century the bolder ones dared to enroll in the universities to win for themselves a diploma which hitherto had been obtainable only by men.

The secondary schools for young ladies began to appear and at first, the Argentine girl studied only to become a teacher. Later she was attracted by the severer courses leading to a high-school diploma and to preparation for a business career. New horizons opened up before her and with her diploma, little by little she began invading the universities. Soon these were turning out women doctors, engineers, lawyers, dentists, and professionals in many branches of learning.

Thanks to her prodigious natural resources, Argentina continued her forward march among the nations of the world, and her women at the same time widened the sphere of their aspirations. And so today, an appreciable percentage of them pursue the most diverse courses, at least in secondary education. Very few of them are content with an elementary-school education, thousands of them entering the higher schools from which they graduate as teachers of science, literature, or languages, economics, business, secretarial work, stenography, typing, and so forth.

The vocational schools turn out a large number of excellent dressmakers, hatmakers, seamstresses, and specialists in home economics.

Others prefer some specialized training and dedicate their lives to teaching the blind, deaf mutes, or the mentally retarded.

The schools of beaux arts of the country receive each year a large number of girls who aspire to become good painters, sculptresses, or draftswomen. The institutions teaching languages attract many pupils of the female sex. There is a great deal of interest in learning the more common modern languages and especially English, which holds first place. Rarely do you meet a young girl of the modern generation who does not know your language, or who is not studying it, with enthusiasm.

The Argentine-North American Institute, the Association of English Culture, and the British Lyceum, to name only the three principal ones in Buenos Aires, and not to mention the large number existing throughout the country, have thousands of girl students.

The schools of manual arts and crafts teach bookbinding, interior decorating, fashion designing, etc. There are also many courses offered in social welfare and public health.

In the arid field of mathematics, many Argentine women have made their mark; the same is true of their work in the biological and natural sciences.

Poetry and prose have their great devotees whose works are very popular.

Coming to the field of music and kindred arts, one of our national conservatories of music, that in the city of Buenos Aires, to mention only one example, prepares talented pianists, violinists, singers, etc. The same conservatory also offers courses in declamation, acting, and ballet dancing. A number of Argentine women pianists have won world-wide acclaim.

In winter in Buenos Aires, a winter that is cold but lacking the beauty of the snow your winters have, lasting from May to September, we have the opera season in the Teatro Colon, one of the most sumptuous opera houses in the world. The greatest vocal celebrities appear in it and to listen to them is considered one of their keenest pleasures by the Argentine women, and they prepare for it with great enthusiasm. The same holds true with respect to the appearance of renowned concert artists who come each year to display their art before the critical Argentine public.

The Argentine women of average culture and, of course the highly cultured also, are expert critics. Both of them are able to judge with equal east the technique of a classical or modern pictorial style, or a symphony by Stravinsky, or the latest fashion model that has come from New York or Paris, or the equally chic gown, made for them by their Argentine dressmaker. They are exacting in matters of art, and frivolously so in fashions. They have a vast fund of knowledge in the most diverse fields, the result of their curiosity and investigation. They have the keenest interest in what is going on the world over. The Argentine and foreign newspapers and magazines nourish their yearning for knowledge.

The classical works of the literature of the world are read and understood by many of our young women. For them, Plato, Aristotle, and Shakespeare are no mystery. English and North American books are highly appreciated: Cronin, Pearl Buck, John Steinbeck, and Ernest Hemingway are their favorite authors. All of us have read Edgar Poe, Walt Whitman, and Longfellow.

We have women's clubs where my fellow-countrywomen meet, just as you do, to exchange ideas, listen to lectures or concerts, or to play bridge.

And the Argentine woman not only studies, but she works, and she works hard. The factories employ many women as skilled workers. They are also expert saleswomen, and are efficient employees in government and private offices, holding positions formerly filled by men. There are women brokers, realtors and merchants. They also manage with equal ease their own properties and drive their own automobiles.

Whenever permitted by her work, the Argentine woman makes herself skillful in the various sports, entering into them with enthusiasm in the hundreds of athletic clubs available.

With all these aspirations to improve herself intellectually, how could the Argentine woman remain indifferent to political affairs? She could not, and she takes great interest in the current problems of the world. She knows the geography of the world and the political complications thereof. She is acquainted with the clauses of the treaties of Chapultepec and of Geneva, and with all work of the General Assembly of the United Nations in Paris last autumn; she applauded unreservedly the brilliant labor there of our Secretary of State, Dr. Juan A. Bramuglia. An Argentine woman, whom you all surely know, Mrs. Oscar Ivanissevich, was appointed to head the Argentine women's delegation to the Inter-American Conference in Bogota.

But we were still denied a supreme right, which we have now obtained under the leadership of the wife of our President, Mrs. Maria Eva Duarte de Perón. I mean that now we have the right to vote. Henceforth, we shall express through the ballot boxes in free elections, as free as those here in this country, our personal opinion as to whom we wish to have govern us.

In view of her high cultural level, the Argentine woman, because of her own convictions and her reasons therefor, will elect her representatives just as you elect yours. I wish to remind you that both of our countries are governed under similar constitutions.

In the field of charity and social service, the Argentine woman is doing very noteworthy work. Founding hospitals, homes for the blind, aged, and invalids, she has always given her assistance generously to all work of a humanitarian nature. As an example, I might mention what a group of us women are doing in Patagonia, a work that we are carrying on without publicity and on a small scale. Patagonia forms a large part of Argentina, situated in the southern extreme thereof. Many children there need spiritual and material aid; they are descendants of those Indians who formerly were masters of all this American Hemisphere. They are no longer Indians, very few of whom remain in our country; they are pure Argentines, children of those gauchos who made our country famous.

I wish to explain to you, parenthetically, that the gauchos have disappeared. The gaucho, of mixed Indian and Spanish blood, who worked on the ranches as an expert horseman to drive the cattle from one place to another, who was a small eater and drinker and an untiring worker, has given way to the gaucho of the present day in whose veins runs European blood and whose hair is fair and whose eyes are light.

And so it is that many of these children are being helped by our social-welfare institution, which is called the Nahuel Pan Workshop (named for an old Indian chief who was very famous in Patagonia) which we founded 8 years ago. I lived in Patagonia for several years, and hence I saw the need of carrying on works of charity. Until coming to this country a year and a half ago, I was vice president and general secretary of the Nahuel Pan Workshop.

Clothing and medicine are being sent every year for these children especially. They are taught sewing and religion. We give aid to the parents by teaching them a practical and modern way of life, and how to take advantage of the resources of the region for their sustenance; we give them employment whenever they require it. We send the children to schools in which they live, paying for their clothes and their traveling expenses from and to their homes.

We visit the wretched huts in which the people live and provide them with medicine and medical care in case of sickness.

At Christmas-time we send them sweet things to eat and toys—all this is done with funds contributed by our members and with the donations we receive.

Speaking of charitable works, I cannot fail to mention the great work, unknown by most Americans, which is being done by our First Lady, Mrs. Peron. An indefatigable worker, she begins receiving early in the morning all those who need material or moral assistance and, with kindness and patience, she listens to their problems. She evades none of these, however complicated it may be, and always finds a satisfactory solution.

She is the directress of the Maria Eva Duarte de Peron Foundation, which is an institution founded for the purpose of helping poor people to whom the assistance given by the government is not sufficient.

She gives aid in the form of money or foodstuffs, provides work tools and implements, awards scholarships in universities and special grants to impecunious students.

She builds dwellings for poor families, and founds charitable institutions, schools, rest homes and hospitals.

Permit me to tell you about some of the work she has already accomplished to show you that she is an Argentine woman completely dedicated to the task of doing good.

She has founded two homes for homeless women, with or without children.

She has sent to schools in the interior of the country 200,000 outfits of clothing.

The foundation, of which she is president, has at its command the services of physicians, dentists, health visitors and many traveling clinics which extend their operations to the most distant places in the country.

She has opened 4,000 school lunchrooms in which many children are fed every day. She has also founded public libraries for workingmen, schools for adults, school homes, school clubs and a polyclinic for children.

Outside the confines of our country, her charitable work extends as far as Europe whither she has sent food and clothing to the regions devastated by war.

Who knows whether this great work may not have impeded the advance of communism in my country? At a meeting of high-ranking leaders of the Soviet Union held not long ago in a European city to receive reports on Communist activities in South America, it was revealed that Argentina is the country in which communism has made least progress.

I shall conclude this talk to you on the Argentine woman of today by speaking on one aspect of her activities upon which I have not yet dwelt. Above all her other attributes, the Argentine woman is a self-sacrificing mother. She usually has many children; the homes of most young couples are brightened by three or four children. Seldom is one found with only one child, and there are many families with as many as 10 children.

As a rule, the Argentine girl marries when very young, and she devotes herself wholly to her family first of all. If she works outside her home, her mother, sister, or some other relative takes care of her children while she is so employed. Argentines as a people are imbued with a very strong spirit of family unity and with a desire to be of assistance to their fellow beings.

I should like to tell you much more about the activities of my fellow countrywomen in that distant part of this same hemisphere, but I do not wish to strain your patience further.

The women of this great country and those of mine are all sisters, daughters of a new and vigorous world, a promise for the world of tomorrow.

And now, let me speak to you as elder sisters to beg you, with the help of God, to unite our hearts in a great friendship based upon a deep understanding, in a solidarity of sisters, in a will for peace and unity above everything else.

American Foreign Policy in the Asiatic Area

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Monday, April 25 (legislative day of Monday, April 11), 1949

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement prepared by me with reference to

American foreign policy in the Asiatic area.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

UNITED STATES SENATE,
COMMITTEE ON EXPENDITURES
IN THE EXECUTIVE DEPARTMENTS,
April 20, 1949.

DEAR MR. EDITOR: There has been a good deal of discussion concerning American foreign policy, particularly as it pertains to the mainland of Asia and the East Indies.

Recent events in China have brought into sharp focus the complexity of the problem of a policy in Asiatic areas as well as failure of our Nation to have any consistent foreign policy in Asia.

Repeatedly competent observers of international events have warned our Nation of the importance of developing a sound and consistent foreign policy pertaining to the nations in the Asiatic area. Recent events in Burma, French Indochina, Indonesia, China, and India compel our Government to direct its attention to these troubled and explosive regions. The cold war in Europe has diverted our attention to the European theater despite the fact that we consistently talk in terms of one world.

Surely the memory of Japanese aggression, Chinese civil war, and the freedom of India should remind us that Asia cannot be ignored. Then, too, the diplomatic and moral problem with which we are faced in Indonesia and our relationships with the Dutch Government call to mind the difficulties that we face in formulating a consistent worldwide policy that conforms with our ideals and our position of world leadership.

Frankly, we need friends in Asia. We need to bolster up those forces that are aspiring to democratic goals. We need to recognize the tremendous potential of wealth and power as well as the real facts of population and race that exist in the Asiatic area. What to do in China is a question mark and will remain so for some time to come. The other potential great power in Asia is India. This nation is still preserving its freedom. India still remains free from Communist conquest or successful infiltration. India is blessed by the leadership of a humanitarian and a man of democratic instincts, Pandit Nehru.

India is strategically located for purposes of geopolitics. In other words, geographically she is a pivotal nation in our relationships with the Near East and the Far East. She represents a great potential industrially and commercially. She is a republic with a constitution that points in the direction of individual freedom and responsible government. She is a leader in the southeastern Asia area. The recent conference of southeastern Asiatic states called by Pandit Nehru is ample testimony as to her strategic and vital role in Asiatic affairs.

Likewise, India is a member in good standing of the United Nations. She has played a consistent and devoted role to the principles of the United Nations Charter. Up to this time, she has alined herself in the United Nations deliberations on the side of the Western Powers. She has a deep friendship for the United States.

It is with these thoughts in mind that I call to the attention of our Government the importance of a positive and constructive foreign policy along with economic aid for India. It is the purpose of this letter and of the attached statement which I placed in the CONGRESSIONAL RECORD to direct your attention to this new force in Asia, a free India. We, as Americans, must begin to think about this country and to act in terms of strengthening our relationships with her.

It would be presumptuous on my part as a freshman Senator to attempt to formulate a detailed program. I would suggest, however, the consideration of (1) educational opportunities for Indian students in our country on the basis of scholarships provided by our Government, (2) direct financial assistance under the same terms as our ECA or Marshall-plan program, (3) possibly this should precede the second point—the application of the fourth point of President Truman's inaugural address foreign-policy statement, namely, technical, scientific, and financial assistance to the underdeveloped areas.

I would appreciate your views on this subject and any comment that you may feel free to make.

Sincerely yours,

HUBERT H. HUMPHREY.

INDIA—A BULWARK OF DEMOCRACY

(By Senator HUBERT H. HUMPHREY, of Minnesota, in the Senate of the United States, Friday, April 8, 1949)

Mr. HUMPHREY. Mr. President, the past weeks we have had our eyes on Europe. The only time we've turned around to look at the other side of the world—what we might term our rear, in cold war terminology—came Tuesday, April 5, when this body voted aid to China.

I do not choose to talk about the wisdom of aiding China today. But I do want to turn our thinking back in that direction. We have many reasons for helping Europe. One is their great need, a serious shortage of what they need for life, partly caused by our common war effort. Another is the encouragement we seek to give toward a world of greater cooperation and unity, at least of the democratic countries. The third reason is the threat of totalitarianism which often steps in where men and women lack the necessities of decent living.

All of these same reasons for aiding Europe apply to another country—to India. India has need. India fought beside us in the great second World War. India should be brought into the councils of democratic world organization we are forming around the framework of the Atlantic Pact. Not only is India a nation of ever-increasing democracy, but her leaders today are among the great and wise men of our time. Finally, the threat of communism and the military threat of the Soviet Union has and may in the future press sharply down on the 300,000,000 people living in the rich peninsula.

China is an enigma. No one is sure what is happening—what we ought to do about it or what will happen if we do nothing. There is no question in India. She is a great and rich country, worthy of our help and needing it sorely.

Eighty-five percent of her people are poverty stricken and illiterate. India's national income was only $13,636,300,000 for her 337,000,000 people as compared to our approximately $224,000,000,000 income in 1948 for only 140,000,000 people. Her per capita income, then, was about one-fortieth of ours.

But India is making strides ahead and needs only investment and help to become a wealthy nation. She reclaimed 32,306 acres of wasteland for agriculture in the fiscal year 1947–48 and is now working to reclaim 100,000 acres more. The United Nations' Food and Agriculture Organization director, Norris Dodd, praised her plans for increased food production and said that if the plans succeed, India can become self-sufficient in food.

Industrial production is increasing, too. Production of electrical supplies, Diesel engines, bicycles, superphosphates, caustic soda, soda ash, bicycle tires, sugar hydrogenated oils and soap are at a new peak in India in 1948.

India needs supplies to feed her expanding economy. Yet she has been forced by a dollar shortage to cut down her imports from hard-money countries. Her deficit balance of trade with hard-currency countries was $93,000,000 in the last 9 months of 1948. She will have to make this up through the international monetary fund. Her deficit in trade with this country in 1947 was $147,000,000. Our imports from India have dropped, causing this unfavorable trade balance between us, in spite of the fact that India's world-wide trade balance is favorable by $100,000,000.

Now for that small gap between what India sells us and what we sell her, India has been forced to cut needed imports from dollar areas. But her imports were not luxury goods that could readily be cut. What India wanted to buy from us were basic needs—food and industrial equipment which are absolutely essential if India's 300,000,000 are ever to rise above their poverty and illiteracy.

Because we are closing one eye and keeping the other focused on Europe we have overlooked our good friends in India, in Asia where the real struggle for men's minds is taking place. Seven European nations have received more ECA funds than India would need to continue importing according to plan from dollar areas. And whereas each of the seven nations have received substantially more than India would need, the combined population of those countries is scarcely greater than the total population of India.

There are practical reasons to help India. She is the second largest producer of vital manganese—and the first is the Soviet Union. She has 20,000,000,000 tons of unexploited iron ore and 60,000,000,000 tons of coal. Her steel production is seventh in the world and she produces nearly all of the world's mica, much of the tungsten, thorium (needed in atomic energy production) and lac (the basic ingredient of shellac).

In the alliance of free, democratic peoples, India deserves an important position. While she has looked at herself as a neutral between the great world blocs, she has found it necessary to put down Communist riots and strikes and she is working toward fuller democracy. More important, India represents the free people of southeast Asia and represents, too, the colored peoples of the world.

Militarily, her position is on the front line against the Soviet Union. She has a volunteer army of 300,000 men, an air force of 8,700 men, 6 fighter squadrons, 1 transport squadron. Her navy has 1 cruiser, 4 sloops, and 12 mine sweepers.

In maintaining Asian stability, India is essential. As her Ambassador to the United States (Sir Benegal Rama Rau) said last October in New York, "It is no exaggeration to say that on the economic and political stability of India depends the prospect of maintenance of peace in Asia during the next decade, and consequently the maintenance of peace throughout the world." He went on to say that while communism was still weak in India, receiving only a handful of votes, "there is, however, one danger to be guarded against. The Indian Union will have a completely democratic system on the basis of adult suffrage. You can easily realize the significance of this in a country, the vast majority of the population of which is on a low standard of living if not on the margin of starvation. All of these men and women will now exercise their vote, and it is obvious that they will not tolerate the democratic system unless in the immediate future the government elected under this system can improve their economic status and rid them of the fear of starvation and misery. If the standard of living is not raised, there is every danger of India falling under the influence of some other system, whether it is communism, or fascism or some other ism. The agriculture and industrial development of the country is, therefore, a matter of great urgency both from the political and the economic points of view."

India is not a question mark. In every way she belongs in the family of free nations. Her needs are no secret, they are all too evident. What must we do to help her and to encourage India's participation with the rest of the free world?

We must first recognize her needs as equally crucial as Europe's needs. Secondly, we must recognize India's legitimate interests and her grievances against us. We must recognize the self-government aspirations of southeast Asia colonies and avoid aid or comfort to European nations now putting down revolts and attempts at self-government. They will not trust us until we take that step. Nor will they trust us until our attitude right here at home toward our own colored citizens has changed to one of friendship and equality.

No one will be free and prosperous in this interdependent world until all are free and prosperous. Our Atlantic Pact and European recovery program are only half of the fight. Let's turn around and face our other friends and bring them into the councils of the free and help them to a standard of living that can truly make them free.

The people rising to greatness and strength are there—in Asia and Africa. We should be their friends and they will be our friends. Let us act in every way like friends—in our aid to them to start on the road to more prosperous life, in our immigration laws and in our attitude toward their nationals in this country and toward our own citizens in their race.

The future lies across the Pacific. We are letting the future escape us until we recognize the fact.

Let us help India and work to cement friendships with the other Asian democracies. Free peoples everywhere must get together in a friendship and cooperation.

Increased Postal Rates on Newspapers

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 12, 1949

Mr. REED of New York. Mr. Speaker, I have some 40 excellent newspapers which are published in the congressional district which I have the honor to represent. The editors and managers of these fine publications are deeply concerned as to the adverse effect of the proposed increase in postage rates on their subscriptions.

I have received from H. K. Williams, general manager of the Dunkirk Printing Co., Dunkirk, N. Y., which publishes two outstanding newspapers, a letter giving a careful analysis of the effect which the proposed increased postage rates will have on the two publications. Inasmuch as the study made by Mr. H. K. Williams may be of interest to other publishers similarly situated, I am, under consent heretofore granted, extending as a part of my remarks the letter to which I have referred:

DUNKIRK PRINTING CO.,
Dunkirk, N. Y., April 15, 1949.

CONGRESSMAN DANIEL A. REED,
House Office Building,
Washington, D. C.

MY DEAR DAN: It occurs to me that while you might have received many letters in regard to the change in postage rates from a general standpoint, that it might be of interest to you also to see how it would affect the smaller newspapers; namely, the Observer and the Grape Belt according to the proposed H. R. 2945.

Accordingly, I have selected a particular day; namely, April 8, for both papers and tried to work out what the change in rate would mean.

The first is for the Grape Belt and is based on 2,724 copies, including complimentary copies which is the average for March 1949. One hundred and four issues for the year, subscription price $2.25 per year.

20 pages—60 percent advertising

	Present		Proposed first year	Proposed second year
	Pounds	Cost		
Zones:				
1	83	$1.25	$4.98	$7.47
2				
3	15	.30	.90	1.35
4	7	.21	.63	.95
5	7	.28	.63	.95
6	4	.20	.48	.72
7	2	.12	.24	.36
8	7	.49	1.04	1.56
1½ cents	72	1.08		
1 cent	226	2.26	10.04	15.06
Free	334		3.34	5.01
Total		6.19	22.28	33.43
Yearly cost		643.76	2,317.12	3,476.72
Increased yearly cost			1,673.36	2,832.96
Average increase per subscription			.61	1.04

In order to take care of the additional cost of mailing, this would change the rate of the Grape Belt from $2.25 per year to $2.86 per year the first year, and the second year from $2.25 to $3.29 per year. In the case of the Grape Belt we have been faced with a decrease in sales and we feel that to add this amount to the subscription price would, undoubtedly, decrease very materially the number of subscriptions.

The second is for the Observer and is based on 367 mail copies including complimentaries for March 1949.

18 pages—60 percent advertising

	Present		Proposed first year	Proposed second year
	Pounds	Cost		
Zones:				
1	12	$0.18	$0.72	$1.
2				.08
3	9	.18	.54	.—
4	6	.18	.54	.81
5	4	.16	.36	.81
6	3	.15	.36	.54
7	1	.06	.12	.54
8	2	.14	.27	.18
1½ cents	19	.29		.41
1 cent	72	.72	2.88	4.—
Free	8		.08	.32
				.12
Total		2.06	5.87	8.—
Yearly cost		634.48	1,807.96	2,713.81
Increased yearly cost			1,173.48	2,079.48
Average increase per subscription			3.19	5.66

In the case of the Observer you note that while this covers only 367 copies which go through the mail, it would mean an average increase for mail subscribers within the county of from $8.75 per year to $11.94 per year, or $3.19 the first year, and the second year from $8.75 to $14.41 per year, or $5.66. A corresponding average increase in the other zones would result so that in Zone 8 it would change the subscription price from $17 per year to about $22.66 per year, which we believe is prohibitive.

Needless to say, the additional charges would have to be passed on to the subscriber as we would be unable to absorb them. We hope that some other means will be found to keep the Post Office Department from going so far in the hole.

With kindest personal regards to you and Mrs. Reed.

Sincerely yours,

DUNKIRK PRINTING CO.,
H. K. WILLIAMS,
General Manager.

Major Problems in United States Foreign Policy

EXTENSION OF REMARKS
OF
HON. ROBERT A. TAFT
OF OHIO
IN THE SENATE OF THE UNITED STATES
Tuesday, April 12 (legislative day of Monday, April 11), 1949

Mr. TAFT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address entitled "Major Problems in the United States Foreign Policy," delivered by Hon. Francis B. Sayre, representative of the United States in the Trusteeship Council of the United Nations, at the Third Annual Conference on Public Affairs, at Ohio State University, Columbus, Ohio, on March 5, 1949.

I have obtained from the Public Printer an estimate as to the probable cost of printing this address. The estimated cost is $187.50.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

MAJOR PROBLEMS IN UNITED STATES FOREIGN POLICY

It is an honor and a privilege to be invited to meet with you, representatives from some 50 colleges, in this Conference on Major Problems in United States Foreign Policy. I am particularly delighted to have the chance of discussing these problems with you; for America has a right to look to her college-trained men for wise leadership and help in the days ahead. As frankly and as simply as I can, I want to lay before you the fundamental issues as I see them.

We are living in an age of problems because we are in an age of revolutionary change. Sometimes I am sure you feel, as I do, that there is not a corner of the world that is not boiling today with unprecedented events. Our country's relationships with over 50 different nations present over 50 different problems, some small and some great. But there is only one today that is really paramount. It overshadows and colors and generally distorts every other one with which we have to deal.

The supreme problem of our time is the struggle between Communists and freedom-loving peoples. The issue depends upon whether communism constitutes, as claimed by the Soviet Government and its followers in other countries, a means of deliverance and of human progress, or whether it marks the pathway to human bondage, the inevitable concomitant of the police state. What shall be America's attitude and what her concrete program? The answer to this fundamental issue must inevitably determine and shape during our time the foreign relationships between the Soviet Union and its satellites on the one hand, and all democratic and free countries on the other.

Our western world, endowed with the priceless heritage of Greco-Roman civilization, for centuries has fought and sacrificed in the age-old struggle for human freedom. We have come to believe in this as one of the most precious things in life. Today our

western civilization is struggling to defend against virulent attack human liberty, the rights of small nations, the rule of law and of right and of conscience as opposed to might.

The Soviet leaders, whatever their professions, have in their concrete deeds violated and denied the right of freedom. Emerging from the Second World War, Soviet Russia has brought under its rule some 500,000,000 people of over 12 countries by methods of terrorism and fear. Human freedom no longer exists among those peoples who once formed the independent states of Latvia, Esthonia, and Lithuania, but who now are living repressed under Soviet rule. Human freedom, as we understand it, no longer exists in Poland, or Czechoslovakia, in Hungary or Bulgaria, or in the other countries behind the iron curtain. The Soviet Government is seeking by every ruthless means to extend this rule. Its followers are attempting to overrun China. It is seeking, like an octopus, to envelop Greece and Korea. It is attemping, through its agents, to work its way into Indonesia. It is attempting to threaten Norway and Sweden and Italy and every country where weakness offers opportunity. Those whom it has enveloped have lost freedom of speech, freedom of opinion, freedom of religion, and even in many cases freedom of movement.

The head-on conflict between these two great forces—communism against free democracy—is the supreme issue of our day. Make no mistake about it. The forces of communism are bent upon wrecking those countries which uphold western civilization and the philosophy upon which it is built; and, although the Communists may not be putting soldiers in the field, they are just as surely waging active war against western civilization with all the forces and methods at their command. The Communists, in truth, are today working out new tactics for gaining their objective of world mastery which, unless effectively combated, are potentially more deadly than the old-fashioned method of battleships and guns. Our supreme problem of foreign policy is how we, in our own self-interest, can best assist those who, like us, are determined to defend human liberty and the noble heritage of western civilization against the insidious attack of communism.

The fundamental conflict, you see, is not between two great peoples. It is a struggle between two fundamentally conflicting philosophies—belief in a world of moral law and ordered justice as against a world of terrorism and the rule of sheer force. In this there is nothing new. From time immemorial this struggle has been going on; and it is only because peoples through the years have felt that human freedom and a rule of law are more precious than life itself and have again and again been willing to fight and die, if need be, in their defense that western civilization as we know it has evolved.

How are we to meet this paramount problem of our day? What practical and concrete steps are we to take?

Two opposite courses have been advocated—the one a policy of compromise, the other a policy of war.

Those who support the first course point out the undeniable fact that we cannot rid ourselves of the problem. We have to learn to live together, whether we like it or not. Therefore, they say, there is compelling necessity for us to work out some kind of compromise.

But the experience of the last few years, and particularly the experience at Paris last autumn in the General Assembly, shows the futility of trying to reach a compromise with the policies at present being followed by the Soviet Government. As long as these are pursued, the differences are too radical and too basic.

You can't, for instance, compromise on the issue of freedom of religion. Either you have it or you do not have it. Restraints and curbs, even though partial, spell denial of freedom. A secret police with despotic power, even though that power is curbed, is still a secret police subject to all of its abuses. Government, unchecked by constitutional safeguards of law and by courts freely accessibly to all, is, and always will be, despotism. The trial of Cardinal Mindszenty in Hungary and the trials currently being staged in Bulgaria reveal the hollowness and the mockery of so-called justice when the decisions of courts depend not upon law but upon orders from state dictators. The philosophy that the state is supreme over everything else cannot possibly be reconciled with a philosophy built upon the supreme value of human personality.

With the great masses of Russian people we have no quarrel. But, unhappily, we have no way of reaching them. For centuries they have been kept in ignorance and darkness, largely cut off from vital contacts with other peoples. They were scarcely touched by the great civilization of Rome. The Renaissance and the humanistic movements of the fifteenth and sixteenth centuries, sweeping across western Europe, never reached the rank and file of Russian people. Their present Government is still keeping them separated from the warm currents of human intercourse flowing outside. The Soviet Government is isolating itself in the world as it is isolating itself in the United Nations. Manifestly, it is either not yet alive to the international responsibilities of the twentieth-century world or, if it is, it has determined that such responsibilities are in conflict with its own ambitions.

There should be no insoluble problem standing between East and West. The Russian people fought valiantly as our allies during the last war and helped to win the victory. Between our two peoples there has always been a strong tradition of friendship.

If the Soviet Government makes clear by action rather than by words her respect for fundamental human rights and her willingness to cooperate in the building of a world based upon law and human freedom, the United States stands always ready to meet her more than halfway. A simple change of conduct in Berlin or at Lake Success would pave the way. Then we would have, not compromise but cooperation.

A second and very different policy from that of compromise is a frank recourse to arms. As already suggested, our experience of the past 2 years makes it clear that compromise with the present policies being pursued by the Soviet Government is impossible. It is equally clear that the Soviet Government is bent upon aggressive action; and, since the appeal to reason has proved utterly unavailing, it is argued that there is only one practical way to stop the Russian advance—superior physical force. Therefore, the conclusion is reached that, since American foreign policy must, above all else, be realistic, the only course open to us is the protection of our Nation and our civilization by armed force. The United Nations, it is argued, has again and again manifested its impotency and its inability to prevent Soviet aggression. Czechoslovakia cried to the United Nations. But Czechoslovakia is in chains and Jan Marsaryk is dead. Hence, it is said, armed force is the only answer. That is the only language the Russians understand. Let us be realistic.

But the trouble is that such a policy assumes that a smashing victory over Russia would destroy communism. That is not true. The conflict is not between two peoples, but between two fundamentally opposed philosophies. It is not as simple as if we were back in the nineteenth century fighting an enemy within their own borders. Our real enemy is communism. Ideas cannot be downed by force. War is not a practical way to stop the spread of communism. Communism battens on war.

Moreover, a third world war could only be a tragic catastrophe to the civilization we would give our lives to protect. Out of the ghastly ruins of such a war communism or something uglier would lift its head.

The scrapping of the United Nations by the resort to arms therefore offers no positive solution to the problem now facing us; nor does it assure the real protection of western civilians.

In what direction, then, must we turn?

All of the Western World is looking to the United States for leadership. Our vast preponderance in wealth, in natural resources, and in population, and also our history and present strategic position thrust upon us, whether we like it or not, responsibility for leadership. Once before the youthful American Nation, consecrated to the ideal of human liberty, was the hope of the world. Now, in a far more crucial struggle, the eyes of all who believe in human liberty and democracy are again upon us. Grounded in the faith of our fathers, believing passionately in human freedom and in the brotherhood of man as taught by the Christian religion, we dare not fail. But which way shall we lead?

Since a genuine solution is to be found neither in compromising with the present policies of the Soviet Government nor in the opposite course of a resort to arms, wise leadership, it seems clear, must struggle to find some middle course other than compromise and other than war. Such a program the United States is boldly developing. Its main points are these:

First. We must consecrate ourselves wholeheartedly and unswervingly to the support of the United Nations.

The nineteenth-century world of separate and more or less isolated national units is gone. That was a world which knew nothing of modern electricity or airplanes or radios; when it took more than a week to get news across the Atlantic Ocean. Out of such a world were naturally evolved theories of national sovereignty absolute in its nature and practices based upon the geographical fact of comparative isolation. But under the facts of today nations can no longer live separate, isolated existences, competing each for selfish, superior power over rivals. We have reached an age when, whether we like it or not, if our civilization is to survive, collaboration among peoples for the service of humanity must take the place of power politics for selfish national ends. Call it humanitarianism—the service of humanity—or call it by the Christian name of brotherhood—this is the goal toward which our twentieth-century world is moving, and must move, if we are to survive.

The Nation which plays a lone hand for stakes of selfish power is bound to lose in the twentieth-century world. The dice are heavily loaded against her. The United States, dreaming of economic self-sufficiency, attempted a long-range policy of selfish isolation in the years between the two world wars. In spite of our matchless power and wealth, the attempt ended in utter failure. The iron curtain is another attempt. It also will end in failure.

Since the Second World War a new world is emerging—a world built upon global concepts of international obligation.

The international trusteeship system is an instance of this twentieth-century trend. Under the United Nations the old nineteenth century colonialism is being supplanted in the trust territories by a new machinery, to prevent every form of human exploitation, and to promote the political, economic, social, and educational advancement of some 16,000,000 inhabitants.

Or, again, take the recent resolution now before the Economic and Social Council to

find practical means for raising the standards of living in underdeveloped areas by providing needed technological and other assistance.

Under twentieth century realities we are coming to realize that unless we can achieve uninterrupted and effective international collaboration, our present civilization, built upon the increasing interdependence of all peoples and races, cannot possibly progress. And the United Nations is today the only organized governmental world machinery in existence for making possible effective international collaboration. It is the hope of the world.

I well realize the current feeling of frustration in many minds about the United Nations. But the United Nations is a growing organism. For one so young, it has displayed a surprising and unexpected vitality and strength. Its very imperfections are a challenge to your generation. It can be improved.

The one chance of winning Russia to reason is through the debates within the United Nations.

If I may digress for a moment I would like to tell you what happened last autumn during the General Assembly meeting in Paris. In spite of the pessimistic reports that went out, the meeting achieved telling and substantial results. The chief protagonists were talking and not fighting. Each was forced to lay before the bar of public opinion its actions and its policies and to find justification for them insofar as possible. The votes taken at Paris were highly significant.

First of all, the General Assembly approved the International Control plan developed by the Atomic Energy Commission. The vote was 40 to 6, only the Soviet bloc voting against. One may hope that, as a result of this overwhelming expression of world opinion, the Soviet Union may find a way to reconsider its position so as to permit atomic energy to be controlled for peace.

Another important vote was taken on the armaments question. The Soviet proposal to reduce armaments by one-third, without any system of effective international inspection and verification, convinced practically everyone of the insincerity and hypocrisy of Soviet aims. The Assembly, instead, passed a constructive resolution looking toward the checking and publication of full information with regard to existing armaments by an international organ of control. The vote was 43 in favor and only the Soviet bloc against.

Next, the General Assembly, over the protest of the Soviet Government and its satelities, voted 47 to 6 to place the guilt for the border disturbances in Greece squarely upon Albania, Yugoslavia, and Bulgaria. Although the Greek case is not settled, the Balkan Commission has been reconstituted for another year. It is doubtful if Greece would be independent today were it not for the United Nations.

A fourth important vote, 48 to 6 this time, declared in unequivocal terms the legality of the Government of the Republic of Korea which had been set up with the assistance of a United Nations Commission.

From these examples you can see how the debates at Paris helped to consolidate and unify the policies of those countries genuinely seeking world peace, as they illumined the hypocrisy of those nations seeking purely selfish ends. The practical unanimity recorded in vote after vote, with only the Soviet bloc voting in opposition, was convincing proof of solid achievement. The Kremlin cannot afford to ignore what happened in Paris.

The recent achievement of a truce in Palestine was brought about through the patient striving of the United Nations. Were it not for the United Nations there seems little doubt but that Jew and Arab would be fighting on the plains of Palestine today. Indeed, without the United Nations, the area of sanguinary fighting by this time might well be extended in the Middle East considerably beyond the confines of Palestine.

To consolidate and unify the policies and thus to strengthen the action of those countries seeking a world peace based upon law, it is a cardinal principle of American foreign policy to fortify and wholeheartedly support the United Nations.

Second. The United States will continue to throw its full weight behind the program for European economic recovery. As a result of the most disastrous and destructive conflict in history, the nations of western Europe were left at the end of the Second World War economically prostrate. Unemployment and economic ruin stared them in the face.

Since the end of the war already much has been accomplished in the way of industrial rehabilitation. But much remains to be done. Unless the countries of western Europe can be successfully assisted to their feet so as to permit again the effective functioning of their machinery of production and thus enable them to regain their economic strength, it will be most difficult for them to withstand Russia's advance or contribute to the defense of western civilization.

We have heard the Soviet propaganda that the shipments of American machinery and industrial goods to Europe are being made to dump unneeded surpluses for the economic advantage of the United States. But the fact that large proportions of these goods are in short supply and vociferously demanded by important American industrial and agricultural groups gives the lie to such a smear campaign. It is sheer nonsense to claim that such shipments are a phase of economic imperialism to gain an American stranglehold over European industry. The American objective is manifestly not to weaken, but to strengthen the European economy and to assist in building it again into a highly productive and self-reliant economy. The Marshall plan is built upon the hard-headed realization that in our twentieth-century civilization no nation can live unto itself alone, that we all sink or swim together, that not even the wealthiest nation can prosper if large populations are desperately hungry and in need in other parts of the world, that the wisest and most rewarding, if not the only safe, national policy today is a humanitarian policy. As part of the project, so that these deliveries will not lead to pauperization and permanent dependency, the shipments are being made on the express condition that the receiving nations themselves collaborate in determining what their own contributions shall be, each to the other, in order to build up a unified Europe, and in planning the organization of a European economy which will become at the earliest date possible independent of further American aid.

The United States is equally concerned in the proposed regional arrangement of western Europe, the so-called western European union. The objective of this cooperative enterprise is not the setting up of a military alliance to threaten the security of other states. It is not a move for selfish power to impose its will through armed force on unwilling peoples. It is rather a cooperative movement by free peoples, through common effort and collaboration, to crash through much of the outlived political and economic nationalism which once held them apart. It is a movement of great promise and of hope. It is an effort in the spirit of the twentieth century to give to peoples a freer and more spacious life and at the same time a higher degree of security under which to work.

It is one of the fundamentals of United States policy to support and, insofar as possible, to assist in those regional arrangements, set up under chapter VII of the Charter, for the strengthening of peace foundations to make possible a more gracious life for men and women everywhere.

Third. Although, as I have already suggested, superior armed force alone will not afford to twentieth-century life the security which is necessary if our civilization is to progress, nevertheless, as long as the present east-west conflict continues, we cannot afford to strip ourselves of our defenses. In frontier days men of peace often found it necessary to build stockades against attack. Both for our own sake and for that of freedom everywhere we must keep our Nation strong to resist aggression.

Western Europe and the United States have the heritage of a common civilization to defend. It is the very manifest interest of the United States to make common cause with western Europe in lessening the chance of Soviet attack. If the United States can strengthen the capacity and the will of freedom-loving nations to defend themselves against aggression, it thereby increases to that extent the power of the United Nations, in the words of the Charter, "to save succeeding generations from the scourge of war."

The organization of a well-armed North Atlantic Security Pact is not a resort to arms. Its purpose is precisely the opposite—to prevent war by making the Soviet Government realize the futility of attack.

In the formulation of a proposed North Atlantic Pact it has been made unmistakably clear that the purpose of the pact is defense and not offense. A North Atlantic Security Pact must be understood as part of a program not to supplant, but to operate under, the United Nations.

Fourth. More important than all else must be a policy of aggressive activity throughout the world for the establishment and the strengthening of the fundamental principles in which we believe—human freedom, justice, genuine world brotherhood. We must be missionaries for human freedom.

The ultimate issue between the forces of communism and democracy will be decided not by armies and atomic bombs. Those philosophies and those basic ideas will ultimately triumph which contain within themselves the inherent power to capture the imaginations and stir the deep desires of men and women throughout the world. How vital is man's faith in human freedom? If this be his ultimate desire, no communistic aggression, no hypocritical propaganda, no terrorism or trickery, can ultimately capture the citadel of man's soul.

Again and again history has proved that ideas and ideals are more powerful than armies—that no dictator can make himself supreme master of the world by force alone.

Western democracy has swept the world because in our experience men and women have believed in human freedom and justice and democracy so passionately that they have been willing to die for them. These will surely triumph over communism too if only we aggressively and passionately carry them into the four corners of the world. History down through the centuries has proved again and again that there can be but one outcome to a struggle for selfish power against forces fighting to protect and advance human rights. Those genuinely serving humanity always emerge ultimately triumphant.

Our task then must be to find a way to prevent war from blazing up, and to spread the faith of democracy and human liberty. Our policy toward Russia must be one of firmness, but at the same time one of understanding and of tolerance. We need Russia's assistance and cooperation in reconstructing Europe and in the gigantic job of building a lasting peace. We must win the Russian people's help if we can. We have no right to conclude that this is impossible.

America is a Christian nation. American foreign policy must be foundationed essentially upon Christian fundamentals. Upon that path we must go forward unflinchingly

and unafraid. Otherwise, we must forfeit our leadership.

In conclusion, then, may I recapitulate in summary form the four cardinal points in American foreign policy:

First. To build up and fortify in every way possible the youthful and developing United Nations Organization.

Second. To continue our full support to ERP and to the movement toward a western European union so as to help unify and strengthen the countries of western Europe.

Third. To assist in establishing an effective North Atlantic Security Pact under the Charter of the United Nations in order to make strong the bastions of human freedom and thus to lessen the likelihood of war.

Fourth. To find ways and means of aggressive action to spread and strengthen the basic principles upon which rests our civilization. America, as a Christian nation, must base its policy unswervingly upon right and justice and humanity. We must believe, in the words of Lincoln, that right makes might; and in that faith we must dare to do our duty as we understand it.

I often think of the verse of Martin Luther, that doughty old fighter, who could not be downed:

"And though this world with devils filled
Should threaten to undo us,
We will not fear for God hath willed
His truth to triumph through us."

With closer political and economic understanding among the free peoples of the world may come a great upsurge of the forces of democracy. The consequences could be electric. Democracy, foundationed upon the deep desires and will of the great masses of mankind, is an unconquerable force.

The time is big with opportunity. Destiny is in the making. The issues call for men of vision and men of courage.

Creeping Revolution

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 12, 1949

Mr. REED of New York. Mr. Speaker, the Communist Manifesto of 1848 is now installed by this administration apparently as a national program. This devastating system for destroying free enterprise, regimenting the people, distributing wealth, and driving toward the nationalization of industries is now being stealthily promoted through proposed legislation to supplement legislation along this line which has already been enacted into law. The people will soon be as helpless in the network of communism as flies entangled in a spider's web.

I am inserting in the RECORD as a part of my remarks a statement by Dr. Arthur A. Smith, professor of economics at Southern Methodist University in Dallas, Tex. I hope that the readers of the CONGRESSIONAL RECORD will take time to peruse this very able analysis of the situation as prepared by Dr. Smith:

ECONOMIC CENTRALIZATION HELD PATH TO COMMUNISM

(By Arthur A. Smith, professor of economics, SMU)

Watch the Communists' trial in New York. It should reveal to America some startling facts about the subtle workings of those who would destroy our economic order.

In the meantime it would be enlightening for you to read the Communist Manifesto. Your public library has a copy somewhere. In this document you will find the essence of the Communists' program and of their operating techniques.

One passage from the manifesto is particularly significant. Here it is: "The proletariat will use its political supremacy, by degrees, to wrest all capital from the bourgeoisie, to centralize all instruments of production in the hands of the state."

Although the manifesto points out the measures to be used in reaching the above objective will be different in different countries, in the most advanced countries the following will be applied:

1. Abolition of property in land.
2. A heavy progressive or graduated income tax.
3. Abolition of all right of inheritance.
4. Confiscation of the property of all emigrants and rebels.
5. Centralization of credit in the hands of the state.
6. Centralization of the means of communication and transport in the hands of the state.
7. Extension of factories and instruments of production owned by the state.
8. Equal obligation of all to work.
9. Combination of agriculture with manufacturing industries; gradual abolition of the distinction between town and country by a more equitable distribution of the population over the country.
10. Free education for all children in public schools.

PLAN CREEPING REVOLUTION

It is interesting to note that, contrary to general belief, the Marxian philosophy of change is not revolutionary in the popular sense of the word. Even though Marx uses the term "revolution," the process of communism is a creeping process—by degrees. It is subtle. Some branches of Marxism do believe in militant methods, but the strongest branches adhere to no such technique. Instead, political processes are to be used.

Now in the light of this, let us examine what has happened in America over the years since the Communist Manifesto was written in 1848.

Under the guise of one thing or another—now supported by the Democrats, now supported by the Republicans—step by step some of the objectives of the manifesto have been realized in this country. Many people fear our two great political parties are not worthy of their names, that they have not stood consistently for anything—except vote-getting. In the subtle process of socialization, each party has been gullible. To get votes, each at one time or another has stolen planks from minority parties—not the least of which is the Socialist Party.

Let's check the score:

We have a heavy progressive income tax. It might become heavier.

Although banks have not been nationalized in this country as in England, government control of credit processes has been increasing. Today the United States Treasury is a dominant force in the trend toward centralization of credit. Credit is too powerful an instrument for the centralists to leave in individual hands. It is a fair guess that the first great business to be nationalized (unless the trend is checked) will be the banks.

We have not abolished all right of inheritance in this country, but we have greatly impaired it through steeply progressive death taxes. There is talk of even higher rates.

Confiscation of the property of all emigrants and rebels is just another way of saying confiscation of the property of all who do not agree with the party. That must be deferred a while yet.

STRICT COMMUNICATION REGULATIONS

The means of communication and transport are not in the hands of the Government yet, but they are strictly regulated. Probably these will be the second great industry (next to the banks) to become nationalized, if the trend is not checked. By virtual subsidization of their competitors, Government has been slowly choking the railroads into such weakened financial position that ultimately the excuse can be found to nationalize them.

Although Government ownership of factories has not progressed very far, we do have the TVA, and there is talk of the Government's going into the steel business. Government ownership of the coal mines, the tidelands, and all subsurface mineral rights is strongly advocated. How long it will be until such is a reality, we do not know.

Agriculture, the great industry that we have always regarded as the bulwark of individual enterprise, has long since sold out to Federal regulation. It is only a matter of months until the farmer will be told what and how much to produce.

The professionals are up next—socialized medicine and Federal aid to education. Will the ministers be in line immediately following? And then the family?

Supposedly we have been fighting communism, planned economy, etc. Yet right in our midst we have steadily adopted their very principles.

How has it happened? Well, we have allowed ourselves to be divided and conquered. And very few of us can truthfully say that we have been consistent in our defense of the American way. We have permitted ourselves to be bought. Our own selfishness has been our undoing. The farmer has been strongly in favor of parity and subsidy. The banker wants the Government to support bond prices: he likes the FHA, and he now rather likes the FDIC. Labor wants minimum-wage laws, etc. The merchant outwardly believes in competition, but he vigorously supports retail-price maintenance, and thinks the merchant who cuts prices is a striped kitty. The none-too-rich fellow believes the rich ones ought to be socked with high taxes until he gets rich. Contactors rather like to think of great public housing programs in the offing. And so it goes, ad infinitum.

Lots of good people in Dallas bitterly oppose so much Government spending, but ardently favor local projects if Uncle Sam will pay the bill. It's a cumulative process.

Something has happened to us locally—at the grass roots. Instead of first trying to solve our own problems, as in the old days, we run to Washington.

"He who pays the fiddler chooses the tune." Washington will dictate the terms, even to school teachers under Federal aid.

The Cornerstones of Democracy

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES

Monday, April 25 (legislative day of Monday, April 11), 1949

Mr. MARTIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the very able address delivered on Saturday night in Pittsburgh, at the annual meeting of the Amen Corner by Gov. William Munford Tuck, of Virginia.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE CORNERSTONES OF DEMOCRACY

No man can visit this rich and productive region of western Pennsylvania without being inspired with renewed faith and confidence in the American way of life. Here you have demonstrated vividly the results that can be achieved under our system of free enterprise and individual initiative. To millions in other lands you in this area stand as the symbol of American industrial might and achievement.

Our people as a nation represent an even greater and more important symbol to our sister states of the world. America, founded and developed as a land of freedom and opportunity, stands today as the last great bulwark against dictatorship and tyranny. Thousands of her sons have fallen on the battlefields of the world in defense of the principles of our free government and our free society. Millions ever stand ready for the call to arms should inimical forces venture to attack us. Yet these same patriotic citizens, plus other millions of Americans, seemingly fail to recognize the arrival of conditions within our own borders which, if continued unchecked, can just as effectively as the arms of an aggressor rob us of our heritage as a free people.

I can conceive of no greater service that might be rendered than that of arousing the citizens of the United States to the dangers that lurk in the shadows of our outwardly placid society. We all have been wont to accept our freedom and our individual liberties as a matter of course. We have given too little thought and attention to the great sacrifices involved in their establishment and even less to the absolute necessity of renewed vigilance for their protection.

The chapters of history written in this century are filled with proof of the doctrine that no government can long endure which disregards the freedom and the rights of the individual. Time and again we have seen the victims of oppression succumb by reason of inner national decay, apathy, or a complete absence of alertness to the influences which finally undermined their economy, their national morality, and their character as individual citizens. In fact, no nation has ever been long subjugated without first having been sapped of its strength and will to resist by inner erosion.

We, in America, despite our proud boasts, are not immune to such contagious and pernicious influences.

The first and most effective antidote is an alert and active citizenship, armed with the will and the determination, as well as the courage, to preserve for ourselves and all posterity the priceless liberty and free institutions which always have been ours. I have heard expounded the fallacious theory that modern civilization requires a fundamental change in our form of government. On the contrary, strict adherence to the philosophy and the principles of our constitutional system is the only means by which the blessings we enjoy can be conveyed to our children and the succeeding generations. With the leadership and encouragement to which the people of America are entitled, and in the past have been accustomed, we can yet drive from the structure of our national life the termites of selfish interest and un-Americanism.

The inroads of these unwelcome elements may have come about in part because of the normal inertia of the people. So long as their national affairs move forward without startling and shocking jolts they are inclined to assume that all is well. Under such circumstances they are prone to go to the polls only to register a protest against an individual or some particularly obnoxious scheme, rather than to cast a positive vote for principle.

Furthermore, Americans have been content, all too frequently, to yield their responsibilities and their rights to a pampering Federal bureaucracy. The bait of free money, something for nothing, cradle-to-grave security, and an over-all paternalism have tended to undermine the hardy characteristics of our citizens and convert them into supplicants at the altar of the Federal Treasury. Many of them are there today, like fawning sycophants at the feet of a political overlord.

One of the grave threats to our sound Government and our American way of life is this trend toward a benevolent but strong central authority. Those who advocate this cloak themselves in the garments of the public interest, but in truth constitute a Trojan horse crammed with the potentialities of self-destruction and ready to tear at the very vitals of the Nation.

I am proud to report that we in Virginia, where American democracy was born, have striven consistently to uphold the structure of our constitutional government, built upon the twin cornerstones of State and local self-rule. The manner in which the leadership of our Virginia delegation in the Congress of the United States has stood for principle, above all other considerations, has inspired and emboldened right-thinking people everywhere.

Our forebears, and many of our distinguished Virginia contemporaries, have not hesitated to point to the fallacies of greater and greater Federal largess and Federal control. Neither have our Virginia administrations since the turn of the century sought to lull our people into the false comfort that we could offer them something for nothing, or that we could render the services they themselves demand without imposing the tax levies necessary to produce the money. We subscribe to the theory that government cannot produce happiness and contentment. We believe that these blessings must be attained by the people themselves. We believe the fundamental obligation and responsibility of government is the maintenance of law and order, and that the individual members of society should have the fullest possible rein in shaping their own destinies.

Unfortunately, this philosophy has not flourished at the highest echelon of government. Despite the fact that under the Constitution it possesses only those powers delegated to it, the tendency has been for the Federal Government to gather unto itself all manner of additional powers by indirect and ofttimes subtle methods. The fault not always has been that of any one individual, or any small group of individuals; it frequently has been the fault of the citizens of America who have encouraged their elected representatives to adopt the policy of grab-barrel politics, irrespective of the effect on the general welfare.

The founding fathers did not conceive of government as a means of providing board and room and support for life for the citizens uniting in its establishment. Our Government was set up to protect our rights and privileges and to help guide us into the most direct paths to their enjoyment.

There are those who have an entirely different conception of the purposes and functions of government. They view government as the means to a planned economy, to a universal and uniform administration of public services, regardless of whether Federal, State, or local in character and responsibility. Under the impetus of this philosophy in high places, there has grown up a governmental colossus which now touches in some form or another the daily lives of practically every citizen of the country. The talons of this bureaucracy extend into the factories, the State capitols, the county courthouses, and the very homes of all the people. The feeding and fattening of this monstrous Frankenstein has demanded an ever-increasing number of dollars, until, in the language of the bobbysoxers, it now runs in zillions, and yet the appetite remains unsatiated. Each dollar creates more demands and at the same time destroys the will and the capacity to resist on the part of both Government and the people. The tentacles of the octopus grow longer and stronger as the lifeblood of the States and the localities is squeezed into the Federal feeding trough.

I am thinking particularly of the program of Federal grants-in-aid and the gradual usurpation of the functions of the States by this method of indirection. Since the day our system was established the levels of government closest to the people have constituted the first line of defense against loss of our liberties. That was recognized in the fact that the Federal Government was the recipient only of certain delegated powers. The rest were reserved by the States. The advocates of Federal grants ignore these unchallenged principles and endeavor to lure the States and the localities into abject surrender and capitulation by grants and other mislabeled Federal appropriations, ostensibly for indispensable public services. Their cry is that, unless the States do these certain things, then the Federal Government must act for them. This is absolutely contrary to the spirit and letter of our Constitution. There is no just basis whatever for their claim to Federal authority over the internal affairs of the States, whether the would-be intervention pertains to voting qualifications, the education of our children, the public health, or some other matter of which we legally and rightly have jurisdiction as member States of this Union.

Fundamentally, the grants-in-aid program is built upon two major fallacies. First, all the funds the Federal Government ever had or ever will have came or will come from the taxpayers of the various States. There is no other source for its income. Whatever the Federal Government allocates in grants to the States, or the localities, comes from the pockets of the people of those same States. But before any money is returned to the States and their subdivisions, it passes through the Federal processing plant. The substantial toll exacted for this service contracts the original tax dollar into a mere fraction by the time it drops into the State or local treasury.

The second major fallacy is that the people of the States and their counties and cities are unable to provide the necessary services unless the Federal Government steps in with this so-called Federal aid. Aside from the fact that the setting of standards for State services is none of the concern of the Federal Government, there is another good reason why the Federal Government should keep out of these State activities. With very, very few exceptions, I am convinced that the whole list of existing grants-in-aid programs could be eliminated today—together with the Federal taxes that finance them—and the States and their localities could shoulder them in their entirety with better service to the public and a lesser expenditure of public funds.

The proposals for further expansion of the Federal-aid system also ignore other fundamentals of the national economic picture. The Federal Government is now saddled with the greatest national debt in all history. It requires enormous sums annually merely for the payment of interest charges. Any sound businessman would be directing a substantial portion of his income toward retirement of his debt before undertaking expansion of his plant. The Federal budget and the Federal Government are not above and beyond the purview of sound business practices. They should be the exemplification of the soundest fiscal policies.

It is a startling fact that in 1 year the Federal withholding tax on the pay of employees of the Commonwealth of Virginia

alone—not taking into account the millions of dollars paid by individual and corporate income-tax payers outside of the State agencies—amounts to $600,000 more than is returned to the State for a dozen Federal grants-in-aid programs. These include game protection, education in agriculture, mechanic arts and vocational training, marketing, research, agricultural extension work and home economics, experimental work in agriculture, industrial rehabilitation, aid to the blind, and mental hygiene.

Total internal-revenue collections in Virginia in a single year are seven times the entire State appropriation from its general fund for the maintenance and operation of all our State agencies during the last 2 years. Yet we are meeting, and always have met, in a satisfactory manner the responsibilities and obligations of our State services.

No doubt a similar picture exists in most of the other States. It is a grave and most disturbing situation.

Were the issue simply which level of government is to dispense the funds, the problem would be less alarming. The danger lies in the concentration of power in the Central Government, the weakening of the State and local governments, and ultimate destruction of the will and the power of the lower units of government to act for themselves in meeting their own problems. Control of the purse means control of the activity, sooner or later. No matter how many assurances are put down on paper that this or that Federal-aid program will be administered under State supervision, there is no assurance that this arrangement will not be changed by the next Congress. Control of the funds is the first step; tight control of the manner in which the funds are used invariably is the second.

If the Federal Government itself is to remain equal to the problems and tasks assigned it under the Constitution, it must recognize the necessity of the State and local governments continuing virile and strong.

It is significant that in every nation where communism has gained the mastery of the government and the people, it has come after the establishment of a strong central authority and the destruction of the rights of the people to manage their local affairs.

Only a few days ago I participated in ceremonies in our beautiful capitol square in Richmond dedicating a marker to the tenth President of the United States, John Tyler, of Virginia. In the course of my remarks on that occasion I recalled that President Tyler resigned from his seat in the Senate of the United States rather than cast his vote contrary to his convictions and his sense of public duty. In announcing that decision, he wrote this memorable declaration of principle: "I shall carry with me into retirement the principles which I brought with me into public life, and by the surrender of the high station to which I was called by the voice of the people of Virginia, I shall set an example to my children which shall teach them to regard as nothing place and office, when either is to be attained or held at the sacrifice of honor."

His voluntary retirement from public office at that time did not deter him from accepting the duties of further public service, in both lowly and exalted capacities. After he had left the Presidency and returned to his home in the historic Virginia county of Charles City, the people called their neighbor and friend to further duty as a county overseer of roads. He was not too proud to accept this humble position. His thought was not for political preferment but for service to his fellow citizens.

There never has been greater need for men and women of similar courage, determination, and high principle who are willing to make the sacrifices so necessary for the defense and the preservation of our liberties. The need extends into all levels of government and into all walks of life.

If the American people want socialism, regimentation, and governmental paternalism at the cost of their freedom, then my voice is raised in futile protest. If the people of this land of unsurpassed resources and a heritage of liberty unequaled on earth want to continue to breathe the air of freedom, then they must awaken to the perils that threaten to engulf them.

They must rededicate themselves to the cause of right, justice, and freedom, and with these as their brick and mortar make certain that the temples of our democracy—the State and the city and the county governments—are not toppled into the abyss of a lost liberty.

Development of Missouri River

EXTENSION OF REMARKS
OF

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Monday, April 25 (legislative day of Monday, April 11), 1949

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the RECORD an article on Missouri River development, published in Look magazine of April 26, 1949.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FLOOD, MUD, DUST, AND DISASTER

WANTED: A MISSOURI COMPROMISE THAT WILL HOLD WATER—"A SHOTGUN WEDDING," THAT'S WHAT FOES CALL THE PICK-SLOAN PLAN—PICK-SLOAN FIGHTS BACK WITH A 6-YEAR PLAN TO BEAT THE RIVER

(By William B. Arthur)

The rampaging Missouri River and man are fighting it out in the West.

The struggle has been long, disheartening, and seemingly unending, with man unable as yet to prevent disaster. And every time the river triumphs, it high lights another long battle in Washington among men who can't agree on a single plan to control the river.

The river's tactics are simple. It either gives man too much water, with page 1 headlines like this: "Thousands homeless in Missouri River flood."

Or it gives man too little water, with headlines like this: "Drought toll mounts in Great Plains."

The river won't compromise. Neither will the men who are battling it out in Washington. On one side are those who believe the river must be fought with a Missouri Valley Authority similar to the Tennessee Valley Authority.

On the other side are those who call MVA everything from socialistic through pinkish, totalitarian, and unrealistic, to communistic. Present tactics, they say, of fighting the river with an alliance of Federal and State Government agencies cooperating in a democratic manner at a grass-roots level, are sufficient to turn the tide of battle.

To this "grass roots" attitude, MVA proponents say "tommy rot." Yet whatever the merits of either argument, the terrible problem remains.

I've seen the Missouri River and know of the destruction it can inflict. I've seen how its water and mud have covered Missouri Valley farms, streets, and living-room carpets. This river has gone on a rampage a dozen times since 1844; six times since 1940. In the past 45 years, an estimated 800 lives have been taken by the river. Millions of acres of land regularly are covered by Big Mo's floods, with property losses totaling a billion dollars.

Droughts, too, are not uncommon to the Missouri's 519,635-square-mile basin. You still can see evidence of the last great one in the 1930's. At that time, particles of rich soil were blown across the country to the Capitol in Washington. More than 300,000 farmers vacated the valley for green pastures elsewhere. It cost the United States $1,246,000,000 to aid those who were left.

You can see why they call the river Big Muddy by looking at it almost anywhere along its 2,470-mile course. Valley residents told me that the water's too thick to drink, and a mite to thin to plow. And they aren't far off. Big Muddy pours 100,000,000 tons of good earth a year into the Mississippi River, a few miles above St. Louis.

The stakes are high in this fight. Valley residents proudly told me, "You name it, we've got it," as they enumerated their areas' resources. But how long they'll be able to list them, including such things as one-half of the Nation's wheat, depends upon the Government's ability to stop the floods and erosion and to control the droughts that are a constant plague.

What is the Government doing?

Congress finally acts

Until 1943, little was accomplished in the fight against the river. But in that year a disastrous flood brought demands for action.

In 1944 Congress passed a new Flood Control Act authorizing the Army's Corps of Engineers and the Interior Department's Bureau of Reclamation, in cooperation with other Federal agencies, to begin work on a program of valley development. The program authorized was one which had been threaded together earlier from separate and widely conflicting plans drawn up by the engineers and the reclamationists.

The Corps of Engineers' plan, primarily for flood control and navigation, had been developed by Col. Lewis A. Pick, then division engineer of the corps' Missouri River division. It was known as the Pick plan.

The Bureau of Reclamation plan for irrigation and hydroelectric power had been developed by W. G. Sloan, then assistant director of the Bureau's region six in the Missouri Valley. It was known as the Sloan plan.

The amalgamated program, authorized by Congress, became known as the Pick-Sloan plan.

Big Mo is divided up

At that time, and continuing until now, critics of the Pick-Sloan plan contended that the two agencies got together in a "shotgun wedding" because it had been suggested that a Missouri Valley Authority be established to develop the valley. Such a suggestion, if carried out then, might have eliminated the well-entrenched engineers and Bureau of Reclamation from their leading roles in valley development.

The Pick-Sloan plan, in effect, split the river, with the engineers assuming basic responsibility for the lower basin; the Bureau, the upper. It calls for the creation of 105 reservoirs along the Missouri and its tributaries to hold water for irrigation, flood control, and navigation, and the generation of electric power.

Congress itself stepped in to settle one of the knottiest problems concerned with Pick-Sloan development. The Corps of Engineers proposed to deepen the Missouri's navigation channel from 6 to 9 feet from Sioux City, Iowa, to the river's mouth. Up-river residents claimed that such a project would take water away from irrigation; that there wasn't enough water in the river for both. An amendment was passed giving up-river residents priority on the water.

Pick-Sloan seek teamwork

Pick-Sloan forces foresaw that their program lacked an integrated, dynamic view of the valley as a whole. So in 1945, they formed a Missouri Basin Inter-Agency Committee to tie together all projects concerned with valley development. On it, they placed representatives of the Corps of Engineers, the Departments of Interior, Commerce, and Agriculture, the Federal Power Commission, and the Governors of 5 of the 10 basin States. The committee holds monthly meetings, with representatives of other Federal, State, and local government agencies invited to take part in its deliberations.

Colonel Pick, who during the war directed construction of the Ledo Road through Burma and became a major general, was elected committee chairman.

MVA versus Pick-Sloan plan

During the past 3 years, $1,229,165,907 has been either spent or earmarked for spending under the Pick-Sloan program. And during the past 3 years, criticism has been heaped on both the manner of spending and the results. Strong groups have been organized to oppose Pick-Sloan in favor of a Missouri Valley Authority. They include such organizations as the Congress of Industrial Organizations, affiliates of the American Federation of Labor, and the National Farmers Union. Senator JAMES E. MURRAY, Democrat, Montana, became the No. 1 MVA spokesman in Congress. He regularly called for the creation of an MVA to weld the entire basin into a comprehensive plan of development under a single responsible leadership.

"The Pick-Sloan plan is fantastic and impractical," MVA's backers assert. "The kind of slap-dash, haphazard, so-called planning which has characterized the official programs for the Missouri River thus far is not consistent with the welfare of this country."

"Here," the MVAites assert, "are some of the Pick-Sloan follies:

"The Corps of Engineers' program for navigation has increased flood danger along the river's lower reaches. By narrowing the channel, they have made it incapable of holding as much water as it used to hold. Twenty years ago, rain would raise the river a few inches. Now, it raises it from 2 to 4 feet.

"The plan neglects upstream-watershed control, a vital necessity if floods are to be abated at their source.

"It neglects water and soil conservation on farms and ranches, general reviews of land use, development of mineral and other raw-material resources, recreation facilities, fish and wildlife conservation, and social and economic measures for diversification and stabilization of the means of livelihood.

"In an area already starved for electric power, and losing industries and people because of it, the Pick-Sloan program for power-generating facilities is woefully inadequate. Rates will be too high.

"The Pick-Sloan alliance is tramping on the rights of Indians.

"The Inter-Agency Committee is little more than a debating society. It has no legal status. Its members still must run to Washington when decisions are needed."

Pick-Sloan criticism, however, hasn't been confined to the MVA forces. Recently a task force of the Hoover Commission investigating the Nation's natural resources reported that some of the unanswered questions concerning development plans (along the Missouri) is whether there will be sufficient water for purposes of navigation, irrigation, water supply, and power development.

"It is nothing short of a calamity that there should be grave uncertainties on this score at this late date."

Pick-Sloan proponents are fighting back. In 1948 the Inter-Agency Committee issued what it terms its "6-Year Program for Valley Development." "This program," the committee contends, "answers the criticism which has been heaped upon us. It brings into being a well-rounded plan for development of the valley as a whole, including upstream watershed control, water and soil conservation, recreation facilities, and all the other things our critics claim are lacking."

Under the 6-year program, which requires congressional authorization, $6,500,000,000 more would be spent for valley development, beginning with the fiscal year 1950.

General Pick, who recently became the Army's Chief of Engineers, told me he believes the Inter-Agency Committee "is the greatest team ever assembled in the United States for the development of an area for the good of the people.

"All of our actions are a democratic process, open and above board. Everyone is given the opportunity to be heard. The people of the valley don't want an authority. They want to work out their problems themselves in a spirit of genuine cooperation.

"Together, we are driving ahead to make the Missouri a river of gold for America. Our objective is to put the river to work for the people."

Another stanch Pick-Sloan supporter told me he believes the river is too big for the TVA type of treatment. The interests of the valley's people are too divergent. They must be reconciled, and an authority is no way to do it. Our opponents fail to see that what we have is a new approach to watershed development. TVA was a new approach, too, and it worked. It worked because it was designed to meet the particular needs of the Tennessee River Valley. Our program is designed to meet the particular needs of the Missouri Valley.

In the midst of the pros and cons, and in the midst of a new Missouri River flood, Senator MURRAY recently introduced his third bill calling for an MVA. In it, he proposes establishment of a Government corporation to be known as the Missouri Valley Authority, headed by a five-member board of directors. A general manager would supervise operations. An advisory board consisting of representatives of Government agencies, governors of the basin States, and basin citizens would examine and pass upon all plans presented to the President and Congress. And, compromising with his previous bills, the new one would permit Government agencies engaged in valley work to continue under MVA's direction.

The Pick-Sloan versus MVA controversy thus enters another round in a long-drawn-out struggle. It has risen and fallen in its intensity with the ebb and flow of the Missouri River. No one knows for certain what the outcome of this controversy will be. But an increasing number of legislators in Washington agree that the time has come to decide whether to cast the weight of action and money behind Pick-Sloan or to throw that program aside and establish an MVA. Division, they agree, won't hold back Big Mo's water.

Thomas Jefferson on Fundamental Truths

EXTENSION OF REMARKS
OF
HON. AUGUST H. ANDRESEN
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 14, 1949

Mr. AUGUST H. ANDRESEN. Mr. Speaker, every Member of Congress, every public official from the President and down, and every citizen of these United States should daily read and follow the following fundamental truths written by Thomas Jefferson about 150 years ago:

I place economy among the first and most important virtues, and public debt as the greatest of dangers. To preserve our independence, we must not let our rulers load us with perpetual debt. We must make our choice between economy and liberty, or profusion and servitude. If we can prevent the Government from wasting the labors of the people under the pretense of caring for them, they will be happy. The same prudence which in private life would forbid our paying our money for unexplained projects forbids it in the disposition of public money.

Management-Labor Relations—Analyses of Wood Bill

EXTENSION OF REMARKS
OF
HON. WAYNE MORSE
OF OREGON
IN THE SENATE OF THE UNITED STATES
Monday, April 25 (legislative day of Monday, April 11), 1949

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD two analyses of the so-called Wood labor bill. One analysis has been prepared by the A. F. of L. and one by the CIO. I do not accept the recommendations of organized labor in respect to certain labor views, but I certainly agree with labor that the Wood bill is an unacceptable compromise of the labor-legislation issue. I hope we can work out some amendments to the administration labor bill on emergency disputes, secondary boycotts, closed shops, welfare funds, free speech, unfair labor practices of both unions and employers, financial accounting, and the other issues I have mentioned in committee hearings, which will give us a fair and sound labor bill. We need to take the labor issue out of partisan politics. Neither the administration labor bill nor the Wood substitute bill will accomplish that result.

There being no objection, the analyses were ordered to be printed in the RECORD, as follows:

ANALYSIS OF SECOND WOOD BILL (H. R. 4290) AND COMPARISON WITH TAFT-HARTLEY

(Prepared by Woll, Glenn & Thatcher, general counsel, American Federation of Labor)

There is little, if anything, to choose from between the second bill submitted by Congressman WOOD (H. R. 4290, introduced April 14, 1949) and the Taft-Hartley Act. The one is as bad as and, in several important respects, worse than the other. In fact, while the Wood bill does throw several sops in labor's direction, in reality the bill enlarges and strengthens the most objectionable feature of that act, namely, the use of injunctions both as against alleged union unfair labor practices and in connection with so-called national emergency strikes. As will be more fully discussed later, the new bill permits the general counsel to file suit for injunction in the Federal courts merely upon the filing of charges alleging the union has committed an unfair labor practice, and without further investigation, and the

courts are empowered to issue injunctions in such cases in their complete discretion and without any standards to guide them or safeguards to protect against indiscriminate or arbitrary orders. Under the Taft-Hartley Act, the general counsel can seek an injunction merely upon filing charges only where violations of section 8 (b) (4), relating to secondary boycotts, are charged, and then only after a full investigation has shown the existence of facts making it reasonably certain that the charges are true. Furthermore, in respect to the national emergency injunctions, the new bill permits the President to apply for an injunction immediately upon the threat of strike and without the requirement that a board of inquiry be assembled to investigate the dispute and make findings prior to the issuance of the injunction as is required under the Taft-Hartley Act.

The few safeguards on the issuance of injunctions in cases involving jurisdictional strikes that are contained in the Taft-Hartley Act are eliminated under the new Wood bill, and under that bill either the board or the court has complete discretion to issue orders respecting jurisdictional strikes without even affording the parties to the dispute an opportunity to settle the jurisdictional dispute for themselves, as was permitted under Taft-Hartley.

The following is a provision-by-provision comparison of the new Wood bill with the Taft-Hartley Act, showing what, if any, changes are made in respect to each of the various provisions in the Taft-Hartley Act. the analysis follows the same form as that followed when the Thomas bill was compared with the Taft-Hartley Act in a previous analysis made by this office. The following provisions of the Taft-Hartley Act are retained, strengthened or modified by the Wood bill as indicated:

1. Disenfranchisement of economic strikers—modified so as to permit an economic striker to vote in a representation election but only if he has not been permanently replaced for a period of 90 days prior to the election. In other words, if the economic striker has been replaced for 90 days, he cannot vote.

2. Blanket prohibitions on restraint or coercion by unions—retained and strengthened by permitting injunctions merely upon the filing of charges and without investigation or issuance of complaint as required under Taft-Hartley.

3. Broad prohibitions on secondary boycotting—retained completely, with the very slight exception that union employees engaged in a lawful primary strike may induce other union employees to assist them in the following limited situation: Where these other employees are employed to work on products ordinarily made at the struck plant, as in a case where such products have been jobbed or contracted out, but even then only if these other employees are members of the same local union as the employees on strike and have a contract with their employer permitting them not to work on struck goods. As can readily be seen, cases where the employer has agreed that his employees need not work on struck goods, and where the employees engaged in the primary dispute are members of the same local union as employees making or working on products for the struck plant, will be very few and far between, so in practical effect the so-called broadening provision is meaningless.

4. Prohibition against jurisdictional disputes—retained and strengthened against unions by eliminating opportunity for parties to settle their own dispute and by permitting court injunction merely upon filing of charges and without issuing of complaint or other investigation.

5. Ban on closed shop and restriction on union shop—retained in most respects, strengthened in others, and modified in some. Under the Wood bill, all closed-shop agreements requiring membership in the union earlier than 30 days after employment are outlawed, and this even includes agreements which might have been valid under the Taft-Hartley Act, such as those entered into prior to the passage of that act and made effective for a period of years. While the Wood bill does eliminate the useless union-shop election prerequisite, it permits employees in a bargaining unit to rescind the authority of a union to enter into a union-shop agreement by majority vote. The bill further permits the employer to discharge an employee under a union-shop agreement for two reasons in addition to failure to pay dues and initiation fees, namely, where the employee was expelled from the union for engaging in a wild-cat strike or for being a Communist or for being affiliated with a Communist or similar organization. Further, the employer is permitted to notify a union "of opportunities for employment," but since the prohibitions on the making and use of union-shop agreements are very specific, it is impossible to see any material benefit whatsoever which could be derived from this provision. In all other respects to the prohibitions on closed-shop agreements and the restrictions on union-shop agreements are identical with those under Taft-Hartley, including the provision making the hodgepodge of State anti-closed-shop laws paramount to the Federal law.

6. Exclusion of supervisors from all protection against employer discrimination and refusal to bargain—retained.

7. Proviso permitting employer to use free speech to abuse unions if no threat of reprisal—retained.

8. Non-Communist affidavit and other filing requirements—retained as to unions and extended to include employers.

9. Restrictions on excessive initiation fees—retained.

10. Restrictions on featherbedding—retained.

11. Definition of good-faith bargaining—retained.

12. Employer petitions and decertification provisions—retained.

13. Opening of Federal courts to damage suits for breaches of contracts and for violation of secondary-boycott provisions—retained, with slight limitation discussed under secondary-boycott paragraph (No. 3) above.

14. Restrictions on welfare funds and check-off—retained and strengthened by making check-off authorization automatically noneffective at the expiration of 1 year from the date of its execution, thus eliminating automatic renewal and making it necessary to procure new authorizations each year.

15. Craft unit proviso—retained.

16. Provision for 60-day notice of termination or modification of existing agreement—retained, except that an employee striking in violation of the 60-day clause does not lose his status as an employee.

17. Separate conciliation service—retained.

18. Provision for enjoining strikes in emergency situations, 80-day "cooling-off" period and "last offer" election—strengthened by permitting injunction at any time a dispute is threatened without investigation or fact-finding by Presidential board. However, useless last offer election is eliminated. Under the Wood bill, the safeguards inherent in an investigation by a board appointed by the President, which makes an investigation and issues findings of fact prior to the issuance of an injunction, are entirely eliminated. The board now functions only after the injunction is obtained. Thus, the Wood bill makes it impossible for the President even to attempt to settle the threatened national emergency by the appointment of a board of inquiry without first obtaining an injunction. Under the injunction the court can order the parties to the dispute to use their best efforts to settle it, under threat of contempt of court if they fail to do so. The Wood bill, therefore, would arouse all the antagonisms that are automatically induced by the issuance of any injunction in a labor dispute before the President is empowered to even try to bring about conciliation or settlement of the issues.

19. Restrictions on political contributions by labor organizations—retained.

20. Separation of powers as between board and general counsel—retained, and powers of general counsel greatly expanded by giving him absolute discretion to seek injunction in any case where charges may have been filed.

CONCLUSION

From the foregoing section-by-section comparison of the Wood bill with the Taft-Hartley Act, it can be readily seen that, if anything, the Wood bill is more vicious and more oppressive than the Taft-Hartley Act and should be as strenuously opposed. Wherever the restrictions of the Taft-Hartley Act are loosened, it is for the most part in unimportant respects, and, on the other hand, the most objectionable of the Taft-Hartley Act provisions—those dealing with injunctions against labor organizations—are considerably strengthened. If the foregoing analysis is compared with the analysis of the Thomas bill appearing in the American Federation of Labor Weekly News Service for April 12, 1949, it can be seen that the Wood bill could not, under any circumstances, be considered in any way an adequate substitute for the Thomas or Lesinski bills.

CIO SUMMARY AND ANALYSIS OF THE REVISED WOOD BILL, H. R. 4290

President Philip Murray, of the CIO, branded the original Wood bill as being more viciously repressive of labor's basic rights than the Taft-Hartley Act itself. Congressman WOOD, of Georgia, has now revised his original bill purportedly to meet some of the objections of labor to the original draft. Our analysis of the revised bill, however, demonstrates that the present Wood bill (H. R. 4290) still reenacts most of the substantive provisions of the Taft-Hartley Act and in several important particulars strengthens Taft-Hartley provisions to make them even more objectionable to labor. No one who reads the Wood bill will be deceived by the language which purports to repeal the Taft-Hartley Act. This statement in the bill is mere sophistry. The Wood bill is the Taft-Hartley Act plus additional antilabor prohibitions. The few concessions in the Wood bill purporting to eliminate or change Taft-Hartley provisions are inconsequential and insubstantial. They constitute window dressing which will deceive no one.

The CIO regards any vote that may be cast for the Wood bill as a vote against labor and against the public interest. The CIO calls upon the Congress to pass the Thomas-Lesinski bill, which is truly a Taft-Hartley repeal bill.

The following is an analysis of the salient provisions of the revised Wood bill:

1. The discretionary right of the general counsel of the NLRB to obtain injunctions is retained and, in fact, enlarged by permitting injunctions to issue merely upon a filing of charges that an unfair labor practice has been committed and without investigation, proof, or hearings. This would extend rather than curtail government by injunction, which is conceded to be one of the outstanding abuses of the Taft-Hartley Act. Under this provision the Norris-LaGuardia Act would become a virtual nullity.

2. The disenfranchisement of economic strikers imposed by the Taft-Hartley Act, and conceded even by Senator TAFT to be unjust, is substantially retained in the Wood bill through the device of permitting eco-

nomic strikers to vote only if they are not replaced 90 days or more before the election. Obviously, employers by delaying petitioning for election until 90 days after the hiring of strikebreakers can still effectively prevent economic strikers from voting in Labor Board elections.

3. The Taft-Hartley Act language which has been interpreted to prevent peaceful picketing by labor unions is retained by the provision of the Wood bill prohibiting restraint or coercion by unions.

4. The ban on secondary boycotts provided in Taft-Hartley is modified only to a very limited extent. The modification permits a union, if its collective agreement so provides, to refuse to work on struck goods where the striking employees are members of the same union. Most justifiable economic boycotts are, therefore, still prohibited. The provision of the Taft-Hartley Act making it mandatory for the general counsel to seek injunctions in secondary-boycott cases is modified to give the general counsel discretion whether to seek such injunctions. But as pointed out above, this discretionary right is extended to permit injunctions to be issued merely upon the filing of charges alleging the union has committed this or any other type of alleged unfair labor practice.

5. Unions continue to be subject to unwarranted lawsuits in the Federal courts, as permitted by Taft-Hartley.

6. The check-off provisions of the Taft-Hartley Act are made more restrictive by making it necessary to procure new check-off authorization cards each year, thus burdening unions with this additional unnecessary administrative burden not now required under Taft-Hartley which permits automatically renewable check-off cards.

7. While the Wood bill purports to eliminate the Taft-Hartley requirement for a union-shop authorization election it provides that 30 percent of the employees can petition for an election to prohibit a union shop and retains most of the other complicated Taft-Hartley election procedures, including employer-election petitions and decertification provisions.

8. The Taft-Hartley Act permits discharge for nonmembership in a union under a union-shop agreement only if the employee was discharged from the union because of failure to pay dues. The Wood bill, while permitting discharge also for expulsion because of Communist affiliation or participating in a strike in violation of a contract, would not permit discharge for expulsion from the union because of antiunion activity, embezzlement of union funds, or other recognized intolerable practices.

9. The Taft-Hartley provision making more restrictive State laws against union security superior to the Federal law is retained.

10. The Wood bill would make illegal closed- or union-shop agreements entered into prior to the Taft-Hartley Act and continuing for a term of years. Such agreements are prevalent in industries enjoying stable collective-bargaining relationships and their validity was recognized and preserved by Taft-Hartley. The Wood bill in this as in other respects goes beyond Taft-Hartley. Furthermore, the general prohibitions against all closed-shop contracts is retained although it is declared not to be an unfair labor practice for an employer "merely to notify a union of opportunities for employment." This vague language does not realistically meet the need of legalizing the hiring hall and other similar forms of union security.

11. Taft-Hartley restrictions on collective bargaining in relation to welfare funds are preserved.

12. The Government's power to seek injunctions in national emergency strikes is broadened by providing for the issuance of such injunctions even before the appointment of an emergency board rather than as in Taft-Hartley after such appointment.

13. The agency definition of the Taft-Hartley Act under which international and local unions have been held responsible for acts not actually authorized or ratified is retained.

14. The Taft-Hartley restriction on political contributions and expenditures by labor unions is retained.

15. The so-called free-speech provision of Taft-Hartley which goes far beyond the legitimate protection of the constitutional right of employers to free speech is retained.

16. The Wood bill, like the Taft-Hartley, would preserve the general counsel of the NLRB as a labor czar by continuing the present separation of powers as between the Board and the general counsel first introduced in the Taft-Hartley Act. This is contrary to the unanimous expert opinion that the NLRB, like all other similar administrative agencies should be restored to the procedures prescribed in the Administrative Procedure Act.

17. Like Taft-Hartley, the Wood bill provides for a separate Conciliation Service rather than for the return of the Conciliation Service to the Department of Labor where it properly belongs.

18. Numerous other provisions of the Wood bill are Taft-Hartley provisions like the individual-grievance clause, the exclusion of supervisors from the protection of the act, the jurisdictional dispute section which, in fact, is made more unworkable by limiting the opportunities for parties to settle their own disputes and the non-Communist affidavit requirement which is enlarged to require such affidavits by employers as well as unions.

The Marshall Plan and the American Defense Budget

EXTENSION OF REMARKS
OF
HON. HUGH BUTLER
OF NEBRASKA
IN THE SENATE OF THE UNITED STATES

Monday, April 25 (legislative day of Monday, April 11), 1949

Mr. BUTLER. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial entitled "Time To Call a Halt," published in the Omaha Evening World-Herald of April 21, 1949.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

TIME TO CALL A HALT

Reperesentative CANNON, Democrat, Missouri, says he plans to draft a single appropriation bill providing funds for the Marshall plan and for arming western Europe. His approach, it seems to us, is not quite the right one but it contains the germ of a good idea.

The Marshall plan is an economic measure. The proposal to arm western Europe is military. Basically, the stated purpose of the Marshall plan is to offset dollar deficits in European countries supposedly working back toward solvency. Sending tanks and planes and guns to Europe will have no effect on these dollar deficits.

However, if Mr. CANNON were to tie together American defense spending and arms for western Europe (the implementation of the North Atlantic Pact) it would, it seems, make very good sense. Both of these programs are military. Both have the same purpose—the defense of the United States and western Europe against attack. The pact was supposed to increase this country's security, not diminish it.

As of now, the American armed forces seem to be committed to a we-can-lick-anybody-and-do-it-all-alone policy. The proposal to arm Europe should mean a modification of this policy. To illustrate: If a billion dollars worth of arms for western Europe will arm 300,000 men, then this country's required force should go down by 300,000 men.

Unhappily, this consideration does not seem to appeal to the brass in the armed forces. They apparently prefer to pile one defense program on top of another, just as they have piled an overblown Navy air force on top of a huge Air Force air force. And so far no one in the administration or Congress has risen to challenge them.

The time has come to challenge. None of the armed forces has shown the slightest disposition to prune itself—far from it. If any pruning is done, it will have to be done by congressional committees that will require the generals and admirals to justify their demands in detail, to take into account what other countries are doing to defend themselves.

Indeed, it appears that considerably more than the cost of arming Europe could come out of the American defense budget. The Hoover Commission has charged that, as of now, about $1,500,000,000 is wasted (approximately the estimated cost of arming Europe), and revelations of frenzied spending indicate that even this estimate may be low.

In wartime, the armed forces got used to getting whatever they asked for—and no questions asked. The time has come for civilians to reassert their authority over the presently high-riding brass, according to the American tradition. If they do not, the people face a tax raise or a ghastly deficit and, in the long run, ruin.

Top-Flight Executives for Government Posts

EXTENSION OF REMARKS
OF
HON. RALPH E. FLANDERS
OF VERMONT
IN THE SENATE OF THE UNITED STATES

Monday, April 25 (legislative day of Monday, April 11), 1949

Mr. FLANDERS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Wanted: Top Men for United States Posts," written by Harlan Trott and published in the Christian Science Monitor of April 22, 1949. The writer of the article expresses some of my own concern at the slowness with which the top-pay bill is being considered.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WANTED: TOP MEN FOR UNITED STATES POSTS
(By Harlan Trott)

WASHINGTON.—Wanted: Top-flight executives for Government posts; must be made of iron and have an elephant hide; only those reconciled to the fact the pay is not worth the ribbing need apply.

This is the ironic twist President Truman gave in effect to the difficulty of finding replacements for Army Secretary Kenneth Royall and several other Federal officials whose resignations are on the President's desk.

Mr. Truman told news correspondents April 21 that he had persuaded Barry Bingham, Louisville publisher, to succeed David K. E. Bruce, of Baltimore, as head of the Economic Cooperation Administration mission to France. Mr. Bruce becomes ambassador to France.

FREQUENT CHANGES

The President's reference to elephant-hided men of iron came in answer to a reporter's question whether the President anticipated any other changes in his defense set-up.

Mr. Truman said he couldn't answer that, although in Government, of course, there always are changes because officials simply can't stand up under the combination of long, hard work, poor pay, and kicking around by Congress and newspapers.

Two prominent business executives and a Government official have been mentioned as possible successors to Mr. Royall, who departs April 27.

Speculation centers around Curtis E. Calder, chairman of Electric Bond & Share Co.; John M. Franklin, president of United States Steamship Lines; and John E. Peurifoy, Assistant Secretary of State.

Both Mr. Calder and Mr. Franklin served in the Government during World War II. The former was Director General of the War Production Board. Mr. Franklin was Assistant Chief of Transportation for the War Department.

THREE JOBS VACANT

Mr. Royall's departure leaves three top Pentagon jobs to be filled. Undersecretary of the Army William H. Draper, Jr., resigned February 19, and Assistant Air Secretary Cornelius V. Whitney left April 11 to become Under Secretary of Commerce.

Navy Secretary John L. Sullivan has been reported as wanting to step up to a Cabinet post or quit the Government. There also has been some talk that Air Secretary W. Stuart Symington might get out.

The White House must find two replacements for the Atomic Energy Commission, W. W. Waymack, Iowa editor, resigned some time ago. Now, Mr. Truman is confronted by the task of filling another vacancy caused by Dr. Robert F. Bacher's resignation. Dr. Bacher is the only nuclear physicist on the Commission.

CONGRESS UNPREDICTABLE

Admiral W. W. Smith's term as Chairman of the Maritime Commission has expired with no sign of a successor in sight as yet. This 6-year appointment pays only $10,000. Able men invariably have to forsake private employment at much higher incomes to take these Federal posts.

The inconsistencies of Congress are a baffling deterrent in many instances. The Federal Communications Commission's Enabling Act for example, provides that members shall receive $12,500. Congress has turned right around and knocked the salary down to $10,000 through its appropriating powers. Why pay the FCC members $12,500 when other commissions pay only $10,000, Congressmen ask.

Then to confuse the picture a little more, Congress proceeded to raise the President's salary $25,000 and throw in a tax-free expense account of $50,000 for good measure—but ignore all the top appointive officials around him.

FTC SHIFTS ARE DELAYED

Meanwhile the leather-indexed folder on the President's desk gets fatter and fatter with files on prospective appointees. Garland Ferguson's term has expired on the Federal Trade Commission. Congress refused to act on the President's reappointment for one reason or another.

Meanwhile Robert E. Freer resigned from the Commission and Mr. Truman delayed for months before sending up John Carson's name as a replacement.

This time it was Congress' turn to raise a fuss. A cry went up that Mr. Carson was a radical, or something equally opposed to free enterprise, in that he was head of a cooperative movement. There is talk now that Mr. Carson will not be confirmed. But the President is sticking by Mr. Carson the way a Missouri mule sticks to his four tracks.

ECA CHOICE PRAISED

Unless Congress acts to raise salaries at the commission level more nearly in line with the times, observers here think Mr. Truman is going to have trouble replacing Mr. Royall and the other service secretaries should they resign. One reason is that the posts have lost importance since the Unification Act of 1947 set up the top military post of Defense Secretary.

Out of the current job shuffling the administration gains only one newcomer. But the general reaction here is that the new head of the ECA mission to France is an extremely able man. Mr. Bingham began his newspaper career as a reporter on the Louisville Courier-Journal after leaving Harvard.

While in college he met Mary Caperton, a Radcliffe girl who became his wife. Mrs. Bingham was the Christian Science Monitor's Radcliffe reporter during part of her undergraduate days.

Since 1945 Mr.Bingham has been editor of the Courier-Journal as well as president of the company which publishes that paper and the Louisville Times.

The State Department's Policy Toward China

EXTENSION OF REMARKS

OF

HON. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Monday, April 25 (legislative day of Monday, April 11), 1949

Mr. BRIDGES. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD two editorials. One is from the New Hampshire Morning Union entitled "BRIDGES Is Right," and the other is from the New York World-Telegram entitled "Misinformation About China." Both of these editorials refer to the Secretary of State Acheson's letter to Senator CONNALLY and to my comments on same.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the New Hampshire Morning Union, Manchester, N. H., of April 18, 1949]

BRIDGES IS RIGHT

Senator STYLES BRIDGES is right in demanding an inquiry to find out what the State Department's policy really is regarding China, or whether it has any policy at all.

The campaign by Communist sympathizers in the United States to discredit the Chinese Nationalist Government and promote the interests of communism in China is well known, and it would not be surprising—indeed, it is logical to believe—that this campaign has found its way into the Government.

Remembering Secretary Acheson's association at the close of the war with a policy of coddling Russia, one has reason to entertain some doubts concerning his ability to judge the implications of Soviet communism today. We do not believe that Mr. Acheson is pro-Communist or pro-Soviet, but his mistaken interpretation of Soviet-American relations in 1945 must create some skepticism regarding his discrimination in judging Soviet aims today.

Acheson's stand against the proposal now before the United States Senate to give Nationalist China military and economic aid follows largely the line of pro-Communist propaganda in the United States. It is the purely defeatist attitude that no help we can give to China will save her from complete Communist domination.

Are we to sit idly by while southern China and all southeast Asia slips under the Soviet Communist grip?

That would be rank folly. There is absolutely no assurance that the cause of a free China is hopeless. Competent observers like General Chennault promptly dismiss that idea. They are confident that with reasonable help south China can yet be saved from Communist domination, and that eventually the whole country can be redeemed from the Communist grip.

It is not the true American spirit to accept defeat as complacently as Secretary Acheson does. If this weak-kneed attitude is to dominate the State Department's policy with relation to Soviet expansion, we are in a pretty plight indeed. China has moved close to the Communist abyss because of the gross blundering in United States policy in trying to play a game of appeasement with the Chinese Communists, and then when that did not work deserting a valiant ally.

But as Senator BRIDGES says there is no reason why at least part of China should not still remain free. The Senator has not put the matter too strongly when he described Acheson's statement on China to the Senate Foreign Relations Committee as a "thoughtless, tactless, unfriendly, and damaging act."

The time has come when this situation should be aired thoroughly. Is the State Department's unfortunate, bungling attitude a result of incompetence—or of prejudice—or is it the work of subtle pro-Communist influence? That question should be answered now definitely.

[From the New York (N. Y.) World-Telegram of April 16, 1949]

MISINFORMATION ABOUT CHINA

Writing to the Senate Foreign Relations Committee, Secretary of State Dean Acheson said that although China had received over $2,000,000,000 in United States assistance since VJ-day, the Communists now hold almost all the important areas of China from Manchuria to the Yangtze River.

The Communists have captured the bulk of the military supplies shipped by this country to the Nationalists since VJ-day, he added.

This would seem to mean that we have given China more than $2,000,000,000 in military assistance since VJ-day, and that most of it has fallen into the Communists' hands.

Neither conclusion is correct.

The $2,000,000,000 figure used by the State Department to discredit Chiang Kai-shek's government is made up of three major items: (1) Lend-lease, (2) the value of surplus military goods sold to the Chinese, and (3) the American contribution to UNRRA. None of this was assistance in the war against the Communists. Mr. Acheson should correct any impression that it was.

Lend-lease expenditures since the war's end, largely in services, included carrying out the terms of the Japanese surrender agreement. Chinese troops did the job there that our own troops did in Europe. We also charged China the cost of flying supplies over the hump during the war. Our service charge against China was $607,000,000, against Britain it was $426,000,000, against Russia $79,-

000,000. Yet, although we used Chinese troops and Chinese labor, the Chinese were credited with only $3,600,000 in reverse lend-lease against $191,000,000 for Belgium.

Much of the surplus property sold to China was in junk condition, and its value was questionable. But we have President Truman's word that no weapons which could be used in fighting a civil war were made available.

UNRRA supplies were divided between the Nationalists and the Communists.

We have given China almost no military assistance in the war against the Communists. No heavy equipment. Only about $9,000,000 in small-arms ammunition.

Anything the Communists have captured must have been delivered to China before VJ-day. We maintained an arms embargo against China from March 1946 to May 28, 1947, while we were trying to force a Communist coalition there. No military funds were voted until April 1948. Only one of the three ships carrying the initial cargoes under this program reached the Chinese mainland. Two docked at Formosa, out of Communist reach. By that time Nationalist China had collapsed.

It may be too late to save China from communism. But it was not too late in 1946 or in 1947, when the State Department opposed military aid for China just as it does today.

Protest Against Increase of Postal Rates by Warren Zimmerman, of Lawrence, Kans.

EXTENSION OF REMARKS
OF
HON. CLYDE M. REED
OF KANSAS
IN THE SENATE OF THE UNITED STATES
Monday, April 25 (legislative day of Monday, April 11), 1949

Mr. REED. Mr. President, Mr. Warren Zimmerman, a prominent businessman of Lawrence, Kans., has written an article for the Lawrence Daily Journal-World in opposition to the proposed increase of postal rates.

I ask unanimous consent to have it printed in the Appendix of the CONGRESSIONAL RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

LETTERS TO THE EDITOR
SPEAKING OF POSTAL RATES

EDITOR JOURNAL-WORLD:

I was interested in a recent article in your paper by Mr. Frank M. York concerning an editorial a few days previously in the Journal-World relative to postal rates, that gentleman endeavoring to justify some of the prevailing, as well as proposed, outrageous charges the department would inflict on the public, which, after all, pays for it—provided it will pay.

Checking over just three of several recent mailing experiences since January 1, 1949, when the last big advance was made, and not considering the proposed additional 400 percent increase as a method of strangling the press of the Nation, it is interesting to note the terrific charges the Government is already levying as many believe in the form of punitive measures against free speech. Here are just three examples of several jobs mailed, all of which run practically proportionate, for one to think over. The first figure represents the Kansas Color Press charge for printing the jobs, the second figure the postal charges for third-class matter:

Our charge to patrons, $159.97; postal charges $240.24.

Our charge to patrons, $653.61; postal charges, $1,008.14.

Our charge to patrons, $491.42; postal charges, $814.10.

In considering all charges the public should understand that a great paper mill in Canada went far out into the woods, chopped down the trees, transported the raw material hundreds of miles at great expense to its manufacturing point; ground those logs into pulp and put that into a finished product in the form of paper; shipped that paper from Kenora, Canada, to Lawrence, Kans., and made its usual profit on its part of the jobs. The Kansas Color Press handled all this roll-paper stock; stored it until needed; composed all the printing forms necessary to get them into the stereotypers' hands who supplied the plates for the press-work and printing; the jobs were printed by our firm and we made our usual and regular profit on same. In other words, two firms got a good profit out of those jobs after all expenses were paid and the customer got his printing at the prices quoted. Then take a squint at the postal rates for simply handling the jobs. Yet here we have our Government coming along and asking for 400-percent increases in rates.

Does anyone think the postal handling of such work is more expensive, is a harder job or requires more brains and ability than the producing of finished paper from the raw material and the costs entailed by printing same?

We think there isn't a business firm in the United States that would dare attempt such a charge for its services, while at the same time we are firm in our convictions that if the Postal Department was turned over to executives of business experience they could and would operate the entire system, pay the Government a good lease for the opportunity, handle the job better, and make a handsome profit for themselves, at the same time giving the public a reduced price for the services.

The power to tax is truly the power to destroy. No more effective measure can be introduced for the ultimate elimination of getting the printed word to the thinking public than this steadily increased taxation system of printing-press strangulation, which has the possible, if not the positive, purpose of finally reducing the American citizen to the quid pro quo or yes man of the Russian pervert or the Mexican peon. Keep enlightenment away from the public long enough and it will soon be easily controlled. A generation or two of that kind of life and the rulers in Washington will be showing Joe Stalin tricks at herding the populace the latter never dreamed about.

But our sympathy goes out to the poor, overworked, understaffed postal force the Nation over. Seeing the gravy train running by for a good many years, who can blame that membership for wanting to hop on. Once when we were younger we endured the life of a postal employee for almost 10 full months. Wearying of the job and having just about broken down physically from its exactions (and if you believe that you will believe anything we tell you) we quit that life and got over into the printing business where we reasoned the fields were lusher and the labor less. What a sucker we were for not continuing our postal career, particularly if that 400-percent increase is put across.

WARREN ZIMMERMAN.

The New Twist in the Communist Line

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, April 26 (legislative day of Monday, April 11), 1949

Mr. MUNDT. Mr. President, yesterday on the floor of the Senate we had an interesting and informative discussion of the perils which communism has brought to our shores. I take this means of calling to the attention of the Congress and the country a highly significant and informative broadcast recently made by Jack Beall, as one of his talks in a series of broadcasts on communism—what it is, how it operates, how it is controlled, its conspiratorial apparatus, and what it means to you and your family. This is the Eighty-fourth in a series of such broadcasts which Jack Beall has made over the network of the American Broadcasting Co.

The text of this broadcast reports a new twist which Mr. Beall believes to be taking place in the Communist line. Perhaps, it is more accurate to say that Mr. Beall discusses new light which has been focused on a traditional aspect of the Communist line which at times has been obscured from many because, as always, there is little relationship between what communism says and what communism does. In all events, I feel that many will be interested in Mr. Beall's analytical discussion of current Communist activities.

I ask unanimous consent to have the text of the broadcast printed in the RECORD.

There being no objection, the text of the broadcast was ordered to be printed in the RECORD, as follows:

Good evening. A new twist in the Communist Party line has taken place and it has to do with the attitude toward Jews. It has particular reference to Zionism.

I must say that there has never been any real change in attitude toward Zionism inside the Soviet Union. In spite of the world-wide propaganda that the Soviet Union was a paradise for Jews, the policy of the Soviet Union has always been one of violent opposition to Zionism and a Jewish national home. One of the things which Stalin did when he was Commissar of Nationalities—way back there in 1919—was to issue a decree forbidding all Jewish communes on the territory of the Soviet Union. You won't find this decree or the language I am about to quote in the collected works of Josef Stalin which has recently been issued by the Soviet State Publishing House. These quotations have more recently been dropped out, because it would not serve state policy. But, in 1919, Stalin wrote: "The Jewish communes and their central bureau gather and group around them manifest enemies of the interests of the Jewish working class and of the achievements of the October revolution. (They) conduct a harmful policy * * * assume governmental functions (of cultural-educational nature and social security) and give a distorted education." The Soviet rulers have recently permitted only one Jewish language newspaper to function in all the

Soviet Union; they closed down Jewish schools and hospitals and old peoples' homes and they broke up every organization which even remotely could be suspected of fostering Zionism. It is actually a crime to be a Zionist in the Soviet Union. You can be sent to prison or to Siberia for it. Dr. Julius Margolin, a Zionist leader of Poland who, himself, spent 5 years in Stalin's slave camps records: "My most shocking encounters in the Soviet camps were meetings with people who had been sentenced solely for having been Zionists in their youth. Before me were old men and women, broken, without hope or faith."

So much for that basic attitude in the Soviet homeland, the so-called paradise for Jews.

During the recent war, the attitude somewhat softened. But when the war was over, it hardened again. The Soviet Union saw a chance to make capital with the Arab world in taking up the old fight against Great Britain. The Zionists were called the vanguard of British imperialism and the bet, then, was on the Arab to oust the British from Palestine. In July of 1946, Victor Lutsky, the Soviet expert on Palestine, lectured in Moscow, strongly assailing the Jews and the Zionists for trying to make a Jewish-capitalist state out of Palestine. He declared that the Arabs, having lived there for many centuries were entitled to call the country their own. But in 1947, with a rapidly rising move by Palestinian Jews for independence, Stalin shifted his bet. He saw a chance to oust Britain from the Holy Land and perhaps install a government there which would be friendly to the U. S. S. R. In the United Nations, the representatives of Stalin supported the partition plan. For a period from 1947, up to last fall, the line was ostensibly pro-Israel and pro-Zionist. It served to confuse many Jews. The gullible believed that the U. S. S. R. was Israel's true friend. It caused embarrassment to Britain and to the United States. But with Britain out and the new state of Israel established, came the new attitude of the U. S. S. R.—really just a reversion to the old line.

The first open manifestation came last fall when Ilya Ehrenberg, the very prominent Soviet journalist, wrote a piece for Pravda. He criticized Israel, Zionism, and the Jews, and, among other things, said that "Israel's bourgeoisie is no better than the bourgeoisie in other countries."

Shortly thereafter began a campaign to eliminate Jewish intellectuals from cultural life in the Soviet Union. The campaign was cloaked under the guise of purging homeless cosmopolitans. But that was another name for Jews, as it very quickly turned out. Fifty individuals were attacked, and, of those 50, 49 were Jews. And in order to make it sufficiently clear, the press of the Soviet Union—the land where there is no discrimination—the paradise for Jews—the Soviet press referred to the purge victims, first by their Russianized names and then put their original Jewish names in parentheses afterward. It spoke of the "malignant, putrid story written by homeless cosmopolitan Melnikoff (Melman)." It spoke of the "cynical, impudent activities of B. Yakovleff (Holtzmann)." The purge of literary figures even extended down to the lower depths of the Soviet literary field—sports writers. But it seems that Jewish sports writers are not homeless cosmopolitans—they are called passportless wanderers, and these wanderers got the full treatment: G. Yasny—Jewish name, Finkelstein; V. Victoroff—Jewish name, Zlochevsky; and A. Svetoff—Jewish name, Sheidlin. I think that this is highly significant. Here is a press, run by and for the Government—the directors of which never make a move or a departure from their fixed policies without first clearing it with the Communist Party control chief—here is a Government press attacking Jews—remember 49 out of the 50 attacked were Jews—and reinforcing its point by printing Jewish names in parentheses after the Russian name. Can you imagine a paper of reputation in the United States doing that? I have never seen it done outside of some frankly anti-Semitic sheets and pamphlets.

If this were not enough to show the official displeasure with Jews, the next step was very, very plain. The Government closed down the one Yiddish-language daily in the Soviet Union—the one called Einigkeit. Thus, several million Russian Jews do not have a single language daily of their own. And along with it, the publishing house which had occasionally printed a book in Yiddish was closed down. Another Jewish periodical—a monthly, I believe—called Der Stern, was also suspended.

You would think that even Communist Jews would resent some of these things. Apparently there was confusion and resentment for a while, on the staff of the Morning Freiheit—the Communist paper in New York which is printed in Yiddish. Moshe Katz, a staff member, dared to take issue with the Ilya Ehrenberg article in a piece he, Katz, wrote for Freiheit last January. The Freiheit itself in its editorials did not come out strongly against Zionism at the time the shift was made by the Kremlin. But now both Mr. Katz and the management of the paper have made their submission to Moscow. Mr. Katz has written a letter, published in the paper, in which he tells his Jewish readers of the Communist faith that Zionist leaders, both inside and outside Israel, are preparing to transform Israel into a bastion of Jewish reaction and as a prop of Anglo-American imperialism.

The Freiheit Association, the publisher of the paper, came out with a statement explaining that its failure to toe the line of Moscow instantly was the result of "constant pressure of bourgeois nationalism on Jewish life in America."

I suggest that the best proof of the change of line against Israel and Zionism by Moscow is the change of line which the Communist daily, Morning Freiheit, has been forced to take, even against what it considers its own best publishing interests.

This is a small thing, which causes scarcely a ripple outside of a comparatively restricted circle. But it is a big thing, actually. With it you see a Communist line change—you catch it in the very act. The Soviet Union has found that the former temporary line, which was taken up for tactical advantages, has served its purpose. It now reverts to its long-time but, for a while, concealed line, of anti-Zionism. I don't see how it can fail to move and shock the Jewish community all over the world—especially those who had been taken in and confused for a time by a seeming friendliness on the part of the Soviet Union toward Israel and Zionism. I don't see how those who have been big Zionists and, at the same time, big defenders of the Soviet Union's foreign policy can now continue to ride those two things abreast. The parting of the ways has come. They have either got to be Zionists, or Communist supporters. Even split personalities will have difficulty in Roman-riding two horses, when they go off at wide angles.

Along with these events, there have been deep stirrings in the satellite countries, over Zionism. At first, the general rule was to permit emigration to Palestine. Many difficulties were put in the way. But until recently, they were letting a certain number of Jews get through the iron curtain. Many more wanted to go than were allowed to leave. It didn't look too good in Rumania, for example, to have so many people who preferred Israel to the blessings of Pauker's "people's democracy." Tension rose at the end of November 1948. Then anti-Zionist riots broke out—staged by Communists. The Zionist headquarters were stormed and seized. Many people were arrested. Then a fortnight later, all Zionist parties were dissolved. The Communists announced that it was done voluntarily but not many people will believe that one. Delegations were appointed in Israel to try to get to Bucharest and break the deadlock. The delegations were refused a visa into Rumania. Last February, an almost-riot took place, when a rumor got started in Bucharest that the Israeli Legation had started to register people who wanted to go to Palestine. Thousands of Jews surged into the streets around the Israeli Legation. The same rumors got started three times later and the same thing happened, each time. It proved to be more than the Rumanian Communists could stand. They arrested seven Israelis, charging them with organizing the demonstrations. Moshe Sharet, Foreign Minister of Israel, sent a note to Anna Pauker asking for a review of the whole situation but nothing has come of it.

A recent publication gotten out by the Jewish Labor Committee, and entitled "Jews Behind the Iron Curtain," tells the story of why the Jews want to get away from the satellite countries. I understand that the publication will be sent to anyone who wants it. The title is "Jews Behind the Iron Curtain," and it is gotten out by the Jewish Labor Committee. If you want it, write to me and I will turn your requests over to the proper party. I regret that I haven't the time here to go into the really outrageous treatment which Jews have received in countries dominated by the Soviet Union—the country which has posed throughout all the years as the friend of the Jew and the country where no anti-Semitism is practiced or permitted. It should open some eyes.

In the United States there is a Jewish organization which has its eyes very wide open to the facts as they relate to the Soviet Union. I am happy to see it get a good start in American life. It is to have a luncheon on the 2d of May, at the Hotel Martinique, in New York, to celebrate its anniversary. The organization is called The American Jewish League Against Communism, Inc. Its chairman is Alfred Kohlberg, importer and publisher, and its executive director is Rabbi Benjamin Schultz.

On the board of directors are some of the best fighters against communism in this country—and they are all Jews. And it reminds me to say this to you—and I mean it most sincerely. A lot of people are constantly writing in to me or saying in my presence that communism is a Jewish movement—that most of the people connected with communism in this country are Jews. I would like to cite the fact that even though there were some Jews—a large number of Jews among those who participated in the October revolution in Russia, there are only two Jews who now are among the ruling group of Soviet Russia. And as for this country—it is true that a large number of Communists are Jews—larger than the ratio of Jews to the total population would suggest. But I make this point—the same thing is true of anti-Communist Jews—a far greater number of Jews are active anti-Communists in this country than the ratio of Jews to the entire population of the country would suggest. Jews have been active in both camps—but there has been far too much emphasis on the Communist side and not enough on the other. Where do you find bonnier fighters against communism than Alfred Kohlberg, Isaac Don Levine, Eugene Lyons, George Sokolsky, Benjamin Gitlow, Benjamin Mandel, Ben Stolberg, Prof. Sydney Hook, Prof. Harry S. Schwartz, Congressman Abe Multer, Jerzy Glicksman, Morrie Ryskind, of the movies, Sol Levitas, of the New Leader, and Abe Kahn, editor of the Jewish Daily Forward,

and many more I haven't time to name? And most of them are on the board of this comparatively new organization—the American Jewish League Against Communism.

If anticommunism should be bereft of these activists, I do not know where their like would be found. In those men I've just named, I dare say you have fully one-quarter of the big names in the fight against communism in this country. If some of you persist in saying that communism is a Jewish movement, I might make reply—with far greater accuracy—that anticommunism is a Jewish movement. I only wish as large a proportion of "us gentiles" were enlisted as strongly and as effectively in the fight.

This is Jack Beall saying good night from Washington.

Address by Hon. Arthur H. Vandenberg, of Michigan, at Annual Award Dinner of Theodore Roosevelt Memorial Association

EXTENSION OF REMARKS
OF
HON. ARTHUR H. VANDENBERG
OF MICHIGAN
IN THE SENATE OF THE UNITED STATES
Tuesday, April 26 (legislative day of Monday, April 11), 1949

Mr. VANDENBERG. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the address delivered by me last evening in New York City before the Theodore Roosevelt Memorial Association.

The VICE PRESIDENT. The Senator's remarks, delivered before the Theodore Roosevelt Memorial Association, will, without objection, be printed in the RECORD.

The address is as follows:

It is impossible adequately to express my humble gratitude for the distinguished honor which the Theodore Roosevelt Memorial Association has done me with this award. I would not dare pretend that your generous citation is warranted. I prefer to look upon it as a token of our common interest in those ideals of peace with honor and justice for which your rugged patron was the prime exemplar of his day and age.

As a lad of 16 I lost my first job because I briefly knocked off work, without leave, one afternoon in order to see Theodore Roosevelt in a parade which welcomed him to my home town as a candidate for Vice President in 1900. I just had to see my hero. Nearly half a century has passed. I have not changed my mind. He was one of the superlative Americans.

His concept for his country was a square deal for all its citizens with special privileges for none. His decisive character drove him into relentless action for these ideals. He lived and died a strenuous warrior for justice—at home and abroad. He loved America. He gave it all the loyalty of his great heart. He kindled the moral imaginations of his countrymen. He lifted their horizons. Would that he were here today.

In the brief time at my disposal I want to consult his memory with reference to the paramount problem of this critical hour—the course his country should follow when the world longs for a peace that is denied to it by Communist imperialism. It would be unforgivable for anyone to assume to assign him specific attitudes as of today. But he would be the last to deny us consultation with the precepts which he wrote into our national inheritance.

Let us remember, first of all, that he was a man of peace. Peace with righteousness was his dominant passion. That was his favorite word. We are prone to speak of peace with justice and with honor. A thousand times he spoke of peace with righteousness. "I abhor war," he said. "I put peace very high as an agent for bringing about righteousness. But if I must choose between righteousness and peace, I choose righteousness."

He practiced what he preached. Through skillful negotiation he brought the war between Japan and Russia to an end. He deserved and won the Nobel peace prize. He proposed a World Peace League with particular emphasis upon juridical peace. He wanted democratic nations to severally guarantee each other against violation. We struggle today in the lengthened shadow of his prescience.

I repeat he was a man of peace above all else—just as his Nation today, in all of its international adventures, hopes and prays and strives for peace. No matter what the national security requires in defense against potential aggressors, the end result we seek is peace—and no amount of self-serving international slander can make it otherwise. We want a live-and-let-live world.

But Theodore Roosevelt had no illusions about peace. Referring to the 15 years after the first Hague Conference, he said:

"These years have seen immense increase of war. These facts furnish no excuse whatever for our failure to work zealously for peace, but they absolutely require us to understand that it is noxious to work for a peace not based on righteousness, and useless to work for a peace based on righteousness unless we put force back of righteousness."

And so this man of peace was virile in his defense of it. He sent the American battle fleet around the world as a hint to foreign jingoes that though America "spoke softly" it carried a "big stick." He said: "I stand for the safety that is obtained by the performance of duty, not by the sacrifice of duty." He said: "It is a wicked thing to be neutral between right and wrong." He said, "Let us not boast, not insult anyone, but make up our minds coolly what it is necessary to say; say it; and then stand to it, whatever the consequences."

This man of peace fought for righteousness in the Spanish-American War. Subsequently he instantly saw the challenge in World War I. He personally sought to fight again. Because of age he was refused a combat commission. But his four sons went to France. Two were wounded. The youngest was killed. One of my most precious possessions is a longhand note from him thanking me for an editorial I had written on this theme. "When you speak of my boys," he wrote, "you hit me where I live."

I have my own conviction as to what this man of peace—rugged, righteous peace—would say if he were here today. But I leave each of you to your own conclusions. I simply quote:

"Above all let us remember that words count only when they give expression to deeds or are to be translated into them. The leaders of the red terror prattled of peace while they steeped their hands in the blood of the innocent; and many a tyrant has called it peace when he has scourged honest protest into silence. Words must be judged by deeds."

And I give you his magnificently thrilling apostrophe to the conscience of his country—his challenge to every patriot-heart which beats in the sublime American tradition of keeping dates with destiny. Said he:

"My countrymen, I believe in you with all my heart. I am proud that it has been granted me to be a citizen in a nation of such glorious opportunities. We have no choice, we people of the United States, as to whether or not we shall play a great part in the world. That has been determined for us by fate, by the march of events. We have to play that part. All that we can decide is whether we shall play it well or ill."

I submit, my fellow Americans, that these words were written for the ages. I submit that never did they burn with greater glory—never did they more accurately define reality—never did they more vividly point the goal—than they do tonight in our peace-travail of 1949. We have no choice as to whether or not we shall play a vital part in the world. All that we can decide is whether we shall play it well or ill. His memory bids us play it well. I dare to think we will.

And how do we "play it well"?

There are conscientious differences of opinion. No sane man can say: "I know the answer." We must choose between calculated risks. We must neither overextend ourselves nor overpromise others. One choice, however, is denied to us unless we are ready for suicide. Theodore Roosevelt said it all half a century ago. We cannot withdraw within ourselves. The most powerful nation on earth either justifies its preeminence or loses it. It either stands or falls. No matter how feverishly we might seek to insulate ourselves, if world war III ever starts, it will be aimed at us. These are the facts of life. They are sharply different facts than they were before Pearl Harbor and Hiroshimo. It were best for us to acknowledge them in advance and act accordingly—not only for the sake of all the precious freedoms personified by western civilization, but also and particularly for the sake of the survival of the United States of America.

How do we "play it well"?

1. We see to it that our international conduct is scrupulously and fearlessly honest; that it never seeks unfair advantage; that it never gives needless offense; that it always welcomes good-faith negotiation; that it is as friendly as it is firm; that it is as dependable as it is fair.

2. We ever prove our devotion to the end reseult of just the honorable and righteous peace—without a thought of conquest over 1 inch of foreign territory or over one alien soul.

3. We cooperate with like-minded, peace-living, independent nations to preserve our common inheritance of freedom—as exemplified in the Marshall plan and as spelled out in the principles and purposes of the United Nations and in the Rio and Atlantic Pacts. Particularly in the latter we discourage any potential armed aggressor's mistaken concept that he can "divide and conquer" this community of freedom. We advise him in advance that he cannot win.

4. We crave a brotherhood of good neighbors with every other people on this anxious and unhappy globe. But we shall not be booby-trapped. There is no trace of Munich in our souls.

5. In the words of Theodore Roosevelt, we make up our minds cooly what it is necessary to say; say it; and then stand to it, whatever the consequences.

6. Learning from the past we must be ready for the future. This means a plan for war if an armed aggressor attacks. But even more important and even more difficult, it means a plan for peace which as yet only dimly emerges on the trestle board of time.

Yet, Mr. Chairman, peace could be so near though it often seems so far. There will be no world war III unless Communist Russia starts it; and there will be no prior armed aggression upon the Soviets—least of all from the United States—to provoke any such calamity. The truth is that this whole earth—barring only Moscow and its satellites and its fifth columns—is demonstrably ready

and eager to "live and let live" in a free world of freemen under the authority of the United Nations. We are continuously prepared to demonstrate our own good faith in this behalf—as we do, for example, with our spurned proposal for 40 years of mutual defense against resurgent nazism.

There can be no rational doubt about our attitudes. Though the peoples of the earth are constantly reminded of the atom bomb's catastrophic threat to humankind—a prospect which would give even madmen pause—yet the civilized world's greatest tribute to its confidence in the United States is its lack of fear that our A-bomb monopoly will be misused. No amount of self-serving, anti-American propaganda—no conspiracy of slander against our international motives—can wipe out this simple but overwhelming demonstration of supreme faith. Incontestably, there it is. And it is further warranted by our programs, unprecedented in human history, to help other nations help themselves.

But there is another force of even greater potential to the lives of men and nations—and it is entirely in the hands of Soviet Russia's rules. It is, ironically, there monopoly in the peace destiny of the years that lie ahead.

Greater in its effects than our whole storehouse of atom bombs would be an announcement tonight—backed by deeds to give it some belated semblance of reality—that Moscow seeks to heal the East-West breach in world relations; that communism is ready to drop its plans for external conquest and subversion; that the Politburo is truly ready for mutual, good-faith efforts to create a livable world in which free self-determination shall decide any nation's accepted ideology; and that effectively disciplined, adequately supervised, universal disarmament shall be the world's progressive goal on a new agenda of hope for the people of the Union of Soviet Socialist Republics and for all the other people in a friendly world. Even to lift the Berlin blockade would be startling sunshine in a dismal sky.

Perhaps I speak in idle fables. Perhaps I fail to account for the Kremlin's suspicions of our own purposes. Perhaps the Marxian conflict is an inevitable denial of peace. Perhaps righteous peace cannot be put dependably on paper. Certainly we have learned that merely putting it on paper is not enough—as witness the fact, for example, that not even the Litvinov agreements upon which we based our recognition of Russia 15 years ago have been honored. But regardless of discouragements the pursuit of righteous peace must ever be our open-minded aim and prayer. At least I have summed up the paramount problem of the world in a single paragraph. I have put responsibility where it belongs.

Mr. Chairman, Theodore Roosevelt carried a friendly and righteous "big stick." Yet, he also won the Nobel peace prize. He thus personified the double role which I would assign to my country tonight.

Again, I thank the Theodore Roosevelt Memorial Association for its distinguished consideration.

Mismanagement of National Fiscal Policy

EXTENSION OF REMARKS
OF
HON. WAYNE MORSE
OF OREGON
IN THE SENATE OF THE UNITED STATES
Tuesday, April 26 (legislative day of Monday, April 11), 1949

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Avert the Danger," published in the Bend (Oreg.) Bulletin of April 4, 1949.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

AVERT THE DANGER

Over the past 16 years we have warned repeatedly of the dangers of Government wastefulness, of the inevitability of catastrophe as the sequel to an inflation deliberately forced upon the Nation in the name of recovery, of the folly of debt financing. We have stressed the disaster that will follow if commitments made to obtain high-priced material and services must be met at a time when prices (and incomes) have returned to lower levels. And, because the conditions and policies against which we have warned are not matters of necessity but of administrative choice, we have urged economy and efficiency and debt reduction—as remedies and as preventive measures.

Because the need for these is so immediate and so pressing, we are encouraged by an editorial statement in the widely read Detroit Free Press, bearing emphatically and logically on the same associated subjects. It appears under the heading, "The Great Danger," and is as follows:

"This country is faced with the gravest danger in its history.

"It is a disaster worse than war.

"For we have always been able before to rebuild after war and to grow mightier.

"That time has gone.

"The imminent danger with which we are confronted transcends all political differences.

"The cold stark ugly fact is that the United States is rapidly drifting into national bankruptcy.

"Unless something is done to stem the tide we will be, within a very few years, no better off than the nations of Europe.

"It is this condition for which the Moscow Communists are patiently and hopefully waiting.

"They know what is coming unless we wake up. They can well afford to wait.

"The insidious enemy which is serving Moscow now as the deadliest of fifth columnists is mismanagement.

"It is bitterly ironic—but a great laugh for Stalin—that America upon whose altars we have placed the god of efficiency is dying of dry rot because of gross and stupid inefficiency.

"The most powerful business corporation in the United States would go into bankruptcy within a year if it were so wretchedly managed as is the business of our Federal Government today.

"There is this difference, however: The private corporation, mismanaged and criminally extravagant, would pay for its own sins and go broke; but the Government does not go out of business. It simply borrows more money which has to be paid through taxation until all business ceases, the factories remain idle and the people starve.

"Eighteen years ago it cost $4,600,000,000 to run the Federal Government.

"Today it costs $41,858,000,000.

"Under President Hoover there were 300 agencies.

"Today there are 1,800.

"The reason for this?

"Lack of organization and the fight of the bureaucrats of both parties to block reform.

"In 1931 Hoover begged Congress to give him authority to get the Government on a working basis. Both Republicans and Democrats rejected the proposal for just one reason:

"It might affect the soft jobs of political parasites of both parties.

"Ten times Hoover pleaded and 10 times was he refused.

"Red tape was killing the Nation.

"With the second war over in 1945 it was obvious to everybody regardless of party affiliations that something had to be done.

"President Truman and the Congress agreed.

"To eliminate politics it was also agreed that there should be six Democrats and six Republicans on a commission to draw up a plan of reform.

"It was unanimously agreed that Herbert Hoover was the one man in all the United States best qualified to head the group.

"Mr. Hoover is 73 years of age. He has no political ambitions of any kind. Regardless of party lines he has served the Nation under President Truman faithfully and brilliantly both in war and peace.

"The Commission has drawn the best brains from all walks of life in the United States.

"Never before, not even in time of war, has there been such a galaxy of experts on management.

"For 2 years these experts have studied our Government. Now they have ready 15 separate reports. All of these mesh into one magnificent presentation of what is needed to save us from national bankruptcy, and to meet Moscow.

"No American of intelligence can read these reports without gasping in horror at our dangers.

"Yet there is a grave possibility that the greatest task of its kind ever accomplished in the history of America will go for naught.

"The mean and petty politicians of both parties are seeking to destroy it for their own selfish ends.

"As Hoover stated to the Senate committee, the danger is as it was in all other such efforts, 'They died of grasshopper bites.'

"Here, then, is the call to the American people of every honest shade of political belief.

"Here is the challenge to save us from the fate for which Moscow is waiting.

"Shall we continue to drift?

"Or shall we be aroused in time by a mighty outburst of public sentiment?

"The people of America have crusaded for war bonds, for Red Cross, for community chests, for every worthy effort devised by the mind of man.

"Twice in one generation they have gone to war to fight for human liberty. They have poured forth the lifeblood of their youth and their treasure. They have willingly and without protest taken upon their backs the most staggering burden of debt history has ever recorded.

"Has all this been in vain?

"The Bible has said that where there is no vision the people perish.

"Will the leaders of the Republican and Democratic Parties, the National Association of Manufacturers, and the AFL and the CIO, the church leaders of all denominations, every civic-minded group, every noonday club, every individual citizen, unite as we have always done in war, to campaign against the evil which is destroying us?

"Will there come a clarion call for battle?

"Only public opinion can save the United States from the bureaucrats who stifle us.

"The politicians of neither party will move unless they hear the mighty roar of an aroused populace. That is what they dread, the only thing they fear.

"'Public sentiment is everything,' said Lincoln. 'With public sentiment nothing can fail. Without it nothing can succeed.'

"Our one hope is the people themselves.

"Facing the Communist horde, surrounded as we are by darkness and chaos across the world, this must be a holy crusade, a fight for God, for country, and for humanity."

Our New Horizons

EXTENSION OF REMARKS
OF

HON. KENNETH S. WHERRY

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Monday, April 25 (legislative day of Monday, April 11), 1949

Mr. WHERRY. Mr. President, I ask unanimous consent to place in the Appendix of the RECORD an address delivered on Friday, April 22, by Benjamin M. Namm, of Brooklyn, immediate past president of the National Retail Dry Goods Association, before the Piedmont Sales Conference, held at Charlotte, N. C., which reflects the concern widely held among independent businessmen and Americans generally over pressures existent today to substitute State socialism for our traditional freedoms.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

OUR NEW HORIZONS

There are a number of reasons why I always am pleased to come to Charlotte. Any merchant can profit from even a casual visit to your great retail stores and this is particularly true when they are in the process of organizing a series of great sales to celebrate the two hundredth anniversary of your fair city. Charlotte was, I understand, settled in 1750, although it was not incorporated until 16 years later.

The main attraction here, however, has always consisted of your many fine citizens.

And, I would like to pay tribute to the publisher and editors of your great newspaper, the Charlotte Observer. Its timely editorials have reverberated not only throughout the South but also throughout the entire land. Let me quote: "The choice lies between European state socialism and American private enterprise." This they have said, time and again, and never were words more truly spoken.

LEFT OR RIGHT

This great land of ours is indeed at the crossroads. One road leads sharply to the left and is beset with the obstacles of regimentation, bureaucracy, and statism. The other road, which is on the right side, is paved with the solid blocks of incentive, individualism, and democracy.

The theme of your conference is New Horizons for Selling. It suggests the lines in Edmond Rostand's Chanticleer which are as follows:

"And sounding in advance its victory, my song sets forth so clear, so proud, so peremptory, that the horizon, seized with a rosy trembling, obeys me."

Yes, we need a new horizon for selling. We men and women of business need a song of economic freedom so clear and so challenging, that the crimson-tinged horizon will obey our call.

Let me put it briefly: During the past decade, American business has done a fine job of creating mass production and mass distribution. Unfortunately, we have done a sorry job of creating mass understanding.

The greatest single lesson that we must learn is to sell our system along with our products.

Last month, Fortune magazine said:

"Soft socialism threatens the United States of America—this kind of socialism is technically different from the old-fashioned brand. But it leads to the same result—a vast and dangerous increase in the power of the state over men's lives."

Over 14,000,000 families, almost 40 percent of our total population, now receive regular monthly checks from our Federal Government. We have over 2,000,000 Federal employees, four times as many as we had 10 years ago. It costs us as much to maintain our Federal Government, with its 1,816 sprawling departments, agencies, and bureaus, as it costs us to feed every man, woman, and child in the country.

FEDERAL PARTICIPATION IN BUSINESS

Our Federal Government is involved in business-type enterprises to the staggering total of $164,000,000,000. This amounts to almost $1,200 for every man, woman, and child in the country.

The enormous scope of Federal participation in business was revealed in the recent report of the Hoover Commission which said:

"The Government owns or has financial interests in concerns which engage directly or indirectly in lending money, guaranteeing loans and deposits, writing life insurance; producing, distributing, and selling electric power and fertilizers; operation of railroads and ships; purchasing and selling of farm products, and smelting and sale of metals.

"The Government's direct investment in these enterprises is in excess of $20,000,000,000, and there are further authorized commitments to supply about $14,000,000,000 to them. In addition, the Government guarantees directly or indirectly about $90,000,000,000 of deposits or mortgages, and the life insurance written by the Government approaches $40,000,000,000."

It is significant to note that our Federal Government is now involved in business-type enterprises to an amount exceeding, in dollar volume, all the goods and services sold at retail in the entire country during the past year.

THE LAST FRONTIER

It must be apparent to all that this precious land of ours, along with Canada, now represents the last great hope for free and private enterprise throughout the world. Virtually all of the other countries are engulfed in some form or other of controlled economy, varying in degree from attenuated socialism to full-fledged communism.

Russia is an expanding imperialism which boasts of the fact that it dominates 180 different nationalities. It is ruled by a revolutionary dictatorship whose cardinal doctrine is the inevitability of war between the Soviet Republic and the bourgeois states. That doctrine was subordinated when Russia was attacked by Hitler and needed bourgeois help. But Marshal Stalin revived the issue clearly in his famous speech of February 9, 1946. The imminent downfall of capitalism for which he then called has been reiterated since then, day in and day out.

France, ravaged by two wars in 20 years, has been too torn with internal strife to plan an effective role in the world struggle. One-third of her voters belong to the Communist Party. Their leader, Maurice Thorez, said, a few weeks ago:

"In the event of war, French workers will receive the Soviet Army with open arms and do everything to render war against the Soviet Union not just difficult but impossible."

This utterance was promptly paraphrased by Palmiro Togliatti, the leader of the Communist Party in Italy. Communist leaders throughout the British Empire then made similar statements.

ENGLAND'S SOCIALISM

Commenting upon the results of socialism in England several months ago, the London Sunday Times editorialized as follows:

"In England there is no incentive to bold undertakings * * * Today it is safer to be a bureaucrat than a maker and the young men know it * * * Socialism is competition without prizes, boredom without hope, war without victory, and statistics without end * * *. It takes the heart out of young men * * *. It is not only politically false but morally destructive."

Ten years ago, England still had 11,000 individuals with net incomes exceeding $20,000 per year. Today, thanks to socialism, there are less than 250 of these "capitalists."

Winston Churchill said recently:

"We in England shall be voting (in 1950) not only for freedom from stifling and paralyzing socialism but also for bare survival. Another Socialist Parliament would seal our fate in world history and close by our own actions, amid self-inflicted gloom and squalor, the marvelous story of Britain's greatness."

Unfortunately, our own political leaders have not followed the economic doctrines which Mr. Churchill has been preaching ever since he first took public office. Instead, they have lent a ready ear to England's leading liberal "economists". First came Lord Maynard Keynes and his twin theories of "pump priming" and "deficit financing." Then came Sir William Beveridge and his welfare program which promised "Security to all from the cradle to the grave." Not to mention the ubiquitous Prof. Harold Laski.

DISASTROUS RESULTS HERE

Thanks largely to our own pump priming and deficit financing, the American dollar is now worth about 50 cents. This is primarily due to the continuous disregard of timely warnings by such sound economists as Bernard M. Baruch who repeatedly admonished, "Stop increasing the money supply." Incidentally, this money supply has almost tripled in the last 10 years.

Thanks largely to our own emulation of England's socialistic measures, our people have suffered the loss of much individual initiative. A recent survey showed that, out of every five people queried, two preferred a job with some Government agency rather than a job in private enterprise. My namesake, Benjamin Harrison, is said to have warned that it was "the duty of the people to support the Government." More recent leaders seem to have encouraged the bizarre belief that it is "the duty of the Government to support the people."

Meanwhile, our Government has discouraged capitalism by hamstringing private investment through unwise tax policies. In the past 20 years, the top surtax rate on personal income has jumped from 20 percent to 88 percent. The minimum rate on estates has jumped from 20 percent to 77 percent. The flat corporation rate has jumped from 11 percent to 38 percent, with the end not yet in sight.

These heavy levies, including double taxation on dividends, have virtually dried up our country's risk capital and venture money, upon which business replacement and expansion is almost entirely dependent.

In 1948, the 420,000 corporations in the United States needed more than $25,000,000,000 for expansion and improvements, less than $1,000,000,000 of this was available by investments in common-stock issues. Almost two-thirds of this money came from retained earnings and the balance from institutional loans.

Yes, it would seem by all this that we have made a deep foray down the road which the Charlotte Observer has labeled "European State Socialism" in contradistinction to the road marked: "American Private Enterprise." Only a few months ago, a distinguished Justice of the United States Supreme Court revealed his own private choice by saying: "The human welfare state is the greatest political invention of the twentieth century. All groups in society—farmers, businessmen, and the professions—are its beneficiaries."

SOCIALISTIC MEASURES IN VARIOUS STATES

Let us now examine the tendency of our individual States to legislate along socialistic

lines. Colorado enacted a social-welfare program a few years back that had the State on the verge of bankruptcy, until the law was changed.

California has recently enacted the world's most luxurious old-age-pension plan. It will cost about $125,000,000 annually, or $42 per capita. This amount is added to what had previously been considered a rather costly program. Incidentally, all these pension payments (only 5 years' residence being required) become a first lien on any money in the State treasury. They take precedence over money for schools, highways, prisons, asylums, etc. And the law forbids anyone to sue a pensioner for any debt he may incur.

In Oregon last November, the voters adopted an amendment to the State's constitution. Under this amendment, the State was called upon to pay every man over 65 and every woman over 60 a pension of $50 per month, regardless of need. Fortunately even a constitutional amendment can be made inoperative by a legal opinion and such an opinion was issued and supported by the legislature. Without such an opinion over $100,000,000 would have been added each year to that State's usual budget of $35,000,000. Security almost meant bankruptcy in Oregon.

Getting nearer to your own South, the Governor of Florida opened the current session of his State's legislature a few weeks ago with a prayer:

"The State faces a financial crisis of unprecedented proportions," he said. "Only God's guidance can save us from the disgrace of insolvency."

THE EFFECT ABROAD

News of this nature must, when it reaches the Kremlin, sound like money from home to Uncle Joe Stalin and the men who comprise his Politburo. It seems to fit precisely into the revolutionary pattern laid down by their arch-hero Nikolas Lenin who said in 1920: "The best way to destroy the capitalistic system is to debauch the currency. By a continuing process of inflation, government can confiscate, secretly and unobserved, an important part of the wealth of its citizens."

Yes, the Communists in Russia undoubtedly believe that the economic trend in this country is something for them to cheer about. But you and I know, of course, that they have another think coming.

For years many Americans and most Europeans looked upon socialism and planning as the wave of the future. Today, the vast majority of Americans have come to realize instinctively that the American system of free and private enterprise, although far from perfect, is still the greatest economic system ever devised.

Russia has never realized this instinctive common sense of the American people. Our mistake, on the other hand, has been that we took it too much for granted. We failed to understand that instinct alone is not enough to guide a nation of people, and that instinct alone is not enough to run the most complex economy in the world.

THE EFFECT AT HOME

Yes, we capitalists have made a serious mistake. We have remained passive during a critical period in which the unorganized majority of liberty-loving Americans were being propagandized and high-pressured.

During that period, the highly organized minority groups really went to town. Communistic doctrines, socialistic cure-alls, political quackery, and half-baked theories were the order of the day. Some of them worked on minds of the uninformed like yeast in a loaf of bread.

Taking full advantage of the fact that business was making little or no effort to sell its system along with its products, the enemies of business gave no quarter. They were adept with the use of lies, distortions, and half-truths. They were old hands at smearing, name-calling, and ridicule. Let us not underestimate the success of their efforts. They actually succeeded in making tens of millions of our citizens believe that democracy does not work here. They continuously made the businessman of our country appear as the villain, not the hero, of the great American story.

WHY SEEK UTOPIA WHEN WE HAVE THE PROMISED LAND?

Contrast the illusory utopias of socialism with the Promised Land in which the American people already live. Consider the degree of consumer ownership in this country of the great modern conveniences. And consider at the same time, if you will, the ridiculous ease in terms of hours of work which makes such possession possible. Also the fact that anyone can get these things if he's willing to work for them. The statistics are prodigious and the conditions they reflect might be called the miracle of every street. For example, over 30,000,000 cars are running over our roads, representing 85 percent of the world's automobiles. Fifty-four percent of the telephones in existence are here in the United States, more than 36,000,000 of them.

Folks in the United States own over 37,000,000 radios, over 20,000,000 electric washers, almost 5,000,000 electric ranges, more than 16,000,000 vacuum cleaners, and not quite 24,000,000 electric refrigerators. These figures are illustrative of myriad satisfactions in other fields of merchandising and service. They are paid for in terms of labor, of which the typical unit might be the cotton shirt, which it takes an American workman 3 hours to earn, whereas his opposite number in Russia would have to serve 320 hours.

And everything else that we produce is available to all on the same easy terms. This sounds like an advertisement—and it is—an ad for America.

But the requirements of our people and the satisfaction of those requirements as the normal outcome of our scheme of things is a sufficient demonstration of the practicality of our handling of the facts of life on a continental scale. You have lately read the estimates of the Bureau of the Census that there are now 148,000,000 people in this country. The Department of Commerce calculates that, this year, these people will spend $130,000,000,000 in stores of one kind and another. They spend a good deal more than that but that is what they are buying in stores. It's about 72 percent of their total expenditures for goods and services. It's $878.37 per capita, for every man, woman, and child in our population. It will take place in the stores of 1,771,000 retailers and will engage the services of 7,500,000 men and women, or over 5 percent of all Americans.

TELL THE PEOPLE THE TRUTH

Abraham Lincoln once said: "I have complete faith in the common sense of the American people. Tell the people the truth! Then the Nation will be saved."

We men and women of business can help save the Nation if we tell the people the truth. Especially those people who are not too familiar with the economic facts of life and therefore become easy prey for leftish propagandists. But so much for generalities and now for a few specific suggestions:

1. Let's tell the public the truth about profits. Contrary to belief, net profits are anything but high. They average less than 5 cents of the customer's dollar. Even that figure is illusory and should be weighted to reflect inventory gains (which are subject to sudden reversal), and inadequate depreciation reserves (which are based on old costs and not replacement costs).

2. Let's tell the public the truth about monopoly. Contrary to belief, American business is not controlled by a chosen few. It is owned directly by 14,000,000 individual stockholders and indirectly by 80,000,000 policyholders and depositors. There are 5,000,000 business firms and 6,000,000 farms.

3. Let's tell the public the truth about wealth. Contrary to belief, the bulk of our national income does not go to rich people. Eighty-three percent goes to people whose incomes are less than $5,000 per year. Less than 5 percent goes to people whose incomes exceed $25,000 per year.

4. Let's tell the public the truth about dividends. Contrary to belief, stockholders and management do not get more for their share than labor. Labor receives four times as much as stockholders and management combined.

5. Let's tell the public the truth about wages. Contrary to belief, prices have not risen faster than wages. The consumer price index was 99.4 in 1939 and it was 170.9 in January 1949, an increase of 72 percent. Average earnings were 63 cents per hour in 1939 and $1.37 per hour in January 1949, an increase of 116 percent.

6. Let's tell the public the truth about taxes. Contrary to belief, business cannot afford to pay more taxes. On the contrary, it is being overtaxed and forced into a progressively weak financial position.

7. Let's tell the public the truth about capital. Contrary to belief, business does not have plenty of capital. Its plant and equipment is rapidly becoming antiquated. It is in great need of additional working capital and until this situation is remedied, the job of every workingman is being jeopardized.

8. Let's tell the public the truth about inflation. Contrary to belief, inflation is not the result of high prices. On the contrary, high prices are the result of inflation. Deficit financing and monetary tinkering by Government agencies are the primary cause of inflation and resultant high prices.

9. Let's tell the public the truth about losses. Contrary to belief, during the years between World War I and World War II, more business concerns reported an annual loss than a profit. One out of every three new retail establishments closed down the first year of operation.

10. Let's tell the public the truth about price control. Contrary to belief, virtually every merchant who operated under Chester Bowles' OPA will testify that these controls resulted in artificial shortages, decreased production, quality deterioration, black markets and higher prices than would have otherwise prevailed.

CONCLUSION

An informed America, which knew the true score on these and similar questions, would never turn to the left. As Dave Ovens once said: "No man would ever enter the door marked 'state socialism' if the price of admission was clearly shown above the door."

That's our job, ladies and gentlemen, to reveal the high price of admission and to rip off the phony labels and to debunk all the lying claims. We can't do the job, however, by maintaining a dignified silence as in the past. We need to take off our coats, and even our vests, to sell our system along with our products—and sell like we never sold before.

In my humble opinion, the great rank and file of American consumers, working people, farmers, and small investors are hungry for facts about business. They instinctively hate regimentation and collectivism and they are eager to be sold on the American way of life. For many years past the Communists have been busy selling America short. During the years ahead it's up to us to sell America on the long side.

There's a passage in the Good Book which says: "For if the trumpet gives an uncertain sound, who shall prepare himself to battle?" Heretofore, the trumpets of business have given a most uncertain sound. But if our

trumpets sound a ringing note so clear and so compelling that none may fail hear, then we will surely find this new horizon of democracy and prosperity that this conference is so gloriously seeking.

Charity Trusts

EXTENSION OF REMARKS
OF
HON. CHARLES W. TOBEY
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES

Tuesday, April 26 (legislative day of Monday, April 11), 1949

Mr. TOBEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "To Curb the Charity Trust Racket," published in the St. Louis Post-Dispatch of April 22, 1949, embodying an editorial from the Washington Post, the subject being the so-called charity trusts, which were under investigation during the last 3 months of 1948, and because of which the taxpayers are being burdened with billions of dollars of taxes from which they would be freed if a law were placed in effect to tax so-called charity trusts, which, in the last analysis, are pseudo trusts.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

TO CURB THE CHARITY TRUST RACKET

After probing the tax-dodging of Textron, Inc., Tobey committee proposes to make tax-exempt charitable trusts pay off 85 percent of each year's income and undergo publicity; newspaper believes such a law would be "a powerful deterrent to unethical practices."

[From the Washington Post]

The tax-exemption privileges accorded religious, educational and charitable institutions, labor unions, and farmer cooperatives have been the target of constant attack in recent years. The complaint is that these tax-exempt organizations frequently engage in business activities and thus have an unfair competitive advantage over concerns subject to Federal income taxation. The problem thus raised has engaged the attention of Congress for some time, and a strong case exists for remedial action to restrict or abolish forms of tax exemption that foster unfair competition.

However, the Tobey committee's investigation of the so-called charitable trusts connected with Textron, Inc., deals with a different problem—that of tax avoidance. This inquiry has uncovered really shocking evidence of the ease with which supposedly charitable organizations can be used by astute businessmen to escape payment of taxes and obtain other advantages from the employment of trust funds at the expense of the ostensible beneficiaries.

By devious financial maneuverings, Textron was able to acquire risk capital through trusts set up or suggested by its president, using them in all sorts of business transactions, including sales and leases of plants and equipment, and loans to the company and its affiliates. A witness who organized one of the Textron trusts admitted that the provisions of the trust indentures made it possible for a manufacturer to avoid taxes, have funds "at his beck and call" and "milk" the trusts of their assets.

That the milking process was thorough is indicated by the fact that of the millions of dollars received by the Textron trusts, only an infinitesimal portion was paid to the beneficiaries.

For example, the Rhode Island Charities Trust, allegedly established for the benefit of the Providence Community Chest, had net earnings of about $4,000,000 during a 3-year period, although its total contributions to the Chest amounted to only $85,000. During that same period payments to trustees and bank charges totaled $140,000.

Another trust, established for benefit of the Massachusetts Institute of Technology, has never paid that institution a single dollar

There is reason to believe that countless other groups are using charitable foundations as a means of tax avoidance and for other ulterior purposes. Senator Tobey has accordingly introduced a bill which provides that no charitable trust shall receive the benefits of tax exemption unless it has actually paid the beneficiaries 85 percent of its annual gross revenue.

This restriction would put an end to the practices indulged in by pseudo trusts of the Textron type. Yet it would allow a reasonable margin for overhead expenses of bona fide charitable trusts.

The bill also requires all trusts which invest their funds in or make loans to manufacturing concerns engaged in interstate commerce to register with the Secretary of Commerce and make periodic reports to the beneficiaries and to Congress. Publicity of this sort would be a powerful deterrent to indulgence in the unethical practices revealed by the Tobey committee's pioneer survey of a neglected but fertile field of tax avoidance.

The Kravchenko Trial in Paris

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES

Tuesday, April 26 (legislative day of Monday, April 11), 1949

Mr. MUNDT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Courtroom Victory in Paris for Kravchenko Was Russian Defeat," published in a recent issue of the Christian Science Monitor, pertaining to the Kravchenko trial in Paris. For the first time in history communism has been forced to defend itself in a court of law and the verdict of the jury has been "guilty as charged." I refer to the recent sensational libel suit in Paris, France, in which Victor Kravchenko, author of I Chose Freedom, brought suit against a Communist newspaper in France and in which the Soviet Government interested itself intensely in a vain effort to discredit and disprove the evidence which Mr. Kravchenko set forth in his startling book describing tyrannical conditions in Russia under the Communists.

I am including with these remarks, Mr. President, an interesting and informative detailed report of that trial written by an eyewitness, Mr. Volney D. Hurd of the Christian Science Monitor.

It happens that the junior Senator from South Dakota was an early and regular consultant with Mr. Kravchenko as he was planning the prosecution of this lawsuit and I was among those working with the American and French Governments to make it possible for Mr. Kravchenko to leave this country and to return so that he could be in Paris for this epochal trial of communism. Moscow made every effort to prevent the trial from being held and to win the lawsuit for its Communist sheet in Paris once it was clear the French authorities were insisting that the trial be held. In spite of everything, however, the trial resulted in a clear-cut convincing victory for Kravchenko and a devastating defeat for communism through its inability to disprove a single assertion made in I Chose Freedom.

Thus today communism stands convicted in a court of law as the ruthless, godless, aggressive, and conspiratorial tyranny which it actually is and American Communists are once again highlighted and labeled as the treasonable characters which they actually are.

America owes to Victor Kravchenko a great debt of gratitude for his courageous insistence that this trial be held and he has rendered the cause of freedom throughout the world a signal service by risking his life and his reputation by going to France and prosecuting this case at his own expense. I hope citizens generally will read carefully the report from the Christian Science Monitor.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

COURTROOM VICTORY IN PARIS FOR KRAVCHENKO WAS RUSSIAN DEFEAT

(By Volney D. Hurd)

PARIS.—Regardless of the bizarre elements in the case against the French weekly Les Lettres Francaises brought by Victor Kravchenko, author of I Chose Freedom, the case gave a considerable fillip to the Western cause in France.

Newspapers in the United States took the case quite in stride. Cables confirm this. But for the Continent, it was a major piece of business. A minuscule but dynamic David critic of Russia seemed pitted against a veritable Soviet Goliath. It seemed that here the West was challenging the Soviets on a major propaganda battlefield.

As the trial proceeded eyes began to open at the success of Kravchenko and the maladroit showing of the Communists. The very charges in the French publication that he was too ignorant to write such a story of conditions in Russia was belied before everyone by his brilliant wit and swift rebuttal.

And when Kravchenko so embarrassed a Russian general, sent to Paris from Moscow by the Soviet Government as a witness, that the latter became confused with his set-piece speech and had to leave the courtroom, the French cheered.

LOSS OF FACE

If Moscow had been wise enough not to have recognized the case officially, it would have saved much loss of face. But, unfortunately for a police state, everything is tied to the Government. Witnesses who come out must be recognized, therefore, as virtually Government witnesses. Whatever they do reflects right back on that Government. And Moscow, in addition, made it clear that these were Kremlin-backed people.

To Americans, Kravchenko's book was just one piece out of thousands on what goes on in the Russian state. The press has well served the American public in this direction.

But in France the press had published little detail of Soviet control and Communist bureaucratic method. And so the Kravchenko book was a sort of all-in-one-piece exposé which stirred the French public with a new sense of what is behind communism. To France it all seemed almost beyond belief.

But here was Kravchenko, who had quit his post on a Soviet purchasing commission in Washington to attack the Soviet regime in his book. France always has had a deep feeling for the man with a cause, particularly if that cause has humanistic overtones.

He had come to a country which had been on the verge of falling into the Communists' hands for several years. This caused no end of admiration. His bearing at the first press conference, too, captured the French. He bounded around, literally asking to be let at his accusers, and said he was fighting the Soviet Government itself.

SOUNDING BOARD

The very disorder of French courtroom procedure set up a spotlight which kept the Continent's attention riveted on this scene for weeks. It was almost as big a sounding board as the United Nations and 100 times more dramatic and exciting. As the case proceeded there was little doubt about the judgment. The Communists never made a case for themselves and Kravchenko delivered challenge after challenge to Soviet Russia which were reproduced practically everywhere in France and much of the rest of the Continent.

The French court ruled that Kravchenko had been libeled. It ordered Claude Morgan, editor and publisher of the newspaper, to pay costs of the 3 weeks' trial, estimated at $18,000, fined him $300, and awarded Kravchenko $150 damages.

It also ordered M. Morgan to print the court's decision on his front page, and advised Kravchenko to abandon his Russian nationality.

The fine against M. Morgan was significant because the court thus ruled that he also had committed an offense against the state.

Kravchenko, who had demanded 10,000,000 francs ($30,000) damages, hailed the decision as a "moral victory."

There is no doubt that this trial contributed definitely to the whole Communist recession which has been taking place in recent months. The dross of its courtroom fireworks have burned off, and the pure grains now stand out. It was not merely a victory for Kravchenko, it was one also for the West.

Aid to Education

EXTENSION OF REMARKS

OF

HON. MATTHEW M. NEELY

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Tuesday, April 26 (legislative day of Monday, April 11), 1949

Mr. NEELY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very informative letter on the subject of aid to education, written recently by Dr. Edgar Fuller, formerly commissioner of education for the State of New Hampshire, and former Acting Chief of the Aviation Education Division of the Civil Aeronautics Administration, who now is Executive Secretary of the National Council of Chief State School Officers. The letter appeared in the New York Times for April 24, 1949.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

TO AID EDUCATION—PENDING BILL DEFENDED AGAINST CHARGES OF FEDERAL CONTROL

(The writer of the following letter, formerly commissioner of education for the State of New Hampshire and former Acting Chief of the Aviation Education Division of the Civil Aeronautics Administration, is executive secretary of the National Council of Chief State School Officers.)

TO THE EDITOR OF THE NEW YORK TIMES:

Benjamin Fine's article in the Times of April 17, in which he relayed the argument of the United States Chamber of Commerce against Federal aid to education, merely rehashes old arguments which have been completely answered time after time.

Only a few decades ago, national, State, and local chambers of commerce consistently opposed educational budgets. Local chambers relaxed first, and now very commonly support adequate budgets for public education. More recently, some State chambers of commerce have seen the light, and are willing to pay to preserve the American public-school system which is probably the most important hallmark of American democracy. The United States Chamber of Commerce stands more and more alone in preferring the protection of concentrated wealth to the adequate support of public education everywhere in the United States.

EFFECT OF FUNDS

Our educational slums persist. Recent experience in Georgia, Nebraska, and elsewhere indicates that they will continue to persist until Federal aid is provided. The chamber's argument that Federal aid is not needed is obviously untrue. The chamber immediately admits this, of course, by contending that $300,000,000 of Federal aid annually is not enough to solve the problems of American education. Not enough, true, but helpful.

The statement that Federal aid would retard necessary consolidation of local districts is false, unless any financial support at all from any source is similarly regarded. Federal aid would probably be added to State aid in many States, and the combined funds presumably would have no more effect on district reorganization than does present financing. Some States would undoubtedly distribute the Federal funds to local districts on a basis which would encourage sound local district organization.

The $300,000,000 of Federal aid proposed by S. 246 for distribution each year would amount to only about 10 percent of public elementary and secondary school costs in the country. The States are already supplying, on an average, more than three times as much. Since the Federal-aid funds would be distributed by the States according to State plans, the argument that local initiative would be undermined has no more strength than the argument that State aid undermines such local initiative. The chamber says it approves increased State aid. The truth is that local initiative is often extremely weak because of financial nonsupport. Federal aid would revitalize local initiative in thousands of school districts.

BASIS FOR CONTROL

The argument of the chamber which deserves most careful consideration is that Federal aid to education will lead to Federal control of education. The Thomas-Taft bill (S. 246) and similar legislation is based on the theory of State and local control and provides every possible protection against Federal control of education. The bill is revolutionary in this respect, since none of the other numerous Federal aids to education has ever gone so far in protecting against Federal controls. The cliché of Federal control ought to be exposed as the red herring it is.

Federal control of education may grow out of: (1) Constitutional requirements as interpreted by the courts, (2) special Federal aids for special educational programs which require Federal controls to insure that the Federal funds are spent for the defined special purposes, (3) provisions in the Federal statutes for exercise of discretionary controls by Federal officials, (4) provision for detailed reporting to the Federal Government, stimulated by excessive funds for Federal administration, (5) direct Federal dealing with 102,000 local school districts, most of which are entirely unable to resist Federal encroachments except as they are protected by dealing through their respective State educational agencies, and (6) vesting of administration of Federal aids to education in noneducational Federal agencies, which deal far more on the basis of control and far less on the basis of educational assistance than does the United States Office of Education.

YARDSTICKS FOR CONTROL

There are several rather simple tests for measuring Federal control of education. One is the presence or absence of Federal employees in local schools or institutions. If Federal agents are to be found there on other than special occasions there is almost certainly undesirable Federal control of education. Superintendents and other administrators know from experience with many Federal-aid programs, which have been applied to numerous aspects of education, that the presence of Federal agents in local schools and institutions is a condition which accompanies Federal control and Federal domination. The Thomas-Taft bill would never permit such violations of State and local autonomy in education.

Another fairly certain indication of Federal control of education can be found in the amount of Federal funds spent to administer Federal-aid programs. If a great deal of money is spent for Federal administration, there is likely to be undesirable Federal control. The Thomas-Taft bill now before the Congress makes no allowance for Federal administrative expenses, but the President's budget has suggested $250,000 per year for the United States Office of Education to administer the distribution of $300,000,000 annually. This is an administrative cost of one-twelfth of 1 percent. It should be compared with the administrative costs of some present Federal-aid programs which have objectionable Federal controls attached.

For instance, administration of the Landis Act, under which $2,900,000 emergency aid for maintenance and operation was distributed at Federal discretion directly to certain local school districts by a noneducational Federal agency in 1949, cost $100,000 for Federal administration. This is well over 3⅓ percent for Federal administration; a cost of 41 times as great per dollar of grants distributed as would be the case under the Thomas-Taft bill. Numerous similar illustrations could be given.

FEDERAL LAWS

Congress has been passing bills for a long time providing Federal aid for special aspects of education. It has often passed such laws with outright Federal controls attached. Now a bill is proposed to aid public elementary and secondary schools which forbids such controls and provides for administrative arrangements which are the best possible protection against them. It is ironic that the United States Chamber of Commerce and others who are opposed to the adequate support of public education everywhere in the United States should attack the the Thomas-Taft bill on the ground that it may lead to Federal control.

An honest approach on the issue of Federal control of education would lead the United States Chamber of Commerce and other opponents of universal and adequate public education to oppose the Federal aids to education proposed or now in effect which do have objectionable Federal controls attached, and to support those which, like the Thomas-Taft bill, do not permit such Federal controls.

EDGAR FULLER.

WASHINGTON, *April 19, 1949.*

Socialized Medicine

EXTENSION OF REMARKS
OF

HON. WAYNE MORSE

OF OREGON

IN THE SENATE OF THE UNITED STATES

Tuesday, April 26 (legislative day of Monday, April 11), 1949

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD two editorials from The Dalles Chronicle, the first entitled "Socialized Medicine," published in the issue of April 7, 1949, and the second entitled "Socialized Medicine II," published in the issue of April 8, 1949.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From The Dalles Chronicle of April 7, 1949]

SOCIALIZED MEDICINE

(EDITOR'S NOTE.—This is the first of two editorials to appear in the Chronicle outlining the faults of proposals to enact compulsory health insurance.)

Before the United States Congress is Senate bill No. 5, which would, if passed, compel the American people to pay for national health insurance.

The legislation would place administrative powers under the Federal Security Administration, the director of which would supervise payments to doctors for medical services rendered to the population.

In short, the proposal is not socialized medicine in entirety, as many of us believe, but a plan of compulsory insurance to be paid by withholding from wages and by contributions from employers—the same method used to finance social security.

More than 90 percent of the American medical profession has denounced the bill because it sets up the Government as the insurance company and arbiter, and is the opening wedge in the bureaucratic drive toward socialized medicine.

If the bureaucrats desire merely health insurance, even they will be forced to admit that private insurance companies are already doing a magnificent job in the field, and certainly handle claims more efficiently than could Government. Therefore it is evident that the bureaucrats of the Federal Security Administration, led by power-hungry Oscar Ewing, recognize the proposed legislation as a significant step toward socializing a great and vital profession.

We are not attempting to apologize for the American medical profession. The member doctors in years past have been notoriously indifferent toward public relations; they have established a labor union with rigid rules of conduct that are wholly uncompromising and at times inimical to the public interest. (For instance, it is almost impossible to prove malpractice against a doctor in a court of law, for the profession's ethics rule that no doctor may testify against another.)

Doctors are often accused of excessive commercialism, with consequent high fees and a tendency to favor cases with higher fees in the offing. There is an almost endless list of complaints against the profession, and doubtless many of them are valid.

Despite any faults of American medicine, the fact is that this Nation has today the highest standards of health in the world; the United States has more doctors and more hospital beds per capita; the ability of the average workingman to secure good medical care is unsurpassed by any other country.

Experience of other nations, notably New Zealand, Germany, and England, proves the utter futility of attempting to improve medical services through Government administration.

Admittedly there are many defects in private medicine, but we must remember that the medical profession is subject to human error the same as any other business. No useful purpose can be served by adding bureaucratic bungling to present defects.

By and large American doctors are serving the Nation well. Of course they sometimes lend themselves to the more commercial aspects of their profession, but after all we're living in a society that has been built through individual initiative given fuel by incentive.

Socialistic medicine enables the poor doctor to earn as much, or nearly as much, as the good doctor, to the disadvantage of the patient. In medicine we are dealing with human lives, and cannot afford to let Government interference force us to accept inferior medical service.

There might be some reason to consider socialized medicine if its proponents can give us even a reasonable basis for supposing that we will have better medical care. But thus far we have only the tragic deterioration of British medicine as an example.

The greatest danger of the proposed compulsory insurance plan is the further extension of bureaucratic control over the lives of all of us. Power-mad, parasitic politicians welcome such a plan as another means of perpetuating their blood-sucking of the Nation's wealth.

At least 200,000 administrative personnel would be required to handle the paper work of a compulsory insurance scheme. And the additional cost would be not only sheer waste, but a block in the path of progress of medicine.

Politicians, no matter what kind of propaganda they may issue or how many misleading statistics they may use, cannot give us better medicine. Only more research and a continued incentive for capable men to enter the profession will provide better care for our people. We have thus far produced in this Nation the world's highest standards in the number of doctors per capita and the number of good hospitals, and we have continually led the world in the twentieth century in medical research. Why change a good system for one that has already proved itself bad?

R. S. H.

[From The Dalles Chronicle of April 8, 1949]

SOCIALIZED MEDICINE—II

(EDITOR'S NOTE.—This is the second of two articles outlining the faults of proposed plans for compulsory health insurance.)

The term "health insurance" is a misnomer. Such insurance is not designed to give the Nation better health, but merely to pay the bills when medical care is necessary.

There are already a great number of charity hospitals to care for those who cannot afford to pay for their own care. The average American with a living income today secures adequate medical services.

We must admit that all of us at one time or another consult physicians unnecessarily. If medical care is free, naturally we'll ask for treatment of such simple ailments as common colds, etc. Doctors will then be burdened with trivial matters and will be unable to devote sufficient time to illnesses requiring their attention.

But the bureaucrats would have us believe that by some magic conjured by their special formula of tax and tax, spend and spend, elect and elect, we can have all the medical care we want for free.

Their proposals are so ridiculous that our only answer is "Nuts." New Zealand has found, after 10 years of socialized medicine, that 40 percent of all revenues collected by the Government must go to pay for socialized medicine.

Of course the politicians love it. They can tell the people that they must have more taxes or the Nation's health will suffer. Naturally the bureaucrats will have their fingers in the money with their usual expense accounts, friends on the pay roll, kickbacks from doctors who want more business, etc.

Do we want politicians running American medicine? Certainly not. But if we enact legislation compelling us to pay for medical insurance, we are opening the door to further bureaucratic encroachment in our daily lives.

Worst of all, the Washington politicians are already using our tax money to convince us that we need socialized medicine. Last year the Federal Security Agency (which would administer the insurance scheme) spent more than $2,000,000 of our money propagandizing the American public in favor of its base proposals.

The Agency further twists facts and figures to suit its purposes. For example, it cites the 36-percent-rejection rate of men called for military duty during the war.

The bureaucrats would have us believe that 36 percent of our young population is in poor health, that we must have socialized medicine to bring our health standards up to what they consider a reasonable level.

The fact is that the rejection rate was actually 28.4 percent (counting enlistees as well as draftees), and of that percentage 20 percent were rejected for conditions and ailments that even the best medical care could not cure, such as illiteracy, subnormal intelligence, venereal disease (a social, not medical problem), flat feet, poor eyesight, etc.

But the bureaucrats, knowing that public opinion on their side would force the Congress to enact their legislation, cleverly twisted the facts to convince the American public that we need a drastic change in the medical profession.

This is just another example of politicians propagandizing us to seek the road to state dominance over the life of the individual. They are constantly telling us that for our own good we need free medicine, public power, Government ownership of basic industries, and gigantic welfare programs designed to make the American citizen wholly dependent upon the Government for his very existence.

When the bureaucrats can convince us on the basis of sound logic and accurate statistics that we will have more and better medical care with Government regulation, we will be willing to consider their proposals. But they cannot, and they know they cannot prove their theories under the light of logic.

The way to seek better medical care is through incentive to doctors to satisfy their patients, and through freedom of action that will promote more research, better methods and more facilities. We don't want meddling politicians to destroy what we have already built.

R. S. H.

Robert N. Denham, General Counsel of the National Labor Relations Board

EXTENSION OF REMARKS
OF
HON. MATTHEW M. NEELY
OF WEST VIRGINIA
IN THE SENATE OF THE UNITED STATES
Tuesday, April 26 (legislative day of Monday, April 11), 1949

Mr. NEELY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD excerpts from three different articles relative to the National Labor Relations Board and Mr. Robert N. Denham, written recently by a prominent attorney, Mr. Charles H. Houston.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

OUR CIVIL RIGHTS

(By Charles H. Houston)

The National Labor Relations Act gives the American industrial worker governmental protection in his freedom to organize, bargain collectively, and be protected against unfair labor practices on the part of his employer. It is labor's "Bill of Rights."

But no law is better than the man who administers it. The key man in the administration of the National Labor Relations Act is Robert N. Denham, general counsel for the National Labor Relations Board. Under the Taft-Hartley revision of the original Wagner National Labor Relations Act, the general counsel has full and exclusive control over all investigations of complaints and exclusive power of prosecuting alleged violations of the Act. There is no power in the Government to force the general counsel to prosecute if he is unwilling to do so; and if he is unwilling to prosecute, there is no way for the worker to get his case before the National Labor Relations Board. Denham has more power than a czar.

Denham has been accused of being both anti-Semitic and anti-Negro. He is definitely anti-Negro.

Denham is 64 years old, born in Missouri; graduated LL. B. from the University of Missouri in 1907 and took his master's degree at the University of Michigan. He practiced law a short while in St. Louis, then spent 2 years in Texas. From Texas he moved to the State of Washington. He saw service in World War I as an officer in the Air Force, commanding lumberjacks in the timber country of Oregon. After World War I he ran a sugar plantation in Puerto Rico, a sheep ranch in Idaho, cotton plantations in Mississippi, and had business interests in Florida, Texas, and North Carolina. His contacts with Negroes have been limited almost to a boss-worker relationship, and his attitude toward them follows the plantation pattern.

Prior to his appointment as general counsel, Denham was a trial examiner for the National Labor Relations Board. The trial examiner goes into the various States and holds hearings on alleged violations of the National Labor Relations Act, and makes findings and recommendations to the entire Board.

In 1942 Denham acted as trial examiner in the famous *Henry K. Phelps, Jr., trustee* case (45 N. L. R. B. cases 1163), involving the discharge of certain white and Negro workers in a Louisiana oil refinery for union activities. Denham's own report on the case is the best proof of his anti-Negro bias.

The employer did not want the CIO union in the plant, and particularly opposed the organization of the Negro workers.

On page 1190 Denham reports Clanton, a white boss over Negro labor at the plant, speaking to a Negro worker as follows: "How come you ain't my nigger any more? * * * I am not mad with you all because you went up there and testified against me or anything like that. I know you all got up there and them white folks doped you all up and got you all to say all those things." Denham commented: "This latter appears to be a sample of the manner in which Clanton in particular has approached the Negroes who are now working. It is the southern overseer's way of controlling their Negroes and of warning them against a given line of conduct." Denham accepts this as normal.

On the next page (1191) Denham says: "It was Clanton's job to 'push' the Negro crew and a good 'pusher' of such a crew must of necessity keep after it aggressively and practically all the time." In other words, Denham expressly approves slave-driver tactics to make Negroes work.

On the following page (1192) Denham reports that when Clanton fired one Negro worker and told the gang that if it "did not give him better work he would fire them all and hire new ones," another Negro worker laughed. When Clanton heard this he fired the man who laughed. Denham approved the firing, saying: "It was entirely a disciplinary measure and for cause."

Denham stated (p. 1187) that "close and intimate contact with the Negro has taught the white overseers to recognize when a Negro is lying, notwithstanding that the formula upon which such recognition is based appears to be indescribable."

On page 1188 Denham reports the testimony of a Negro worker whose white boss (Roy) was questioning him about attending a fish fry given by the union: "And he asked me did I go to the fish fry, and I told him 'Yes, sir,' and he said, 'Well, next time you go to a fish fry, you see me.' I says, 'Well, boss, I didn't think I had to see you to go to a fish fry,' and he slapped my jaws and shoved me around and kicked me, and so I ran off." The worker was then asked if he was afraid of his boss. He replied, "Oh, I would say that I was afraid of him all right, on my job out there, if he tells me to do anything. * * * When he tells me to do anything, I confine myself to that, I was afraid of him all right, because he was my boss."

Denham never protested this brutality in his report, and never referred to it as creating a constant state of terror. He found some of the Negro workers had been discharged because of union activities and recommended their reinstatement and back pay, but he said nothing about the constant abuse of the Negro workers as constituting a steady reign of terror.

Denham's anti-Negro expressions in the Phelps case were sharply criticized by some of his associates, but he never modified them.

This is a pen picture of the general counsel of the National Labor Relations Board, using his own words. By every standard he is unfit to hold any office under the Fair Deal program.

* * * * *

Last week I commented on the anti-Negro bias of Robert N. Denham. * * * His printed report is bad enough, but the typewritten transcript of testimony in the case shows that Denham did not limit himself to presiding impartially at the trial but injected himself into the examination of witnesses to bring out his own preconceived prejudices against southern Negro workers, and to try to make the witness agree with his own views. * * *

* * * * *

I do not know Mr. Denham personally and there is nothing personal in my opposition. But he occupies a spot no confirmed Negrophobe should occupy. As general counsel of the National Labor Relations Board, all complaints of Negro workers against either employers or unions under the National Labor Relations Act come under Denham's jurisdiction. A man who believes, as Denham does, that southern Negro workers are lazy, shiftless, have to be pushed and driven to do a full day's work, and cannot be depended on to tell the truth, is not the type of person for such a position or any other position under the National Labor Relations Act.

During my investigation of Denham I continued to hear reports about his being anti-Semitic as well as anti-Negro. * * * Denham was hostile to the appointment of Jewish lawyers as trial examiners on the National Labor Relations Board staff. He has openly taken the position that Jews were not capable of understanding things the way white gentiles do, and that they should not be selected for important public positions.

Denham's anti-Semitism is exceeded only by his Negrophobia. Yet this is the man who has authority to pass on every complaint of a Jewish or Negro worker under the National Labor Relations Act, and to decide whether the complaint shall be prosecuted or dropped.

* * * * * *

The thirteenth, fourteenth, and fifteenth Amendments have been on the books since reconstruction, but they have not been enforced. Nothing was wrong with the Amendments; the trouble has lain with the men who are supposed to enforce them.

The National Labor Relations Act is no better than the general counsel who is its chief enforcing officer.

Right now we have a particularly bad combination: a Taft-Hartley Act which needs amendment, and a general counsel who needs to be removed. Denham must be removed if minority workers' rights are to be given full protection under the present Act or any future changes in the Act. He must be removed not only from his position as general counsel but from every other position where the rights of minority workers have to be submitted to his anti-Semitic and anti-Negro prejudices.

On his record, Denham must go.

Louis Johnson

EXTENSION OF REMARKS
OF
HON. WAYNE MORSE
OF OREGON
IN THE SENATE OF THE UNITED STATES
Tuesday, April 26 (legislative day of Monday, April 11), 1949

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Is Johnson Running for President" written by Marquis Childs and published in the St. Louis Post-Dispatch of April 13, 1949.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

IS JOHNSON RUNNING FOR PRESIDENT?

(By Marquis Childs)

WASHINGTON.—On the day that Louis Johnson was sworn in as Secretary of Na-

tional Defense in an unprecedented and highly publicized mass ceremony, a dinner was given in his honor. On the dais were President Truman, Chief Justice Vinson, and other notables.

At an appropriate moment from the rear of the room came cries of "Lou in '52." Thus was heralded the driving ambition of the new Secretary. As one of Johnson's close friends put it:

"Lou has been running for President for a long time. But he really began in earnest when this job put him in the public eye."

Now, if ambition were a crime in this intensely competitive Capital, a number of otherwise law-abiding citizens would go to jail. Perhaps under the spur of ambition Johnson will take the difficult decisions that his predecessor in the office tragically failed to take.

HARD-BOILED OPERATOR

Certainly, he has begun with a rush that is causing a great clatter in the Pentagon Building as offices are switched about in accord with Johnson's concept of unity on that battle front. But the suspicion is growing that one of his goals is to build up his own personal machine.

He is an operator in the hard-boiled tradition of American Legion politics. His first appointment was that of Paul H. Griffith, national commander of the Legion in 1946–47, to be his personal assistant. Griffith thus far has been serving without pay, but it is understood at The Pentagon that when Congress passes the new unification bill requested by the White House, he will be made an Assistant Secretary.

GRIFFITH, A SABOTEUR

As Legion commander, one of Griffith's most conspicuous public acts was to sabotage the housing program, being advanced in 1946 by Wilson Wyatt of Lousiville, Ky., who was then Housing Expediter. At a strategic moment in the housing fight, Griffith visited the White House. He announced publicly that the Legion opposed the administration program.

Johnson is reported to be privately pushing his friend, Floyd Odlum, the utilities operator and promoter, for Chairman of the National Security Resources Board. This is the post to which President Truman named his old friend, Mon Wallgren, but the Senate Armed Services Committee refused to report the nomination to the Senate.

While Mr. Truman says publicly he will stick to Wallgren, it is widely conceded that the appointment must eventually be withdrawn. Odlum called on the President at the White House last week.

CORPORATION BACKGROUNDS

In these matters the President is said to feel, with considerable irritation, that the Senate seems to expect him to appoint angels from heaven who have had no prior connections of any sort. Wallgren was rejected because it was felt he did not have enough business background. If Odlum's name goes to the Senate, there very likely will be an inquiry into the closeness of his connections with the aviation industry, and it seems to me properly so.

Odlum is president of the Atlas Corp., a holding company. Atlas, according to a report to the Securities and Exchange Commission last December, owns 418,200 shares of Consolidated Vultee Aircraft Corp. This is slightly less than 20 percent of the total, and considered equivalent to control.

Johnson, prior to his appointment, was a director of Consolidated Vultee. So also is Victor Emanuel, utility-investment tycoon who has had so much to do with moving President Truman's friend, George E. Allen, and several other figures out of the Roosevelt-Truman administration into directorships of large corporations.

THE B-36

Johnson recently approved a shift of approximately $157,000,000 in Air Force funds from other types of aircraft in experimental production to the B–36 which is made exclusively by Consolidated. This decision was said to have been approved by James Forrestal before he retired as Defense Secretary.

This may well have been a wise and inevitable move. Those with expert knowledge believe that in the past funds have been spread too thin over too many types of planes. Despite much criticism, the B–36 seems to have established its reputation.

But when all this has been said, there would seem to be a question of the propriety of the decision being taken by one whose self-interest must be, directly or indirectly, so involved. It raises, too, some pertinent questions about the relationship between Government and so-called free enterprise.

The Jews of Eire

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 26, 1949

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following article from the Philadelphia Jewish Time and brought to my attention by Mr. Charles Goldman of Lynn, Mass.:

OUR JEWISH COMMUNITY—HERE'S TO THE IRISH

(By Arnold R. Ginsburg)

My Irish secretary, who frequently types up this column, almost kicked me out of the office on St. Patrick's Day because I had forgotten to wear a green tie. She warned me about it the day before, too, and I fully intended to wear the Irish color in tribute to this wonderful group of Americans. Not only did I forget the green but I came in wearing a red tie which Miss Fahy tells me is almost as bad as wearing orange. Perhaps this column will show that my heart is in the right place.

You may be interested to know that an Irish rabbi, who speaks with a light Irish brogue, last week became spiritual leader of the Touro Synagogue in Newport, R. I., which has the oldest synagogue building in the United States. Rabbi Theodore Lewis, born and educated in Dublin, came to Newport from the Adelaide Road Synagogue, the largest in Dublin, where Irish Jews offer prayers every Saturday for Eire, the Irish Free State, and its president, Sean O'Kelly.

As Rabbi Lewis says, the 7,500 Jews in southern Ireland are devoted to the "auld sod." An Irish Jew, Robert "Bobby" Briscoe, is a member of the Dail Eireann, the lower chamber of the Irish legislature, representing a constituency that is almost entirely Roman Catholic.

According to an Irish legend, the prophet Jeremiah and his disciple Baruch visited Ireland about 580 B. C. Some connect the people of Ireland with the 10 lost tribes.

IRISH JEWS

There was a permanent Jewish settlement in Ireland as early as 1232 but this existed for only some 60 years. Jews did not again live there until about the year 1655.

The 7,500 Jews of Eire are only a very small part of the population which numbers about 3,000,000. Most of the Jews are concentrated in Dublin, the capital of Eire, where there are two large and four small synagogues, some five charitable organizations, and a Talmud Torah. Smaller groups of Jews, ranging from 40 to 350 in number, live in the Irish cities of Cork, Limerick, and Waterford, each city having a Jewish congregation and a rabbi.

By reason of their small number, the Jews of Eire have not taken a big part in the economic and civic life of the country. Very few are engaged in the professions. Most of them are small shopkeepers and tradesmen.

It is also a matter of interest that Rabbi Isaac Halevi Herzog, chief rabbi of Palestine since 1936, had previously been chief rabbi of Dublin from 1919 to 1925, and chief rabbi of the Jewish community of the Irish Free State from 1925 to 1936.

AMERICAN IRISH TEACH US A LESSON

Coming back to the American Irish, however, I cannot refrain from pointing to them as a fine example of what Americans should be like. They participate in and contribute to almost every area of American civic, economic, social, cultural, and communal life. Their loyalty to America is unchallenged. And yet, our Irish fellow-citizens remember with pride their country of origin.

It is now an honored American tradition, which no true American Irishman would forget, to wear the green and to parade up Fifth Avenue on St. Patrick's Day. By and large, the American Irish are observant Roman Catholics.

Here, then, is a large and loyal group of American citizens who are not afraid to pay their respects openly to the Irish Free State, to honor Irish traditions, and to give faithful observance to their religion.

I have never heard or seen any American Irish worry about his distinctive traits or traditions. No one impugns his loyalty to America notwithstanding his proper interest in Eire. There is no anguished desire here to assimilate, to be exactly like the next fellow. Why should there be?

The story of the American Irish should teach an important lesson to those American Jews who would rather be anything else but Jews, who prefer to hide their Jewishness and who worry about their proper interests in Israel.

America is and was intended to be a land of many peoples with diverse interests, religions, and cultures living together with a common passion for democracy and the American way of life. If we were all the same, life here would be drab and monotonous. America is, if anything, a mixing bowl—not a melting pot.

Comparison of H. R. 3190 With H. R. 4272

EXTENSION OF REMARKS

OF

HON. WINGATE H. LUCAS

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 26, 1949

Mr. LUCAS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following chart comparing H. R. 3190 with H. R. 4272:

Chart containing section-by-section comparison of H. R. 3190 with H. R. 4272

Sec.	H. R. 3190, as reported	H. R. 4272
2 (a) and (b) (finding and declaration of policy).	Same as present act except that there is added in sec. 2 (b) the statement that Congress is exercising its power to regulate commerce with "foreign nations" as well as its power to regulate commerce among the States. This change is made for purposes of consistency with the extension of the minimum wage provisions to seamen.	Same as H. R. 3190. Reference to "foreign commerce" in sec. 2 (b) is for purposes of consistency with change in definition of "commerce" in sec. 3 (b), which covers importers of goods from foreign lands even though they do not thereafter ship the goods into another State.
3 (Definitions)	The definitions in the present act are unchanged except the definitions of "commerce," "oppressive child labor" and "wage". The definition of "commerce" is changed to cover an importer of goods from a foreign land even though the goods imported do not thereafter move into another State. The definition of "oppressive child labor" is amended to prohibit a parent from employing a child in his custody under 16 in an occupation particularly hazardous for children between 16 and 18. The amendment closes a loophole in the present definition whereby a parent may employ such a child under 16 in such an occupation, even though he could not employ a child 16 or 17 in the same occupation. The definition of "wage" is amended to include tips for which records are kept by the employer in accordance with regulations of the Secretary of Labor. The definition is also amended to provide that board, lodging and other facilities furnished the employee may not be included in wages, if the facilities are an incident of and necessary to the employment and practically available only from the employer. This would require the payment of the minimum wage free and clear to such employees as seamen, meal service employees on common carriers, or employees in isolated lumber camps.	The changes in the definitions of "commerce" and "oppressive child labor" are the same as those in H. R. 3190, but the administrative authority over the child labor provisions of the act is taken from the Secretary of Labor and given to the Administrator of the Wage and Hour Division. The definition of "produced" is changed so as to insert the words "closely related" before the words "process or occupation". Also the word "indispensable" is substituted for the word "necessary." By virtue of these changes the Administrator and the courts will no longer be able to hold covered local retail and neighborhood businesses on the ground that some of the customers of such businesses are engaged in the production of goods for commerce, notwithstanding that all of the goods or services of the local businesses are sold or rendered within the State to customers located within the State.
4 (Administration):		
(a)	Transfers administrative authority under the act from the Administrator of the Wage and Hour Division to the Secretary of Labor. The Wage and Hour Division is continued as a bureau in the Department of Labor headed by an Administrator subject to the direction and control of the Secretary. The Administrator's salary is increased from $10,000 to $15,000 per year.	Leaves administrative authority under the act in the Administrator of the Wage and Hour Division. Increases his salary to $15,000 per year.
(b)	Confers upon Secretary of Labor authority to appoint employees including attorneys to carry out his functions under the act.	Gives such appointive authority to the Administrator as in the present act.
(c)	Gives the Secretary of Labor unlimited rule-making power including the power to define any term used in the law. Also provides that no liability or disability shall be imposed upon any employer acting in good faith in conformity with any regulation or order of the Secretary.	No such rule-making power given to the Administrator. Sec. 4 (c) of H. R. 4272 provides that no liability, disability or *punishment* shall be imposed upon any employer acting in good faith in conformity with any *written* regulation, order or *interpretation* of the *Administrator* or the *Secretary of Agriculture*. [The italicized words represent the differences between this subsection and the like subsection in H. R. 3190. The reference to the Secretary of Agriculture is necessary because he is given authority to define the term "area of production" in secs. 7 (c) and 13 (a) (10).]
(d)	Certain technical revisions, relating to the place of exercise of duties and powers under the act, required by the revision of sec. 4 (a).	Unchanged from the present act. [This subject matter is dealt with in sec. 4 (c) of H. R. 4272.]
(e)	Certain technical revisions relating to annual reports required by the revision of sec. 4 (a)..	Unchanged from the present act. [This subject matter is dealt with in sec. 4 (d) of H. R. 4272.]
5 (Special industry committees for Puerto Rico and the Virgin Islands).	This section establishes the industry committee technique for fixing minimum wages in Puerto Rico and the Virgin Islands below the general minimum prescribed in sec. 6.	Same as H. R. 3190 except that minimum wages fixed for Puerto Rico and the Virgin Islands are made applicable only to employees engaged in interstate commerce or the production of goods for interstate commerce.
6 (Minimum wages)	(1) Minimum wage provisions extended to *all* employees of *every* employer engaged in commerce or in the production of goods for interstate commerce.	(1) No such extension. Minimum wage is limited as in the present act to *employees* actually engaged in interstate commerce or in the production of goods for interstate commerce.
	(2) Establishes rigid minimum of 75 cents per hour	(2) Establishes minimum hourly rate of 65 cents up to Dec. 31, 1949. Thereafter the minimum wage is to go up or down each year in accordance with fluctuations in the Consumer Price Index determined by the Bureau of Labor Statistics. Any rate set under this formula is to stay in effect for a full calendar year. In no event can the minimum wage be set at less than 50 cents per hour.
	(3) Allows payment of piece rates to home workers in Puerto Rico and the Virgin Islands just as in the present law.	(3) Same.
	(4) Sec. 6 (b) is one of the several provisions needed for permitting wage rates in Puerto Rico and the Virgin Islands to be less than the general minimum prescribed in sec. 6 (a). Sec. 6 (b) also preserves existing wage orders for Puerto Rico and the Virgin Islands until superseded. Such wage orders, however, are extended so as to apply to every employee in an industry subject to the wage order and not simply to employees in the industry engaged in commerce or in the production of goods for commerce.	(4) Same except that existing wage orders are applied only to employees engaged in commerce or in the production of goods for commerce.
7 (Maximum hours):		
(a)	Overtime provisions extended to all employees of every employer engaged in interstate commerce or in the production of goods for interstate commerce.	No such extension. Overtime provisions limited as in present act to employees actually engaged in interstate commerce or in the production of goods for interstate commerce.
(b) (1)	Overtime exemption granted to employees employed under bona fide union contracts limiting employment to 1,040 hours during any period of 26 consecutive weeks. Overtime must be paid after 10 hours in a day or 50 hours in a week.	Same.
(b) (2)	Overtime exemption granted to employees employed under bona fide union contracts guaranteeing annual employment. Overtime must be paid after 10 hours in a day or 50 hours in a week.	Same.
(b) (3) (a)	Overtime exemption granted for 14 weeks per year to seasonal industries. Overtime must be paid after 10 hours in a day or 50 hours in a week.	Same.
(b) (3) (b)	Overtime exemption granted for 14 weeks per year to various agricultural processing industries and to the first processing or canning of fish, if the Secretary of Labor finds that such industries are characterized by marked annually recurring seasonal peaks of operation. In the case of the fresh fruit and vegetable industries the Secretary may allow the exemption for 20 weeks per year. Overtime must be paid in each case after 10 hours in a day or 50 hours in a week.	This subject matter is dealt with in sec. 7 (c) which is almost exactly the same as the sec. 7 (c) contained in the present act. The only differences between sec. 7 (c) of the bill and sec. 7 (c) of the present act are (1) the addition of the first processing of "buttermilk" to the dairy products exemption, and (2) the transfer from the Administrator to the Secretary of Agriculture of the authority to define "area of production."
(c)	*Outlaws* Belo type contracts except under conditions impossible to meet.	This subject matter is dealt with in sec. 7 (e) of the bill. It specifically *validates* Belo type contracts if the duties of the employees necessitate irregular hours of work. The contracts may be made either individually with the employees or with unions, but must specify a regular rate of pay of not less than the minimum provided in sec. 6 (a) and compensation at not less than time and one-half such rate for all hours worked over 40 in a week. The contracts must also provide a weekly guaranty of pay for not more than 60 hours based on the rates so specified.

Chart containing section-by-section comparison of H. R. 3190 with H. R. 4272—Continued

Sec.	H. R. 3190, as reported	H. R. 4272
7 (Maximum hours)—Continued		
(d)	Defines regular rate as all remuneration for employment except certain specified types of payments.	Same.
	The exceptions are:	
	(1) Gifts and payments in the nature of gifts made at Christmastime or on other special occasions.	(1) Same.
	(2) Payments not made as compensation for hours of employment, such as payments for occasional periods when no work is performed due to vacation, holiday, etc., and traveling expenses.	(2) Same.
	(3) Sums paid in recognition of services performed during a given period of time if the payments are not pursuant to any prior "contract, agreement, promise, arrangement, or a custom or practice causing the employee to expect such payments regularly"; or if the payments are made pursuant to a bona fide profit-sharing plan, meeting the requirements of the Secretary of Labor; or if the payments are so-called talent fees defined by regulations of the Secretary paid to performers.	(3) Same except for following differences: The words "arrangement, or a custom or practice" are stricken from this paragraph of the bill. The Administrator is given no authority to issue regulations dealing with profit-sharing plans or with talent fees.
	(4) Contributions pursuant to a bona fide old age, retirement, accident, etc. plan for employees.	(4) Same.
	(5) Premium compensation for hours in excess of 8 in a day or 40 in a week or in excess of the employee's normal or regular working hours.	(5) Same.
	(6) Premium compensation for Saturdays, Sundays, holidays, regular days of rest or the 6th or 7th day of the workweek where the premium rate is not less than time and one-half the rate in nonovertime hours on other days.	(6) Same.
	(7) Premium compensation for work *outside* the basic normal or regular workday (not exceeding 8 hours) or workweek (not exceeding 40 hours), which premium is paid to the employee pursuant to his employment contract or a collective bargaining agreement and which is not less than time and one-half the rate established by the contract or agreement for like work performed *during* the workday or workweek.	(7) Same.
(e)	Permits overtime payments at time and one-half the hourly or piece rates applicable during the overtime hours.	Same except that this provision appears as sec. 7 (f).
(f)	Permits the premium compensation paid under pars. (5), (6), and (7) of sec. 7 (d) to be credited toward overtime compensation due under the act.	Same except that this provision appears as sec. 7 (g).
8 (Wage orders in Puerto Rico and the Virgin Islands).	Prescribes procedure for issuance of wage orders for industries in Puerto Rico and the Virgin Islands permitting the payment of less than the statutory minimum. This section states the policy of the act to be to reach the objective of a 75-cent minimum wage in such industries as rapidly as is economically feasible without substantially curtailing employment.	Same except that the policy of the act is stated to be to reach the objective of the minimum wage prescribed pursuant to sec. 6 (a) (2), i. e., the minimum wage tied into the Consumers Price Index.
9 (Attendance of witnesses)	Same as in present act except for a change making reference to the Secretary of Labor instead of to the Administrator and the Chief of the Children's Bureau.	Same as in present act except that reference to the Chief of the Children's Bureau is stricken.
10 (Court review)	Same as in present act except for changes to make the section refer accurately to the United States courts of appeals, in which review of industry wage orders for Puerto Rico and the Virgin Islands may be obtained, and to substitute references to the Secretary of Labor for references to the Administrator.	Same as present act, except for changes (1) to refer accurately to the United States courts of appeals, and (2) to substitute the "preponderance of the evidence" test for the "substantial evidence" test in according finality to the Administrator's findings of fact.
11 (Investigations, inspections, and records).	Same as present act except for substitution of references to the Secretary of Labor for references to the Administrator and the Chief of the Children's Bureau.	Same as present act except for striking out all references to the Chief of the Children's Bureau and placing in the Administrator full power under the act to bring actions to restrain violations thereof, including violations of the child-labor provisions.
12 (Child-labor provisions)	Extends child-labor provisions so as directly to forbid employment of child labor in commerce or in the production of goods for commerce.	Same.
	Also extends child labor coverage to all employees of every employer engaged in commerce or in the production of goods for commerce.	No such extension.
	Also continues existing provision barring shipment in commerce of goods produced in an establishment where child labor is employed.	Same except that *innocent* purchasers of goods produced in violation of the child labor provisions are permitted to ship or deliver such goods for shipment in commerce.
13 (Exemptions):		
(a) (1)	Wage-and-hour and child-labor provisions made inapplicable to any employee engaged in the delivery of newspapers to the consumer.	No comparable provision. [Such provision is unnecessary in this bill, for such bill does not bring newsboys under the coverage of the Act in the first instance.]
(a) (2)	Wage-and-hour and child-labor provisions made inapplicable to any employees of a retail or service establishment. Following limitations are placed upon the exemption. First, the employer must not have a total annual volume of sales or servicing in excess of $500,000. Second, at least 75 percent of the establishment's selling or servicing must be (1) to private individuals for personal or family use, (2) to farmers, or (3) of goods or services not differing materially in type or quantity from goods or services normally sold or rendered for personal or family consumption.	Wage-and-hour exemption granted to any employee employed by a retail or service establishment more than 50 percent of which establishment's annual dollar volume of sales of goods or services is made within the State in which the establishment is located. A retail or service establishment is defined as meaning an establishment 75 percent of whose annual dollar volume of sales of goods or services (or of both) is not for resale and is recognized as retail sales or services in the particular industry. The discriminatory limitations on the exemption found in H. R. 3190 are eliminated.
(b) (1)	Wage-and-hour exemption granted to executive, administrative, professional and outside salesmen employees.	The comparable section is sec. 13 (a) (1), which grants wage-and-hour exemption to the same categories of employees and also, as in the present act, to employees employed in a local retailing capacity.
(b) (2)	Wage-and-hour exemption granted to catching, harvesting, etc., fish but denied to processing, canning and other on-shore fisheries operations.	The comparable section is sec. 13 (a) (4). This leaves the present wage-and-hour fisheries exemption intact, including exemption for processing, canning, and other onshore operations.
(b) (3)	Wage-and-hour exemption granted to employees employed in agriculture.	Same. The exemption is found in sec. 13 (a) (5).
(b) (4)	Wage-and-hour exemption granted employees affected by regulations or orders issued under sec. 14 relating to learners, apprentices, etc.	Same. The exemption is found in sec. 13 (a) (6).
(b) (5)	Wage-and-hour exemption granted to employees of weekly or semi-weekly newspapers with a circulation of less than 5,000. [Under present law the maximum circulation requirement is 3,000.]	Same. The exemption is found in sec. 13 (a) (7).
(b) (6)	Wage-and-hour exemption granted to switchboard operators employed in a public telephone exchange which has less than 500 stations.	Same. The exemption is found in sec. 13 (a) (10).
(b) (7)	Wage-and-hour exemption granted to employees of employers engaged in the business of operating taxicabs.	Same. The exemption is found in sec. 13 (a) (11).
(b) (8)	Wage-and-hour exemption granted to employees or proprietors in a retail or service establishment (meeting the new tests for determining what is a retail or service establishment) engaged in handling telegraph messages under an agency arrangement with a telegraph company where the telegraph-message revenue of such agency does not exceed $500 a month.	Same. The exemption is found in sec. 13 (a) (12).
		This bill also continues in sec. 13 (a) (8) and (9) the present wage-and-hour exemptions for employees of local trolleys and motorbus carriers, etc., and for employees employed within the area of production engaged in handling, packing and various other operations upon agricultural commodities, or in making cheese, butter or other dairy products. The Secretary of Agriculture, not the Administrator, is given the authority to define "area of production." These exemptions are completely eliminated by H. R. 3190.

Chart containing section-by-section comparison of H. R. 3190 with H. R. 4272—Continued

Sec.	H. R. 3190, as reported	H. R. 4272
13 (Exemptions)—Continued		
(c)(1)	Overtime exemption granted any employee who during the greater part of a workweek is a driver or driver's helper riding a motor vehicle in performance of over-the-road transport operations as defined by the Secretary of Labor.	This subject matter is dealt with in sec. 13(b)(1). As in the present act, overtime exemption is granted to any employee with respect to whom the Interstate Commerce Commission has power to establish qualifications and maximum hours of service pursuant to the Motor Carrier Act. This includes loaders and mechanics as well as drivers and drivers' helpers.
(c)(2)	Overtime exemption granted to employees of an employer which is an express company, sleeping-car company or carrier by railroad subject to pt. I of the Interstate Commerce Act.	This subject matter is dealt with in sec. 13(b)(2). Overtime exemption is granted, as in the present act, to any employee of an employer subject to pt. I of the Interstate Commerce Act.
(c)(3)	Overtime exemption granted to employees employed as flight personnel on an aircraft operated by a carrier by air subject to title II of the Railway Labor Act.	This subject matter is dealt with in sec. 13 (b) (3). Overtime exemption is granted to any employee of such carrier by air and not only to flight personnel.
(c)(4)	Overtime exemption granted to any employee employed as a seaman.	This subject matter is dealt with in sec. 13 (a) (3). Seamen are exempt from both wages and hours as in the present law.
(d)	The child-labor provisions are rendered inapplicable to (1) any employee in agriculture "outside of school hours" for the employee's school district, and (2) any child actor or performer.	This subject matter is dealt with in sec. 13 (c). The child-labor provisions are rendered inapplicable to any employee in agriculture "while not legally required to attend school" (as in the present act) and also to any child actor or performer.
14 (Learners, apprentices, messengers, and handicapped workers).	Authorizes employment of learners, apprentices, messengers, and handicapped workers at rates lower than the statutory minimum under special certificates issued by the Secretary of Labor.	Same except that certificates are issued by the Administrator.
15 (Prohibited acts)	Same as present act with following exceptions: Innocent purchaser is allowed to ship in commerce any goods produced in violation of the wage-and-hour provisions of the act. It is made unlawful to violate any regulation or order of the Secretary issued under the unlimited rule-making authority granted the Secretary.	Same as present act except for provision allowing innocent purchaser to ship in commerce goods produced in violation of the wage and hour provisions of the act.
16 (Penalties)	Subsections (a) and (b) remain the same as in present law. Subsection (c) is new and gives the Secretary of Labor authority to (1) supervise back payments due employees, and (2) bring back pay suits on behalf of employees.	No comparable provision.
17 (Injunction proceedings)	Same as present law except for elimination of unnecessary reference to 28 U. S. C. § 381.	Same as H. R. 3190 except that no authority is conferred upon the Administrator to bring back-pay suits on behalf of employees.
18 (Relation to other laws)	Same as present act.	Same as H. R. 3190.
19 (Separability of provisions)	Same as present act.	Same as present act.
	Sec. 3 of H. R. 3190 amends the Portal Act by (1) substituting a 4-year statute of limitations for the present 2-year statute on back-pay suits by employees, and (2) transferring the duties of the Administrator under sec. 10 of the Portal Act (relating to reliance on administrative rulings, etc.) to the Secretary of Labor.	H. R. 4272 contains no such provisions. The 2-year statute of limitations is left intact as is the Administrator's authority under sec. 10 of the Portal Act.
	Sec. 4 (a) of H. R. 3190 makes the amendments to the Fair Labor Standards Act in general effective 120 days from the effective date of H. R. 3190.	Subsection 3 (a) of H. R. 4272 makes the amendments to the Fair Labor Standards Act in general effective 60 days from the effective date of H. R. 4272.
	Sec. 4 (b) of H. R. 3190 provides for the carry-over of the orders, regulations, agreements, or interpretations of the Administrator or the Secretary of Labor, where not inconsistent with this bill, from the Fair Labor Standards Act of 1938 to the Fair Labor Standards Act of 1949.	Sec. 3 (b) of H. R. 4272 provides the same.
	Sec. 4 (c) of H. R. 3190 contains a saving clause with respect to any penalty or liability arising out of any act or omission occurring prior to the effective date of H. R. 3190, but bars back-pay suits for any such liability after the expiration of 4 years from such effective date.	Sec. 3 (c) of H. R. 4272 contains a similar saving clause but bars back-pay suits after 2 years.
		Sec. 3 (d) of H. R. 4272 provides that no amendment made thereby shall amend, modify, or repeal the Portal-to-Portal Act. Such a provision is necessary since sec. 16 (b) of the proposed Fair Labor Standards Act of 1949 reenacts the employee's right to collect liquidated damages in back-pay suits and such reenactment might otherwise be held to supersede sec. 11 of the Portal Act, authorizing the court in its discretion not to award liquidated damages. No saving clause as to the Portal Act is in H. R. 3190 although it, too, in sec. 16 (b) reenacts the employee's right to liquidated damages.

Incomes and Prices

EXTENSION OF REMARKS

OF

HON. L. MENDEL RIVERS

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 26, 1949

Mr. RIVERS. Mr. Speaker, under leave to extend my remarks I wish to include some very timely and appropriate statements from the pen of Mr. Francis B. Taylor, State news editor, News and Courier, Charleston, S. C., contained in two letters, which information I believe will be of general interest to the public, as follows:

THE NEWS AND COURIER,
Charleston, S. C., February 18, 1949.

Representative L. MENDEL RIVERS,
House of Representatives,
Washington, D. C.

DEAR MENDEL: Thanks for your reply to mine of the 15th.

I have no objection to my letter going into the CONGRESSIONAL RECORD. There's just one point about it that might deserve correction—that $1 a day for milk, I find from my wife, is for us and two of the "chillun"; when No. 3 begins to drink cow's milk, the bill will go up around $1.25 a day. That, incidentally, is due in a couple of months. Mebbe the Taylors think milk is too good a food. Should I put 'em on tankage?

One other thing: I rejoice that you recognize the need for holding down individual taxes on income. It seems to me, however, that any spending or social programs that increase the cost of doing business will nullify whatever gains downward price trends might make.

So, more taxes on corporations and workers for social security and health will price me and the other lobsters like me out of the market place just the same. That's no social gain.

Very truly yours,

FRANCIS B. TAYLOR,
State News Editor.

THE NEWS AND COURIER,
Charleston, S. C., February 15, 1949.

Representative L. MENDEL RIVERS,
House of Representatives,
Washington, D. C.

DEAR MENDEL: Take a deep breath. Here it comes.

There are evidences increasingly ominous to my way of thinking that bad times are in store for the American people.

What disturbs me is the trend that is showing itself more and more clearly toward throttling the opportunities for the man in the street to get along.

This is me talking and not reflection of an editorial line of thought. What I want to put over is a synthesis of what I am experiencing in my own daily life and what I discover in the signs and portents.

First off: Despite a pretty good income—more than I've ever had before—I have less left over at the week's end than even before. In the face of this (and remember I am not alone) Congress is asked by the President to extract still more taxes from me and my kind. There are no extenuating circumstances offered or promised for this.

The people must be taxed more, the party line sings, because in time of plenty it would be naughty to engage in deficit financing.

How would it be for Uncle Sam to pull in his horns the way I am having to do? If the present tax take (which already is too much) does not meet the spending plans, why not cut the spending plans? I mean really cut them.

Consider:

I would like to buy an auto. I cannot, because they are more than twice the prewar price.

I would like to build a house. I cannot, because materials are twice or thrice the pre-

war price and labor has become so nonproductive that, in the face of sharply higher wages, workmen do less than their prewar daily stints.

I have three children. They need food, clothing, and medical care. I want to pay for what they get and I don't want it to come via a Federal bureaucracy. Brother, I've been treated by service medicos and Oscar Ewing's socialized medicine won't smell any sweeter because my pay envelope is robbed to pay for it.

Do you know that milk for my family costs $1 a day? Do you realize that Congress is keeping the price of milk that high? Do you realize that besides paying all that to the milkman, my pay envelope is nicked for an extra something to the farmers and the vast army of "guvmint" workers who operate that swindle?

When the farm price-support program runs the price of tobacco out of sight, I'll quit smoking. Already, I've had to cut down. I cannot ration milk for my children. Not yet, anyway.

I can cut out drinking whisky. The combination of State and Federal liquor taxes already has reduced my purchases of demon rum, a good bit of which I used to buy to serve my friends. I cannot let my "chillun" run barefoot and their shoes are double or more than the price of 3 or 4 years ago.

Multiply me by several million people and then try to figure out what all this will mean in lower employment, reduced rail, water, and truck transport, and business activity generally on which taxes are paid.

Just because the political ambitions of Members of Congress and the administration are tending to reduce the tax take, are you going to vote for higher taxes on incomes?

I want to know your answer to that last question. It is important. I want people like me all over the country to ask their elected representatives similar questions.

There's another matter: extended social security. Don't expect to make me a tax collector. I hire a servant now. The chances are I won't have one if my wife or I is to be required to be an unpaid revenue agent. It would be cheaper and less trouble to do the housework ourselves (and we would buy less food, too).

There is only one mandate for all this malarkey coming out of the White House. It comes from the loafers and wasters, who'll vote for anybody who promises to give them something that belongs to somebody else. If Congress fancies itself the representative of that ilk, the rest of us will be aroused ere long.

Why in time doesn't the Federal Government give some consideration to the people who pay their keep, instead of pandering to the element which contributes next to nothing?

It is no use for Mr. Truman to spend tax money hiring economic advisers. They are not worth their salt. Lop 'em off the pay roll along with about 1,000,000 of the other parasites doing no useful work at the taxpayers' expense.

Inflation, deflation, recession, depression; boom or bust. Whichever of these disagreeable fates is to befall us, the blame will rest almost entirely upon the political motives of a really rather stupid Federal administration and its rather undiscerning friends in Congress.

You are preparing to tax me right out of the marketplace. When my shopping is confined solely to the sidewalk side of the show windows, I'll have plenty of company. Then who'll pay the taxes to support the expensive projects now being dreamed up in Washington?

Very truly yours,

FRANCIS B. TAYLOR,
State News Editor.

Why Not a Sensible Policy Toward Spain?

EXTENSION OF REMARKS
OF
HON. L. MENDEL RIVERS
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 26, 1949

Mr. RIVERS. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include herewith an article which appears in the May issue of the Reader's Digest, of which our distinguished colleague, the Honorable DEWEY SHORT, of Missouri, is the author and which is entitled "Why Not a Sensible Policy Toward Spain?"

Recently I made a trip to Spain as the ranking Democrat on a committee headed by Mr. SHORT. Mr. SHORT's observations in my opinion reflect an accurate picture of conditions and indicate a sensible approach to the Spanish question at this time. It is a most timely article and one which I trust every Member of Congress will carefully read.

Mr. SHORT is a student and a scholar of world renown. He has been educated in the leading universities of the world and he has traveled extensively over all continents. If any Member of the Congress is qualified to speak on this subject, I consider Mr. SHORT the one.

I enclose herewith the article by this distinguished scholar, statesman, and world traveler.

WHY NOT A SENSIBLE POLICY TOWARD SPAIN?

(By DEWEY SHORT, United States Representative from Missouri)

Why do we do business with Stalin, but refuse to do business with Franco? The answer may be in Alice in Wonderland; it isn't in the book of common sense.

We have no Ambassador in Madrid. General Franco's unofficial Ambassador at Washington, José Felix de Lequerica, has refrained from presenting his papers of accreditation to avoid a possible rebuff. Our trade relations with the Spanish people are suspended in contradictory vagueness.

Yet Great Britain has negotiated a $320,000,000 trade agreement with Franco's Government. France has provided a $40,000,000 credit to Spanish railroads. Sweden, Ireland, the Netherlands, Switzerland, Turkey, and other nations have made commercial compacts, and all 16 Marshall-plan countries are stepping up their trade relations with Spain. Thus, American tax dollars, donated by the Marshall plan, are being used by other nations to promote an exchange of goods with Spain.

Our attitude toward Spain is no less fantastic and self-defeating in other ways.

The food-raising potential of Spain and its important textile industry are reckoned in the over-all plans for feeding and clothing western Europe; 3,000,000 tons of these goods provided by Spain last year reduced the strain on our own industry and transport facilities. Clearly, it is in our interest to expand Spanish production and exports of those items. They could be at least trebled, if only Spain could obtain—not as a handout, but by purchase—sufficient American fertilizers, farm machinery, transport equipment, and, above all, cotton.

It is no secret that our military high command, in calculating the European-defense equation, assigns an important place to the Iberian Peninsula. Our aid to Greece and Turkey against Communist expansion—in fact our whole Near East policy—is obviously intended to safeguard the eastern doors to the Mediterranean. Common sense demands similar attention to the western door, to which Spain holds the key.

There we have the best clue, incidentally, to Moscow's inordinate interest in the internal affairs of Spain. If the friends of the Kremlin should ever obtain a foothold on the Peninsula and on the Spanish-African coast opposite, the Mediterranean would become a Red lake.

Spain's geographic position clearly makes it a bulwark and beachhead against aggression from the East. The Pyrenees make the Iberian Peninsula a natural fortress the availability of which in an hour of crisis may spell the difference between victory and defeat.

That fortress is today defended by an army of some 400,000, with 2,000,000 veterans available for reinforcement. Modern airfields suitable for our largest bombers are being constructed. Here is a primary base of operations—and without the hazard of pro-Soviet fifth columns which unhappily must be taken into account in most other Atlantic countries. At a time when western Europe is shaping up military plans in a realistic spirit and an Atlantic Pact is being hammered out, a strong and friendly Spain would be a valuable military asset.

Our anti-Franco policies cannot be explained by belated questions about the origins of the Spanish Government in bloody revolution, for on April 1, 1939, we unconditionally recognized the Franco regime. Virtually all other great powers had established unequivocal relations with Madrid at that time.

Neither can our perplexing behavior be accounted for by the character of the Franco regime. If the idea is that full diplomatic intercourse implies moral approval of a foreign government, how explain our present normal diplomatic relations with governments of every conceivable tinge—from Argentina to Soviet Russia? We support unabridged political contacts not only with recent enemies like Italy but with the Governments of Poland, Bulgaria, Rumania, and Czechoslovakia whom we have publicly accused of usurping power through terror.

Can our attitude toward Spain be justified perhaps on the basis of Franco's record in the recent war? The behavior of all neutrals on the European continent was of necessity opportunist; their first purpose was not to cut the bridges with either of the possible victorious coalitions.

While Dr. Goebbels' Diary was denouncing Franco for his refusal to help the Nazis, Prime Minister Churchill could tell the House of Commons in 1944: "There is no doubt that if Spain had yielded to German pressure our burdens would have been much heavier. Spain's power to injure us was at its very highest when United States and British forces descended upon northwest Africa."

At the same time President Roosevelt, in a personal letter to Franco, wrote: "Your nation and mine are friends in the best sense of the word. * * * I believe the Spanish Government and the Spanish people wish to maintain neutrality and remain outside the war." That neutrality fitted perfectly into our best military interests.

On December 10, 1948, Mr. Churchill reaffirmed this fact in Parliament. "Spain," he said, "refused to aid the Germans to take Gibraltar and enter Africa, and the way Hitler and Mussolini were treated by General Franco is a monumental example of ingratitude."

Some 4,000 American fliers forced to take refuge in Spain were released to fly and fight again; the Franco government did not intern

them—which is more than can be said for other neutrals and, for that matter, for Soviet Russia. Franco was reproached for his policies in the war only by Berlin and Rome. At no time did Spain collaborate with the Nazis in the overt manner of Soviet Russia between August 1939 and June 1941. To use the war record as a pretext for boycotting Spain makes no sense.

How does it happen, then, that we helped keep Spain out of the UN, that we do not restore normal diplomatic representation, that we consent to the exclusion of Spain from the European recovery program and the Atlantic security plans?

The answer is simple. It was embodied in the recent House of Commons statement by Mr. Churchill: "I say there is certainly far more liberty in Spain under Franco than in any countries behind the iron curtain. The great mistake is to allow legitimate objections to Franco and his form of government to be a barrier between the Spanish people and the Western Powers with whom they have many natural ties. So far from leading to the downfall of Franco, it has consolidated his position at every stage.

"It is true that I agreed at Potsdam that Spain should not be invited to join the United Nations, but I said that in hope of obtaining full Russian cooperation in a real instrument of world peace."

Though other neutrals were admitted, the doors of the United Nations were slammed in Spain's face to appease Moscow. The UN Assembly recommendation to withdraw the heads of diplomatic missions from Madrid was another act in that tragicomedy of appeasement.

The futility of that appeasement has been proved and generally acknowledged. In nearly all other respects it has been abandoned. But ostracism of Spain continues through sheer inertia. It is carried to such ludicrous extremes that Spain is not invited to international conferences on such subjects as civil aviation, health, and saving life at sea.

In his original announcement of the European-recovery proposal, Secretary Marshall declared: "Our policy is not directed against any country or doctrine." Nevertheless, Spain was kept out—to make it easier for the Kremlin to come in. And though Russia not only refused to join but compelled its satellites to reject our offer and set up its Cominform to sabotage the American effort, Spain still remains beyond Marshall plan bounds. In the midst of a fateful cold war against communism, the most anti-Communist nation is isolated to please Moscow.

There is a vocal and persistent anti-Franco minority in this country that constantly attempts to spread the myth that American public opinion would be offended by the ending of our present policy toward Spain. Any fair sample of public opinion will show that such a claim is without foundation, and, in fact, that a majority would welcome a change in our present policy.

Mr. Churchill spoke of "natural ties" which bind England to Spain. Those ties are greater and more significant for our own hemisphere. Nearly all the Latin-American countries have deep-rooted cultural and sentimental attachments to Spain. Regardless of their political systems, they resent the humiliations heaped on their mother country. They are fully aware that the political and economic sanctions imposed on Spain were Moscow-made in the first place and have been maintained largely by pressure groups taking their cues from Moscow. They can no more reconcile this with our intensive anti-Communist professions than logical-minded North Americans can.

The time has come to establish normal relations with Spain. The present ambiguous policies are a continuing triumph for the Kremlin. Strategically, commercially, politically, Spain is indispensable to the Marshall plan's success, to victory in the cold war and to security if we are forced into a shooting war.

Robert N. Denham, General Counsel of the National Labor Relations Board

EXTENSION OF REMARKS
OF
HON. MATTHEW M. NEELY
OF WEST VIRGINIA
IN THE SENATE OF THE UNITED STATES

Tuesday, April 26 (legislative day of Monday, April 11), 1949

Mr. NEELY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article by Miss Marjorie McKenzie, a prominent columnist for the Pittsburgh Courier, relative to Robert Denham, general counsel of the National Labor Relations Board.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PURSUIT OF DEMOCRACY

(By Marjorie McKenzie)

To the bonfire which has been a-building under Robert N. Denham, general counsel of the National Labor Relations Board, and which may blast his hopes for reappointment, I cheerfully add my few sticks. The range of complaint against Mr. Denham is so wide that a random choice of grounds for ousting him might turn on his racial bias, his reactionary attitudes toward labor, or his questionable theories and practices as a representative of the executive branch of Government.

Mr. Denham came into power with the Taft-Hartley Act, as its chief administrator, after he had languished for 9 years in obscurity mixed with disfavor as an NLRB trial examiner. A very damaging Denham profile was done by Collier's magazine in the November 1, 1947, issue. * * *

It is difficult to see the evil that is Robert Denham apart from the evil that is the Taft-Hartley law, so well do they complement each other. The law strips the members of the Board, that is the Board itself, of most of their former power under the Wagner Act and vests it in the general counsel, who has become thereby what one Senator has called America's labor "gauleiter." Actually, "fuehrer" would be a more accurate term, since Denham is not a local but a national tyrant. Denham decides whether a case may be heard before a trial examiner, but, even worse, determines what cases the Board itself may hear. When employers want injunctions against their workers, it is Denham's loving task to apply therefor to a Federal court. * * *

A despotic general counsel or a reactionary board under the Wagner Act could have done great harm to worker security and freedom, but the essential safeguards of the law would have cushioned labor against permanent losses. Under Taft-Hartley, where one man is given more power over labor than ever existed in public or private hands, it is disastrous that he should be the wrong man. The pattern, the framework, the record are gone. Dealings between labor and management become extralegal and union activity goes underground in an atmosphere of guilt and potential violence. What decisional labor relations remain concern those situations which are all white or all black and provide no guidance for the gray bulk in between where the skills of an agency such as NLRB once was, are most useful.

The case to which reference is usually made to document Mr. Denham's Negro prejudices is the Phelps Case * * * in which he served as trial examiner. That part of the report which describes the firing of five Negro workers because of their union activities is so full of stereotyped ideas about southern Negro workers in general that it possesses burlesque qualities.

It is almost incredible that a lawyer, no matter what his limitations, could have produced this section, commenting on the disposition of Negroes to lie and their love of fish fries, as part of his serious professional work. The Collier's article states that some of Mr. Denham's judicial reasoning about Negroes was cut out of his final report by his superiors. The fact is that they did tell him to delete it, and he did, but he later reinserted it and it appears in the record.

Though it is important to document Mr. Denham's anti-Negro feeling, it is unnecessary to rely on it as a reason why Negroes should oppose his reappointment. Negroes, as workers, have an interest in seeing that the administrative process functions as it was meant to function. Robert Denham has demonstrated his unfitness to interpret labor-relations issues and to personify the Government in settling labor disputes, even under so strict a law as the Taft-Hartley Act. With a new and more liberal labor law in sight, he obviously must be replaced by a more sympathetic administrator.

Repeal of Taft-Hartley Act

EXTENSION OF REMARKS
OF
HON. HARRY J. DAVENPORT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 26, 1949

Mr. DAVENPORT. Mr. Speaker, I rise to urge the immediate repeal of the Taft-Hartley Act—the misnamed Labor-Management Relations Act, 1947—and to urge that this body quickly pass the Lesinski bill, H. R. 2032, without weakening amendments.

The reasons why the Congress should take this step are legion. The Taft-Hartley Act has been on the statute books for nearly 2 years. Rarely in the entire history of our country has any law been so completely discredited, on the basis of day-to-day experience, as this measure which moved through the Eightieth Congress on a fearsome wave of antilabor hysteria.

The months since adoption of the Taft-Hartley Act have exposed the sinister purposes of its sponsors. It has been shown that this was a law not written of, by, and for the people but of, by, and for the great corporations of this country. It was not written to produce sound labor-management relations, but to place every advantage of power, prestige, and the influence of Government on the side of employers. It was a vindictive law, a law to punish working men and women for the allegedly heinous crime of joining a union; of using their union for decent, democratic collective bargaining. It was a loaded law, full of

weasel words, of strange phraseology—of special-interest phraseology, if you please; the Taft-Hartley law was purposely loaded with but one intent—to give management a disastrous, undeserved advantage over the unions with which they deal at the bargaining table.

This is not a law that can be corrected by a few amendments. Such a course would be as futile as to attempt to drain the Mississippi River with a tablespoon. The inequities of the Taft-Hartley Act run through every section, indeed, through every sentence of the statute. It was designed that way. Lobbyists who saw dollars and cents for themselves and for the superprofits of the corporations which they represented, made certain that the Taft-Hartley Act was an expert job of freezing antiunionism into the legal document which they rammed through the sadly misguided Eightieth Congress.

The Taft-Hartley Act was nothing new. It merely incorporated antiunion attitudes which had been floating around the front offices of big business for a generation.

Back before the First World War, some narrow-minded thinkers for big industry developed the so-called "American plan." It was a wrong title. It should have been called the "Un-American plan"—for it was clearly and simply and admittedly designed to thwart the growth of unions in this country of ours. This "Un-American plan" was a mixture of powerful persuasion by employers, who had unlimited right to hire and to fire, together with brutal force when necessary, to deprive workers of their right to join a union. It was the era of the injunction, the yellow-dog contract, the blacklist, the coal and iron police, evictions from company-owned homes, violence against workers and their families.

Yet, nevertheless, unions grew, for the need was apparent and workers' conditions were desperate. Despite this atmosphere of repression, they joined unions and they sought the benefits of collective bargaining.

After World War I, these antiunion employers tried a new device. Men who had used inhuman brutality against workers suddenly decided that workers needed "protection" from their own unions. They drew a fearsome, if inaccurate picture, of the "curse" of union-management agreements and of union security. Under the auspices of the National Association of Manufacturers, they threw all their propaganda artillery behind the so-called open shop. The "open" shop was "open" only to exploitation and antiunionism. It was a closed shop to the right of workers to join unions of their own choosing, or to make those unions anything but the palest carbon copy of an effective, functioning organization.

The open shop, and the weakened union organization which it brought about, contributed directly to the severity of the depression which gripped this country during the Hoover Administration and which continued for many years. Unions weakened by the open shop drive of leading sections of American industry were too anemic to fight wage cuts, to fight sweat shopping, to fight every form of human degradation that developed during the depression years.

The breadline, the women and children working for pennies an hour—that was the end result of the successful open-shop campaign which the NAM and its cohorts sold to the American public in those years between 1920 and 1933, when a great humanitarian, Franklin Delano Roosevelt, gave this Nation its great New Deal.

The Wagner Labor Relations Act was hailed by working men and women, and by all fair-minded citizens, as a magna carta. And with good reason. For it provided a minimum—just a minimum—of protection to workers in their God-given right to search for security and for a little better standard of living.

Those spokesmen for industry who loved the open shop, and its brutality and its union busting, attacked the Wagner Act as one-sided. Of course, it was one-sided—for it was a redress of scandalous grievances. It prohibited employers from interfering with the growth of development of workers' trade-union organizations. It prohibited employers from discriminating against union members by dismissals or other forms of penalty. It merely provided that employers must bargain—but not necessarily reach agreement—with the representatives of union men and women.

It was one-sided only in the sense of that in this democratic government of ours, we have always striven to protect the weak and the exploited; to prevent practices to tear down the decent structure of our society.

There was no need for the Wagner Act to be two-sided, as many uninformed industrial spokesmen have maintained.

There was, and there is, no need to protect employers from interference by their employees with management's right to join the trade association of its choice. No employer has ever been fired by an employee because he joined the National Association of Manufacturers or the United States Chamber of Commerce. No employers' association has ever had its treasury raided, its activities halted by sudden, sweeping injunctions, won by workers. No employer has ever been refused work because he was active in the Rotary Club or because he dared to say in public that his corporation might benefit by affiliation with a trade association.

In other words, the Wagner Act was a law to protect the rabbit from the hunter. There is not, and there never has been, a need for a law to protect the hunter from the rabbit.

Yet that is precisely the nature of the Taft-Hartley Act. It has protected corporate hunters from union rabbits. The effect of it has been to weaken the rabbits still further, and to aggrandize the hunters more than ever before.

The Taft-Hartley Act, with its scores upon scores of provisions, has a direct influence upon each and every phase of collective bargaining throughout our land. Sometimes the influence of the Taft-Hartley Act has been direct, and unions are faced with injunctions, with sweeping orders that prevent men and women from what we have always regarded as their basic constitutional rights.

Sometimes the Taft-Hartley Act's influence is indirect—it is the shadow across the collective bargaining table that permits the employer to get all the benefits and the unions to make all the concessions.

Mr. Gerhard Van Arkel, the former counsel of the National Labor Relations Board, had this to say about the hidden effects of the Taft-Hartley Act: "The assurance of Federal support in union-busting activities is valuable to employers, even where not exercised—for it enjoins unions to tread softly and speak meekly lest these powers be invoked."

Mr. Fred Hartley, a former Republican member of this body who showed uncommon good sense when he decided not to run for reelection in 1948, said the same thing, but even more directly. "There's more in this law than meets the eye," former Representative Hartley assured businessmen shortly after the law was passed.

But men—leading American citizens who have devoted their careers to building harmonious equitable relations between labor and management—know that the Taft-Hartley Act is dangerous law.

Dr. William Leiserson is a former member of the National Labor Relations Board. He is a former member of the Railroad Mediation Board. He is the author of a number of volumes which are standard works for students in this field. What does Dr. Leiserson say about the Taft-Hartley bill? At the Senate Labor Committee hearings on this subject, he made his position clear. He said: "I just think the Taft-Hartley Act is no good. The Thomas bill (which is the Senate's identical version of H. R. 2032) is the kind of a bill we need at this time," Dr. Leiserson testified. "The Taft-Hartley Act needs to be repealed."

I am not a lawyer. I confess I cannot recite by heart every section of the Taft-Hartley Act, and the countless legal citations on the subject. But I am impressed by statements by reputable experts such as these, and by my own experience in human relations, which is what labor-management relations really are.

After all, many of the so-called experts who described the Taft-Hartley Act as the perfect bill when it was passed in 1947 seem to admit that the model has imperfections. I read in the newspapers a few weeks back that Mr. Philip Murray, the respected leader of the Congress of Industrial Organizations and of the United Steelworkers of America, charged that Senator TAFT, himself, had admitted that at least 18 sections of the Taft-Hartley Act were unwise or unworkable.

Now I expected that the Senator from Ohio would indignantly deny the charges made by Mr. Murray. But the opposite

happened. Senator TAFT, according to the newspaper stories I saw, told reporters out in Ohio that Mr. Murray underestimated. The Senator from Ohio told newspapermen there were probably 50 sections of the Taft-Hartley law that need rewriting.

That statement impresses me, just as the statements of people like Dr. William Leiserson, Mr. William H. Davis, the former head of the War Labor Board, and other experts have impressed me.

When the independent experts agree the law is no good; when labor spokesmen offer chapter and verse to show why the law is no good for their cooperative relations with management; when the sponsor of the law admits it is ridden with imperfections—these add up in my mind to the fact that this law should be removed from the lawbooks.

These statements, and some of the things that have transpired during the course of the hearings before this Congress, convince me that the Taft-Hartley Act was a political law designed—though the people did not take the hint last November—to bring a consistently unsuccessful political party back to power. They convince me it was written to give additional advantages to corportations in their day-to-day dealings with labor unions.

Mr. Gerald Morgan appeared before the hearings of the House Labor Committee and boasted that he had actually written the Taft-Hartley bill. Who paid him? The Republican National Committee. And they paid him $7,500 for that little chore.

That sounds like political legislation to me.

A former member of the National Labor Relations Board appeared before the hearings of the Senate Labor Committee, posing as an independent expert. And then it developed he was receiving a $3,000-a-month retainer from the General Electric Co.; another monthly retainer, of size unknown, from the General Motors Corp.; and a third allotment of money from a printing trades industry group.

That sounds to me as though Taft-Hartley law is a corporation bill, and that they are curiously eager to keep it on the statute books.

There might be an argument for the Taft-Hartley law if, despite all these adverse circumstances, it had worked for the benefit of labor, industry, and the national welfare. But the Taft-Hartley law has failed. It has strained, not improved, labor-management relations. It has limited the constitutional rights of working men and women. It has, by its operations, upset the delicate balance between wages and prices and profits, and thereby threatened our economic stability. It has weakened us as a nation in the eyes of the people overseas who look to the United States for democratic leadership. It is criticized by independent experts, and apologized for by its supporters.

Clearly, the Taft-Hartley Act has earned the right to repeal. The people of the country want it repealed. They said so in the election results last November, in a mandate as clear as any in the history of this Nation.

The Lesinski bill will repeal the Taft-Hartley Act. It restores the Norris-LaGuardia Act—passed under a Republican administration in 1932—which removed discord-producing, inequitable injunctions from the field of labor-management relations. It restores the Wagner Labor Relations Act, under which collective bargaining and the welfare not only of workers but of all the people, steadily improved. It recognizes and deals with the problems brought about by some forms of boycotts, or jurisdictional strikes and national emergencies disputes.

The Lesinski bill should be passed, and passed quickly. It should not be burdened with a host of amendments designed to convert it into a new Taft-Hartley law with a new 1949 look.

When it is passed, the people of this country will know that the Fair Deal program, for which they voted in overwhelming numbers last November, is on its way to realization. Passage of the Lesinski bill without amendments by this body and passage of the companion bill in the Senate, will prove once again the glorious effectiveness of our American form of democratic government. It will strengthen the morale of all our people, and it will pay immediate dividends to the men and women in the shops and factories—and in the front offices, too—of American industry.

The Lesinski bill deserves the support of every one of us who values peace in industry, stability in the economic system, and an effective democratic United States of America in the troubled world of today. Thank you.

Colonial Airlines' Splendid Record

EXTENSION OF REMARKS
OF
HON. L. MENDEL RIVERS
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 26, 1949

Mr. RIVERS. Mr. Speaker, throughout the postwar years many have criticized our certificated air lines and each plane crash continues to receive front-page publicity in glaring headlines. I have frequently been critical myself in my remarks from the floor of the House, and I expect to continue to be critical whenever I consider it warranted as a constructive measure. Today, however, I want to take this opportunity to extol the remarkable safety record of one of the air lines which deserves the highest plaudits of the House.

On April 19 Colonial Airlines entered upon its twentieth consecutive year of regularly scheduled commercial operation without experiencing a single fatality to either passengers or flight crew. Colonial operates from United States terminals at Washington and New York to Ottawa-Montreal, Canada, and to Bermuda, serving 18 intermediate points in Maryland, Pennsylvania, New York, and Vermont. Its operations to Canada are over mountainous terrain, where severe weather conditions are experienced throughout the winter months, and its flights to Bermuda are over water. Such operating conditions make all the more remarkable its unmatched record of 250,545,622 passenger-miles flown over a period of 19 years without one fatal accident to mar that perfect record. During this period Colonial completed 400,000 landings and take-offs. That achievement deserves the recognition of Congress and high tribute to the management, flight crews, and maintenance employees of Colonial.

Such a record cannot help but instill public confidence in the safety of aviation so that the entire air transportation industry has been a beneficiary of Colonial's faultless record. The Civil Aeronautics Board has consistently denied this splendid company route extensions which it requested to improve the economy and efficiency of its operations over its present route structure, which was inexpertly conceived and designed by that Board. Surely Colonial's fine contribution to safety in air transportation is deserving of greater consideration and just reward by this Government agency.

New Jersey's Great Growth, Her Historical Landmarks, Her Friendly Appeal

EXTENSION OF REMARKS
OF
HON. GORDON CANFIELD
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 26, 1949

Mr. CANFIELD. Mr. Speaker, New Jersey's well-known columnist, Morris Mogelever, whose writings appear in several New Jersey newspapers under the caption "The State we're in," has written the following article describing the State's remarkable growth since 1940, its historical landmarks, and its appeal to visitors:

TRENTON.—The next New Jersey census in 1950 will show our grand State has rivalled California for population growth since the last 1940 census. Percentagewise, the population of New Jersey now stands at 5,000,000 people, an increase of nearly a million folks.

And so to the newcomers from all parts of America welcome to our fine State—a State that is unexcelled for diversity of its physical structure. New Jersey has a striking variety of climate, topography and plant life; rock-strewn mountains in the northern part, wooded hills and cultivated fields in the central counties, 130 miles of the finest ocean beach in the world, and a pine forest of 1,875 square miles in south Jersey.

Although forty-fifth in area, New Jersey ranks sixth in the country industrially. And, no part of the State is more than 125 miles from New York and Philadelphia, two of the three largest consuming centers in the country.

To the stranger within our borders, who would like to get to know Jersey better, and appreciate its interesting places and historic landmarks, and for those who would like to explore the past or present by automobile on a week end, or a study, here's a brief round of places to see:

Trenton: Old Barracks on South Willow Street. Built 1758 for troops during French and Indian wars. State Museum open Sundays 2 p. m. to 5 p. m. Eight miles west of this city is a memorial park at Washington Crossing on the Delaware, and, 12 miles north of this city is Princeton, home of Nassau Inn, battle monument, and the university.

Rock Hill: Sixteen miles north of Trenton in this spot is the house occupied by General Washington until the declaration of peace was signed in November 1783. During these months the Continental Congress was in session at Princeton. Here, Washington wrote his farewell address to the Army. It is open Sundays from 2 to 4 p. m., and daily from 10 a. m. to 6 p. m.

Plainsboro: The kiddies will enjoy the only retolactor in the world on the Walker-Gordon farm, located on United States Route 1, 43 miles from New York on the road to Philadelphia. It's a slow-moving merry-go-round on which 240 cows an hour are washed, dried, and milked. The visitor may see every step of this fascinating operation.

Somerville: Duke's Park, 1 mile south of Somerville on Route 31 is the Duke estate, left by the late James B. Duke, the tobacco king. Parts of this estate are open to the public.

Flemington: Can be reached by Routes 12, 29, and 30. It's a quaint old village. In the old cemetery on Bonnell Street is the only monument in the State erected to honor an Indian by white men—Indian Chief Tuggamircan, who died in 1750.

Bound Brook: Visit Washington Rock about 4 miles east of this community off Highway 29. This point offers one of the finest views of New Jersey. Also WJZ transmitting station on River Road, which is open to visitors.

New Brunswick: Visit Rutgers University—eighth oldest in the Nation. Bucceleuch occupied by British in 1776–77, now a showplace, is open to visitors 3 to 5 p. m. Sundays.

Menlo Park: Here, Thomas Edison operated his laboratory from 1876 to 1886. The Edison Tower rises 131 feet above the ground—2 miles north of Metuchen on Route 27.

It is maintained by the Edison Foundation. The tower enclosure is open to the public weekdays 1 p. m. to 8 p. m., and Sundays from 10 a. m. to 8 p. m. Admission 10 cents.

Newark: Visit the Newark museum at 43 Washington Street; Newark public library; Newark airport.

Morristown: Washington lived here for more than a year. See his headquarters in National Park, any native will be happy to point out the place. See also the Seeing Eye Home, one of America's unique institutions. Also see the historical museum open daily, except Sunday.

Paterson: Visit Lambert Castle on Garret Mountain in the western section of the city, maintained as a museum by the county historical society. Open weekdays and Sunday 10 a. m. to 5 p. m. Admission free. Excellent panorama of surrounding country is afforded from the town. Also see the Holland submarine, the first in the world at West Side Park. And the city museum, 268 Summer Street, is a natural history museum. And the Dey House, at Preakness, 5 miles west of the city, served as Washington's headquarters on several occasions.

Elsewhere in the State, on Route 46 is the Delaware Water Gap, one of the best known scenic features in eastern United States. It is a gorge 1,200 feet deep, and less than a mile across through which the Delaware River flows.

In north Jersey there are hundreds of famous lakes, particularly Greenwood Lake, northern Passaic County, Lake Hopatcong in Sussex, Lake Mohawk, Swartswood Lake, Culvers Lake in Sussex which are devoted to recreation.

And, along the Jersey coast from Sandy Hook on Route 36 through the Highlands to Sea Bright, Long Branch, Asbury Park, Belmar, Bradley Beach, Spring Lake, Sea Girt and then to the extreme south to Atlantic City, Cape May, Wildwood, the visitor will find a summertime mecca for bracing ocean air.

Truly, New Jersey is a great State for all to work in and enjoy, and to the thousands who have recently settled in this section, happy living is our wish.

Winston Churchill

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 26, 1949

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following article from the Boston Sunday Post, Boston, Mass., April 3, 1949:

NECESSITY OF ETHICS ROOTED IN CHRISTIANITY STRESSED BY CHURCHILL—NOTEWORTHY THAT HE TOLD SCIENTISTS WORLD SIMPLY CANNOT GET ALONG ONLY ON WHAT THEY HAVE TO OFFER

(By John Griffin)

Winston Churchill's speech in Boston Garden Thursday night revealed clearly how far the split between the English-speaking peoples and the Russians has grown. While the former Prime Minister expressed the hope that a peaceful solution can be worked out, the whole tenor of his address was one of defiance.

And his statement that the Russians would long ago have attacked London if it weren't for the threat of the atom bomb, indicated that, whatever his words of hope and optimism may have been, he actually believes the Russians cannot be trusted and must be opposed with overwhelming force.

The olive branch that he was offering wasn't much more than a twig. His hopes appeared, inferentially at least, to rest on the possibility that when Stalin retires or is taken by death, Russia will be thrown into a turmoil which may result in a breakup of the power of the Politburo.

Barring that event, he was saying, the only hope lies in the North Atlantic Pact and the atom bomb, particularly the latter. It is a rather appalling prospect, any way you look at it.

But it has to be faced. If the English and Americans have lost all faith in the peaceful promises of the Soviet leaders, as they obviously have, it is logical to assume that the only alternative is a constant preparedness to use all the modern weapons as a guaranty of peace, if not a pleasing peace, at least not a fighting war.

EXPECTED NEW PROPOSAL

There was a curious disappointment in the Churchill speech, which was due to advance reports that he was ready to make a far-reaching proposal of a sort of United States of English-speaking nations.

This was evident among the newspapermen present from many parts of the country. There was a large group of Washington correspondents, several journalists from England, and correspondents from the larger papers throughout the East.

They were attracted by the expectation that Churchill had a new proposal. He had indicated that in interviews given upon his arrival in New York a week or so ago. At that time he pointed out that his Fulton, Mo., speech, which was a forerunner of the North Atlantic Pact, had already been superseded by a new need, and the conclusion-jumpers decided he would carry the idea of a treaty to the English-speaking nations at least one step further.

The occasion appeared made for such a presentation, and when it did not come, there was a decided let-down. It was probably best described by one Washington correspondent, who closed his story by saying, "This was once when the man and the occasion did not meet."

INTERPRETED TRUMAN'S ABSENCE

There will be wonder as to why he did not undertake a new proposal. The fact that President Truman called off his own scheduled appearance at this meeting had meant to many people that Churchill was about to spring a sensation which might appear, from the very fact of Mr. Truman's presence on the program, to have the President's support.

Actually it is pretty well known in Washington that the President's reasons for canceling his appearance was due to several factors. One was the report of his advisers that he could have beaten the filibuster recently by staying in Washington.

Another was that his principal speech writer is seriously ill. And it became clear that if he didn't come to the M. I. T. program, he couldn't very well show up to receive an honorary degree at the Boston College convocation a couple of weeks later. To be consistent, he had also to cancel two April appearances in New York.

A consideration that might have played a part in Churchill's decision to make no further proposals of union is the fact that he is a representative of a minority group in England nowadays. As one of the great men of the world and the great wartime leader, he still enjoys enormous prestige, but politically his star has dimmed in his own country.

What he had to say about the difficulties with Soviet Russia was sensational in itself, but apart from the charge that Russia would not have hesitated to attack London except for the atom bomb, his remarks were about what has been said many times before.

MOST SIGNIFICANT THOUGHT

General Eisenhower, at least 3 years ago, expressed the belief that Russia's aggressive refusal to reach honest agreement with the western nations was due to their fear of the friendship of the west. As it was then stated, "The Russian leaders cannot afford to have friendly borders," which is saying that in order to keep their people in subjugation, they must convince them that they are beset by enemies.

They don't want the Russian people to know what life is like outside of Russia. It would be difficult to convince the people then that they must submit to eternal hardship.

But there was one aspect of the Churchill speech which was noteworthy. It was his affirmation of the necessity for the exercise of Christian virtues and Christian ethics. He was speaking before what was the most distinguished gathering of scientists in many years, and some men of science seem to think that science is all.

They sometimes forget that there is a greater power, and that the world cannot get along simply on what science provides. If science were the be-all and know-all of existence, there would be no hope for humanity. Churchill's insistence upon the fact of God and the need for acting in accordance with Christian ethics was a timely thought.

Dr. Stephen S. Wise

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 26, 1949

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following article from the Jewish Advocate, Thursday, April 21, 1949:

STEPHEN S. WISE, SPIRIT OF ELIJAH—A PRINCE OF ISRAEL IS DEPARTED

(By Rabbi Joseph S. Shubow)

A monarch of the mind is gone from this vale of tears. A giant of the spirit departs from the arena of human struggle. The passing of Dr. Stephen S. Wise will be a shocking tragedy to all men who love freedom. Christians as well as Jews, white and black, believers and nonbelievers, scholars, sages and saints, as well as millions of common men—men who earn their livelihood by the sweat of their brow—will weep for this great prince of Israel.

Dr. Wise crowded into his life the achievements of a veritable host of men; his attainments and accomplishments bear no comparison with lesser men, any more than one can say that Homer, Virgil, Dante, Cervantes, Shakespeare, and Goethe wrote so many times better than less gifted writers, or that Demosthenes, Cicero, Amos, Jeremiah, and Isaiah have spoken so much more powerfully than weaker men, or that Philo, Seneca, Maimonides, Spinoza, Kant, and Hegel have thought so many degrees more clearly than less brilliant minds.

In the realm of genius, be it mental or moral, intellectual or spiritual, there can be no fair comparison. The rare and extraordinary phenomenon of a truly great man stands out unique, overpowering, awe-inspiring, solitary if you please, and defies all comparison. Such a one was he whom Jews and gentiles throughout all the four corners of the world, notably our great country, the United States of America, and the state of Israel, delighted to honor on his seventy-fifth birthday, a few weeks ago, for all declared him to be what the late Dean C. Baron Russell Briggs, of Harvard, said of the unforgettable Charles W. Eliot, president of Harvard University for 40 years, "a leader of men by divine right."

Everybody in America and millions across the seas knew the name of Dr. Stephen S. Wise. He was known to humble porters, hotel clerks, station masters throughout the land, as well as to statesmen, sages, publicists, and divines; in Europe crowned heads, presidents, and premiers have known his name and have heard his voice; and so have dictators, tyrants, oppressors, and self-seeking politicians; they, too, have heard his voice and quaked and shivered, for he has ever spoken in violent denunciation of greed, duplicity, cruelty, bigotry, and hatred. He spoke in the name of standards unsullied and ideals sublime. His was a true and authentic Hebraic and American voice. It was an echo from Sinai and the hills of Judea and also from the plains and the mountains of America.

The emergence of the Nazi regime of murder, arson, mendacity, and ferocity, reminiscent of the old-time Furor Teutonicus, made of Dr. Wise a veritable arsenal of weapons forged against the ruthless pagan tyrants of humanity and the vicious, cowardly despoilers of the Jews. This one man was the moral and spiritual equivalent of a great host, a huge array of implacable foes of that cruel, cowardly, murderous, piratical crew that stifled all life, liberty, and happiness in the land of Lessing, Schiller, Goethe, Heine, Mann, Emil Ludwig, Feuchtwanger, and Einstein. Dr. Wise had a double case against the Nazis because of their degrading all humanity in general and because of their sadistic degradation and wholesale slaughter of the Jews. Throughout those troublous times and terrible years, he toiled indefatigably day after day, without rest or comfort or the slightest thought of self, in order to eliminate what the sages of Jewish history called the Gezerah Baah, the evil decree.

He always sought peace, but never peace at any price, ever "peace with honor," in Disraeli's old phrase. For him it was never a question of respect shown and opportunities given a few more Jewish or Negro lawyers, physicians, students, or merchants; for him it was always a question of the core of religious idealism; Christianity, Judaism, and all religious and moral teachings of the human race were on trial. He said, with the celebrated Viennese Jewish scientist and moral philosopher, Popper-Lynkeus, that as long as a single man goes hungry, unsheltered, and unclothed because of bigotry, we can take all our books on religion and morality and throw them into the fire. And here there can be no compromise for him, who regards life when robbed of all honor, fairness, and decency, worse than a thousand deaths.

THE FREE SYNAGOGUE

In 1932 the Free Synagogue of New York, which he founded, celebrated its silver jubilee. That marked a great event in the history of American Israel and religious development in general. When he organized the Free Synagogue he was in his early thirties—brilliant, dashing, eloquent—with respect for learning and stirred by a great religious idealism; his pulpit, which for many years was Carnegie Hall, became the most celebrated in the land. All America listened to his sermons and preachments, long before the radio brought religion to the home. His vision has been that of only the most spiritually blessed of men. He crowded into a single ministry the service and activity of many great men.

Along with his love of God and America, his ruling passion was the Zionist movement. He and Dr. Chaim Weizmann, the first President of Israel, his intimate friend and coworker in the sacred cause of the redemption of the exiles, were the last survivors of the epoch-making leaders who created the modern Zionist movement. And in his unerring prophetic sense, he always said he would live to see the Jewish state as Dr. Theodor Herzl once told him at a Zionist Congress.

HIS LOVE OF ZION

Dr. Wise's amazing, superb, and consistent devotion to the Zionist movement from its very inception is a fact that can never be adequately appreciated even by those Zionists who know more than the superficial facts. He espoused the Zionist cause when it was not only unpopular, but carried with it a most unsavory stigma. In those early benighted days, Zionism was looked upon as undesirable, alien, un-American, at its best, indissolubly associated, in the minds of the so-called better Jewish elements, with the malodorous Ghetto, and at its worst identified with atheism, anarchism, radicalism, and general rebelliousness. Dr. Wise, seeing the traditional glory of the Zionist ideal and viewing the misery of his European, Asiatic, and north African coreligionists, vowed eternal fealty to the oath of Zion: "If I forget thee, O Jerusalem, let my right hand wither." He threw in his lot with the immigrant Jews who spoke Yiddish or English with an East-side accent, but who burned with a love for the prophetic ideal recrystallized and revitalized by the magic personality of Dr. Theodor Herzl.

Dr. Wise did not wait until the movement became socially correct and acceptable. He discerned at once the powerful elements of national revival that the ideal harbored and he enlisted immediately under the banner that a kindred prophetic soul had unfurled. And from that day to the end he gave of his rich and bountiful talents to this great ideal with a most unflagging devotion, a burning zeal, and an unshakable optimism.

Older Zionists never tire of telling with joy and pride of the distinction and recognition the valiant and impressive young Dr. Wise brought to the Zionist ranks. All that the fervent and intellectual Yiddish speaking Zionists were brilliantly and powerfully proclaiming in the ghetto, but confusedly and ineptly uttering to the Americanized Jews, was now a richness of color and originality of interpretation by the striking young American rabbi, whom they regarded as a glorious blend of Apollo and Isaiah. They prayed for a prophet who would translate their spirit, interpret their ideal, and turn into glory their broken accents—and such a spokesman and champion they found in Dr. Stephen S. Wise, who remained the most significant and the most eloquent proponent and interpreter of the cause in America.

Not until a great biography is written of him, after the manner of Morley's Gladstone or Monenpenny and Buckle's Disraeli, will it ever be known how in a thousand and one ways he had been instrumental in gaining a point or a concession or recognition for Zionism from Presidents Wilson, Roosevelt, and Truman, and how he wooed and won for Zionism some of the most outstanding American personalities through the charm and magnetism of his own personality and through his contagious devotion and irresistible persuasiveness; and especially what endless personal sacrifice he made for the Zionist ideal.

DEVOTION TO DEMOCRACY

A vital aspect in the service of Dr. Wise was his uncompromising devotion to democracy and he applied it to the management of the Free Synagogue. A warrior against special favor and privilege, he could never be reconciled to the unprophetic profit basis which had become the rock on which many houses of worship were built. This money qualification for membership and leadership in the House of God Dr. Wise regarded as utterly incongruous and incompatible with the spirit of the teachings of Israel. He taught that aristocracy among Jews was always based on learning, charity, piety and that these were as often, if not more often, found among the lowly circumstanced.

DEMOCRACY IN THE SYNAGOGUE

Though men of great wealth and high social standing were inevitably drawn to the Free Synagogue, it was the man of moderate means but of sincere intentions who was given an equal opportunity for service and recognition. This virtually marked a new era in the history of the American temple. A man arose who proclaimed that the house of prayer was not to be a fortress of the opulent and privileged, but a citadel of all those who truly sought God. This attitude may yet revolutionize American Judaism and all religion. Prohibitive dues and exacting fees have often made of the temple a rich man's club. Dr. Wise preached that each man could bring as an offering what his heart and purse would allow, kemathriath vado, according to his ability to give. The synagogue thus becomes a true temple, dedicated to the All-High with a clean conscience and a contrite heart as the prerequisites for admission, rather than being an exclusive club or high-priced theater, where the amount of one's bank account determined one's proximity to God. The House of God was never meant to be a house of favor and privilege.

PULPIT FREEDOM

Virtually as a corollary of the thoroughly equalitarian and democratic spirit of the church and synagogue follows the incontrovertible principle of pulpit freedom, for it is clear that if the church or temple is the creation of a few men of power and opulence, they will inevitably look upon the minister or rabbi not as their free and independent spokesman, but as their mouthpiece; not as a free and inspired preacher and teacher who interprets the truth as he best sees it, but rather as a hireling or circus barker or ventriloquist's dummy. It is a pity and a shame that many clergymen have become toys and pawns in the hands of the Engastrimanteis, or belly prophets. On this point, as on ever so many others, Dr. Wise would no more compromise than he would barter with the devil or sell his soul.

Pulpit freedom, he maintained, is a sine qua non for regenerating the faith and for making our religious ideals applicable to our daily lives. A synagogue and church, open to the masses as well as to the classes, would become the safest guaranty of the prevalence of the prophetic spirit, for though the common people may stray from the path of righteousness, they inevitably recognize the honest soul and the true character and will instinctively follow the word of him who is a respecter of ideas rather than of persons and has the good of all the people at heart rather than cater to the wishes of the favored few.

CREATED JEWISH CONGRESS

As another indication of his democratic spirit, we have his creation, with the other great prophet, Justice Louis D. Brandeis, of the American Jewish Congress, and later by himself and others, of the World Jewish Congress. This is an epic in itself. He wanted Jewish rights protected everywhere, be it against the Ku Klux Klan of America, the Nazis of Germany, the Cuzists of Rumania, or the Endecks of Poland. Wherever anti-Semitism flourished and bigotry raised its ugly head, there he focused the world's attention through the glare of what Woodrow Wilson called pitiless publicity.

He saw how Jewish rights were insufficiently protected by those self-appointed notables who spoke with muffled voice and his heart bled. He wanted representation on a purely democratic basis; only then would they speak with vigor and firmness like men. All of Jewish life became his pressing concern. No event, no problem, no question of Jewish or general import, escaped him. This guardian of Israel neither slept nor slumbered.

CLEANING UP NEW YORK

There are indeed many other aspects of Dr. Wise's extraordinary career which entrance and fascinate. Suffice it here but to mention his Herculean efforts in the hope of purging the political life of the greatest city in the world has known of a foulness and corruption as stenchant as the Augean stables which only a Hercules could cleanse. What was achieved by him and his highly gifted and great true friend, Reverend John Haynes Holmes, in this direction, is public record. Perhaps millions of dollars and thousands of lives were saved due to their militant moralism.

In this connection, it is of interest to note what tender affection and wonderful comradeship there existed between Dr. Wise, the Jew, and Dr. Holmes, the Gentile, united together in an effort to bring sanity, cleanliness, amity and true fellowship among their fellow men and their readiness to eradicate every evil and deviltry that mar man's life. And what was equally magnificent was to see each one refer to the other as the better man, as if there were degrees and gradations in supreme excellence of character and genius. One is reminded of the famous statue of Goethe and Schiller with the wrath of glory gently held by both and each proclaiming to the other: "You deserve it equally for your extraordinary service to your fellow men."

SOCIAL SERVICE

The Free Synagogue has also become celebrated for its social-service department, which has rendered aid to the sum of $100,000 per year. Dr. Wise at the very founding of his congregation considered this work as an integral part of his program. And due to the help of Dr. Wise's able and devoted associate, Dr. Sidney E. Goldstein, this department has been regarded as a model throughout the land.

CHILD-ADOPTION BUREAU

There is also the child-adoption department, which used to be conducted by Mrs. Wise herself, of blessed memory, a celebrity in her own right, having attained wide recognition as an artist and writer of high quality. For years this very charming, highly cultured, and most noble woman devoted her days to making the homes of those not blessed with offspring ring with laughter and joy of children. She was ever the soulful and sympathetic companion of her celebrated husband.

JEWISH INSTITUTE OF RELIGION

There is one more aspect of Dr. Wise's service which may in the long run prove of most permanent value, and that is the Jewish Institute of Religion, which he founded in 1922. For years the friends and admirers of Dr. Wise urged him to establish a school of learning and training for promising young Jews who would be prepared for the rabbinate by the most eminent masters available and who would have the wonderful privilege of the daily contact and lasting influence of Dr. Wise himself. There are over 200 graduates to date, serving God and man throughout the land. Many served with distinction as chaplains during the World War. When the institute was founded in 1922 Dr. Wise repeatedly tried to obtain others to accept the presidency, but fortunately his friends finally prevailed upon him to take the leadership himself. And his achievement and influence in the brief period of a decade and a half have been incalculable. With the help of his graduates and with the militant spirit for a modern, genuine, scholarly, unapologetic, and avowedly national Judaism and true religion burning in their souls, the long fight that Dr. Wise waged for the ideals and visions he first beheld will become easier and more certain for victory.

There is the old beautiful legend, that the fiery prophet Elijah never died, but ascended to heaven in a flaming chariot and continues to reappear from generation to generation. When we looked upon the prophet of New York we intuitively felt the spirit of Elijah was still alive and still roamed the streets. We shall not so soon look upon his likeness again.

Money Makes the Mare Go

EXTENSION OF REMARKS

OF

HON. L. MENDEL RIVERS

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 26, 1949

Mr. RIVERS. Mr. Speaker, on March 15, 1949, I introduced House Concurrent Resolution No. 48, which reads as follows:

Resolved by the House of Representatives (the Senate concurring), That there shall be printed as a House document 30,000 copies of the document entitled "Money Makes the Mare Go," which was printed for the use of the Committee on Coinage, Weights, and Measures of the House of Representatives. Seven thousand copies shall be for the use of the House of Representatives and 3,000 copies shall be for the use of the Senate. The remaining 20,000 copies shall be sold through the Government Printing Office at a price approximating the cost of printing.

In commenting on this book in the News and Courier of Charleston, S. C., the brilliant and patriotic Rev. Henry F. Wolfe, who celebrates his silver jubilee on May 4, 1949, said:

If our congressional leaders in Washington will appropriate moneys to put this book in the hands of every honest-to-God American, inflation, depression, and world war III will vanish overnight. After you read it, you will be a red-hot American and you will do your best to get your congressional leaders to get this book published and placed in the hands of all Americans.

SOUND MONEY: A CURB ON WAR

All wars are economic. All depressions are the result of unsound economic and monetary policies. Sound money is the first requisite of peace and economic recovery. If it were possible to make a book on sound money a best seller so that everybody would be reading it and discussing it, wars and depressions would be eliminated.

Frank Waldrop, editor of the Washington Times-Herald, in commenting on this book said: "It is not dull reading. Quite the opposite"; and it "tells you some facts about money in language anybody can understand."

This book could become a best seller if the Congress would make it available at a reasonable price, based on the cost of printing and distribution. The cost of printing in quantities of 10,000 is 22 cents per copy; and the great majority of those requesting copies have offered to pay for them.

In my opinion, sound money is the most important question before the American people today because, unless money is sound and dependable, nothing can be sound and dependable. Money is sound only when currency in circulation is backed by monetary reserves adequate to insure redemption at face value on demand.

SOUND MONEY OR SOCIALISM?

All thoughtful Americans deplore the drift toward socialism, regimentation, and a controlled economy, but all efforts to combat it will be futile until we replace our so-called managed currency with sound redeemable currency. For currency that is not redeemable is fiat money, and the only way that fiat money or managed currency can work is through collectivism or completely Government-controlled economy. This means complete coercion of individuals, controlled production, rationing, and price fixing.

THE THREE FUNCTIONS OF MONEY

Real money has but three simple functions: (1) A measure of value; (2) a medium of exchange; and (3) a convenient way of storing the equivalent of goods and services. The most important function of money is to serve as a constant, invariable measure of the value of goods and services, and when it fails to do that, we have economic chaos such as exists throughout the world today.

MANAGED CURRENCY OR CONSTITUTIONAL GOVERNMENT?

Rather than being an accurate yardstick to measure the value of commodities, money itself has become a commodity—to be bought and sold, made cheap or dear—by the manipulation of a group of international bankers who control the International Monetary Fund to which we have delegated the control of our money in direct violation of the Constitution of the United States which clearly states in article I, section 8, clause 5:

The Congress shall have power * * * to coin money, regulate the value thereof, and of foreign coin, and fix the standard of weights and measures.

Right now is a most appropriate time to recall the admonition of President Garfield:

Whoever controls the money of a nation controls its industry and commerce.

WHAT THE AMERICAN PEOPLE WANT

The four principal objectives of the American people are: World peace, economic stability, national security, and constitutional government; and all four are predicated upon the adoption of a sound monetary system. Until the world is able to use one standard of value again—whether it be measured in gold alone or gold and silver joined at fixed and proper ratio—there can be no economic stability in the United States or elsewhere.

At a time when the American people are being propagandized into pursuing a course which many fear will inevitably lead to economic collapse and world chaos, can we afford to ignore the printing of this book which, in the minds of many people, offers a solution to our problems?

Be that as it may, I have complete confidence in the intelligence, integrity, and judgment of the American people to correctly appraise this book and make the right decisions; and feel, therefore, that it should be made available to all who desire to read it.

I trust that my colleagues will concur in my views and give their support to House Concurrent Resolution No. 48.

Principles of the American Government

EXTENSION OF REMARKS
OF

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 26, 1949

Mr. DINGELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Soterios Nicholson:

PRINCIPLES OF THE AMERICAN GOVERNMENT

By Soterios Nicholson

"WE, THE PEOPLE OF THE UNITED STATES"

The United States is a Republic of 48 States, the District of Columbia, and outlying Territories.

The Government of the United States combines both the democratic and republican principles of government.

A. Democratic because the power rests in the people.

B. Republican because this power is exercised by representatives of the people.

The Declaration of Independence was adopted by Congress on July 4, 1776. It proclaimed that the 13 colonies were from that day forward free and independent States, no longer under any allegiance or obligation to the British King, that they had full power to make war or peace; the right to take any action which other independent States had a right to take.

"We hold these truths to be self-evident. That all men are created equal, that they are endowed by their Creator with certain unalienable rights; that among these are life, liberty and the pursuit of happiness."

The War of Independence freed the American Colonies from Great Britain. For 8 years (1781–1789) the people of the 13 newly independent States tried a plan of Government known as the Articles of Confederation.

This was found to be unsatisfactory, the confederation having little power. It had no chief executive to enforce laws, no plan or power to collect taxes, and it could not settle disputes between States.

In 1787, the constitutional convention was established. Finally, Gouverneur Morris wrote the final draft of the American Constitution.

In it, the preamble expressed the purpose of the American Government:

"We, the People of the United States, in order to form a more perfect Union, establish Justice, insure domestic Tranquility, provide for the common Defense, promote the general Welfare, and secure the Blessings of Liberty to ourselves and our Posterity, do ordain and establish this Constitution for the United States of America."

The National Constitution guarantees (1) freedom of speech; (2) freedom of the press; (3) freedom of worship; (4) right to assemble peaceably; (5) right to life and liberty; (6) right to a speedy and public trial; (7) right to hold property; (8) right to petition the Government.

The Constitution of the United States is the supreme law of the land. Our "Ladder of Laws": The National Constitution, treaties, acts of Congress, State constitutions, State laws, county regulations and rules, city and village rules and regulations.

The Constitution gives to the Central Government of the Nation the authority to make laws on almost all subjects which are of common interest to all the people.

It provides the Government with authority to put those laws into effect.

It provides for the organization of the Government group. It sets up a Federal system of government.

It provides for contacts with other groups; with State governments; with foreign countries, by giving the President the right to appoint ambassadors and other public ministers and consuls.

It explains the relationship which should exist between the several branches of the National Government.

Laws of the United States are made in pursuance of the Constitution, and treaties made under authority of the United States.

The Constitutional Convention decided that three branches of the Government should be established:

The legislative, which makes the laws

The executive, which operates the Government and puts laws into effect

The judiciary, explains the laws and settles legal questions.

Each branch represents the people separately * * * each has limited powers, independent of each other, except for certain "checks and balances."

The Bill of Rights consists of the first 10 amendments to the Constitution, adopted in 1791. These are:

First amendment: Forbids Congress to interfere with religion, free speech, a free press, with the right to assemble peaceably, or to petition the Government.

Second amendment: Guarantees to the people the right to have weapons.

Third amendment: Guarantees against lodging soldiers in private houses in time of peace without the consent of the owners.

Fourth amendment: Provides that there shall be no search or seizure of persons, houses, goods, or papers, without a search warrant.

Fifth amendment: Declares that there will be no trial for serious offenses without a grand jury indictment, no repeated trials for the same offense, condemnation without trial, no one compelled to witness against himself, and no property taken for public use except at a fair price.

Sixth amendment: Requires a speedy and public trial for criminal offenses in the district where the crime was committed, a fair jury, a plain statement of the accusation; gives the accused the right to be represented by a lawyer and to compel the attendance of his witnesses, and requires all witnesses to testify in the presence of the accused.

Seventh amendment: Provides that in lawsuits about anything valued at more than $20, a trial by jury shall be allowed.

Eighth amendment: Prohibits too large bail or fines and cruel or unusual punishments.

Ninth amendment: Declares that rights not stated in the Constitution are not therefore taken away from the people.

Tenth amendment: States that powers not delegated to the United States nor prohibited by the Constitution to the States are reserved to the States or to the people.

The Constitution fixes the terms of President and Vice President at 4 years, of Senators at 6 years, and of Representatives at 2 years.

THE EXECUTIVE

"The executive power shall be vested in a President of the United States."

The term of the President commences at noon on January 20. His term of office is for 4 years. His salary is $75,000 and allowances. He is elected in November of every fourth year. He must be a natural-born citizen, at least 35 years old, and at least 14 years a resident of the United States.

His chief power and duty is to enforce the Constitution, the laws made by the Congress, and treaties. Among his other powers are: To veto bills, to recommend measures to Congress, to call special sessions of Congress, to appoint Federal judges, to appoint representatives to foreign countries, to appoint heads of departments and other officials, to be Commander in Chief of the Army and Navy.

Candidates for the office of President and Vice President are chosen at conventions held by the principal political parties (of which there are now two of major size: Democrats and Republicans).

The voters of each State select as many presidential electors as the combined number of Congressmen from the State. These become known as the electoral college, and vote for the candidates for President and Vice President of the party which the elector represents.

In case of the death of the President, his resignation, inability to use the powers or do the duties of his office or his removal, the Vice President is given the right and duty of taking his place. Other successors to the office are, in sequence: The Speaker of the House of Representatives, President pro tempore of Senate, the Secretary of State, Secretary of the Treasury, Secretary of National Defense, Attorney General, Postmaster General, Secretaries of the Interior, Agriculture, Commerce, and Labor, in the order named.

To help the President enforce and administer the laws, executive departments have been created. Heads of these departments form a council called the "President's Cabi-

net." Each department head is responsible to the President.

Cabinet members are chosen by the President and approved by Senate. Each member of the Cabinet holds office as long as he satisfies the President. He operates under authority delegated to him by the President.

Each department is divided into many divisions, bureaus, offices, or services. The Cabinet is recognized as constituting the President's regular board of advisers.

Law-making and enforcing agencies of the Government are provided in the Constitution. The first article arranges for the establishment of a Congress and defines its power to make laws.

THE LEGISLATIVE

The Congress of the United States is the legislative branch of the National Government and consists of two branches: the Senate and the House of Representatives.

Each State is represented by two Senators. These are elected by the voters of the States. Before 1913, Senators were elected by State legislatures. Senators are chosen at the national election held in November of each even-numbered year, but only one-third of them are elected at any one election. The term they serve is 6 years.

In the House of Representatives, the number of Members is determined by the Congress. A provision was included in the Constitution for the periodic enumeration of the people * * * this is called a census * * * so the number of Representatives could be changed as the population varied.

The House of Representatives has consisted of 435 Members since 1910.

Representatives are elected in November of even-numbered years to serve 2 years. Members can be reelected for each term.

Among the powers delegated by the Constitution to the Congress are: To lay and collect taxes; to borrow money; to make rules and regulations for commerce between the States and foreign countries; to coin money and control counterfeiting; to make a uniform rule about naturalization; to establish post offices; to issue patents and copyrights; to set up a system of Federal courts; to declare war and to raise and support armies and the Navy; to provide for calling out the militia to enforce Federal laws, to suppress lawlessness, or to repel invasion; to make all laws needed under the Constitution.

The Constitution provides that the Vice President of the United States shall be the President of the Senate. The House of Representatives chooses its own Speaker.

Each House of Congress arranges for a number of committees of its Members which concentrate upon the important subjects of lawmaking.

The Ways and Means Committee is the most important committee in the House of Representatives. It not only has original jurisdiction of all tax measures, it also serves in the capacity of a policy-making body, and as the Committee on Committees it determines the membership of the other committees of the House of Representatives.

Other leading committees include: Agriculture, Appropriations, Banking and Currency, Commerce, Finance, Foreign Relations, Judiciary, Labor, Rules, and Military and Naval Affairs.

Each committee has a chairman, usually a Member of Congress who has served for some time.

Every bill introduced in either House of Congress is referred to an appropriate committee for study. The committee, after study, may recommend it to Congress in the form in which it was introduced; change it slightly; rewrite it; or fail to report it in any form.

After a committee reports a bill back to its House in Congress the Members of Congress discuss it in debate and then vote upon it. When a bill is passed by one House, it is sent to the other House for action. If the measure is passed by the second House with amendments, it must be returned to the House in which it was introduced.

If the amendments are not acceptable, the measure can then go to a conference committee made up of Members of both Houses. When the points of difference are adjusted they are then presented to each House for approval.

After a bill has been passed by both Houses of Congress it is sent to the President of the United States. The President may approve the entire bill or disapprove it (veto it). If the President fails to sign the bill within 10 days after reaching him (not counting Sundays), it becomes law without his signature.

If the President vetoes a bill, while Congress is in session, it does not become a law unless each House passes it over the President's veto by a two-thirds vote.

When the President signs a bill it is then sent to the Secretary of State to be given a number.

Congress may also conduct investigations, using one of its regular committees or appointing a special committee.

A session of Congress must terminate by January 3 so that the annual session of the current year may begin.

Special session of Congress may be called by the President on extraordinary occasions.

A third branch of the Federal Government is the judicial.

It is made up of the Federal courts. These courts explain and interpret the Federal laws, settle lawsuits between citizens of different States and punish some kinds of law-breaking. They explain the meaning of the Constitution.

Regular courts of the United States consist of a Supreme Court, 10 circuit courts of appeals, about 94 district courts. Special courts are one Court of Claims, one Court of Customs, one Court of Customs and Patent Appeals, and other estaolished at different times by Congress.

Decisions of the Supreme Court are final. For more than 70 years the Supreme Court has consisted of a Chief Justice and eight Associate Justices.

STATE GOVERNMENTS

State and city governments are modeled on that of the Federal Government. There are three general branches—executive, legislative, and judicial.

The governor is the chief executive of the State. He is elected by the people of the State, his term of office being either 2 years or 4 years, according to State laws. New Jersey governor's term is 3 years.

If a governor dies or is removed from office, the State usually provides that his place be taken by the lieutenant governor.

The executive branch of the State includes other officers such as the secretary of state, attorney general, State treasurer, State auditor or comptroller.

The lawmaking branch of the State is called the State legislature or assembly. It consists of two houses except in Nebraska only one. In most States, the legislature meets every 2 years, in a few States they meet every year, and in one State, Alabama, once in every 4 years. The governor may call them in special sessions.

Each State has a system of law courts called the State judiciary. The State courts have authority to try two general classes of cases—civil and criminal.

Each of the government groups must be supported by the people who are its members. This is done by means of taxes and excises. All money paid as taxes is to be used for public purposes.

The United States, most of the States, and many cities, operate on a budget system, which lists the needs for which money must be expended, how much each need will cost and an estimate of where the money is coming from.

Among the taxes imposed by the Federal Government and in varying proportions by many of the States and cities are: Income taxes of persons and business organizations, inheritance taxes, taxes on the manufacture and sale of certain products, tariff laws providing customs fees, transfer taxes and other legal charges, capital taxes of corporations, social-security insurance.

There are other taxes, not universal, such as sales taxes, business taxes, license fees, fines, special assessments.

Taxes represent our share of the costs of government, our own government.

Against them may be credited the great advantages enjoyed by the American citizen. benefits that attach themselves to every activity in his personal, business or public life, that create a country of opportunity, safety and comfort for a man and his family.

Here is the American's creed accepted by the House of Representatives on behalf of the American people:

"I believe in the United States of America as a Government of the people, by the people, for the people; whose just powers are derived from the consent of the governed; a democracy in a republic; a sovereign Nation of many sovereign States; a perfect Union, one and inseparable; established upon those principles of freedom, equality, justice, and humanity for which American patriots sacrificed their lives and fortunes.

"I therefore believe it is my duty to my country to love it; to support its Constitution; to obey its law; to respect its flag; and to defend it against all enemies."

Housing Hokum

EXTENSION OF REMARKS
OF

HON. PAUL W. SHAFER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 26, 1949

Mr. SHAFER. Mr. Speaker, during our Easter recess I was greatly amused by newspaper articles and radio broadcasts of a visit made by Members of the other body to the slum areas located in what was termed "a stone's throw" from the Nation's Capitol. This tour was taken, it was explained, to whip up support for housing legislation.

There was nothing original about the idea of such a tour. Twelve years ago, in 1937, Members of Congress were taken on such a tour and to that same particular alley which is so located that anyone standing in a certain spot can have his picture taken with the Capitol dome showing in the background. Such photographs were used in 1937 by New Dealers and associated persons with the self-styled deep consciousness of the need for social progress, to put the heat on Congress to pass housing legislation. This was passed and $800,000,000 was voted. Every dime of it was spent in less than 3 years but the same slum area that was pictured then remains.

It is true that a lot of low-cost housing was built with the $800,000,000 voted by the Congress in 1937, but the slums eliminated in city after city were merely moved from one section to another. People who lived in the slums moved to

other slums and the low-cost housing projects were occupied by those who had been living in other good houses who found they could get cheaper rent, or by persons of means and "pull" who wanted to live at the expense of the American taxpayer.

Now, more than a decade later, Mr. Speaker, the Fair Dealers have sponsored another tour into the slum area near the Nation's Capitol. The same alley is there, different residents live there, but they cannot be moved because landlords are under rent control and cannot either move their tenants to change the character of the houses, or charge enough rent to make improvements to the dwellings feasible.

In 12 years the New Deal housing legislation did not change a single brick in this famous alley. The slum is still there. If Congress had voted $10,000,000,000 for housing back in 1937, that slum would still be there.

As a matter of fact, a recent investigation showed that approximately half of the people in that slum area own automobiles ranging in cost from $500 to $2,500. Many of them have had plenty of chances to move to other places but did not accept the opportunity.

The same powerful oratory is at work in this Congress as was heard in 1937 and the same so-called social consciousness is at work in the same hearts. The only difference today is that the Fair Dealers want to spend three or four times as much as the New Dealers spent.

The Fair Dealers would put the Federal Government in the housing business and construct houses. Thus, the wild-spending bureaucrats would go out and compete with private individuals who have been waiting for prices to fall so they could build, for materials and labor. The price of building a home, every competent real-estate man will tell you, likely will be higher a year after the Government goes into the building business than now.

Expensive low-cost housing—the real cost of which we will never be able to determine considering the double bookkeeping employed by the bureaucrats—will again be made available to those who have political pull or are just plain lucky enough to get it. Millions of Americans will be paying not only their own rent in private homes, but will be paying their brother's rent when he lives in Government subsidized homes. That rent will be stuck on their tax bill whether they have a social conscience or whether they just want to live and let live.

There are those who are actually economically naive enough to believe that this will bring more good housing to the American scene. I wish I could believe that it would. It is certain that fewer homes will actually be built if the Government enters the housing field. Private investment capital will most certainly get out of the housing business as fast as it economically can do so. The net result of the housing bill, if it passes, will not be more homes available to all the people but a few good homes available for a few lucky persons or those with political influence.

The people who now live in slums may be forced out of the slums to make way for the low-cost housing projects but none of them will be able to get a room in the new projects. They will go to other slums or live in makeshift structures on the edge of town and create another slum area.

The Government is only now selling Greenbelt, the Tugwell-built town near Washington, and several other housing projects similarly dreamed up at the expense of the taxpayer by the New Deal in the 1930's. The Government is taking a terrific loss on this Tugwell-built town and, in fact, has sacrificed some $100,000,000 just to prove that cannot change the character of the people.

But, Mr. Speaker, Congress is now asked by the do-gooders to put up more millions of dollars to prove the same age-old facts. Will the people in every State eventually awaken to the stupidity of such a process? Thoughtful persons can only wait and wonder.

Broadcast by Henry J. Taylor

EXTENSION OF REMARKS
OF

HON. KATHARINE ST. GEORGE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 26, 1949

Mrs. ST. GEORGE. Mr. Speaker, under unanimous consent, I include in the Appendix of the RECORD a broadcast made by Mr. Henry J. Taylor and some questions from his listeners with his replies:

CRONY AND CORRUPTION

Own anything? Want to be independent—lick nobody's boots? Interested in your future success?

This is a free country. You only live once. Stand up and make yourself heard.

As a nation we've arrived where we are because an American has the right to keep the proceeds of his efforts. Yet everybody who owns anything—everybody who wants to be independent in your land and mine—is being milked dry, getting an awful kicking around.

Can 10 percent be cut from the Marshall plan? Oh, no.

Can $3,000,000,000 be saved by cutting Government overhead—as is clearly shown in the Hoover report? Oh, no.

Instead, political spenders keep on saying taxes must go up. The more they spend, the more they tax. They call on everybody but themselves to sacrifice. Working people and thrifty people are the goats.

LIVING ON THE FAT OF THE LAND

In any socialist state, the political leaders live on the fat of the land, regardless of what happens to the welfare of ordinary folks. They enjoy high living and enormous tax exemptions, which they vote themselves at the same time that they're slapping more and more taxes on everybody else.

If they get sick, they enter beautiful suites in Federal hospitals and charge it to the taxpayers. If they want to take a ride, they call out a battleship and sit on the sun deck, while you and I pay and pay. If they want a vacation, a house, a car, a special train, riding horses, or admirals or generals to carry messages about who's supposed to come to dinner, they just charge it to the taxpayers, and eliminate the tax on their own enormous allowances for good measure.

That's what's called a planned economy. What it amounts to is government by crony and corruption.

THE PLAN BEHIND A PLANNED ECONOMY

Will high-living politicians, who slap on higher and higher taxes until they may drive you out of business entirely, pay back the losses? Will they give up a battleship to ride on, or a single million-dollar airplane to ride 'n, to make it a little easier for the taxpayer who foots the bills? Oh, no.

The whole tax racket is a politician's paradise. That's what's called a planned economy. They keep on planning to put taxes up, although you know and I know that Government spending and waste should and could come down, and taxes could come down.

THE PENDERGAST PAVING PLAN

I grew up in Kansas City. There, in my home town, Tom Pendergast, prior to his final residence in Leavenworth Penitentiary, operated a planned economy.

For 10 years in our town Twelfth Street and Thirteenth Street were always being paved and repaired. Pendergast would order the paving blocks ripped up from Twelfth Street to pave Thirteenth Street. That left Twelfth Street unpaved. So a few months later, Pendergast would rip up the blocks from Thirteenth Street to pave Twelfth Street, distributing patronage and plunder all the while.

Back and forth, back and forth, these paving blocks traveled, for 10 long years. All the while Pendergast kept saying, "Taxes must go up." So it is, always, in a planned economy.

MANAGEMENT A TARGET

Next, the campaign designed to further socialize you includes attacks on any kind of management except political management. Politicians and organized pressure groups propose to manage your life, your work, your future. That's also included in what's called a planned economy. It hits every one of us. Your pay, your security, your independence, your hope for the future are involved.

This is the stake you have in individual management: You're working in a place that needs good management—not political management—so that you can hold your job, and progress, as a free citizen. Neither the men and women in an enterprise, nor the capital, can be effective without good management. Nothing else is so important to the employee's welfare, the investor's welfare, or the public welfare.

So the next time you hear some law proposed—like higher taxes, or the closed shop, or other reactionary measures that are all a part of this attack on you—ask yourself this question: "What happens to the experienced, responsible management? If they kill off the management, what happens to me?"

For people prosper when business prospers—and at no other time.

MORE RUBBER MONEY?

Accordingly, there are three main prongs in this campaign: the tax attack, the management attack, and, third, the confiscation of your savings and insurance through laws permitting more and more rubber money for political purposes.

I'm sorry to say that any one of us who thinks the politicians got that one out of their systems when they devalued everybody's savings in 1933 may be mistaken. For example, while attention was being diverted by the recent filibuster maneuvers about civil rights, a sleeper bill was very quietly introduced in the Eighty-first Congress. It is House of Representatives bill 2573.

This is a plan, to be held in reserve, for further and further watering your money, your savings account, your life insurance policy value, by again juggling the price of

gold upward to $56 an ounce and silver up to $3.50 per ounce.

In short, this prong of the three-pronged attack on you who have anything is a political ace up the sleeve, a second money devaluation. Incidentally, it would put the value of just the silver alone, in the present 25-cent piece, up to 65 cents, making bootlegging of silver quarters a black-market bonanza. But perhaps the big brains that thought that bill up—and wish to plan everything in America—haven't figured that out.

Doesn't all this sometimes sound like Ponzi's plan?

LOOK BEHIND THE SLOGANS

But take heart. Clear thinking of progressive Americans can stop these steals. Is it liberal to steal things from people? Is it liberal to say taxes must go up, when expenses should come down? Is it liberal to smear independence and thrift?

The people's eyes must be opened. The curtain must be lifted on the sham and shame that masquerade behind catchwords, and such false slogans as "Human Rights," when human rights are actually being abused.

When that is done, the truth about this three-pronged attack against you will be driven out into the open, and the whole swindle of socialism exposed. From that day forward your future can be boundless in your land and mine.

(From questions received through the mail from listeners, Mr. Taylor selected the following for comment on this program.)

GENERAL M'NARNEY'S APPOINTMENT

Question. I was shocked by revelations of incredible confusion and waste in our national defense, in your recent Reader's Digest article and broadcasts. You say that through our wastefulness at home and all over the world, Russia expects us to knock ourselves out in our own gymnasium. I think that is exactly what we are doing.

Answer. The Hoover investigation committee agrees. The committee says that enormous savings are possible in the Army, Navy, or Air Force without reducing their combat efficiency but, in fact, increasing it.

The premium upon economy and coordination, therefore, becomes more important than ever. Our national security depends on it.

Defense Chief Johnson's appointment of four-star Gen. Joseph T. McNarney to an important place in the Pentagon Building is a very valuable step forward. He is an able man along reorganizational lines. In fact, he originally reorganized the War Department, just before the war.

This is no time for the United States to be anything but the strongest nation on the face of the earth.

A GOOD PLACE TO LEAVE

Question. I took my high school teacher a printed pamphlet of one of your broadcasts. She is still arguing with me about what you say regarding living conditions under communism in Russia.

Answer. Certainly, she can at least remember that thousands try to steal out of the Soviet Union every day. I saw this in Germany myself. They risk their lives, swim canals, tunnel under barbed wire, risk death by hunger or bullets, to get out of Communist Russia.

Why do they do that, if it's such a good place to live? They even steal airplanes to get out, as you know. Your teacher can verify that.

But did you ever hear of thousands of people from the free Western World doing anything like that to get into the Soviet Union?

WISHFUL THINKING

Question. Do you think the Soviet Union, with its low standard of living, will blow up in revolt from within?

Answer. No. I'm convinced we should warn ourselves against any easy thinking that our country's Russian problem will be solved for us by revolt from within.

The Kremlin tyrants, unfortunately, can stay in control of the tragically oppressed Russian people a long, long time—just as long as the Kremlin planners control the people's food supply, the secret police, the concentration camps, and the army. They can do just what the Nazis did in Germany.

THE HIGH COST OF DRAFTING

Question. How many men have been drafted, and how much did it cost to induct them?

Answer. Up to February 1 only 35,000 men have been drafted. Based on what the Selective Service System is spending in the fiscal year, the cost of each induction has been about $785 per man. That's how high the draft cost has been.

BUSINESS FAILURES ON THE INCREASE

Question. I am a small-business woman. I've already let out seven people. Higher taxes would drive me to the wall and cost me my life's savings. Help me, Mr. Taylor. I'm afraid my little business will fail.

Answer. You're up against a tough proposition, but stick with it, and hope and hope—like every big company and small company that is trying to operate over a long pull.

The number of business failures has been increasing. They averaged 53 a week in 1947. But the average now is 164 a week. Last week the number, sadly enough, hit a new high of 210. This was the largest number of failures in any week in 7 years—since 1942.

Business and trade and employment need encouragement now, not a series of reckless knocks on the head through labor laws, or taxes, or anything else.

THE CLOSE PROFIT MARGIN

Question: You say automobiles in our country are manufactured at a close margin of profit, averaging $75 per car. I don't buy a car every day, but I do deal daily in stores. How about that?

Answer: The profit side of our economy is dangerously low per unit of sale, propaganda to the contrary notwithstanding. This is equally true in stores.

A coast-to-coast survey by the National Retail Dry Goods Association, covering 228 department stores doing over $2,500,000,000 in business a year, shows they've netted less than 4 cents profit out of each dollar they took in this year.

Increased taxes would cut buying further, make people have less. Because of lower take-home pay they would buy less.

It would be the easiest thing in the world to tax us into a bust that way. For when business falls jobs fall, as anyone should know. When prosperity goes out the window depression comes in the door, but we don't want that in your land and mine.

No Depression—Yet

EXTENSION OF REMARKS

OF

HON. FRANK BUCHANAN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 26, 1949

Mr. BUCHANAN. Mr. Speaker, under leave to extend my remarks, I wish to include an article by George Soule appearing in the April 25 issue of the New Republic, entitled "No Depression—Yet."

IT'S NOT A DEPRESSION—YET

(By George Soule)

Perhaps the best way to find out whether we are sliding into a depression would be to poll a list of forecasters and then take a position contrary to that of a majority. Most of them were wrong in 1929, 1937, 1945, 1946, and 1947. Yet their judgment might be as good as that of a tossed penny: by mere chance they might be right. Anyone who is asked to make public a prediction would be safer to go back into his burrow like the groundhog, which looks for his shadow but says nothing.

Words like inflation, deflation, recession, depression are bandied about without much precision. Of course we have not got rid of the business cycle. The curve of aggregate business activity, charted with care by statisticians, will continue to show oscillations. But that does not tell us much about what we really want to know. Even if it were certain that we had passed the peak of the curve and were on the downgrade, the most important questions would remain. Recessions come in all styles and sizes. Some are long, some are short; some have sharp breaks of prices, others gentle declines; some are marked by severe restriction of production and employment, others are so mild that they are barely noticeable at the time and appear later merely as a statistical dip when compared with what preceded and what followed.

The least hazardous guess is that inflation in the sense of rapidly rising prices has temporarily run its course. The general index of wholesale commodity prices has been falling since last August. At latest report it was about the same as the 158.5 level of October 1947, after having bulged to 169.5 in the meantime. It is now down almost to the inflationary peak of 1920, which was 154.4. How low this is may be seen by comparing it with the 100 of 1926, the 64.8 of 1932 and the 78.6 of 1940. The index has not previously fallen consecutively for 6 months since 1938.

The greater part of this decline was occasioned by the drop in farm products and food. By contrast the prices of coal, glass and clay products, metals—such materials as go into automobiles, housing, fuel, and power—increased substantially. But these increases now seem to have come to a halt, and some declines have appeared, as in steel scrap and oil. Textile products have recently been falling, as has the average of all nonfood products.

Unless demand markedly increases, there is no reason to expect any important reversal of this downward tendency of wholesale prices, since crops are abundant both here and in Europe, and the supply of some other commodities has been creeping upward. But there is no reason to expect a precipitate drop either, like that from the 154.4 of 1920 to the 97.6 of 1921. During that deflation the prices of crops were cut in half. Now farm products have bumped into Government supports, which did not exist in 1920. There was no Marshall plan after World War I. If we agree to call what happened then deflation, we do not have it now. I would be inclined to say that even disinflation is too strong a word. Maybe it is just exflation.

The consumer's price index began to fall in September, and has eased off from 174.5 at that time to 169 on February 15, 1949—a magnificent decline of 3.2 percent. The cost of living is still 26.8 percent higher than in June 1946, when price control collapsed, and 71.4 percent above August 1939, just before the outbreak of war. The drop has come mainly in foods, apparel, and house furnishings. Rent, fuel, light, and miscellaneous items have been creeping up. The widely heralded cut in prices of General

Motors cars amounted to about 1 percent, after a 6-percent increase near the end of last year. Even if some retail prices should fall a little more, no substantial relief is in sight. After World War I, when the collapse of wholesale prices was the sharpest ever experienced, the cost of living fell only 12 or 13 percent in 2 years. The same percentage fall now would bring the index down to about 150—higher than in 1946. Not so great a drop is now likely.

No consistent decline is shown in the overall figures of production or employment. At the end of 1948 the index of industrial production was close to the highest point attained since the end of the war—in December it was about 92 percent above the level of 1935–39. Nonagricultural employment was also near its top, 50 percent above 1939. Factory pay rolls were close to their all-time high. Whatever may come, this situation can hardly be called even a Truman depression. To be sure, there were numerous reports of lay-offs in January and February, somewhat more than is customary at this time of year, but the total number employed remained larger than in the same months of 1948. If employment recovers in the spring, as usual, the little dip will be regarded as a normal seasonal movement rather than as part of a downward trend.

If a general business recession, even a moderate one, is in store, the signs of it must be sought elsewhere than in these statistics. There are a number of slackening markets which may or may not be significant of trouble. It is these which attract attention because they offer such a bright contrast to the days when there was not enough of anything to satisfy the demand. Retail trade declined a little toward the end of 1948. Men's apparel and women's dresses have suffered. For the first time in years excess stocks were offered in post-Christmas sales. The outlook in the textile industry is so uncertain that the union, after having suffered adverse arbitral decisions in its demand for higher wages, called a halt. Some new houses cannot be sold at the prevailing high prices. Kaiser-Frazer and Hudson have cut production and laid off men. Other cars in the higher price brackets can be obtained without waiting. The used-car market has been slipping. Many other consumers' durable goods have caught up with demand at existing prices.

Slackening demand in any part of the economy, reflected in unemployment, can pyramid into slackening demand in other parts. It does not necessarily do so. All through the prosperous 1920's, for instance, we had sick industries like agriculture, cotton textiles and bituminous coal. The business cycle itself is not a parallel movement of all industries on a common front; always some factors are on the way down while others are on the way up. What happens in the aggregate depends on the total balance of the economy. If the body is in a healthy condition, local sources of infection are less likely to spread. Let us turn, then, to a broader view of the economic balance.

Consumers are buying much more than before the war, but there is much more to buy. The gross national product has grown in both money and real terms. The share of this product which went to consumers in 1947 was 71 parcent; in 1948 it was 70 percent. But in 1939, consumers took 75 percent of it, and in 1929—a year of high prosperity and heavy investment—76 percent of the product went to consumers. Government is now absorbing a larger share than it did in either of these earlier years, but equally marked is the unusually high proportion of the product which has been going to supply the purchases of capital goods for business investment. Private capital expenditures in the United States have been running at about 15 percent of the gross national product.

There is a controversy as to whether this level of capital investment is too high to last. One school argues that it is. The President's Council of Economic Advisers contends that it stems mainly from making up the deficiencies in industrial growth which occurred during and before the war, and that the percentage of our total product which goes into capital is likely to shrink, perhaps to 11 or 12 percent. Others maintain that businessmen will continue to invest at the present rate for a long time to come unless the Government or labor does something which chills their delicate confidence—something like raising taxes or using bad words like socialism.

As long as the present level of investment does continue, we need have no worry about any severe recession. But if investment should taper off, then consumer or Government purchases would have to increase to take its place, or there would not be enough demand to avoid serious unemployment. The Council of Economic Advisers believes that within a few years consumers will have to absorb about 75 percent of the national product if that product is not to shrink. At the present growth of production, this would mean an increase of consumption at the rate of 4 percent a year, or 3 percent per capita.

That is why the recent hesitancy of retail sales causes some alarm. Ever since 1946, the average level of real wages has been slipping. While some have received wage boosts sufficient to cope with the rising cost of living, many other consumers with less easily changed wages and salaries, and those with fixed incomes, have been falling behind the procession, as they always do in an inflationary period. Some have spent their war savings. Others have extended their borrowings to buy cars or houses. Consumers' disposable income per capita (annual rate at 1947 prices) was $1,288 in 1946, $1,208 in the first half of 1947, $1,200 in the second half of 1947, and $1,200 in the first half of 1948. If the amount bought by consumers does not increase from now on as the capacity for producing goods destined for retail markets grows, we are in for trouble. Business would not for long keep investing at the present rate if it could not sell the goods to be produced by the new machinery and factories.

Business, raising the prices of its products while demand exceeded supply, accumulated tremendous and steadily growing profits. A large part of these profits was used for expansion. Now that prices have started to fall, business could keep production and employment high by letting prices drop to the point where consumers could buy everything that could be produced, even if this meant somewhat lower profits. In that case investment might go on without any marked halt, though at a lower percentage of the total product. But if business tries to hold up profits by maintaining prices at the expense of the volume of sales, there will be more unemployment, diminished national production, fewer profits, and a sharp drop in investment.

Shifts in the amount of capital investment mark the swings of the business cycle; this is one of the most volatile factors in the whole economy. What is the present outlook for investment?

A survey of intentions by the McGraw-Hill Co. indicates that investment in productive equipment planned for 1949 is almost as high as in 1948. But it is of a different character; instead of being mainly for expansion of capacity, it is more largely to replace old machinery with up-to-date equipment.

Business is already holding off on construction because of high costs and other uncertainties.

Housing accounts for more than half of total construction and has been running between one-fifth and one-sixth of total gross investment. The value of residential contracts awarded has been falling ever since last July. The number of new dwelling units started has been falling since last spring. The housing shortage is far from made up, but not enough people can buy at the prices asked, and mortgage money has been running low.

The growth of business inventories, which rose steadily after the war, has flattened out, especially in nondurable goods. A drop of inventories would be one of the surest signs of recession. During the years between World War I and World War II the fluctuation of inventories alone accounted for about half the difference in the flow of investment between the top of prosperity and the bottom of depression.

Foreign investment, though far smaller than domestic, has already shrunk substantially and is likely to get smaller as the Marshall plan progresses and our imports increase.

There is, therefore, no certainty of expansion in a single one of the great categories of investment, and a fall is occurring in one of the most important—housing construction. If a decline of private investment should acquire momentum, the storm warnings would be flying.

Government and the banking system provide the channels through which money is poured into the economy or is drained out of it. The pouring in of money increases demand; the draining out decreases it.

The war expenditures of Government, financed to a large extent by the expansion of bank loans and investments, were the primary source, first of full employment, then of inflation. Ever since 1946 Government has been playing a restrictive role. Instead of having a deficit, it has taken more money from the public than it has paid back. By tending to decrease the amount of purchasing power, this would bring deflation if spending were not at the same time increased in the private sector of the economy by the use of accumulated savings and new borrowing from the banks.

In 1947 Government exerted $6.7 billion of counter-inflationary pressure. (The figures include Federal, State, and local governments.) In the first half of 1948, Government was taking in money at an annual rate of $12,000,000,000 more than it was paying out. In the second half of 1948, Government cash surplus declined to the annual rate of $2.8 billion. The effect of reduced taxes and higher defense expenditures was beginning to be felt.

The fact that last year inflation still continued, in spite of the anti-inflationary fiscal policy, may be regarded as a measure of the latent upward tendency in the private sector of the economy. Perhaps the leveling off in the latter part of the year could be attributed in part to a delayed effect of the Government surplus.

Unless taxes are now increased, there will probably be a Federal deficit in 1949. Already the anti-inflationary pressure of Government has been reduced by some $10 billion within 6 months. There is little doubt that a sufficient increase in public expenditures, without a corresponding increase in revenues, could start the inflationary spiral upward again. On the other hand, a sufficiently large surplus could reinforce any deflationary tendencies in the economy. Where to draw the line, and just when to shift the pressure from one side of the balance to the other, is the puzzle.

As far as the banking system is concerned, it can either apply the brakes or pull out the throttle according to need. Until recently it has been gently applying the brakes. Still stronger downward pressure could be exerted if the Federal Reserve banks should start to sell Government bonds, since this would reduce bank reserves and compel a restriction

of bank credit. The authorities of the system have been opposed to this measure, but instead have stiffened the requirements for banking reserves. The power to do so, which expires in June, they want renewed. On the other hand, if circumstances should require a relaxation of credit restrictions, they have almost unlimited scope. The gold reserve would support an expansion far greater than that which we have had. No recession need be caused by any banking crisis. Fear of the unused inflationary possibilities in the banking structure has been the chief concern.

We are not in a depression. There is some chance that the economic tide has started to recede. Any recession will be moderate if business allows prices to fall so as to maintain and increase consumer demand, instead of keeping prices up, cutting production, and laying off men.

There is also a chance that inflation will be resumed, as it was after the dips in early 1947 and 1948. In this case the absence of a surplus in the Federal budget would be a severely aggravating factor. The longer inflation continues, the greater will be the distortion in the pattern of consumers' incomes and purchasing power. For this and other reasons, the greater will be the danger of a really severe depression to follow.

A higher tax on corporate profits would be appropriate to either inflation or recession. If inflation does continue, the tax can yield a budget surplus which will be counter-inflationary. If deflation is in process, profits will shrink, the yield of the tax will rapidly drop, and the needed budget deficit will appear.

The Federal Reserve Board, if fortified with renewal of its present powers, would be in a position to move quickly in either required direction.

The stand-by anti-inflationary controls which the President asks, such as allocation of scarce commodities and price control in special cases, will do no harm if they do not have to be employed; their absence might do a good deal of harm if they should be needed.

A large public-housing program, if now authorized, would take some time to get under way. It might be just what was required to fill in a slump in building. In any case it would supply a want which the private builders cannot satisfy.

The social-security program is, by and large, countercyclical, and its extension would emphasize its effect. Higher minimum wages are required to help repair the present distortion of incomes.

Whether we are to have a depression, more inflation, or a mild and salutary readjustment will depend largely, not on blind fate, but on what we do. Good business policies can supply part of the answer; good government policies the rest.

Radio Address of Secretary-Treasurer George Meany of the American Federation of Labor

EXTENSION OF REMARKS
OF
HON. ANDREW J. BIEMILLER
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 26, 1949

Mr. BIEMILLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a radio address delivered by Secretary-Treasurer George Meany of the American Federation of Labor, April 23, 1949.

Mr. Meany's address is a penetrating analysis of the provisions of the second Wood bill and quite clearly sets forth the A. F. of L.'s position on this proposed legislation.

The address follows:

When the House of Representatives returns from its Easter vacation next week, the first important business scheduled for its consideration is the new labor bill—the Lesinski bill. After long hearings and careful consideration, the House Labor Committee approved the Lesinski bill in its present form. It calls for the repeal of the obnoxious Taft-Hartley Act and the restoration of the original Wagner Act with several amendments intended to protect the public interest when labor-management disputes arise.

In my opinion, the Lesinski bill is an honest attempt to carry out the wishes of the American people as expressed in the 1948 elections. The results of those elections, both for executive and congressional offices, provided a clear and unmistakable mandate for the prompt repeal of the Taft-Hartley Act and the substitution of a new law which would be fair to both management and labor, while safeguarding the interests of the public.

But the surviving elements of the reactionary groups in both parties whose policies in the Eightieth Congress were so overwhelmingly repudiated by the voters in 1948, are unwilling to permit a show-down vote on this major issue. They have rallied their scattered and defeated forces into a tight coalition for opposing repeal of the Taft-Hartley Act by every device, maneuver, and strategy in the complicated book of legislative procedure.

The coalition's first weapon is confusion. In an attempt to mislead and confuse Members of Congress, the coalition forces have trotted out a so-called compromise measure, known as the Wood bill and have arranged to force a vote on it before the provisions of the Lesinski bill can be considered and voted upon by the House of Representatives.

What is this Wood bill? I venture to say that not one out of a hundred Americans have ever heard of it. It was never even given a public inspection before a congressional committee. Thus, Members of Congress are not too familiar with its provisions. Its sponsor, Representative JOHN S. WOOD, of Georgia, calls it a Taft-Hartley substitute which, he says, is "fair and evenly balanced" between labor and management and contains many changes, "all of a liberalizing nature."

Unfortunately, the record tells another story. It reveals, first of all, that Representative WOOD originally introduced a bill which was a duplicate of, instead of a substitute for, the Taft-Hartley Act. It reveals, further, that when the coalition forces discovered that this Congress would not find Taft-Hartleyism attractive even under another name, they tried to give the Wood bill a "new look" by hasty revision of a few of its provisions.

When this "new look" Wood bill is carefully scrutinized, it becomes apparent that it is coming apart at the seams and that the old Taft-Hartley slip is showing its ugly colors all over again. In other words, the Wood bill is a transparent disguise for Taft-Hartleyism at its worst.

For instance, the evil of injunctions which was restored by the Taft-Hartley law is enlarged, strengthened, and made even more repugnant to free American workers by the Wood bill.

Under Taft-Hartley, if charges were filed accusing a union of committing unfair labor practices, the general counsel for the National Labor Relations Board was directed to conduct a preliminary investigation of the charges and if he found there was real basis for them, it was his duty to apply to the Federal courts for an injunction restraining such practices.

However, the Wood bill has streamlined that procedure considerably. It permits the general counsel for the NLRB to ask for injunctions the moment charges against a union are filed, without even bothering to check up on the accusations.

The abuses that such procedure would lead to, and the opportunities it offers a few unfriendly employers or officials to harass and destroy established unions of American workers are so obvious that I cannot conceive of any fair-minded Congressman voting for such a bill.

As bad as it is, the Taft-Hartley law does contain a few safeguards against the issuance of indiscriminate injunctions in cases involving jurisdictional disputes. These safeguards are eliminated entirely by the Wood bill. The National Labor Relations Board and the courts are given complete discretionary authority to issue restraints against jurisdictional strikes without even affording the parties an opportunity to settle the dispute themselves.

Now let us examine some of the "liberalizing changes" in the bill of which Congressman WOOD boasts. One of these deal with secondary boycotts against which the Taft-Hartley law lays down a sweeping prohibition. The Wood bill, however, does legalize one type of secondary boycott, if the work in a factory on strike is farmed out to another plant, if the workers in the second factory are members of the same local union as the first and if the local union has a contract with the second factory providing that its members may refuse to work on struck goods. When all those "if's" in the Wood bill are added together, the result is that not one boycott in a hundred thousand would ever be held legal.

One would imagine from the attitude of both the Taft-Hartley Act and the Wood bill that secondary boycotts are an evil that should be eliminated. On the contrary, history shows that the boycott has been the most powerful weapon available to unions in their fight to eliminate sweatshop conditions and to raise American standards of living to their present level. The Lesinski bill recognizes this truth by providing that secondary boycotts should be held illegal only when they are invoked in furtherance of a jurisdictional dispute or when a losing union in an official election at a plant attempts to boycott in retaliation for its defeat.

There are two other changes in the Wood bill that deserve brief comment. Under Taft-Hartley, the closed shop was banned in future contracts but provisions in existing agreements between labor and management were allowed to remain in force for the duration of the contract. The Wood bill goes one step further in making even those prior contracts illegal.

The Taft-Hartley law set up a mechanism for employe elections to determine whether they preferred a union shop. No union security provision could be included in a labor-management contract without such direct and advance authority from a majority of the workers themselves. Well, in the thousands of such elections which have been held since the Taft-Hartley law became effective, the union shop has won in more than 99 percent of the cases. So now the Wood bill eliminates the elections altogether. Apparently, some employers found it more difficult to refuse to grant a union shop after their workers had voted overwhelmingly for it.

As against these changes, which go even beyond the Taft-Hartley Act in their vicious and malicious attacks against organized labor, the Wood bill throws the Nation's workers a sop by providing that employers as well as union officials will henceforth be required to sign non-Communist affidavits.

The American Federation of Labor does not object to this change, but it fails to see any great boon that it confers on the workers of our country.

So far I have dealt only with the changes, or the "new look" in the Wood bill. Now let's see what it keeps from the "old look," what it picks up word for word from the Taft-Hartley law.

The Taft-Hartley proviso permitting employers to abuse free speech in attacks against unions is retained in full.

Unions are still left subject to the danger of damage suits in the Federal courts.

Restrictions against welfare funds, which have brought relief to unemployed and injured workers and have come to the rescue of the families of many other workers killed on the job, are kept just as tight and as cruel as before.

The Taft-Hartley law's attempts to suppress and bottle up political activities by unions remains unchanged.

The tricky and precedent-shattering paragraph making State laws paramount to the Federal law when their restrictions against union security provisions are more sweeping than the Federal law, stays as it was.

Exclusion of so-called supervisory employees from union protection against employer discrimination or refusal to bargain, stands identical with the Taft-Hartley law.

The whole Taft-Hartley list of prefabricated unfair practices imposed against unions in an effort to weaken and regulate them to the point of ineffectiveness is reincorporated in the Wood bill.

Thus, it becomes obvious that the new look in the Wood bill is an utter sham. In some respects, indeed, the Wood bill is far more dangerous and repressive than the Taft-Hartley and in not a single respect does it offer any hope of substantial improvement.

Within 2 years' time, the Taft-Hartley Act has become thoroughly discredited. The last election proved that support of Taft-Hartleyism is political poison. Not even Senator TAFT himself favors keeping his own legislative monstrosity unchanged.

Therefore, the American Federation of Labor considers it necessary at this time to point out bluntly and emphatically to all Members of Congress that labor will regard a vote for the Wood bill as a vote to retain Taft-Hartleyism. We urge all Members of the House of Representatives to defeat the Wood bill overwhelmingly and to approve the well-considered, fair and honest Lesinski bill.

Socialized Medicine

EXTENSION OF REMARKS
OF
HON. A. L. MILLER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 26, 1949

Mr. MILLER of Nebraska. Mr. Speaker, public medicine—free medical care—supported by tax on pay rolls has been demanded by the President. Let there be no mistake the President's health plan is no social experiment. It will be a final surrender and Government will take over the major responsibility for distributing and financing medical care. When this is done, there will be no turning back no matter how great the confusion or how bitter the disappointment. The American people will be disappointed with the quality of the medical care they receive from the Government. There should certainly be no hasty and ill-considered acceptance of any compulsory Government-controlled health insurance program.

The resolutions included with these remarks indicate that the public is being aroused as to the dangers of Government interference in the private lives of our citizens. They realize that if medicine can be socialized, then law, and every other business can, and no doubt will follow in the same steps.

The big joker in the President's program is the scheme that makes the individual feel he is getting something free—something for nothing. The proponents of this plan do not tell the truth. In practice the patient does not have a free choice of physician and the physician does not have freedom in the practice of medicine.

Every worker will have the cost taken from his pay envelope and this cost must be added to the price of everything he buys. He will be supporting a whole host of filing clerks in order to keep up the paper work on the health of 140,000,000 people. When he is ill, he will find he is only one of 40 or more patients who want service for his money, and whom the physician must examine very superficially in a short time. When he really becomes ill, he will discover that the slap-happy methods of overworked doctors whose fees are assured, and who must look to the Government for pay, will give this same ill patient not better, but worse care. The patient will undoubtedly consult a private physician, who does not join the assembly line, in order to get a good quality of medical care.

Mr. Speaker, we must not disturb that personal relationship between physician and patient. It seems quite possible that some of the States will need assistance in the care of the sick and the needy. This assistance should be enlarged and improved, but upon a State basis. Keep these problems close to home and they will be better administered than when directed from an all-powerful bureaucracy in the Nation's Capital.

MORRILL, NEBR., *April 21, 1949.*
Hon. A. L. MILLER,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN: With the issue of socialized medicine coming up, we want to go on record, as some of your constituents, as opposing the socialization of medical care or socialistic practices of any kind. We are not capitalists but we do believe in the capitalistic system of government. We want to be free to choose our doctors, our treatment, our medicine. We want our doctors to have something to work for so that they will keep abreast of the most modern and efficient methods of caring for all ailments.

We want our doctors to have a personal interest in our particular troubles. Furthermore, we believe we are capable of paying our own doctor and hospital bills but we do not care to pay for those neurotics who are constantly seeking medical care when it is not necessary.

On the other hand, we have never known a doctor to turn away an ailing or hurt person due to their inability to pay. We have many charitable institutions who help the needy secure medical care and they do this at a lesser cost and more efficiently than a Government agency could handle it.

It appears that socialized medicine is only another step toward complete socialization and another freedom lost, so please work against all socialistic measures and work for a more democratic and free Nation. We believe that in doing this you will go on record as being definitely opposed to socialized medicine and will vote accordingly.

Sincerely,

Signed by 17 women from Morrill, Nebr.

THE COLUMBUS LIONS CLUB,
Columbus, Nebr.

RESOLUTION

Whereas the standards of medical care in the United States of America are unsurpassed in the world, and the medical profession in the United States is of the best under our free and democratic form of government; and

Whereas any person now unable to pay for medical and surgical treatment is generally taken care of by physicians and surgeons without charge, and no person in the United States need be deprived of medical care because of voluntary assistance of physicians and surgeons and locally controlled agencies; and

Whereas there is a bill now before the Congress of the United States to socialize medicine, hospitals, and other health agencies, and which if passed will be an entering wedge destroying entirely our American way of life as we know it, and for which our forefathers died to establish; and

Whereas the adoption of such a program in whole or in part will entirely change our democratic way of life, and will inevitably lead to further state socialism, and make all of us more and more vassals of government: Wherefore be it

Resolved by the Lions Club of Columbus, Nebr.—

1. That the club and all its members respectfully request the Congress of the United States not to impose upon the citizens of the United States any form of compulsory health insurance under whatever name or guise.

2. That a copy of this resolution be sent to all Nebraska Senators and Representatives in Congress, and that they be urged to use all effort to defeat the enactment of any legislation of this nature, and to use all effort to stop the trend now seeming to be uppermost in the minds of the democratic leaders to lead our country down the road of state paternalism and oblivion.

Signed this 18th day of April 1949, at Columbus, Nebr.

O. LEE GRACE, *President.*
JOHN ARMSTRONG, *Secretary.*

Our Foreign Policy—Senate Debate on Atlantic Pact Could Be Forum for Analysis of United States Stand

EXTENSION OF REMARKS
OF
HON. GEORGE G. SADOWSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 26, 1949

Mr. SADOWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following article by Thomas L. Stokes that appeared recently in the Washington Star:

OUR FOREIGN POLICY—SENATE DEBATE ON ATLANTIC PACT COULD BE FORUM FOR ANALYSIS OF UNITED STATES STAND

(By Thomas L. Stokes)

The Senate could, and should, become the forum for a careful analytical review of our whole foreign policy when it begins to consider the Atlantic Pact in the near future.

It is the logical time to take stock, for this military alliance with western Europe is a departure for us. It is certainly, too, not the place at which we expected to arrive when we

looked forward from creation of the United Nations at San Francisco only 4 years ago. It would be wise to try to find out how we got where we are today as a possible help in going on from here.

It represents a backward step from the United Nations into outmoded concepts of armed alliances which so many of us thought had been shattered by the second world war in our generation, only to find ourselves deluded after so short a time.

The debate on the Atlantic Pact offers a splendid opportunity to talk about strengthening the United Nations into a real world government, which was the original objective, instead of weakening it by a secession movement such as the Atlantic Pact.

At best the UN was comparable to the Articles of Confederation of our American Revolution era. While that loose confederation which lacked essential authority somehow carried us through the Revolution, it had to be transformed into a strong Federal Union only 6 years thereafter when we ran into the problems of self-government as an independent Nation—such problems as the world itself faces today and on not much larger or different scale, for the air and radio-connected world today is much smaller than our colonies were then.

BOLDNESS NEEDED TODAY

Cynics here and the world over, looked with unconcealed skepticism upon the group of men who gathered at Philadelphia to write a Constitution that would bind together such diverse elements, refusing to believe that men, however able and skillful and earnest, could be so bold and original. Such boldness is needed today, nor is it too much to ask.

Twice since World War I our Senate has initiated movements for international peace and concord—first in the 1922 Arms Limitation Conference here in Washington which it proposed to the President in a rider on a naval appropriation bill, second in the 1933 World Economic Conference in London which it recommended by resolution. If each had succeeded as fully as it might, much that has happened since might not have happened. But in both instances American idealism and leadership expressed themselves, as they could again.

By the time the Senate begins to consider the Atlantic Pact it is expected to have before it a resolution sponsored by a number of Senators and House Members beseeching President Truman to call a constitutional convention of the nations of the world to establish a real world federation. The public pressure behind this movement is indicated by adoption of similar resolutions by a number of State legislatures.

Such a resolution offers the opportunity for Congress to take the initiative again.

DEMOCRACY IN GERMANY

Debate on the Atlantic Pact would be a good time, too, to take another look at our war aim to promote democracy elsewhere which, upon examination, we would find slightly tarnished here and there, notably in Germany. There the influence of our policy has been less toward encouraging the democratic elements than to encouraging those elements, represented in the big business and financial monopolists and cartelists, who picked Hitler for their stooge, appropriated the military for their purposes, exploited the German people and started a war to establish their system all over Europe and the world. There's not a democrat in the whole cynical and sinister lot.

Some of this story is told in a report submitted to Army Secretary Royall a few days ago by the special commission he sent to Germany late last year to investigate abandonment of our program designed to break up the cartels which supplied Hitler's armies. It is not a pretty story. Some of it is not complimentary to some key officials in our regime in Germany.

American Ideals of Government

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 26, 1949

Mr. DINGELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Soterios Nicholson:

AMERICAN IDEALS OF GOVERNMENT

By Soterios Nicholson

"Ideals are like stars. You will not succeed in touching them with your hands. But, like the seafaring man on the desert of waters, you choose them as your guide, and following them, you reach your destiny." (Carl Schurz.)

Ideals are intangible. They are difficult to explain, even to ourselves. They are hard to write about, except in flowing generalities; they provide thought for seemingly endless discussion.

Yet, ideals have been the motivating forces for all the great events of life and history. Nowhere is this more evident than in the history of our own country.

The United States was founded by those to whom ideals meant more than comfort or material success. The thousands who fled from oppression and want in other lands to America's shores were following a dream, a future that gratifyingly grew into certainty as their ideals became the foundation of American Government.

What are the American ideals? We shall try to answer this vital question as best we can.

From the earliest beginnings of American history, ideals of democracy and fair play have been evident in every phase of life. One of the first events to make America stand out as an exponent of the rights of the people was the Boston Tea Party.

You will remember, the British Ministry wished to allow the East India Company to send to America a large quantity of tea, subject to a tax of 3d a pound.

Even though tea was urgently needed, the people determined to oppose its landing because of the unfair tax which had been imposed. After refusal of the company to return the tea to England the people took the matters into their own hands.

A group of men, disguised as Mohawk Indians boarded the ships and emptied into the harbor several hundred chests of tea.

Thus, in a dramatic event, exceedingly daring in those days, was the American principle of "No taxation without representation" visualized for the world to see.

The word "democracy" is a combination of two Greek words, which, written in English, look like this:

PEOPLE TO RULE

Aristotle said: "Democracy arose from men's thinking that if they are equal in any respect they are equal absolutely."

From the day the Declaration of Independence was passed on July 4, 1776, it became the great Charter of Democracy.

Opening sentences: "We hold these truths to be self-evident, that all men are created equal, that they are endowed by their Creator with certain unalienable rights, that among these are life, liberty, and the pursuit of happiness. That to secure these rights, governments are instituted among men, deriving their just powers from the consent of the governed. That whenever any form of government becomes destructive of these ends, it is the right of the people to alter or to abolish it, and to institute new government, laying its foundation on such principles and organizing its powers in such form, as to them shall seem most likely to effect their safety and happiness."

The Government of the United States has been established and continues to function on the principle of maintaining the rights of the people. Thus, a great ideal of the human race has become an actuality—one that is looked upon with envy and longing by distant peoples everywhere.

The ideals of humanity are universal. They represent different aspects of hunger for the "square deal" which has become a definite part of American thinking. Different people give ideals varying interpretations according to their needs and desires. Basically, ideals of mankind represent the fundamentals of living.

Foremost among these ideals are: Liberty—political, economic, religious, and social: Equality—in opportunity, education, and privileges: Fraternity—among men of all classes.

American democracy extends a fair opportunity to all, it gives every interest a fair hearing, and it establishes its standards through discussion rather than through physical power.

Teamwork is its rallying cry. It is a form of life that is controlled by its citizens through their government. As Henry Emerson Fosdick proclaimed:

"Democracy is based upon the conviction that there are extraordinary possibilities in ordinary people."

Democracy, as practiced in America, is not only a government of the people, for the people, it is a way of life.

Abraham Lincoln said:

"That we here highly resolve that this Nation, under God, shall have a new birth of freedom, and that government of the people, by the people, for the people, shall not perish from this earth."

And elsewhere he declared:

"No man is good enough to govern any other man without that man's consent."

Theodore Roosevelt, former President, explained:

"Our democracy means that we have no privileged class, no class that is exempt from the duties or deprived of the privileges that are implied in the words 'American citizenship'."

America is a land of surprises. It is a nation of practical doing. The American ideal is one of constant change for the better, for improved living conditions, independence of action, and of vision for the future.

The American ideal is activity and energy, readiness to change, demanding improvements of living conditions, freedom of rule, independence of action, willingness to correct wrong, and to see future possibilities.

Democracy as practiced in the United States is not only a form of government it is a conscious movement to realize the highest social ideals which the race has reached.

Throughout American history the same allegiance to the idea of equality has been the basic reason for our development. Every war in which Americans have participated has been in defense of that principle.

Another President, Herbert Hoover, speaking of the Declaration of Independence and the American Constitution, expressed it this way:

"Of vastly more importance than even the machinery of government was the inspired charter of the rights of men which it guaranteed. Under them, we hold that all men are created equal, that they are equal before the law and that they should be safeguarded in liberty, and as we express it latterly, in equality of opportunity to every individual, that he may achieve for himself and for the community the best to which his character, his ability, and his ambition entitle him."

A. S. Sachs:

"Democracy is a political principle, the aim of which is that government shall not be controlled by one class or group, but rather by the whole populace."

Preamble to the Constitution:

"We the people of the United States, in order to form a more perfect Union, establish Justice, insure domestic Tranquility, provide for the common Defence, promote the general Welfare, and secure the blessings of Liberty to ourselves and our posterity, do ordain and establish this Constitution for the United States of America."

Assumptions implied in democracy:

1. The dignity of man and the importance of treating personalities upon a fraternal rather than a differential basis.

2. The perfectibility of man, or confidence in the development more fully as time goes by of the possibilities latent in human possibility, as over against the doctrine of fixed caste, class, and slave systems.

3. The gains of civilization and of nations viewed as essentially mass gains—the product of national effort either in war or time of peace rather than the efforts of the few.

4. Confidence in the value of the consent of the governed expressed in institutional forms, understanding, and practices as the basis of order, liberty, and justice.

5. The value of decisions arrived at by rational processes, by common counsel, with the implications, normally, of tolerance and freedom of discussion, rather than violence and brutality.

The implements of democracy have been the suffrage, the representative council, the apparatus of civil liberties, sound administrative organization, and systems of adjudication.

American ideals have been annunciated by the different accomplishments of good government throughout American history.

There are too many to detail here—but to such ideals can be traced forward steps as the freedom of the slaves; the acceptance of sections of land which had been oppressed by their former governments, as part of the United States with all the privileges and opportunities of the original States; development of our cross-country and intertwined-transport system; opportunities for free schooling to all; equal chance for every individual in government or business life, etc.

Truly, as Emerson said: "America is another name for opportunity."

There are about 140,000,000 people in the United States. Of these, about 5,000,000 today are not citizens of the country. In other words, 96 to 97 in every 100 persons are citizens.

Most of these nearly 5,000,000 noncitizens, who have come to this country as immigrants, intend to make their homes here for the rest of their lives. By the generous system of American democracy they can live here in safety and happiness.

Every law-abiding person in the United States is free to live the kind of life which he chooses and can afford to pay for, provided that he does not interfere with the rights of others.

As the Government itself points out, he is free to come and go anywhere in the country. He is free to choose between many kinds of jobs, to work at his job, or, if he does not like it, to look for another.

He is free to hold, sell, or exchange his goods as he likes. He has the advantage of our widespread system of public and private schools and can get a good education. He is free to discuss his problems with his neighbors.

He is a person of independence. He may decide for himself what kind of a home he will live in, and he may direct his own home life, as long as he does it peaceably.

Every person is free to work as hard as he likes for his own personal good and for that of the community, State, and Nation, according to the part he decides to take in government, home, church, business, or other activities.

American ideals gather about big things—they flourish in this land of immensities. The man in America has discovered that in this land of promise it is easier to do the big things than the little things.

The manner in which ideals become realities of life in the United States, may be summed up in the words of Henry Ford, himself an idealist and a successful American, who said: "An idealist is a person who helps other people be prosperous."

Pledge of allegiance: "I pledge allegiance to the flag of the United States of America and to the Republic for which it stands, one Nation indivisible, with liberty and justice for all."

Wars Take Three-quarters of $42,000,000,000 Budget

EXTENSION OF REMARKS

OF

HON. GEORGE G. SADOWSKI

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 26, 1949

Mr. SADOWSKI. Mr. Speaker, under leave to extend my remarks, I wish to include an article which appeared in the Farmers Union Herald on April 18, 1949:

WARS TAKE THREE-QUARTERS OF $42,000,000,000 BUDGET

It's no simple matter to figure out the proposed national budget for this year. But one thing stands out clearly—75 percent of the money the United States intends to spend in 1949 goes to wars, past, present, and future.

President Truman's budget message is for about $41,900,000,000 dollars, the largest peacetime budget ever presented.

This peacetime budget divides like this:

For national defense (Army, Navy, Air Corps, atom bombs, and the like): $14,300,000,000.

For past wars (veterans' aid, foreign aid and interest on the wartime-accumulated debt): $17,700,000,000.

For running the Government (farm aid, health, public works, and general administration): $9,900,000,000.

These figures make cold shivers run down the spine. It is so high, in fact, that it scares some of the people who favor stepping up the cold war with Russia.

David Lawrence, a conservative columnist in United States News magazine, says bluntly: "Present prosperity is underwritten by billions being spent for armaments. Ending of the cold war would bring economic upheaval in the United States."

The top-heavy war and military budgets are subsidizing American business, in other words. Yet big business, thus subsidized, complains bitterly that public health, public housing, and social-security projects are too expensive.

When the new farm bill was presented to Congress last week, the big business spokesmen immediately cried "It costs too much." It always seems to cost too much to help those who need it.

The present tax burden, in the eyes of big business, should be used only for the payment of war debt and preparation for another war. The fact that they profess a desire for peace doesn't mean that big business would sacrifice their profitable cold war contracts for genuine peace.

Earlier in the year, proposals for an excess-profits tax were heard. This tax would be placed on the industries which are growing fat on military expenditures. It would be insurance against big business, or anyone else, profiteering from the cold war. But such a storm of protest arose from businessmen that the proposal has been smothered.

Just imagine what could be done in 1 year with what the military now spends—with no hope of bettering the lot of the people.

New schools, highways, flood control and soil conservation, sewers, hospitals, airports, and public housing is just a partial list of the things that could be built with 14.3 billions of dollars.

Thomas Stokes, a respected syndicated Washington writer, puts it this way: "Perhaps, slowly, people will begin to wake up, individually. And, perhaps eventually, they will raise their voices collectively in a great tornado of public opinion and force those, who are our leaders, to do something about war."

The Taft-Hartley Act

EXTENSION OF REMARKS

OF

HON. ANDREW J. BIEMILLER

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 26, 1949

Mr. BIEMILLER. Mr. Speaker, the question of repeal of the Taft-Hartley Act was submitted to the voters of this country last November. President Truman let everyone know that he stood for repeal, that if reelected he would advocate repeal of that punitive measure. His opponent defended the Taft-Hartley Act. The question was clearly drawn and the voters cast their ballots for repeal.

This was a heart-rending blow to some of the gentlemen on the other side of the aisle and to certain reactionary corporation officials for whom they devised and enacted this law. They had failed to win majority support for the Taft-Hartley Act.

The question inevitably arose as to how they could recover their position. How can you convince a Congressman that a majority of the people favor something that the majority opposed in last November's election?

The answer was the loaded questionnaires which have been coming into our offices—with all questions phrased so that most people would give the answer the framer desired. These questionnaires were supposed to convince us that people who voted for President Truman last November are now opposed to repeal of the Taft-Hartley Act. If we are to accept this supposition, we must believe that the loaded questionnaires come from working people who did not vote Republican last November. And we have to suppose that these working people understood that in filling out the questionnaire they were defending the Taft-Hartley Act.

I have not been convinced on either count.

In the first place, I have checked the names signed to questionnaires mailed to my office. To the best of my knowledge, most of these signers voted with the minority last fall. They are still in the minority. These questionnaires have merely given a few reactionary, antilabor Republican voters a second chance to vote against collective bargaining.

In the second place, the framers of these questionnaires have been afraid, or too wise, to ask the question: Do you favor the Taft-Hartley Act? Do you advocate repeal of the Taft-Hartley Act? In the questionnaire published and circulated by General Electric and in the

other questionnaires the Taft-Hartley Act is not mentioned. No one who fills out these questionnaires is supposed to know their purpose. Let me ask a question: If the people favor Taft-Hartley, why should its defenders be afraid to mention it by name?

Questionnaires are faulty at best. Questionnaires that attempt to deceive or confuse do not take in many Members of Congress—or I am greatly mistaken at the caliber of my colleagues.

One of the best contributions to the battle of the questionnaires over Taft-Hartley appeared recently in the Machinist, official organ of the International Association of Machinists. I would like to submit it for the RECORD. It makes no attempt to deceive anyone. I ask you to read the questions and to ask yourselves, How many working people in your own district would make pro-Taft-Hartley answers to these questions? They follow:

1. Do you believe labor laws guaranteeing the right to strike should make it more difficult for union members to win a strikes? ☐ Yes. No ☐.

2. Do you believe labor laws should give the President the right, through the courts, to force employees to remain at work during a wage dispute without impounding the employer's profits? ☐ Yes. ☐ No.

3. Should labor laws give the Government the power to decide which craft shall be hired on a particular job? ☐ Yes. ☐ No.

4. Should labor laws prohibit union members from refusing to handle struck work as a means of supporting brother unionists who have a legitimate economic dispute? ☐ Yes. ☐ No.

5. Should labor laws set up a different standard for democratic procedure than other laws? ☐ Yes. ☐ No.

6. Do you believe that labor laws should assume that trade-unions seek to avoid collective bargaining? ☐ Yes. ☐ No.

7. Should labor laws recognize that when a management official gives his own employees his advice about union activity, he is putting them on warning? ☐ Yes. ☐ No.

8. Should labor laws seek to police the internal affairs of trade unions and employer corporations? ☐ Yes. ☐ No.

9. Do you believe that Communist activities should be outlawed only in trade-unions? ☐ Yes. ☐ No.

10. Do you believe that labor laws should require local unions to publish detailed financial statements that disclose to the employer the exact financial status of the union? ☐ Yes. ☐ No.

11. Should labor laws encourage an employer to sue a trade union in a court of law every time he has a grievance against union members? ☐ Yes. ☐ No.

12. Do you believe that labor laws should assume that union members and not the employer are responsible for full production in the shop? ☐ Yes. ☐ No.

13. Should labor laws recognize the right of union members to refuse to work with scabs and free riders? ☐ Yes. ☐ No.

14. Do you believe labor laws should permit union members to warn scabs and strike-breakers that they will be boycotted socially and ostracized? ☐ Yes. ☐ No.

15. Do you believe labor laws should hold management responsible for the illegal anti-union activities of the foremen and supervisors? ☐ Yes. ☐ No.

16. Do you believe labor laws guaranteeing the right of employers to organize should encourage individual employees not to join a union? ☐ Yes. ☐ No.

17. Should labor laws assume that union members and employers are financially equal and should therefore be regulated equally by law? ☐ Yes. ☐ No.

18. Should labor laws permit only scabs to vote in an election to choose a bargaining agent during a strike? ☐ Yes. ☐ No.

Taxes Versus Plums

EXTENSION OF REMARKS
OF
HON. ROBERT F. RICH
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 26, 1949

Mr. RICH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Bristol (Pa.) Courier of April 19, 1949:

TAXES VERSUS PLUMS

One of the major issues of this generation is the struggle between the American taxpayer and Uncle Sam's pay roll.

Thus far, the taxpayer has been fighting a losing battle. If present trends continue, the final result can only be the bankrupting of American economy.

The recent report of ex-President Herbert Hoover, emphasizing the terrific waste in Federal jobs, merely high lighted an evil which has been growing for many years.

Democratic Senator BYRD has been filing reports which reached the same conclusion for more than a decade. Senator BYRD's pleas for carving the Federal staff back to reason fell on deaf ears.

So, apparently, has the recent report by Mr. Hoover.

This is almost astounding.

President Truman has threatened, over and over again, to increase the tax rate by some $4,000,000,000. His leaders in Congress have been insisting that this will be necessary to balance the budget.

Two outstanding public figures, representing both political parties, and both of them eminently qualified to judge the matter, now are in agreement that virtually all of the predicted shortage in Government revenues could be met by the simple act of dropping from the Federal pay roll the job holders who are not needed.

One would expect that the American taxpayers would rise in a body to demand that the administration resort to the obvious reductions in expenses, in preference to a further increase in our staggering tax burden.

One would think that businessmen and business organizations, familiar as they are for the need for economy and watchfulness in their own operations, would take up the cry for the needless waste in public business which threatens another tax boost—almost inevitably to be aimed directly at these groups.

One would feel confident that some or all of the various elements in our national life who are out of sympathy with President Truman's socialistic program would stand up to demand that he set his own house in order before attempting to remodel all American life. Yet the Dixiecrats, the farm organizations, the Wallace-ites, labor's political groups, the women's clubs—not a single one of these has seriously raised the question of why America should be taxed to extermination merely to keep the White House well-stocked with political patronage.

Even the Republicans in the main, have been largely silent on this issue—although it is a Republican ex-President who now has, reraised the question, and although the figures show it may have been nothing at all except the swollen Federal pay roll which defeated the Republican Party in the last three national elections.

Back in 1932, Franklin D. Roosevelt campaigned against President Hoover on the grounds that the latter was guilty of "mismanagement" (October 19, 1932).

At that time the Federal pay roll was 583,000; the ordinary annual expenditures (budget) of the Federal Government stood $4,535,100,000; and the national debt was $19,487,010,000.

Today the regular Federal staff is well over 2,000,000 (with at least half a million more jobs that don't show up on the list, although the taxpayers pay for them); the annual spending is $45,000,000,000 plus; and the national debt is $257,000,000,000.

After 16 years of the New Deal, it is interesting to look back on the speeches which elected Mr. Roosevelt and started the whole thing. They have the material for a political "refresher course" for those (of whatever party or faction) who hope some day to convert enough voters to get themselves elected nationally, in place of Mr. Truman.

Here are some of candidate Roosevelt's stump-speech remarks:

"I accuse the present (Hoover) administration of being the greatest spending administration in peacetimes in all our history—it is an administration that has piled bureau on bureau, commission on commission. * * * Bureaus and bureaucrats, commissions and commissioners, have been retained at the expense of the taxpayers." (Sept. 29, 1932.)

" 'We advocate an immediate and drastic reduction of governmental expenditures by abolishing useless commissions and offices, consolidating departments and bureaus and eliminating extravagance, to accomplish a saving of not less than 25 percent in the cost of Federal Government.' " (Democratic platform, quoted by Mr. Roosevelt July 30, 1932.)

"I shall approach the problem of carrying out the plain precept of our party, which is to reduce the cost of current Federal Government operations by 25 percent." (Oct. 19, 1932.)

"And I propose to use this position of high responsibility (the Presidency) to discuss up and down the country, in all seasons and at all times, the duty of reducing taxes, of increasing the efficiency of Government, of cutting out the underbrush around our governmental structure, of getting the most public service for every dollar paid in taxation." (Sept. 29, 1932.)

"I hope that it will not be necessary to increase the present scale of taxes * * * Taxes are paid in the sweat of every man who labors because they are a burden on production and are paid through production." (Oct. 19, 1932.)

As everyone knows, Mr. Roosevelt kept none of these promises. Federal jobholding is 400 percent more than in 1932; the tax rate is 10 times as heavy; and the national debt is about 1,300 percent larger now than then.

But there is a most interesting lesson for those engaged in politics to be learned from this part of the Roosevelt campaign in 1932.

For one reason and another that was the last time a candidate went before the American people earnestly and apparently sincerely promising to run the Federal Government efficiently, economically, and with a much smaller pay roll.

He won. Whether or not he made good on his promises (he didn't) is neither here nor there. He offered the American people a reduction in the cost of government, and they bought it by electing him.

What makes this point all the most impressive is that the Roosevelt pledge of economy in government is one of the old two points which come to mind wherein the Democratic platform of 1932 and the Roosevelt campaign of that year differed materially from what was offered by the Republican Party—the other principal difference being that the Democrats promised to repeal prohibition.

Here is a key election in American history, the election which broke the almost unin-

terrupted domination over this country by the Republican Party since the Civil War—and one of the key issues in that victory was the Roosevelt promise to reduce government costs, at a time when the need for it was trifling compared with today.

Are we to assume that the American people's thinking has changed so fundamentally that they would ignore a similar appeal today? This is inconceivable.

The fact of the matter is that the simplest, most understandable issue in politics today, and the one with the widest appeal, is that of waste and extravagance by the Truman administration; and that the phase of this issue which is easiest for the average citizen to grasp is this matter of financing thousands of political workers at the taxpayers' expense by giving them unnecessary Federal jobs.

Translate it into the terms of your own life.

Do you think it is right for Mr. Truman to raise taxes, when all he needs to do to "balance his budget" is to drop the employees he doesn't need from the Federal pay roll?

And isn't it a self-evident fact that if Uncle Sam's hiring of political favorites, regardless of whether their services are needed in the public business, is permitted to continue, it can finally result in only one thing—the bankrupting of the Nation?

Not all the pay roll consists of loafers and political hacks. That's perfectly obvious. As a matter of fact, there are thousands of sincere, "career" persons who work just as hard in their public jobs as they would in private ones—and who, in some cases, probably receive less for their services.

The truth is that the padding of Uncle Sam's pay roll for political purposes is an injustice, first of all, to these career employees. The workers have to do the work for the drones as well as for themselves. And the fact is that it is is the political favorites who wind up getting the well-paid "plums" and the sinecures.

The purpose of pushing the Federal pay roll so high is conspicuous. It is to permit the hiring of enough political workers to control elections. This in itself is outrageous. It is a stultification of the word "democracy" to permit a hired pay roll to defeat the will of the public at the voting booths.

From both financial and moral grounds, all hands in America ought to turn in to demand that Congress enact the Hoover recommendations—and thereafter force the President to live up to them.

Basing-Point System Absorbs Gasoline Tax—Dollars That Should Build Highways Pay for Phantom Freight—Basing-Point Bids on Cement to State Highway Departments Were Identical Before Supreme Court Decision

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 26, 1949

Mr. PATMAN. Mr. Speaker, as we all know, shortly after the turn of the century the automobile added impetus and urgency to the program of highway building in the United States. The several States expanded their road construction and maintenance budgets to proportions never dreamed of in pre-automobile days. Aid was sought from the Federal Government and by progressive steps the Congress of the United States increased its appropriations in the interest of our expanding network of modern highways.

We all are familiar with the increasing rightful petitions of our compatriots to build more and more highways in the rural, as well as in the urban areas. Men and women with automobiles wanted to go places. Additional revenue was sought to satisfy this demand, and the legislatures of our several States concluded that a fair and equitable method of taxation would be a gallonage tax on gasoline. With the increasing use of motor vehicles in business, as well as for pleasure, the sums derived from the gasoline tax assumed proportions far beyond expectations. And, so our highways were built and are being built today.

CEMENT TRUST TAKES ITS TOLL

Cement then as now was of great importance in the construction of highways. All the while the automobile industry was expanding and developing, and new oil fields and refining techniques were being discovered to fill the unceasing demands for more and more petroleum products, the cement, steel, and other trusts were perfecting the basing-point system of pricing. Thus, on the one hand, our people were taxing themselves to build highways and bridges, and, on the other hand, the Cement Trust was figuring ways and means to take its unearned slice of the tax money in the form of phantom freight. To the Federal Government, to the State highway departments, to the general highway contractors, and to the subcontractors on highway work, the cement industry through the years offered noncompetitive identical bids on by far a majority of the highway projects built in the last several decades. There was no escaping the basing-point system until the Supreme Court upheld the findings of the Federal Trade Commission on April 26, 1948.

As an excellent example of the basing-point system of pricing, I include a table of bids on approximately 40,000 barrels of cement to the Virginia Department of Highways—Inquiry No. 6706, closing date June 17, 1947—for delivery during the period of July 1, 1947, through June 30, 1948. The table follows:

MORATORIUM SHOULD NOT BE PASSED

It will be noted that the bids are from 7 cement manufacturers to 134 destination points in 82 counties of the State of Virginia. Mark well the accuracy of the basing-point estimators in their secret hideaways. Only one man made a mistake, and he erred, not on the side of reducing the price but in three instances, for reasons of his own, he increased the price. This, unfortunately, is not news. Had he reduced the price below that of his noncompeting brethren, that indeed would have been news.

The basing point and monopoly boys continue to urge upon the Congress the passage of a moratorium; the excuse is that it will give Congress additional time to study the needs for substantive amendments to antitrust laws. The basing-point proponents claim they want the moratorium in good faith so as to feel free to use individual delivered-price systems and to absorb freight in free and open competition. Of course, they can do that now, and they know it as well as anybody. All such statements are in general terms and never get down to the factual background as to what they really want legalized. They do not say basing point, but that is what they mean.

SMALL BUSINESS RENDERED DEFENSELESS BY MORATORIUM

If Congress passes a moratorium bill, amended to the extent that its phrases sound innocent and virtuous, it will, nevertheless, be the opening document which will serve to arm monopoly and basing-point lawyers with arguments that will last for years. I sincerely hope, on the basis of the evidence patiently gathered by the able servants of the Government in its effort to protect the people from rapacious monopolistic practices by big business, that the moratorium bill will not pass. Small business has absolutely no chance to defend itself under the basing-point or similar systems. Small business can only survive in free and open competition with an equal opportunity to buy and sell in nondiscriminatory markets.

Basing Point Defeat in Cement Case—Anniversary of the People's Defeat of the Cement Trust—FTC Upheld in Rigid Steel Conduit Case Yesterday—Small Business Must Continue To Fight Mortatorium—Different Instead of Identical Bids After Basing Point Outlawed

---

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 26, 1949

Mr. PATMAN. Mr. Speaker, this is the anniversary of the victory of the people over the Cement Trust. One year ago today, April 26, 1948, the Supreme Court handed down its decision in the Cement case which outlawed the vicious and collusive basing-point system. One month later on May 25, 1948, the Cement Trust petitioned the Supreme Court for a rehearing. This petition was denied on June 7, 1948, thereby ending a long chapter of diligent effort by the Federal Trade Commission to eliminate unfair trade practices and the collusive basing-point pricing in the manufacture and sale of cement.

Small business all over our country has a right to celebrate this victorious battle against monopoly and greed. The winning of that battle, however, did not win the war against the Cement Trust because immediately the Congress became the focal point of attack. Monopoly was on the march again, sounding the battle cry of "moratorium."

RIGID STEEL CONDUIT CASE

Yesterday in a 4 to 4 decision the Supreme Court issued the following order

in the Rigid Steel Conduit Case: Docket No. 464 Clayton-Mark & Company versus F. T. C.—per curiam:

The judgment is affirmed by an equally divided court. Mr. Justice Jackson took no part in the consideration or decision of this case.

The decision of the Circuit Court of Appeals is thus affirmed and the order of the Federal Trade Commission is upheld. The powerful monopolies which have used the basing-point system as a creature to stifle competition and destroy free enterprise are again deprived of this most effective weapon.

The New York Journal of Commerce this morning states in part:

Vigorous competition is already a fact in many industries which use the basing-point system, and if freight absorption is banned, outright cuts in basic prices will be the only avenue through which individual companies will be able to book sufficient business to support their operations.

Later in the article the further statement is made:

If Congress approved the moratorium bill in its present form, it is expected that the steel and cement industries, which abandoned freight absorption a year ago, will resume that practice immediately.

What these statements really mean is that immediately upon the passage of a moratorium bill the cement, the steel, the rigid steel conduit, and all other industries heretofore using the basing-point system, will immediately initiate the practice again. It doesn't make much difference what the bill says if it becomes law, because the basing-point and monopoly boys will immediately tuck the basing-point ball under their arm and head for the goal line and dare anybody to try and catch them.

This morning's Wall Street Journal quotes Mr. Earnest T. Weir, chairman of the National Steel Corp., as saying:

It is apparent that the only possible remedy is action by Congress. The effect of this decision if allowed to stand unchanged will be so serious on the industry and trade of the country that Congress is confronted with necessity for prompt passage of clarifying legislation.

Thus, one of the proponents of the basing-point system grasps the opportunity to spread alarm among businessmen throughout the country. The principal issue is the renewal of the basing-point system of pricing which has served to concentrate the power of life and death to small business throughout the country in the hands of a favored few who, until the Cement decision, enjoyed immunity in carrying on the nefarious practice of charging phantom freight and the equally vicious practice of destroying competition through the use of the basing-point system.

Unfortunately, the phrases "delivered price" and "freight absorption" have become, by design of the moratorium proponents, phrases which many are persuaded to believe are synonymous with "basing-point system."

A delivered price, a real bona fide delivered price, has something added to the f. o. b. price, namely, the freight to destination, handling charges, and profit; or a delivered price guarantees delivery of an article in trade or commerce. Until the Federal Trade Commission action against the Cement Trust, all cement was quoted at destination prices, an entirely different matter than a delivered price. The destination price was charged on the invoice and the actual freight deducted in making payment of the bill for cement or other article bought under the basing-point system. In by far of the majority of cases, the buyer paid phantom freight and no actual freight was absorbed. The basing-point system used arbitrary base points so that the mill or factory net price was more often than not higher than the alleged or mean f. o. b. mill price.

Freight absorption is not an appropriate phrase to describe the acts that occur in the use of the basing-point system. As many times, or perhaps more times, that a factory or mill absorbs freight under the basing-point system, it adds that unearned increment phantom freight. True, freight absorption is the equalization of actual freight charges with one's competitors in a free and open market. There is no market free or none open under the basing-point system.

Time stands still as we watch small business enterprise slowly but surely succumb to the hard and rigorous hand of monopoly. The Supreme Court decisions in the Cement and Rigid Steel Conduit cases stays the hand of monopoly momentarily. Shall we, the Congress, stand firm on the side of antimonopoly and antiprice discrimination, or shall we too succumb to the rising tide of the concentration of power and pelf?

NON-BASING-POINT PRICES AFTER THE SUPREME COURT DECISION

Today I have placed in the RECORD a table illustrative of basing-point prices submitted to the Virginia State Highway Department, prior to the Supreme Court decision. That table showed destination prices which were identical in all instances except three by one company which, for reasons of their own, increased its price a few cents to three destination points. In other instances this company quoted the same price as its alleged competitors.

In addition, I also offer for the benefit of my colleagues an interesting table of bids after the Cement decision on approximately 12,000 barrels of cement to the Virginia Department of Highways—inquiry No. 7320, closing date September 14, 1948—for delivery during the period of October 1, 1948, to March 31, 1949. The table follows:

[Prices quoted are for type II cement (approximately 12,000 barrels). Type III cement, plus 50 cents per barrel. Discounts, 10 cents]

County	Destination	Lehigh Portland Cement Co., Allentown, Pa.[1]	Lone Star Cement Corp., Norfolk, Va.[2]	Penn-Dixie Cement Corp., Philadelphia, Pa.	
				Type II	Type III
Accomack	Makemie Park	$3.68	$3.41		
	Tasley	3.68	3.41		
Albemarle	Charlottesville	3.19	3.60	$3.73	$4.13

[1] 8,000 barrels only.

[2] No type III.

[3] Plus switching.

The bids shown above are from 4 cement manufacturers to 135 destination points in 82 counties in the State of Virginia. The destinations, with one addition, are the same as I have shown in the table elsewhere in the RECORD on bids prior to the Supreme Court decision.

BASING-POINT OPPONENTS SHOULD RENEW THEIR FIGHT AGAINST THE MORATORIUM

On this anniversary of the outlawing of the basing-point system, I have shown it is possible for highway departments to secure competitive bids. Previously, I have shown that it is possible for other governmental bodies to secure such bids. Under the basing-point system, as you well know, it was virtually impossible to secure bids which were other than identical to any given destination.

The battle cry of "moratorium" is shouted louder than ever this morning. All the more need now that the opponents of the basing-point system, who I believe are by far the majority of businessmen and consumers in our country, redouble their efforts to prevent the passage of the moratorium bill. I am sure the cement, steel, and rigid steel conduit trusts will exercise every effort, every argument, and every resource to obtain a legislative rack upon which to hang their smartly creased basing-point hats.

War Crimes Lawyer Finds Nazi Thinking Unaltered—Cites Personal Experience To Illustrate Problem of Getting Germans To Take Charitable, Democratic Views

EXTENSION OF REMARKS

OF

HON. GEORGE G. SADOWSKI

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 26, 1949

Mr. SADOWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following article by Bigelow Boysen, that appeared in the Sunday Star, April 24, 1949:

WAR CRIMES LAWYER FINDS NAZI THINKING UNALTERED—CITES PERSONAL EXPERIENCE TO ILLUSTRATE PROBLEM OF GETTING GERMANS TO TAKE CHARITABLE, DEMOCRATIC VIEWS

(The author, a lawyer, is just back from Germany, where he was assigned to defend 13 Nazi war criminals and prosecute 13 others. He and his wife traveled through the western zone looking for signs that the Germans have changed their way of thinking since the war.)

(By Bigelow Boysen)

Are there any Americans so gullible as to believe that the United States occupation of Germany has converted a single German Nazi into a peace-loving citizen? I hope not, because in spite of all the cigarettes and well-intended effort which symbolize our policy in Germany, a physical occupation which leaves moral regeneration out of the prescription has not yet and never will transform the state of mind called "German nationalism" into charitable, democratic thinking.

I searched the western zone for two solid years, looking for a converted, enlightened regenerated German and never found a single specimen whose transformation could be traced to our occupation of his country. Those few who have broken away from the mystic belief of German racial superiority, with the selfishness and ruthlessness which go with it, have invariably found their new freedom through the Bible. Only insofar as our occupation policies have guaranteed to the German people free use of their Bible and other religious activities, can we consider our presence in Germany to have been effectual in even these isolated cases.

HAS OCCUPATION FAILED?

Whether our occupation has been a waste of money and effort depends upon the point of view from which we regard its purpose. If that purpose was to restore Germany industrially for the relief of the American taxpayer and at the same time to hold Communist influence in western Europe to a minimum, then our occupation must be voted a success. But if our real purpose (and this must certainly have been the original purpose) was to seek out, uproot, and destroy

the evil seed of Germanism, which has regularly erupted through Bismarck, Kaiser Wilhelm, and Hitler, in lust for world domination, then our occupation must be regarded as a total failure.

Here are three instances of present-day German thinking, which prove how helpless a purely physical occupation is to deal with the mental problem:

My wife and I once asked our German neighbor in Munich, who is a teacher of English in an interpreter's school there, why she had never in the 2 years we had known her, expressed a single word of regret for the known cruelties practiced by her armies, her Gestapo, and her SS organizations in the eastern territories which Germany overran after 1939. "Oh, those people (meaning the Slavic races) are uneducated people," was the quick and unconcerned reply. It reminded me of the German Minister of Interior's published statement of October 1943:

"What happens to a Russian, a Czech, does not interest me in the slightest. What the nations can offer in good blood of our type we will take. If necessary, by kidnapping their children and raising them here with us. Whether nations live in prosperity or starve to death interests me only insofar as we need them as slaves for our kultur, otherwise it is of no interest to me."

WIDOW'S ATTITUDE

Illustration No. 2 concerns a German widow. Her former husband was executed in October 1948, by the American occupation authorities. He had been the commander of Dachau concentration camp during the years 1941–43. I was called upon to defend him in the trial for his life as a war criminal before an American tribunal. His sentence to death, which followed after a trial based upon recognized judicial processes, was appealed and reappealed for 2 years, and even taken to the Supreme Court of the United States. But these lessons in democratic or American justice were wasted as far as this German woman was concerned. She still accuses us of having murdered her innocent husband. The day after he had been hanged she wrote to me as follows:

"DEAR MAJOR: Herewith I am sending you the last greetings of my husband from October 22, 1948, 0800 hours. * * * At 0800 hours he was convinced there wouldn't be any more chance. My husband said and wrote to me that he, as a sincere German, dies innocently. * * * On Thursday, October 21, 1948, between 2000 and 2100 hours, I said good-by to him. * * * No tears were shed; my husband was calm and prepared and I was courageous. The time of the execution was 1000 hours. I was sitting in the hotel with the watch in my hand and waited until my husband was murdered and had finished suffering. It is so easy to write and so hard to speak about it—to be in the position that one can't help one's dearest, but to be forced to wait until it is too late, then merely take care of all formalities—I think only those people that went through it can understand it. Two hours before the execution 800 men (convicted war criminals imprisoned in the war-crimes prison at Landsberg, Germany) sang the German national hymn."

CASE OF SELFISHNESS

That woman had lived with her husband for 4 years just outside the wall which surrounds concentration camp Dachau. Yet to this very day she is morally blind to her husband's guilt as commander of that camp for the crimes practiced by his subordinates during all those years, on the thousands of human beings who passed through the gates of Dachau and never came out. Perhaps those inmates were the racial inferiors of whom Himmler, her husband's superior officer in the German SS, had this to say:

"Whether 10,000 Russian females fall down from exhaustion while digging an antitank ditch interests me only insofar as the antitank ditch for Germany is finished. * * * We must realize that we have 6,000,000 to 7,000,000 foreigners in Germany. * * * They are none of them dangerous so long as we take severe measures at the merest trifles."

The third illustration involves a bright little German girl of 6, named Rose Marie, who was the daughter of a well-to-do farmer who lived across the pasture behind our house on the outskirts of Munich.

One evening my wife and I visited these neighbors and took along some chocolate for the child. Although the house was large, the entire family, including the big, friendly English sheepdog, was congregated as usual in the kitchen. The farmhands, parents, and all present watched with interest as the child grasped the chocolate. Her dog, Karo, drooled hopefully, expecting to be remembered by his playmate. But what happened? Instantly Rose Marie fled from the kitchen to her bedroom. We wondered why. But her mother knew why and told us with pride that her child had disappeared to hide her candy. Soon, Rose Marie returned, but refused to tell anyone where her candy was hidden. Her mother's plea for a little met stubborn refusal. Rose Marie gave us all to understand that no one would know where it was, and no one would ever share in it—not even the shaggy dog she loved to play with.

Shocked to find this child's nature so early tainted by selfishness and unwillingness to share with others, we turned to her mother for an explanation. "Isn't she clever?" was the answer.

WHAT TO DO?

In a very few years Rose Marie will be an adult German woman. If no one at school corrects this selfishness and refusal to share with others, it is very easy to see how the grown-up Rose Marie could some day listen with approval to a new German leader repeating the same words spoken by Herman Goering in 1939:

"God knows you are not sent out there (German-occupied countries) to work for the welfare of the people in your charge, but to get the utmost out of them, so that the German people can live. That is what I expect of your exertions. This everlasting concern about foreign people must cease now, once and for all. * * * It makes no difference to me in this connection if you say that your people will starve."

What's to be done about it?

First, let's all take a good look at the problem and recognize that a purely physical diagnosis for the recovery of Germany economically leaves the mental and moral causes of her disease untouched. Once we realize that our efforts should be directed mainly toward Germany's spiritual and moral regeneration, we will at least have the basis for a competent cure. Surely we could then decide upon the right way to instill in her a new concept of the brotherhood of all mankind. Without this concept, the shells and outside structures of democratic institutions, and all the foreign constitutions and bills of rights in the world, are worthless to the German people and deceptive to a hopeful world.

NEED DIVINE AID

Perhaps our first step to bring forth in Germany a respect for other nations should begin by obliging her youngsters to study the Bible. Legal refinements which have developed recently in the United States regarding constitutionality of compulsory Bible study in public schools may be proper for the people of America, born and bred as they are to think for themselves. But no such technicality at this early stage in the democratic reeducation of Germany should be permitted to stand in the way of transforming the great numbers of her militarist-minded people into progressively charitable citizens of the world. Certainly we need God's help to this end, and what better tool could we find to gain that help than the Luther Bible that was given to the world by Germany when her spiritual impulses made her great?

Judge of the Juvenile Court of Cook County, Ill., Opposes H. R. 2892 on 14 Grounds

EXTENSION OF REMARKS

OF

HON. BARRATT O'HARA

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 26, 1949

Mr. O'HARA of Illinois. Mr. Speaker, presiding over the Juvenile Court of Cook County in Illinois is the Honorable Robert Jerome Dunne, judge of the circuit court and distinguished son of one of the greatest governors in the history of Illinois, the Honorable Edward F. Dunne, in whose administration during the presidency of Woodrow Wilson it was my high privilege to serve as lieutenant governor. The outstanding public service of Judge Dunne and the national attention that has focused upon his accomplishments in the vitally important but difficult field of juvenile delinquency have won for him the admiration of all the people in Chicago in a measure comparable to that given in another generation to his great father.

Judge Dunne has written me a letter in which he states with much force the 14 grounds upon which he bases his opposition to H. R. 2892. Because of the standing of the Juvenile Court of Cook County, servicing the second city of America, and the wide experience and high character of Judge Dunne, I trust his letter will be widely read by my colleagues and receive their thoughtful attention.

The letter follows:

JUVENILE COURT OF COOK COUNTY,
Chicago, April 20, 1949.

Representative BARRATT O'HARA,
Washington, D. C.

DEAR REPRESENTATIVE O'HARA: As presiding judge of the Juvenile Court of Cook County, Ill., I wish to express my objections to the proposed legislation introduced in the House of Representatives on February 21, 1949, by Mr. DOUGHTON, better known at the present writing as H. R. 2892:

1. The establishment of a single State agency to administer the State plan under the proposed legislation will either duplicate the work of the juvenile courts throughout the country or limit the sphere of their activities as hereinafter pointed out.

2. The establishment of such a State agency will place the Federal Government operating through the State agency in the position of a juvenile court in the removal of children from their own homes, and in the placement of them in temporary care homes, foster homes, and institutions, without a trial and without the usual safeguards which have become acceptable to the American way of life.

3. The establishment of a single State agency to promote the well-being of chil-

dren whether in their own homes or elsewhere, and to help them overcome problems resulting from parental neglect will put the Federal Government, acting through the State agency, into competition with the juvenile courts in the exercise of supervision over neglected and dependent children.

4. There are no sanctions provided in the proposed legislation whereby the State agency can compel the placement of any child in need of assistance in a temporary-care home, a foster home, or an institution, but it can deny assistance unless the placement of the children is accepted by the parents.

5. Under these circumstances, if the State agency denies assistance and refers the matter to the local juvenile court for a judicial determination of dependency and neglect, the judge of the juvenile court may uphold the parental right to the custody of the children, and the State agency could still refuse assistance because the terms of the decree are not acceptable to the State agency.

6. Since there will be a single agency within each community to administer the proposed act, a placement of a dependent child in a foster home by a juvenile court would prevent the court from obtaining direct assistance for the child from any other public agency (in Chicago, for example, from the Chicago Welfare Department) and the placement of the needy child, when approved by the court, would be at the mercy of the administrative board to grant assistance or withhold it. In this way the action of a judicial tribunal would be rendered nugatory by the refusal of the State agency to recognize the placement.

7. After a child has been removed from his own home by the beneficient action of the State agency there is no means provided in the proposed legislation by which a parent can obtain custody of the child so placed, without court action, and if court action is resorted to, State aid may be withdrawn.

8. The State agency in the placement of dependent and neglected needy children in temporary-care homes, foster homes, and institutions, will be competing with the local juvenile court and the private child-placing agencies to obtain the same available foster homes.

9. To the extent that the available foster homes are taken over by the Federal Government the operations of the private agencies will be impaired, and they may even be driven out of business, resulting not only in a shortage of institutions and foster homes locally, but resulting in a terrific loss to the Government in supporting these children who now, to a great extent, are being cared for by funds provided by private charities.

10. To the extent that the private foster homes are taken over by the Federal Government, the new social-welfare program will impede the work of the juvenile courts in caring for children whose parents, through unfitness, have neglected them, and this in turn will result in expensive delays, inimical to the welfare of the child.

11. If the Federal Government, acting through the State agency, cannot obtain sufficient homes to provide care under a greatly expanded program of child welfare, such as is called for under the proposed law, the States will be called upon to provide necessary care in State institutions, which will separate children from their parents by walls as well as by distance which, in my humble judgment, smacks of complete socialism and a communistic form of government.

12. Experience has proved beyond question, that professional social workers in their zeal are apt to seek an ideal placement of children without reference to parental unfitness. The proposed amendments will encourage this by allowing an administrative board to place needy children in foster homes without court action, and this, in my opinion, will tend to undermine the security of the home.

13. Too much emphasis is being placed upon taking children away from their parents by this sort of legislation, whereas emphasis should be upon safeguarding the security of the child in his own home except by court action.

14. Experience has proved that where parental responsibility for rearing a family is lifted from parents and placed on foster mothers, the incentive to maintain a home is weakened and the barriers staving off desertion, abandonment, immorality, and licentiousness are threatened.

I think the proposed legislation beyond doubt is opened to each and every one of the above criticisms, and if it is enacted into a law, the strongholds for the protection of children which have been developed over a period of 200 years, through the protection of the courts of chancery, will be destroyed.

Very truly yours,

ROBERT JEROME DUNNE,
Judge.

The American People Need the Facts About Health Insurance

EXTENSION OF REMARKS
OF
HON. ANDREW J. BIEMILLER
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 26, 1949

Mr. BIEMILLER. Mr. Speaker, a recent editorial in the widely respected Capital Times of Madison, Wis., brings to light some pertinent facts about the British national health service plan and offers some good advice to the American Medical Association and other opponents of the President's health program.

Under leave to extend my remarks, I insert it in the RECORD as follows:

THE AMERICAN PEOPLE NEED THE FACTS ABOUT HEALTH INSURANCE

Not long ago the New York Times reported from London that one of the biggest problems with the compulsory health insurance system operating in Britain is that it is too successful.

Recently the conservative Associated Press carried a story from London in which it pointed out that Winston Churchill is on the skids as leader of the Conservative Party because of his uncompromising opposition to Labor Government reforms.

"Churchill's threat to seek a vote of censure against the Labor Government over soaring costs of the popular national health service was described by many as a blunder," the AP said.

Yet, the medical politicians in this country, who are fighting compulsory health insurance, would have us believe that the health service system of the British Labor Party has been foisted on the innocent and abused British people by a bunch of scheming bureaucrats.

The plain fact of the matter is that the present health service in Britain is immensely popular, as the AP says. Since 1945, when the Labor Government went into power, there have been 31 by-elections and the Conservative Party has been unable to win back one of them from the Labor Party. An important issue in all these elections has been the health service system.

The AMA would have us believe also that the doctors in Great Britain are opposed to the plan so intensely that they are boycotting it. The fact is that more than 90 percent of the doctors are in the plan.

Let's get down to cases on this question of health insurance. The AMA can do a great public service by presenting the facts about the weaknesses of the compulsory health insurance bill, a service they are not doing with their present campaign of bogey stories and misrepresentations.

The AMA should know from its experience in opposing voluntary health insurance plans in the past—plans which it has since accepted—that the American people are not going to be scared or kidded out of a program that provides adequate medical care.

Racial Discrimination

EXTENSION OF REMARKS
OF
HON. ANTHONY F. TAURIELLO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 26, 1949

Mr. TAURIELLO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter and resolution from the Federation of American Citizens of German Descent in the United States:

FEDERATION OF AMERICAN
CITIZENS OF GERMAN DESCENT IN THE
UNITED STATES, BRANCH NO. 4,
Buffalo, N. Y., April 23, 1949.

Hon. ANTHONY F. TAURIELLO,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN: Enclosed you will find a copy of resolutions which were adopted by our Branch No. 4.

We urge you to read these carefully and do all you can to avoid any racial discrimination which would exclude all persons of German ethnic origin.

Expellees should be included in the displaced-persons bill.

Thanking you for your help.

Sincerely yours,

CHARLES F. FOELL,
Secretary.

RESOLUTION ADOPTED AT MEETINGS HELD BY BRANCH 11, BROOKLYN, N. Y., AND BY BRANCH 5, PHILADELPHIA, PA., OF THE FEDERATION OF AMERICAN CITIZENS OF GERMAN DESCENT IN THE U. S. A., INC., BROOKLYN, N. Y., FEBRUARY 17, 1949, AND PHILADELPHIA, PA., FEBRUARY 24, 1949

Whereas 6,000,000 Germans from East Prussia and east of the Oder-Neisse line, 3,000,000 from the Sudetenland in Czechoslovakia, 700,000 from Rumania, 500,000 from Hungary, 600,000 from Yugoslavia, and 1,000,000 from prewar Poland have been totally robbed and forcibly and brutally expelled from their homes and homelands into shrunken Germany for no fault of theirs whatever; and

Whereas these expellees, millions of whom died of abuse and hardship during their expulsion and since, are the victims of policies made with the complicity of the Government of these United States in the Potsdam agreement of July 17, 1945, and are therefore, in part this country's charges; and

Whereas these victims of the Potsdam agreement were in a racially discriminatory manner heartlessly excluded from the assistance of UNNRA and of IRO; and

Whereas in so-called DP law 774, under section 12, the relatively small percentage of expellees of 27,000 annually were granted this

admissibility only at the quota expense to which German and Austrian nationals are legally and justly entitled; and

Whereas in a shameful discrimination against even this small number of admissible expellees, "not one expellee has been admitted to date to this country under section 12 of the present act," as reported by the Reverend William F. Kelly, director, Brooklyn Diocesan Resettlement Council; and

Whereas there are now being brought before Congress bills to amend the existing law, 774, some of which are calculated in a vicious racial discrimination to exclude all persons of German ethnic origin: Be it resolved;

1. That the provisions for persons of German ethnic origin so-called under section 12 of Act 774 be retained, and that the numbers now provided for be doubled and the period of time for which this section is effective be extended to June 30, 1952;

2. That expellees, that is, DP's of German ethnic origin, be admissible without regard to quota limitations, and in any case be not as heretofore forced from the regular German and Austrian quotas, which discriminatingly deprives nationals of those countries of their rightful quota;

3. That the discrimination in extending visas which resulted in the curious failure to admit a single person of German ethnic origin among the 3,400 DP's so far admitted be retroactively corrected;

4. That in future, visas issued be made available to each group and element in the proportion which such group or element bears to the total number of displaced persons and expellees; and

5. That in issuing visas in accordance with the quotas set for groups, as directed in sections 2 and 4 of this resolution, priority preference be given to the relatives of United States citizens among the expellees.

Ownership and Control of Lands Beneath Navigable Waters

EXTENSION OF REMARKS

OF

HON. L. MENDEL RIVERS

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 26, 1949

Mr. RIVERS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following concurrent resolution of the South Carolina General Assembly:

Concurrent resolution memorializing the Congress of the United States to oppose Federal ownership and control of lands, fish, and other resources within and beneath navigable waters within the boundaries of the respective States

Whereas the State of South Carolina owns and possesses more than 1,000 square miles of land beneath navigable waters within its boundaries, subject only to the Federal powers over navigation, commerce, and national defense; and

Whereas State ownership of this property is a potential source of revenue for our State, the loss of which would be a great injury to the State and our people, for whom it is held in trust; and

Whereas after over 100 years of recognized State ownership without interference with the delegated Federal powers, certain Federal officials are now suing other States for similar property and advocating Federal seizure of the lands: Now, therefore, be it

Resolved by the House of Representatives of the State of South Carolina (the senate concurring):

That the State of South Carolina favors continued State ownership and control, subject only to the delegated Federal powers, of lands and resources within and beneath navigable waters within the boundaries of the respective States, and requests Congress to pass suitable legislation to that end.

That the members of our delegation in Congress are hereby requested to give their active opposition to all pending and proposed measures which would create Federal ownership or control of lands, fish, or other resources beneath navigable waters within State boundaries.

That the members of our delegation in Congress are hereby requested to give their active support to legislation which would recognize and confirm State ownership of such property.

That a copy of this resolution be mailed to each member of our delegation in Congress.

Uniformed Firemen's Association—Address by Hon. James A. Farley

EXTENSION OF REMARKS

OF

HON. JAMES J. DELANEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 26, 1949

Mr. DELANEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by the Honorable James A. Farley, Chairman of the Board of the Coca-Cola Export Corporation, and the former Postmaster General of the United States, at the thirtieth anniversary rally of the Uniformed Firemen's Association of Greater New York, Madison Square Garden, March 30, 1949:

They tell the story about a politician whose telephone rang late one night to announce that the river was overflowing and flooding the area. Hurriedly, he dressed and ran out to join the rescue crews. Next morning, haggard and tired, he watched the debris floating downstream — household goods, chunks of lumber, small animals.

But one object caught the politician's attention. It was a straw hat. And instead of floating downstream like everything else, this hat would go downstream about 20 feet, then float upstream 20 feet, then down again, then up.

It was a mighty odd phenomenon, and finally the puzzled politician turned to a friend and asked:

"How is it that straw hat keeps going up and back, up and back, instead of floating downstream with the rest of the flotsam?"

"Oh, that?" answered the friend. "Why, that's Farmer Jeb. Last night he made up his mind he was going to mow his lawn today, come hell or high water."

That's what I like about the Uniformed Firemen's Association. Once they make up their minds to go after an objective they'll stick it through—come hell or high water.

They're good trade-union men, good civil servants, and good members of the community. And, so far as I can see, when they decide on an objective they don't overlook the public interest.

I've traveled widely through the world, and I've headed up a Government Department, the post office, which was manned by a uniformed force. I know a little about the problems which civil-service employees face.

And I want to go on record unequivocally, without any ifs or buts. Civil service and the merit system are essential ingredients of a democracy. A government that works well is one in which civil service occupies an important place, where merit and fitness rule the choice of the men and women who are paid out of the funds of the whole community. The people have a right to expect full service for their dollars. In return they have a responsibility to see to it that the security of the civil servant is not jeopardized. They have a responsibility to see to it that their essential services are manned not only by competent personnel, but in such a manner that one man doesn't have to do the work of two while getting paid for doing the work of one.

The people of this country, and of this State, and of this city, have a right to demand the best possible services. To get the best possible services they need the best possible employees. And to get the best possible employees, we—all the people—have a deep responsibility to provide, first, rates of pay and quality of working conditions that will attract such people; and, secondly, we must provide security.

I am somewhat familiar with the steps now being taken by your organization, and by others of a like character, for your future security and well-being. And speaking as a New Yorker who has great pride in the city and its people, I sincerely hope that your request will be given the strongest consideration by those charged with the responsibility.

The growing importance of the civil-service worker in the affairs of the city, the State, and the Nation, is a matter which should be more fully recognized. We like to speak of our Government as the best in the world, the most smoothly functioning. The reason our American Government is so well run, the reason why—if the future should bring us war we can rely completely on the unselfish efficiency of our public servants—that reason is precisely because of our civil service and its emphasis on merit and fitness. And among the outstanding exemplars of the merit system are the firemen of New York City.

Whenever I travel in the United States, when I hear two words, I know they refer to members of the police force. These two words are "the finest." And they refer not just to any police force, but specifically to the police of New York City. I would like to propose a synonym for New York City's firemen, a symbol by which they should be known everywhere and to everyone at all times. My suggestion is, ladies and gentlemen, that hereafter, whenever you think of New York's firemen, who protect the city with miraculous efficiency, and often—more often than the public knows—at the cost of their lives, we think of them as "The Valiant."

That's the term they used to apply to the knights of old, if you remember your King Arthur stories. It means brave, it means facing danger, it mean being heroic, and it means being gentlemen. The definition applies perfectly to the firemen of New York City. I nominate them as recipients of this new name—"The Valiant," and I hope all of you in the audience will from this day on publicize the word.

And to you, John Crane, president of the Uniformed Firemen's Association, please accept this symbol on behalf of myself as a sincere friend, and I am sure, I speak on behalf of all the citizens of this city.

Address by the President of Israel

EXTENSION OF REMARKS
OF

HON. JACOB K. JAVITS
OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 26, 1949

Mr. JAVITS. Mr. Speaker, there is appended hereto the text of the address by the President of Israel, Dr. Chaim Weizmann, at a great reception tendered to him at the Waldorf-Astoria Hotel in New York, on Saturday, April 23, in the name of the Weizmann Institute of Science at Rehoboth in Israel. In the course of his remarks, Dr. Weizmann pledged Israel to insure the safety of the holy places, the right of free access to them, and full security for religious institutions of all faiths in the exercise of their functions and "to encourage and accept the fullest international safeguards and controls for their immunity and protection."

The expression of views by Dr. Weizmann on this distinguished occasion, and the pledge of Israel's cooperation with respect to the holy places, of such profound interest to men of all faiths, should prove of interest to the members. There is also appended hereto an editorial of the New York Herald Tribune on this address appraising its importance, and approving its purport:

TEXT OF ADDRESS BY THE PRESIDENT OF ISRAEL

I am deeply moved by the sight of this large and impressive gathering. I am conscious that in honoring me by your presence here tonight you pay tribute to the two causes which have commanded my devotion throughout my life—the cause of Israel's rise to independence and the cause of scientific progress and research. These two interests which I pursued so long in parallel but separate channels have now converged in the Institute of Science which has sponsored this occasion tonight. For at our laboratories and libraries at Rehoboth, in the gentle beauty of the coastal plain, we dedicate ourselves at once to the universal principles of science and to the special needs of Israel as a state confronted by urgent economic and social tasks.

Few events in the history of our generation have evoked a wider or more ardent sympathy amongst the peoples of the world than the emergence of Israel as an independent state after 2,000 years of homelessness. Surely, it is no ordinary episode. So many high issues are here involved. Here we have the gallant struggle of a people which lost 6,000,000 of its sons in the cause of the victorious United Nations against the Nazi tyranny; the establishment of democracy in an area where the ideals and institutions of democracy are little known; the revival of one of mankind's oldest cultures; the creation of a home of social and scientific progress in a region where desperate squalor and degradation prevail; a successful defense against aggression; the realization of an international judgment made by the United Nations 18 months ago; a great ingathering of exiles; the auspicious beginnings of Arab-Jewish peace—all this has happened in the one crowded year since I last left these shores for Israel. It is proper to feel humility at this great hour of Israel's fortunes. Yet I confess that is a humility not unmixed with pride. I am naturally conscious of much imperfection in Israel still; yet in the light of these splendid events the idea that my people's rightful claim to a modest equality in the family of nations is still a matter of doubt, appears to me unworthy of any serious or sincere mind.

Your excellencies, ladies and gentlemen, it is a source of special pleasure to me to celebrate this occasion in the United States. Israel will be eternally grateful for the wide support which it has received from the Government and people of this great country. On many crucial occasions this support has been expressed by the deeply human statesmanship of President Truman, who was the pioneer in the recognition of our state. It will be my privilege a few days hence to express my people's gratitude to the President in person.

I recall that in those fateful early days we were quick to receive the recognition and consistent support of the Soviet Union; ever since that time we have pursued—and will continue to pursue—a policy of friendship to all the nations, whether or not they diverge amongst themselves in other aspects of their policy. From the earliest days we were warmly supported by the states of eastern Europe, South America, and the British Dominions, whose distinguished representatives I am happy to greet this evening. In recent weeks Israel has been privileged to establish official relations with governments of western Europe, and the entire American continent, as well as making its first steps toward recognition in the continent of Asia. Above all other objectives my Government will cherish and pursue the goal of lasting peace between Israel and the Arab states.

I should like to say a special word of welcome to the representatives of the United Nations present here tonight, and especially to the eminent president of the General Assembly. Dr. Evatt has played a momentous role in all the processes which culminated in the birth of Israel within the shelter of the United Nations. The cause of international cooperation owes much to his high qualities of intellect and zeal, and I deeply appreciate his eloquent words tonight. The doctrine of universal peace entered the records of civilization as the inheritance of Israel's prophetic literature. It is the cornerstone of the Charter.

Recent events have also created an intimate relationship between the early days of Israel's independence and the most successful effort yet achieved by the United Nations in the solution of an international conflict by judgment, conciliation, and mediation. It is therefore a happy omen to have amongst us the Secretary General, Mr. Trygve Lie, whose name is almost a synonym for the ideal of world peace. The confidence of world opinion in the practical value of skillful mediation has been greatly strengthened by the brilliant accomplishments of another of our guests this evening—Dr. Ralph Bunche.

It is noteworthy that the statement whereby the Government of Israel secured parliamentary confidence pledges our foreign policy to seek its expression through the procedures of the Charter. Despite its small size, Israel evokes moral and intellectual influence throughout the world which may well be deemed worthy of being harnessed to the general strength and prestige of the United Nations.

At this season it is natural for the world to turn its thoughts toward the Holy City of Jerusalem. Within a single year Jerusalem has been rescued from the condition of violence, anarchy, siege, and famine in which it was abandoned last year. Its people have passed through unforgettable sacrifices and ordeals. I have been deeply impressed with Jerusalem's recovery since that time. It is a special pride to record the part played by the Government and people of Israel in restoring the city's life and security, establishing a regular and effective administration, renewing its food and water supply and reviving the cultural and educational primacy befitting its tradition. This achievement, at the cost of many young and precious lives, deserves the applause of all devout and reverent men to whom the neglect and humiliation of Jerusalem last year must have been a deep reproach.

The Government and people of Israel are conscious of the international interest in the safety of the holy places and the right of free access to them. We pledge ourselves to ensure full security for religious institutions in the exercise of their functions; to grant the supervision of the holy places by those who hold them sacred; and to encourage and accept the fullest international safeguards and controls for their immunity and protection.

Just as we are resolved to give complete and practical expression to the universal interest arising from the holy places, so we expect that the international community will understand the direct and inescapable responsibility which Israel bears and exercises in the daily life and administration of Jewish Jerusalem. I am satisfied that no real incompatability exists between the interests and concerns of Christianity to which His Holiness the Pope has recently given eloquent expression, and the aspirations of the people of Jerusalem to assure their government and security in conformity with their national allegiance. If theirs is a genuine desire to reconcile these two interests, a harmonious solution can swiftly be secured with international consent.

Ladies and gentlemen, it should not be imagined that this record of advance in so many fields signifies that Israel's main tasks are over. Nothing has been more impressive in recent months than to observe the welcome flow of Jewish immigrants by their tens of thousands into our open ports. With their arrival a terrible chapter in human suffering is about to be closed. They come destitute, haunted by the terrible memories of martyrdom, very often still stunned and demoralized by the ordeals through which they have passed. To secure their transportation and absorption in productive work is an immense task, the successful completion of which depends entirely upon the outcome of the United Jewish Appeal, which merits the fervent support of American Jewry.

I cannot possibly exaggerate the importance of a successful campaign for the United Jewish Appeal this year. It is the one really decisive test of American Jewry's devotion to the cause of Israel and the Jewish people. No less than 23,000 of our people have come to our shores in the first 16 days of April alone. We receive them on the solemn assumption that American Jews will assist us in providing the resources without which the very generosity of our immigration policy will crush the economy of our state.

If Jews in this country are the partners in Israel's pride, let them share in its travails which it has endured not for Israel itself, but for the life and dignity of our people.

This great increase in our population compels us to give urgent attention to the conditions necessary for our people to maintain a dignified standard of life. In order to make up the disparity between the needs of our immigrants and the limited resources of our country, great schemes of industrial and agricultural development must be undertaken. These, together with the settlement and irrigation of the Negeb, can help a swift expansion to take place in Israel's economic opportunities. The Weizmann Institute is engaged in an investigation of the Negeb's potentialities. Our first conclusions indicate that both the Negeb's agricultural

possibilities and its industrial resources can be more hopefully evaluated than they used to be.

A country such as Israel can only develop industry based on the skill of its people and the application of the results of scientific research. The Institute of Science at Rehovoth has already played an honorable part in every crisis of our State. The processes worked out there have enabled good results to be obtained from advanced agricultural methods. When the country was at war the workshops and laboratories at Rehovoth were a potent aid in its defense. Now as we stand on the threshold of great industrial development, it is certain that only scientific research can reveal new possibilities for the manufacture of exportable goods.

While we shall not neglect the needs of pure science, I am especially conscious at this time of the urgent need for applied research, harnessed to a swiftly developing economy. Moreover, high standards of production, health and education in an Israel dominated by a scientific spirit cannot fail to have a deep effect upon the surrounding Arab world. We enter upon our task with a deep sense of regional responsibility, hoping that the Arab peoples will soon join us in the common pursuit of peace and welfare. The development of the Middle East holds out great hope for a common regional solution of problems of economic recovery, social stability, and refugee settlement. The problem of resettling refugees in conditions favorable to their free and peaceful life requires urgent attention by all the Governments concerned.

The glaring light of public attention is focussed upon the State of Israel. More is expected of it than is usually demanded of such small states born in the throes of adversity and crisis. The cultural traditions of our people encourage the world to expect a corresponding achievement by Israel in modern times. We cannot hope to surprise the world with any manifestations of material power, and Israel has no deeper longing than to turn its energies into the arts of peace. In this generation, as always before, Israel must make its mark through the achievements of its mind and spirit. I pray that the coming years of independence will be not unworthy of the first, and that Israel will remain forever faithful to its most universal and significant ideals.

[From the New York Herald Tribune of April 25, 1949]

PRESIDENT WEIZMANN ON JERUSALEM

President Chaim Weizmann, at the dinner given in his honor on Saturday, made clear Israel's position on the problem of Jerusalem, and also indicated that a harmonious solution can swiftly be secured with international consent.

Dr. Weizmann asked that the international community understand the direct and inescapable responsibility which Israel bears and exercises in the daily life and administration of Jewish Jerusalem. But he also pledged Israel to insure full security for religious institutions in the exercise of their functions; to grant the supervision of the holy places by those who hold them sacred; and to encourage and accept the fullest international safeguards and controls for their immunity and protection. This is less than the separate international administration for Jerusalem and its environs, which was projected in the original Palestine plan of the United Nations Assembly, and which was repeated in later directives. There are many who will regret that the UN was unable to establish this neutral control at the outset, and so avert the fighting which raged in Jerusalem, the siege and countersiege of the Holy City. However, the suggestion of Israel's President does offer the elements of a practical compromise.

Religious institutions would be left in the hands of their founders; the holy places in new and old Jersualem would be under the immediate control, in Dr. Weizmann's words, "of those who hold them sacred." And some form of UN commission, with headquarters in Jerusalem and a sufficient staff, could be made available to see that the rights of all religions were fully maintained. Doubtless, the task of carrying on this system, and coordinating it with Israeli and Arab secular administration of the divided city, would be delicate. But it is doubtful whether the complications would be much greater than those involved in full UN control of the Jerusalem area. In any case, good will and good sense could make the plan work, and no international arrangements are proof against the lack of these qualities.

Compulsory Health Insurance

EXTENSION OF REMARKS
OF
HON. JAMES T. PATTERSON
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 26, 1949

Mr. PATTERSON. Mr. Speaker, much has been heard in recent months of the wonderful benefits which would accrue to our citizens through the passage of compulsory health and medical insurance. It seems that not all our people are so gullible as the administration would have us believe. A group of sensible, thoughtful citizens has presented to me a resolution expressing opposition to such a plan, and detailing the fallacies of a coumpulsory health program. I commend them for this presentation and insert the resolution in its entirety:

Whereas the American family has received the finest quality of medical care available in any country in the world, developed under our system of free enterprise; and

Whereas compulsory health insurance, wherever tried, has caused a decline in national health and deterioration of medical standards, and facilities, to the detriment of family welfare; and

Whereas compulsory health insurance, wherever tried, has taken away the family's right to choosing its own family physician; and

Whereas invasion of family privacy and violation of the sanctity of the patient-physician relationship have proved to be one of the most objectionable features of compulsory health insurance, wherever tried; and

Whereas compulsory health insurance would result immediately in a tax of 3 percent on the income of the American workingman, rising within a few years to 6 percent and higher, creating a new tax burden which would reduce household budgets and bring down family standards of living; and

Whereas Government control of medical services, by gradually undermining free enterprises and establishing heavy new tax burdens and unprecedented national deficits, would threaten national bankruptcy and encourage the spread of socialism, which would endanger the rights of our children to the individual freedoms which have been the American heritage: Now, therefore, be it

Resolved, That the Mothers' Group of the Torrington Council of Catholic Women does hereby go on record against any form of compulsory health insurance or any system of political medicine designed for national bureaucratic control.

That a copy of this resolution be forwarded to the President of the United States, to each Senator and Representative from the State of Connecticut, and that said Senators and Representatives be and are hereby respectfully requested to use every effort at their command to prevent the enactment of such legislation.

Dated this 18th day of April 1949.

HOPE H. CHIDESTER,
President.
MARGARET G. MCMAHON,
Secretary.

The Jewish Appeal

EXTENSION OF REMARKS
OF
HON. JOHN J. ROONEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 26, 1949

Mr. ROONEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which appeared in the Washington Evening Star of April 25, 1949:

THE JEWISH APPEAL

Every American friend of the young state of Israel, and all who are aware of what Europe's Jews have suffered, should feel impelled, both in mind and heart, to give the most generous support to this year's United Jewish Appeal. For the appeal—which will be formally launched on the local front tomorrow—is aimed at attaining objectives that are humanitarian in character and of great historical significance in terms of opening up a new era of peace and well-being in the Middle East.

As a Nation-wide undertaking carried out in behalf of the joint distribution committee, the United Palestine Appeal and the United Service for New Americans, the 10-year-old UJA seeks to raise a total of $250,000,000 in the weeks immediately ahead. This sum, though the biggest to date in the UJA's history, is described as the irreducible minimum needed to make the most of the challenging opportunity to establish Israel on a firm footing in 1949 and to put an end to the last tragic phases of the sufferings of the Jews in Europe.

Translated into human terms, the UJA's success will make possible many splendid accomplishments. For one thing, it will mean that Europe's Jewish displaced-persons camps will be emptied before the end of the year and that new homes will be found for the 100,000 still languishing there. It will mean, too, that the Israeli Government in 1949 will have the wherewithal to cope with an influx of over 200,000 immigrant Jews. Further, wholly apart from its bearing on Israel, it will mean such things as much-needed help for Jewish communities in western Europe, measures to improve the deteriorating position of 1,000,000 Jews in North Africa, and aid for thousands of refugees expected to come to the United States under a revised DP law.

All this represents only a sketchy summation of the program to be carried out with the funds sought by the United Jewish Appeal. On grounds both of traditional humanitarianism and enlightened self-interest, the Nation has every reason to respond generously to the UJA.

Resolution Protesting Imprisonment of Hungarian Prelates

EXTENSION OF REMARKS
OF
HON. ANDREW J. BIEMILLER
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 26, 1949

Mr. BIEMILLER. Mr. Speaker, I have previously joined with the people of my district in the protest against the infamous treatment of Hungarian church leaders by the Hungarian Government. The protests of the people of Wisconsin are further voiced in a resolution passed by the State assembly, which I desire to include in the RECORD. I cannot reemphasize strongly enough the complete travesty of justice suffered by all Christendom at the hands of the ruthless, godless forces in control of that unfortunate country. The resolution follows:

Resolution requesting the President and Secretary of State to protest the imprisonment of Hungarian prelates

Whereas the Hungarian Government has unjustly arrested and imprisoned His Eminence, Cardinal Mindszenty, the Primate of Hungary, Hungarian Lutheran Bishop Lajor Ordass, and the leaders and officers of other Christian denominations; and

Whereas the arrest and imprisonment of these intrepid champions of human rights and freedoms is a bold and brutal challenge to all Christendom and to all freedom-loving peoples throughout the world; and

Whereas any and all attacks on freedom of conscience and worship wherever made should be resisted by all peoples of all faiths: Now, therefore, be it

Resolved, That this assembly register with the President of the United States and the Secretary of State, its strong protest against the unjust arrest and trial of Cardinal Mindszenty, Bishop Ordass, and all those who are being persecuted for their religious convictions and belief in Hungary, to the end that representations be made to the Hungarian Government for their immediate release and the full restoration of their civil and religious rights; be it further

Resolved, That copies of this resolution be transmitted to the President, Secretary of State, both Houses of Congress, and to each Wisconsin Member thereof.

A Friendly Analysis of the Columbia River Bills

EXTENSION OF REMARKS
OF
HON. WALT HORAN
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 26, 1949

Mr. HORAN. Mr. Speaker, there are now four major proposals before the Congress of the United States aimed at the problem of better coordination of the planning, construction, and operation of the Government's—and the people's—multi-billion-dollar stake in the Columbia River region. For all practical purposes, only three of these need be considered, since the original bill for a Columbia Valley Authority, although introduced on the opening day of this Congress by Representative HENRY JACKSON, of Washington, has been abandoned. However, since so much discussion has centered around the original Authority bill—and since it is the pattern from which all the modifications have been cut—I think it should be included in this analysis, so that the others will fit into a proper perspective.

The Columbia Valley Authority bill is identical with the proposal originally sponsored by Congressman—then Senator—HUGH MITCHELL in 1945 and later sponsored in the Eightieth Congress by Senator TAYLOR, of Idaho. It was patterned very much after the set-up of the Tennessee Valley Authority and its contents, I think, are quite well known.

The second proposal is my own bill for a Columbia Interstate Commission, which I have developed after an independent study of the problem dating over many years. In it, I have sought to accomplish the same general purposes as the CVA bills but to provide by law a much greater degree of local control over policies governing the development of the Columbia River.

The third suggestion is the Truman administration's new bill for a Columbia Valley Administration, which was drafted by several Government departments at the President's request this year and introduced by Congressmen MITCHELL and JACKSON in the House and by Senators CAIN and MAGNUSON and 17 others in the Senate. I want to stress right here that the new administration bill is a very much milder proposal than the original C. V. A. bills and does not go nearly as far as the advocates of a Pacific Northwest superstate would have liked.

Finally, there is the Joint Army Engineers-Bureau of Reclamation plan, which is based on the separately devised studies of these two Government construction agencies, and which was announced by General Pick and Secretary of the Interior Krug on April 11. Basically, it would adopt the compromises between the Army's 308 report and the Interior Department's long-range program announced in February 1947. All projects would be planned, built and operated by the present agencies, with the necessary coordination provided by the existing Columbia Basin Inter-Agency Committee. This has been called—in some quarters—a States' rights plan—but it actually gives the States no more authority or participation in Columbia River development than the administration bill. It gives the States much less real control over development policies than my C. I. C. bill does.

It is the declared intention of each of these four proposals to clarify the policies and coordinate the procedures according to which the resources—chiefly the water resources—of the Columbia River region shall be developed. The differences lie in the means to be taken toward the same end and in the point of view of the persons proposing those means. They all recognize in common that—up to now—we have a hodgepodge of governmental activities, competing against each other, subject to confusion and misdirection, resulting in prolonged delay of needed activities and overlapping administration of others.

Tonight I want to discuss just the basic organizations proposed in these four plans and the general policies according to which development would be carried out under each of them. Next week, I will go more deeply into the specific provisions relating to State water rights, irrigation, fisheries, taxes, the provisions relating to employees of the agencies to be set up, and so forth.

The original Authority bill would have set up a strong Government corporation, empowered to undertake almost any activity its three-man board of directors decided was in the best interests of the region. Although individual projects would have to be approved by Congress, there was no provision whatever for local control or participation in planning or operation of the Authority. It would have swallowed up the Bureau of Reclamation, Army Engineers, Bonneville Power Administration and most of the activities in the Pacific Northwest of the Forest Service, Fish and Wildlife Service, Soil Conservation Service and several other agencies. It had broad powers of condemnation of existing utility systems, of privately owned land, and even State properties. It was not subject to the national reclamation laws, the flood-control laws, civil-service regulations, national labor relations laws, or even the provisions of the Government Corporation Control Act. While it paid lip service to the subjects of States' rights and fair treatment of its employees, the Authority could not legally have been made to carry out those provisions if its politically appointed bosses decided to do otherwise.

In drafting the new administration bill, many of the criticisms of the original Authority proposal were heeded and the Government has sought to mollify CVA critics with a number of important changes. However, there still are basic defects which, I am sure, will have to be rectified before Congress will accept even this modified version. Among the major improvements over the old CVA, it would require that two of the three directors be residents of the area, although the people of the region would have no part in selecting them. It provides for an indefinite number of advisory bodies, to offer local assistance on different types of activities, but gives those bodies no specific form, composition or authority. In other words, the directors could either take their advice or ignore it. It provides for public hearings and a much-improved budgetary procedure, and makes provisions for payments to State and local governments for tax losses. Instead of junking all previous plans for development, which the old CVA would have done, it provides for carrying on without delay all presently approved projects, with additional plans to be made on an annual basis. This is one of the many provisions of my CIC bill which have been incorporated, in one form or another, into the administration proposals. A very radical difference from

the original CVA is that the administration bill requires the Corporation to carry out its major construction activities through the existing agencies, such as the Army engineers and Bureau of Reclamation. It would take over the Bonneville Power Administration and the operation of other completed projects in the area—again copying the provisions of my bill and one of the CIC's chief distinctions from the original Authority proposal. I shall discuss this provision at greater length next week. Finally, for the first time, the administration bill accepts my requirement that any new agency must make adequate provision for existing resources, such as our great fishing industry, which previously have been given no protection except in my Columbia Interstate Commission bill.

The provisions of the new CVA bill relating to distribution of electric power also have been greatly modified, although it still is a strong public power bill. No longer would the CVA have authority to condemn and take over private power systems. But it would be able to purchase such systems by negotiation for resale to a public agency, such as an REA cooperative, or a public utility district, or a municipal power agency. This provision could, of course, be used as a squeeze play to force private power companies into a position where they had no other choice but to sell out. In contrast, my CIC bill specifically prohibits the Federal corporation from going into the local distributing business, although it does provide the main transmission lines from Government plants to make power available to any cooperative, public utility district, or other agency that wants it at a fair price. There is another provision which my bill may have forced into the administration proposal—that is a clarification of the priority to be given to rural and home consumers in the sale of power. Under the present Bonneville Power Act and the earlier authority bills, statements have been included which say that priority was being given to family consumers. In the actual operation, however, the public-preference priority has too often been exercised to provide power for new industries, while hundreds of farmers are still waiting for power. I changed the wording of my bill so that this priority could be exercised only for actual home and farm use. Now, I see, the administration bill has followed suit.

So these, in general outline, are the principal features of the four basic proposals for Columbia River development now lying before Congress. They have been referred to the Public Works Committees of the House and of the Senate, but no indication has been given as to when—if at all—hearings will be held on them. If the subject is taken up at all, it is probable that all four will be considered jointly, so that the committees and the Congress—and the public—can have the benefit of full discussion of the merits and disadvantages of each. Then the committee probably would write an entire new bill, incorporating the most acceptable provisions of these four different approaches in the hope of devising a program actually tailored to the peculiar problems and needs of the Pacific Northwest.

Next week I will discuss a number of the specific provisions of these bills, outlining some of the things that I believe are essential in any proposal which would be satisfactory to our people. For, in my opinion, no such legislation should be enacted which does not take fully into account the desires and hopes and rights of the people who live in the region served by the workhorse of the Northwest, the Columbia River.

Fooling the Public

EXTENSION OF REMARKS
OF
HON. PAUL B. DAGUE
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 26, 1949

Mr. DAGUE. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include an editorial which appeared recently in the Coatesville (Pa.) Record. This editorial points out that the President and his satellites did not hesitate to digress from the facts in their program of garnering the farm vote. I believe it also important to call attention to the outstanding service being performed by Senator JOHN WILLIAMS in setting the public right concerning misrepresentations which were made by the President's aides during the recent campaign. The editorial follows:

FOOLING THE PUBLIC

According to Ray Tucker, in his article on this page the other day concerning Secretary of Agriculture Charles F. Brannan, even candidates for the Presidency of the United States do not hesitate to stoop to wrong information in their search for votes in an election.

Mr. Tucker points out that when the President, in his campaign, informed farmers that the Eightieth Congress had sold them down the river through refusal to provide increased grain capacity storage, he was giving them information which was absolutely false. But the farmers swallowed it, and some of the farm States which are normally Republican cast their electoral votes for Harry Truman.

Not so long ago we discussed this question with a "gentleman farmer." He is president of an insurance company, but had a large farm which he operates, not as a plaything, but for a profit. He said that when President Truman was running for the Presidency, he attended meetings of farmers in his home State of Indiana, and all the farmers were "sold" on the idea that Mr. Truman was honest in his appeals to the farmers, and that he could do something to keep farm prices high. This gentleman pointed out to the other farmers that Truman had also promised the housewives to bring food prices down to a fair level, but they laughed that one off and the district went for Truman.

"I attended one of the meetings of these same farmers early this year," said this insurance president-farmer, "and they were down in the dumps. The bottom had fallen out of the prices of many of their crops. I could have said, 'I told you so,' but I refrained. But some of them told me following the meeting that I was right and they had been wrong."

But the big mistake in the campaign last fall was made by the Republicans, who failed to take advantage of the propaganda put out by Truman. It was known to the Republican candidate and his followers, because former Banking and Currency Chairman Jesse Wolcott, of Michigan, had sent a 20-page report to Governor Dewey.

For some reason known only to the high Republican command, this report was not used. The GOP candidate might have pointed out that while the Trumanites were declaring there was a shortage of grain capacity storage it was due to the Truman policy of preventing the shipment of grain to places where there was plenty of storage. He could have made it clear that the Government itself was selling portable grain bins, available to anybody who wished them, and he could have charged that both the President and his Secretary of Agriculture were deliberately double-crossing the farmers.

The vice-presidential candidate, Harold Stassen, should have known that the information being given out at Washington was incorrect. After all, he knew that in his own State there was grain storage capacity available at the time Washington was blaming the Eightieth Congress for a shortage.

But there is nothing funnier or more complicated than politics. Dewey and his cohorts may have failed to grasp the significance of the situation, or they may have had the idea that it was wrong to use it. Stassen, possibly, in view of his 1952 aspirations, may have felt that Dewey's defeat would not be such a big disappointment.

But the whole story is a disgrace.

One loses confidence in political campaigns after discovering that even the President of the United States does not hesitate to give out wrong information in his campaign for votes.

Father Junipero Serra, Missionary and Teacher Extraordinary

EXTENSION OF REMARKS
OF
HON. LEROY JOHNSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 26, 1949

Mr. JOHNSON. Mr. Speaker, it was my great privilege and pleasure to participate in brief exercises on Sunday, April 24, 1949, in Statuary Hall, the purpose of which exercises was to commemorate the two hundredth anniversary of the departure of Father Junipero Serra from Spain to America. This man did a remarkable work during his own lifetime in the new and romantic country known as California. As is the case with all great men, his shadow extended far beyond his own lifetime. His attitude and spirit in laying down his life in an effort to teach and Christianize the Indians is having a great influence on people today. A large program is under way in California to restore the 21 missions which were built as the result of the efforts and program of Father Serra. The life of this great padre is an inspiration to many people and especially to many priests of the Catholic Church.

With us at these ceremonies were Rev. Fr. Virgil Cordano, O. F. M., and Franciscan friars from Holy Name College of Washington, D. C., and others from various Catholic orders. Father Cordano happens to be from my congressional district and I wish I could claim

him as a constituent, but he now resides in Santa Barbara.

Father Cordano delivered a very inspiring and informative address. It was my honor and pleasure to represent the California Society of Washington and in that capacity to make a short speech concerning Father Junipero Serra, and to place a wreath at the base of the statue of Father Serra in Statuary Hall.

Junipero Serra is one of the representatives of California in Statuary Hall. The people of California can well be proud of this representative in the Hall of Fame. His life was a true reflection of the real Christian spirit whose cardinal principles are the brotherhood of man and the Fatherhood of God. In our complex civilization of today that spirit is more needed than ever before. Freedom, security, and opportunity can best flower in a civilization motivated by Christian principles. By living the true Christian life, people of the world can become men of good will and strife, turmoil, jealousy, and violence be banished from the earth. This is what Junipero Serra desired and what we need and want today.

Under leave to extend my remarks, I include the addresses delivered by Father Cordano and myself:

ADDRESS OF HON. LEROY JOHNSON, OF CALIFORNIA

It is appropriate that we today, in this historic Chamber, honor the memory of Father Junipero Serra. Two hundred years ago he left Spain for that great western empire known as America. Why did he go to this great unknown continent which was then practically a limitless wilderness? It was not to get rich which frequently is the motive of pioneers and adventurers. It was not to make explorations for geographic or scientific purposes. He went to teach and Christianize the Indians of America. We should always bear that in mind when we think of this great character. He wanted merely to increase the intelligence, knowledge, morals of the Indians, and above all, to make them familiar with the Christian religion. He wanted to develop the personality of every individual and to dignify his existence as an image of God. That is the special and important significance of the pilgrimage of Father Serra.

The physical evidence of his work is found in the 21 missions that were built in California; nine under his specific supervision.

Two hundred years have passed since Father Serra made his eventful and uncertain journey. His personal efforts produced some good results. But have we in the intervening two centuries progressed along the lines of the endeavors of Father Serra? As to our own Nation we can give a weak affirmative answer. We undoubtedly have built a civilization that dignifies the individual, gives him more personal freedom, a better standard of living and more equitable distribution of the Nation's wealth. But as a country we also have failed to furnish the leadership that would make world peace more likely. The world as a whole seems to me to have made little progress in a spiritual way during these two centuries. An interminable number of wars, including two within our time, have been fought. War is merely legalized murder and certainly Christianity or an enlightened world opinion would not condone murder. The Christian spirit has not been very prevalent in the conduct of the foreign offices of the civilized countries of the world.

Today we are menaced by the threat of a philosophy that does not recognize nor believe in a God; that bases its conduct and program on a purely materialistic philosophy and that also believes it to be its mission to bend every nation and group to its way of thinking and living. If this cannot be done by peaceful persuasion or penetration then it must and will be done by force.

If we could get the people and the countries of the world back on the pathway of Father Serra, our hope and aspiration for peace might be realized. The peoples of the world want peace, above all else. But roadblocks are placed in the pathway to peace by designing dictators and would-be agents of the people. If we could only get representative government throughout the world, we would have no wars. If the foreign offices of the various countries throughout the world would practice Christian principles in their dealings with their neighbors in the family of nations we would have no war.

We cannot win the peace by armaments alone. They may be necessary in this transition period but in the long run we must have good will and mutual confidence among the family of nations to make peace permanent. This is nothing more than practical Christianity in Government. If there has been 200 years of Father Serra's efforts in every Nation of the world, we would not today be worrying about war nor would we be suffering from its aftermath. If we teach and preach and thus make men more intelligent, tolerant and religious this may reflect itself in the conducts of governments. Then the beginning of lasting peace will be here. Then indeed can Father Serra's dream of a peaceful and Christian America be translated into a peaceful and Christian world.

For these and other reasons I consider it a distinct honor and a deep pleasure to place this wreath at the foot of the Statue of Father Junipero Serra, on behalf of the California Delegation in Congress and of the California State Society of Washington.

ADDRESS OF REV. FR. VIRGIL CORDANO, O. F. M., OF SANTA BARBARA, CALIF.

Padre Junipero Serra is admired and extolled today as a spirited colonizer, an untiring builder of missions, and the bearer of culture and civilization to our Western States. He was all this and as such he is an inspiration to many today.

But to me and others who go about in the same brown robe, white cord, and open sandals as did this gallant apostle of California, Padre Junipero Serra is above all a man of God, a priest, and a Franciscan friar. In the name of his successors along the Pacific coast and all in the United States who belong to the same Franciscan family and labor in our 48 States, I wish to add a word of praise for one who is an inspiration to us in our work of instilling the love of God and our fellow man in the citizens of these United States. We do not claim to be discoverers of new lands and tireless builders of material structures, but we have united ourselves with Padre Serra in bringing God to men and men to God, the soul of true culture and civilization. With Serra we know that a civilization without religion is like the house of the Gospel which was built upon sand. The rain fell and the floods came and the winds blew and beat against that house and it fell, utterly ruined.

Rather, Serra was like the wise man of the Gospel who knew that if his house were to stand it had to be built upon rock. Spanish soldiers came to our shores to extend the frontiers of the native land, but Serra left the comforts of home, his fame as a preacher and renown as professor to extend the Kingdom of God, the rock that would support the frontiers of his nation.

The civil ruler brought the Spanish flag to our shores; Serra carried the Christian cross, believing that if he planted the cross on our land the flag would ever wave over it.

If he raised up a material building it was to point heavenwards to the stars; when he tramped the dusty trail called the "El Camino Real" (The King's Highway) it was to bring men the knowledge that there was another royal road to be traveled to a far country above; while the governor claimed the land for Spain, Serra claimed its inhabitants for Heaven.

His was the fortune of having lived long enough to see nearly 6,000 Indians converted from paganism to Christianity, from barbarism to civilization. He himself personally supervised the construction of 9 missions, confirmed over 5,000 of his people, and walked over 13,000 miles in search of souls in need of God. Besides raising up 9 of the 21 missions that remind the traveler of today of a glorious past he reared up structures not built with hands, for while the Indians worked and rested with him, conversed and prayed with him, they were unconsciously clearing away from their hearts the thicket of superstition, the bitter weeds of hatred and revenge and filling their hearts with the love of their Creator and their fellow man.

At the present time California is commemorating the centennial of the discovery of gold and its rapid rise to statehood. Many names will be held in high honor and gigantic deeds will be retold. But we must sing the praises of this valiant man of God, Padre Junipero Serra. One of the reasons why Spain sent colonizers up the coast of California was the fear she had of the downward march of the Russians from the north. If it were not for the undaunted spirit of Serra, California must have been left to be absorbed by the enemy creeping down from the north. There is a lesson in this for us today. To insure our civilization we must build fortresses, not only material edifices but spiritual edifices; we too must implant the cross of Christ in the hearts of the irreligious of our Nation. Serra brought the saving cross to our shores and holds it aloft in our Capitol, for in it is salvation for the individual and our beloved Nation. If it is planted in our midst the flag of the red, white, and blue will ever wave over this land of the free.

Lincoln, Martyred Friend of the South

EXTENSION OF REMARKS

OF

HON. CLYDE DOYLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 26, 1949

Mr. DOYLE. Mr. Speaker, in connection with the observation of the anniversary of the untimely assassination of Abraham Lincoln, on April 14, 1865, at the Ford Theater here in Washington, Mrs. Doyle and I attended and heard a remarkable lecture by Dr. Robert L. Kincaid, president of the Lincoln University, and I felt certain that the following address by this distinguished educator and resident of what is commonly termed the South of our beloved Nation, would be of interest and inspiration to all.

The life and service of Abraham Lincoln has long been my guide in the history of America, and it is again my pleasure to be presently serving as president of the Abraham Lincoln Club, in my home city of Long Beach, Calif. Recently, when the Abraham Lincoln Club, of Washington, did the honor of electing me as one of its board of directors, I again renewed my decision to, in every

way possible, perpetuate the worthiness and righteousness of this citizen of the ages, therefore, I am pleased to share the text of the address which I heard, with you:

LINCOLN, MARTYRED FRIEND OF THE SOUTH

We meet today where an event occurred which shall never be forgotten in the annals of mankind. We are at the place where the life of a great national leader was extinguished. Mortality ended for Abraham Lincoln April 15, 1865, and an immortality began which has been an inspiring influence for all freedom-loving people. By this meeting today we bridge the long span of years between this memorable past event and the living present. The great personality of long ago who set humanity farther along the road toward the attainment of universally desired goals is still alive and pleading the cause for which he sacrificed his mortal body.

To those of us who are not privileged to visit this sacred memorial often, the presence and inspiration of Abraham Lincoln is especially near today. Our thoughts easily conjure up the dramatic circumstances of that tragic hour 84 years ago when one of the world's greatest leaders passed into eternity. But it is not so much that event which is recalled at this moment, as it is the great deathless heart which beat in unison with the hopes of all free people and encompassed the ideals and principles which have made this country the greatest and most powerful force in the world. Here in this moment we can see in majestic perspective the towering figure of a lonely man still walking among us and still speaking for peace, understanding and good will; still inspiring and leading us confidently ahead in a confused and turbulent period of history. Truly we may say such leaders as Abraham Lincoln never die.

As a southerner and a descendant of a Confederate soldier and as the present head of an institution which is a living memorial to Lincoln in the heart of the South, I can speak of the universality of the Great Emancipator. For more than 30 years I have lived in close association with the spirit of Lincoln, and intangibly but positively the lessons of his life have become a part of my inheritance as they have in the lives of many thousands of others who have found the opportunity for broader and richer living at Lincoln Memorial University.

Through such institutions at the one with which I am associated and through the innumerable Lincoln shrines as this which our Nation preserved, we can translate Lincoln's life and memory into the lives and consciousness of all our people. In that way, we can build a stronger, more dynamic America. If we can live thus, close to the great leaders of America and try to preserve the principles of freedom and democracy which they won for us at so great a sacrifice, our Nation cannot swing far from its orbit and all peoples everywhere can look upon America as a fixed and guiding star in the firmament of the world.

As we turn to a contemplation of the tragic event which occurred at this place 84 years ago, it is easy to recall the shadow of sorrow and distress which spread over our torn and bleeding country. Although we were then still divided and fighting among ourselves, the assassination of Lincoln ran through the North and South like a great blighting disaster. There was weeping and sorrow in millions of homes throughout the land, and even in the rebellious sections of the South there was something of the same feeling of horror.

I have had occasion in recent years to make a study of the place Lincoln holds in the South. We know that there were great segments of the southern region which were dominantly Union in sentiment and that even throughout the areas where there was the greatest suffering because of the war, extreme hatred of Lincoln did not exist except in isolated cases. During the war the southern leaders played up the horrors of the war and attributed to Lincoln, as the national leader, much of the suffering which came to the South. On the other hand, calm reflection on the part of all the southern people made them admit that Lincoln's policies could scarcely have done otherwise. When the news of his assassination swept throughout the South, any feeling of hatred which the southern people may have previously possessed gave way to distress and fear of the reprisals which might follow.

I have been interested in the general reaction of the southern press and leaders in the South immediately following the assassination. While ministers throughout the North were holding memorial services deploring the dastardly act of John Wilkes Booth and declaiming upon the greatness of Abraham Lincoln, similar services taking a different form were held in many churches throughout the South. I believe that the views of Dr. J. Lansing Burrows, pastor of the First Baptist Church, Richmond, Va., were somewhat typical of those held by leading ministers throughout the South. On Sunday, April 23, 1865, Dr. Burrows devoted his entire sermon to the assassination of Lincoln. Although he presented the usual viewpoint of the South toward the Civil War, he saw in Lincoln's assassination an omen of great evil. Said he, "If the deed was a calamity to the North, it was a more harmful calamity to the South. * * * We have even more reason to mourn over the murder than the people of the North. Its tendencies are to inflict a deeper injury upon us than even upon them." On the following Sunday, June 1, 1865, which had been appointed by President Johnson as a day of humiliation and mourning, Dr. Burrows observed the day in his pulpit quite appropriately, and had this to say: "We have no feelings but those of horror and indignation and grief in contemplating this deed of infamy. * * * Whatever may have been our views of the political doctrines and policy [Lincoln] represented, we have but one voice and one heart, of profound and abhorrent condemnation of the brutal criminality of those, whoever they may be, who are directly or remotely implicated in the atrocious deed. And this I am glad to know, for the honor of humanity and Christianity, is the universal voice of the people of this city and State."

I give you these quotations from Dr. Burrows because the examination of other sermons preached in southern pulpits indicates that he was reflecting the attitude of most of the southern people toward the tragic passing of the President.

Let me also give you the tribute of one northern soldier temporarily located in Knoxville, Tenn. This soldier, John S. McGraw, of the Indiana Volunteers, was in a Knoxville hospital on April 16, 1865, when the news of the assassination was received in that southern community. Knoxville was about evenly divided in sentiment during the war, but east Tennessee was predominantly Union in sentiment. Mr. McGraw, in writing to his wife, stated that the assassination had struck with dismay the people of this community. He said, "Everyone that I have seen looked downcast and sorrowful. I have never seen anything cause such a general gloom over the people as this. Everyone seems to be horror stricken at the perpetration of the deed and filled with the baneful spirit of revenge at the cowardly and dastardly act. Everyone seems to feel as our country has lost her best friend and greatest man, and I think myself that in the history of this country Abraham Lincoln will be ranked among the best and greatest. His death is a sad blow to our unhappy country at this time when everything is unsettled. My eyes have been filled with tears several times today as I sat in my room and heard the gun booming at regular intervals of half an hour through the day."

Typical also was the feeling in Louisville, Ky., another southern city where sentiment was divided. Memorial services were held at many places in the city. Prominent among those who took the leadership in these tributes to Lincoln was Joshua Fry Speed, Lincoln's most intimate friend. The entire Speed family had remained loyal during the war, but they were southern in background and sentiment. They represented the attitude of thousands of families throughout the South who loved their native land but deplored the circumstances which brought about war.

A few years ago I found in the archives of the courthouse in Knox County, Ky., near the Tennessee border, an account of a memorial service held in Barbourville, April 17, 1865, which reflected the great sorrow of the people in that section. In this isolated mountain community a single telegraph wire, used for military purposes, brought the news of the assassination of Lincoln. Court was in session on Monday morning. Hundreds of people from the surrounding communities had gathered for the trials which were in progress. Immediately upon the receipt of the news court was adjourned, and a court attendant went outside and announced to the assembled throng that a meeting in the courthouse would be immediately held for an important announcement to be made. The little county courthouse was packed and jammed with people. A young attorney, David H. Lytle, took the rostrum and made an address to the crowd which in the passing of years has proved to be prophetic in its summation of the life and character of Abraham Lincoln. Since it is not long, I would like to quote in full that brief address from a native Kentuckian who was a true patriot and lover of his country:

"Fellow citizens of Knox County, I appear before you this morning to make to you in a formal manner the awful announcement that the President of the United States has been assassinated, and that his lifeless remains now lie pale in death—not at the base of a statue but in the Capitol of a people determined to maintain their national life and the integrity of the Union—not muffled in a cloak, but wrapped in the flag of his country.

"Who could have thought that at a moment when a morning so bright had just dawned and the hopes of the patriot beat so high that a night of such melancholy gloom would overspread our national sky? Brutus showed his solicitude by stabbing his friend. Rebellion has showed its folly by shooting Abraham Lincoln, whose heart was throbbing with anxiety for the moment to arrive when he could safely astonish the world by his clemency, and guild the southern sky with an unfading bow of hope.

"Unfortunately the American people did not know the goodness of Abraham Lincoln before his election to the Presidency, and they have only learned it as it has beamed forth amidst the fiery ordeal through which he has been called to pass. If it had been known that he would make good the immortal declaration of the second father of his country, "The Union must and shall be preserved," and that he with glad heart, where he could safely do so [could] rejoice the family circle by returning the rebel son, causing the father and mother to exclaim, 'This, our son, was dead and is alive, was lost and is found,' and that he could conduct the American Nation from the bondage of civil war to the heights and overlook the promised land of peace and union, his pathway to Washington city would have been strewn with flowers instead of daggers, and the Nation would have been saved from this

calamity and disgrace, and your little city this day instead of being covered with the weeds of mourning and woe would have been lighted with the bonfires of rejoicing.

"But, fellow citizens, as he has conducted us through the Red Sea and has left us on the mount, we must give his successor a cheerful and hearty support, and he will conduct us safely to the promised land of union, liberty, and law."

We cannot say that this simple and eloquent tribute to Lincoln from the heart of the Kentucky hills was truly representative of the feeling in the entire South. That was most certainly not true. But I quote the humble Kentucky lawyer to show how Abraham Lincoln in four short years had become the idol of the common people in many southern sections who loved liberty and the Federal Union. These hill people in southeastern Kentucky had scarcely heard of Lincoln when he was nominated for the Presidency. That Lincoln was of their own kind, had come up the hard way, and spoke their language, was soon evident after he was installed as President. At first Lincoln was accepted by these Kentuckians because he was the titular head of the country they loved. But as the trying days of the war wore on, more and more Lincoln won the affection and finally the undying devotion of these hardy individualists of the southern hills. Now that his death had come in the very hour of triumph, they were shocked and horrified, and their sorrow was great indeed. Abraham Lincoln to them on this gray Monday morning after the tragedy, had become the martyred savior of their torn and troubled world.

Historians for nearly a century now have been writing about the Civil War and its blighting consequences upon our country. Long since have we had a full recapitulation of causes and effects of this tragic era of our national life. There is nothing more to be said, nothing more to be written in tribute to the brave men who gave their lives in a useless conflict. We have built our monuments to the heroic dead of our North and our South. We tell and retell their exploits, merging into one united whole the story of their struggle. Victor and vanquished alike take their place side by side in our universal tribute, and the tragedy of the sixties is now softened and sweetened by the mingled tears of united countrymen.

But as we come to this place where occurred the last act in that awful drama of the Civil War, we think of another phase of the tragedy which most people were slow to understand at the time. If the South could only have understood that Lincoln did not hate, did not desire war, did not wish to destroy the South's traditions and institutions, even the cursed institution of slavery, and that his sole desire was to preserve a strong union of free and independent States, the course of history would have been different. Indeed to me the great tragedy of the sixties was the failure of the South to accept Lincoln as their friend and their President.

Lincoln came to the Presidency virtually unknown in the South. He was accepted as the titular head of a party which the South believed was pledged to destroy it economically and politically. But Lincoln himself was not pledged to do that. He stood upon certain inflexible principles which could not be compromised, but none of those principles would have weakened the South in any particular. For Lincoln there could be no extension of slavery, there could be no withdrawal from the Union of States which had adopted as their charter of liberty, the Constitution of the United States. But beyond that, Lincoln was willing and anxious to work out the internal problems of the South within the framework of the Constitution.

It has often been stated that the South had no greater friend than Lincoln. The verdict of history now attests that. But passions, bitterness, and narrow sectionalism prevented that acceptance in those dark days. Lincoln was of the common people. His forebears had lived long enough in Virginia and Kentucky to gain the flavor of the South. He himself grew up in the atmosphere of freedom and independence which the frontier nurtured with lavish abundance. Combine that southern heritage of Lincoln with the stalwart ruggedness of the western frontier and you have the leader who came into power at a time of supreme crisis. Wise, tolerant, understanding, sympathetic with all groups, and intensely devoted to the ideals of the founding fathers, he represented all sections of the country with objective consideration of what was good for the whole.

Perhaps it was inevitable that this comparatively unknown national leader could not turn back the forces which for generations had been rising toward the irrepressible conflict. Perhaps in our national life some fundamental issues had to be settled in war, rather than by peaceful methods. If only the South could have taken Lincoln as their leader, rather than rejecting his earnest efforts to appease and compromise on the basis of his convictions which history has proved to be right and just, we could have avoided the awful holocaust which set our Nation back for half a century.

But there is no need to speculate upon this eventuality. It is rather for our people to turn from what might have been to what was and is, and to take from the story of our glorious Nation the lessons we need to make a part of our life and philosophy. We need no longer think of any of our national leaders as sectional or partisan. They belong to all our people, and their lives and contributions make up the magnificent record of our Nation.

All of us have our own particular heroes. We love our country in proportion to our respect and veneration for the men and women who built our Nation. I suppose that is a natural, human attribute. We read our history, we thrill over the exploits of our heroes, and we come to love and respect our country's institutions and privileges because of the labor and sacrifices of those who have gone before.

For me, a southerner, there are many national heroes whom I cherish. Strangely, perhaps, I have upon the walls of my study, side by side, the pictures of Abraham Lincoln and Robert E. Lee. To my friends in the North that may be hard to explain. But it is easy for me to reconcile that apparent incongruity.

My regard for Robert E. Lee is not because he was a vanquished leader of a lost cause who should have led his armies to victory. It is rather that he was a great patriot who possessed noble attributes of character and greatness. No one can read the story of his life without drawing from it an abiding inspiration. No one can deny that he was activated by unselfish patriotic motives when he faced the supreme decision which turned the course of his life. We may regret his decision, but we cannot say we would have done otherwise had we been in his place.

My acceptance of Abraham Lincoln came later in life. Admiration of southern personalities and traditions did not prevent me from turning to the study of Lincoln with genuine enthusiasm. It was Sandburg's Prairie Years which brought to me the revelation of Lincoln's expanding greatness. In the last two decades, Lincoln has become a growing, living personality whose life and ideals I would cherish as a guide and inspiration for all peoples of all the world. Charles Evans Hughes once said that a course in the study of Abraham Lincoln should be given in every college in America, that no young man or young woman could make the study of Lincoln a part of his heritage without being a better American. If what Hughes said is true, surely the many millions who revere the memory of Lincoln are better citizens.

So today, at this shrine, we come together as representatives of all sections, all groups, and all classes, that we may more sensibly feel the immortal spirit of Abraham Lincoln. He speaks to us in his deathless messages of hope, peace, and understanding. He lives for us in indestructible glory. He challenges us in this era of world stress and ideological conflicts. Upon his ideals and principles we have built a strong Nation of a free and democratic people, and we can be stronger still if we do not depart from the sure course which he charted in the long ago.

Out of Tune

EXTENSION OF REMARKS
OF

HON. EARL T. WAGNER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 26, 1949

Mr. WAGNER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial:

OUT OF TUNE

As a singer, Paul Robeson, Negro baritone, is more than good and never—they say—gets off the key. Which can scarcely be said for his speech this week before the Communist-inspired "World Peace Congress" in Paris. His people, he declared, would not fight for America but would "fight for friendship with Russia, the Eastern democracies and a free China."

Naturally, Cincinnati Negroes challenge Robeson's right to speak for them and others of their race in this country. To their statements we add a word: The so-called Eastern democracies, notably Russia itself, are all slave states. There are 35 Negro colleges in America sustained by their own people and by private benevolence. There are no such colleges for any race—white, yellow or black—in Russia. Our Negro population of 14,000,000 has 70,000 of its sons and daughters in college, not nearly enough, and yet greater in proportion than in Russia's 194,000,000. The daily wages of Negro war workers in the Wright plant at Lockland were more than the weekly wages of Russians.

The American Negro, Dr. Ralph Bunche, as UN mediator in Palestine, was associated with Count Folke Bernadotte of the Swedish royal house, succeeded him when Bernadotte was assassinated, and himself wrought peace between Jew and Arab. No such honor was ever paid by Russia to a member of any of its racial minorities, and what Russian of any race has made a comparable achievement?

Wealth? "We are determined," says Robeson, "to share this wealth," built, he continued, by the labor of Negroes and immigrants. Well, all of us would like a little more, and Communists, of course, would like to "seize it" from somebody else. However, one statistic is in point. So far as the possession of automobiles is a measure of individual well-being, and it may be as good a yardstick as any other, these are the facts: The 14,000,000 American Negroes own more automobiles than the 194,000,000 Russians, plus all the Negroes in Africa living under European control.

Meanwhile, as counterpoint to Singer Robeson's Paris dithyrambs, the annual campaign in this country, to raise $1,400,000, to meet the needs of 31 Negro colleges associated in the United Negro college fund, proceeds apace. Although he had other thoughts, our guess is that Robeson has helped it.

Successes and Failures

EXTENSION OF REMARKS
OF
HON. GEORGE G. SADOWSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 26, 1949

Mr. SADOWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following article by Walter Lippmann that appeared recently in the Detroit Free Press:

SUCCESSES AND FAILURES

(By Walter Lippmann)

WASHINGTON.—Mr. Acheson, as he takes stock and looks ahead to what is coming, might well feel, it seems to me, like a trustee who finds that the main investments are showing a nice profit but that there are a lot of sick cats and dogs in the portfolio.

He can have every reason to be confident that the great decision to redress the balance of power is successful: That a shooting war brought on by outright military aggression has been made impossible, by the measures which began with the dispatch of the fleet to the Mediterranean, were reinforced by American rearmament, and are now culminating in the Atlantic Pact.

He can feel no less confident that the funds invested in European recovery are achieving their main purpose: That Great Britain and France are recovering and will, therefore, be able to play their necessary part in the poltical and economic reconstruction of the Western World.

But when Mr. Acheson turns from these large and promising achievements, and looks at Germany, Japan, China, Greece, Iran and Korea, the picture is not so pretty.

All the public-relations officers and all the visitors, who have had the VIP treatment, are unable to cover the fact that in these places things have gone or are going badly. They are the headaches of United States foreign policy.

Looking at the successes of our foreign policy, which are very great, and then at the failures, which are unpleasant and dangerous and costly but not fatal, can we not say that the difference between them is just about what we might have expected?

POOR IMPERIALISTS

This country is a great power separated from Europe and Asia by the oceans, and never until the past few years involved closely and directly in the affairs of Europe and Asia.

When we participate, remembering the distance and aware of our unfamiliarity with the complex details—when we approach the old world as guarantors against aggression, as sponsors of recovery and reconstruction—we do well.

We are doing what we are able to do, what we know how to do, what geography and history and a true estimate of our interests, fit and permit us to do.

We are true to the distinctively American relationship to the Old World. We are in character. And though our power and our responsibilities are greater than they have ever been, they are a development, and not a break with, the American tradition.

But when we go into Germany, Japan, Greece and set out to govern, to administer, to play politics, we are in a realm which is alien to our experience, to our habits and our ideals, and to our instincts.

We have tried to persuade ourselves that we can rule over alien peoples, and that we can reform them and educate them, and make them over in the image of ourselves. But we do not really believe it, or honestly think that we or anyone else can do it.

For we are not an imperial people who feel it their mission to rule over other peoples, and when we have to act as if we were, we make a hash of it—thank heaven.

AN UNAPPETIZING JOB

Even the ablest and the best men among us could almost certainly not succeed. But the ablest and best will not stay in Germany and Japan and Korea and Greece.

A few of them have tried it. They go with high purposes, they stay for a while, and then come home and take a long hot bath, feeling that if that sort of thing has to be done, they do not want to do it.

So there are left to do these jobs the soldiers who are ordered out there, and civilians who could never dream of having comparable power, responsibility, or privileges at home.

Need we, then, be astounded when gradually the truth seeps out, as at last it is beginning to, that we have not created a new democratic Germany and Japan in which the people love us, admire us, and wish to imitate us?

As the truth becomes more generally known, is recognized, and is not obscured by propaganda, the relations of this country to the Old World will improve.

For then we shall be able to distinguish the enduring policy of participation in the maintenance of peace and in the reconstruction and development of the earth—from the passing entanglements of military government, intervention, and of a bastard imperialism.

Illinois Is Proud of Her Senators

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 26, 1949

Mr. PRICE. Mr. Speaker, a few weeks ago it was my privilege to place in the RECORD an editorial from the Alton (Ill.) Evening Telegraph praising the fine record of Illinois' senior Senator, the Honorable SCOTT W. LUCAS.

Today I have the added pleasure of calling to the attention of the House membership through an editorial which I will insert in the RECORD the already amazing record made by Illinois' junior Senator, the Honorable PAUL DOUGLAS.

Illinois is justly proud of her two United States Senators.

Under leave to do so, I include herewith an editorial from the East St. Louis (Ill.) Journal, of Friday, April 22, 1949, commenting on the record of Senator PAUL DOUGLAS. It follows:

EXPERIENCED FRESHMAN SENATOR

All within the space of a week:

Thomas Stokes, Pulitzer prize-winning Washington correspondent, wrote in the New York World-Telegram of the excellent reception accorded Senator PAUL DOUGLAS, of Illinois, when he addressed the Senate on the subject of civil rights.

Washington Columnist Jay Franklin reported the stir created by Senator PAUL DOUGLAS, of Illinois, and Senator ELBERT THOMAS, of Utah, when they suggested that all members of the United Nations be invited to join the Atlantic alliance.

The Associated Press distributed a Washington dispatch recounting how Senator PAUL DOUGLAS made effective use of charts, photographs, statistics and cold logic in a plea for a Federal long-range housing bill.

Thus the junior Senator from Illinois attracted attention with his knowledge of, and interest in civil rights, housing, and foreign affairs. PAUL DOUGLAS is the junior Senator from Illinois, but in the Senate he is a freshman who registered in January—a first semester freshman.

Ordinary new members of the Senate are content to watch and listen for a while before joining in debate. Their elders account that proper, respectful behavior for a newcomer.

Senator PAUL DOUGLAS is a newcomer to the Senate but he has been interested in, and familiar with public affairs for a quarter century. As a college professor, as a member of the Chicago city council, and as a lecturer and political candidate, he kept himself informed and spoke his mind. He has come to the Senate admirably equipped for public service. There is no occasion for him to mark time when his talents are needed.

Spiritual Vitality of the Irish

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 26, 1949

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following address which I delivered as guest speaker at the annual commemorative services for the martyrs of the 1916 Easter week massacre in Ireland at the Clan-Na-Gael of Greater Boston, Banquet Hall, New England Mutual Building, Boston, Mass., on Easter Sunday night, April 17, 1949:

Mr. President, Mr. Toastmaster, our reverend guest, Bishop Wright, members of the Clan-Na-Gael, and to all whose hearts beat in sympathy with the passionate yearning for independence under God, which is the mark of Irishmen everywhere, we meet on a night which crowns that great Christian festival of Easter. It is by no small coincidence that the Irish are, at the same time, a deeply religious people, and a proud, individualistic people. Famed for his humor, his generosity, and the openness of his heart, the Irishman understands that he cannot help his fellow man if he himself is in chains. Where others of lesser faith surrender to despair and despotism he fights on. In this, there is a lesson for men and women all over the world whose present plight seems to offer no hope of liberation.

Let them look to the Irish, who are human beings like themselves, and who for hundreds of years suffered from oppression without yielding their sovereign rights as men.

The clay gods of the Kremlin must be puzzled as they look at this small country which confounds all their formulas for subjecting people to slavery. This small country where, for every brutality of the oppressor, the will to overthrow tyranny grew stronger. Here was the heart of family life and family virtues which material power could not destroy. The Irish reared their children with spiritual strength and sent them forth to all corners of the globe, and wherever they landed you found them in the forefront of

those who work and sacrifice and win in freedom's name.

The Communists believe that the life of any individual is determined by heredity and environment exclusively. In return for back-breaking work, they give a minimum of food, shelter, clothing, and strictly supervised recreation. Under them, a man lives and dies in absolute service to the self-appointed gods of the state without a mind, a spirit, a conscience of his own. He becomes a mechanical thing without free will, and without that opportunity for inner development that leads to an awareness of divinity and of the happiness he can earn in the eternal kingdom of God when he has completed life's journey.

To the Communist, worship of the state, for the brief span of any life, is the only meaning of existence.

And they dare to call this paradise!

If any evidence were required to prove the genius of the Irishman, it is here in his singular determination to have nothing to do with such nonsense.

For he has the gift of imagination, and that extra perception that reveals to him a wealth of human and spiritual values in the unfolding experience that we call life.

He believes in the fellowship of progress, working and growing side by side with other men, but he is first to fight against slavery in any form.

His is the social justice of Christianity, warmed by faith and hope and charity, leading to the true development of a human family beholden only to the fatherhood of God.

It was this abiding belief in the dignity of the individual, nourished by the teachings of the Son of God that has sustained the race in its long and succeeding efforts to attain freedom.

This is the mark of its spiritual courage, which we revere and in which we rejoice.

In times of great stress, men and women of exceptional character are developed. These few and their sacrifices become symbols of the vast but unexpressed yearnings of the many. Deep within the heart of the average man are goals which he longs for but can never realize. This has been the experience of Irishmen as individuals for centuries. Their minds were tortured by the unhappy lot of their homeland. Although they sent money and gifts to their relatives in the old country, neither were satisfied with this holding operation. The Irishman is a man and not a machine. In keeping with his God-given dignity he needs freedom as much as he needs food and clothing and shelter. He must exist, in order that he may live, but the latter is always the earthly goal toward which he strives.

From the lips of our forefathers we have heard the story, passed on from generation to generation, of the famines which ravaged the land. Those were hard and bitter times, and it is not easy to forget the oppressors who were responsible for the sufferings inflicted upon the people.

For years on end they endured the ache of hunger, and many were the young who died in their infancy. In spite of this ordeal, the race survived, sending its youth to other lands where they thrived on the opportunities which were granted to them and of which they made the most.

Those who remained in Ireland to face a dreary and hopeless future did not give up the fight. Famished and poverty-stricken as they were, they did not bend the knee to the alien conqueror and his unremitting oppression.

The finest testimonial to the undying spiritual vitality of the Irish people is that, through this long agony, they never surrendered their claims for freedom. And what was the unifying faith which sustained them? Constant devotion to the teachings of Christ, as brought to them by Patrick their patron saint; this was the flame of truth which lighted the way through the darkness and which all the material power in the world could not extinguish.

There were many times when you and I felt so helpless about the situation. There was little that we could do to rid Ireland of the chains which enslaved her. Perhaps it was we who needed encouragement. It was not enough to mourn for Ireland. Positive action was necessary to show to England and the world that the initiative for freedom had not lessened in its ardor and in its capacity for sacrifice.

As an outlet for our frustration and as an inspiring example of the indomitable human spirit, it was necessary for some men to stand forth and do the things we wanted done but could not do ourselves. We vaguely recalled other instances in history. There was the small band of ancient Greeks at Thermopylae. And the beleaguered Texans at the Alamo. And many others where the few did count the cost but resisted to the end, and in so doing won a moral victory which gave heart to all freemen. Although the few, against great odds, are defeated, their faith and their courage sets in motion a rallying tide of effort in emulation of their sublime example. We are stirred from our complacency. We wish to measure up, as fellow human beings, to the high resolve they have demonstrated with their lives.

And so it was in that memorable Easter week of 1916 in Ireland. Shortly after noon on Easter Monday, the Irish Republic was proclaimed at the base of Nelson's Pillar in Dublin. It began with these words:

"Irishmen and Irishwomen: In the name of God and of the dead generations from which she receives her old tradition of nationhood, Ireland, through us, summons her children to her flag and strikes for her freedom."

The proclamation asserts the inalienable right of the Irish to nationhood and details the fact that in every generation her sons and daughters have given voice to that right. Six times within the 300 years preceding they had fought and bled for their freedom only to be crushed by overwhelming power. It concludes with these ringing words: "We place the cause of the Irish Republic under the protection of the Most High God, whose blessing we invoke upon our arms, and we pray that no one who serves that cause will dishonor it by cowardice, inhumanity, or rapine. In this supreme hour the Irish nation must, by its valor and discipline and by the readiness of its children to sacrifice themselves for the common good, prove itself worthy of the august destiny to which it is called."

This was signed by such men as Clarke, McDermott, McDonagh, Pearse, Kent, Connolly, and Plunkett, who but a short time later were to become martyrs to the Irish cause and whose names would become enshrined forever in Irish hearts.

The revolt was foredoomed to failure partly because the British intercepted a vessel bringing 20,000 rifles, together with a million rounds of ammunition, and partly because some objected to a revolution at the time, faced as it was with inevitable defeat.

Perhaps these few hundred men and women thought that their gallant sacrifice would stir the imagination of the world, which it did, and enlist such public sympathy for their cause that British policy in the end would capitulate to the moral fervor which outlasts the physical defeats of the moment.

They did not turn back.

Although their bodies might forfeit the precious gift of life, their spirits would endure and would someday be vindicated by a free and united Ireland.

One thousand men in Dublin against 20,000 British supported by artillery, with British reinforcements moving up steadily. This was the picture after the insurgents seized the post office and other strategic points by surprise.

The center of the city was raked by artillery and machine-gun fire while noncombatants huddled in tenements or offices, pinned down by the fierce street fighting. Fires broke out and many were the victims of flames as well as bullets.

Finally, the surrounded insurgents ran out of ammunition. On Saturday, the week-old rebellion came to an end with an order to surrender signed by Padraic Pearse reading and I quote: "In order to prevent further slaughter of unarmed people and in the hope of saving the lives of our followers, now surrounded and hopelessly outnumbered, members of the Provisional Government at present at headquarters have agreed to unconditional surrender, and the commanders of all units of the Republican forces will order their followers to lay down their arms."

The battle of Dublin was over, but in many ways, this only marked the beginning of the tragedy. For the Government, heedless of the best opinion in England, inaugurated a program of ruthless reprisals. Field general courts martial were set up. They were brief, rarely lasting over a quarter of an hour. Sixteen leaders were summarily executed, one of whom, James Connelly, wounded in the fighting, was propped in a chair and shot. Three months later, Sir Roger Casement was hanged in London.

Although there were many in Ireland who disapproved of the rebellion, the events which followed, changed their minds. Houses were wrecked without warrant, men and women were shot down in cold blood by nervous English soldiers, and hundreds were thrown into jail who had never participated in the uprising.

This terrorism stirred up righteous resentment among all the people, uniting them in their determination to throw off this alien yoke once and for all.

The Easter martyrs had not died in vain. "Never slacken," became the watchword.

Employing every stratagem of resistance, the Irish balked the occupation government at every turn. After World War I was over, they tackled the job in earnest. This time, having learned from bitter experience, they organized. Underground activities became professional in scope and effectiveness. In time they made conditions so expensive and uncomfortable for the British, aided in no small measure by the mounting pressure of world opinion, that Britain compromised. Eire came into being with self-government, but still tied to the British by tenuous strings which the Irish will break forever within a few short hours.

The six northern counties of Ulster remain unnaturally separated from the heartland. I maintain that this is a fictitious situation supported by those who wish to keep Ireland divided. But they shall not prevail. All the world knows that Ireland truly means the whole island and not any subdivision thereof. As long as Ulster remains apart, the sovereignty of the Emerald Isle stands unredeemed.

I am proud to be a member of that group in the Congress of the United States whose ancestors came from Ireland. We have not forgotten our splendid heritage, nor the sense of fair play which animates all Americans.

I have introduced a resolution calling upon Congress to establish a committee which will work with Britain to correct this age-old infringement on Ireland's sovereignty and return that, which by unassailable right, belongs to her.

We look forward to that day in the near future when the old country, whole and com-

plete, will take her honored place as a member of the family of nations.

The Clan-Na-Gael of Greater Boston, one of the most loyal and vigorous of those groups who have contributed so much to the cause of Irish freedom, meets tonight on a most significant occasion.

We honor the martyrs of Easter Week, secure in the knowledge that one-half of the goal for which they sacrificed, will be reached on tomorrow.

How fitting it is that the proclamation announcing the establishment of the Irish Republic will be issued on the anniversary of the 1916 rebellion. What vindication for the heroes of Easter Week.

Drawing strength from their example, we shall proceed with redoubled strength to work toward that other goal, which will mark the end of partition.

On this joyous evening we celebrate the birth of a free Ireland, and pledge our help to the cause of a united Ireland.

That it will come is as certain as the faith and the courage to be found in Irishmen everywhere.

Newton County Triple-A Report

EXTENSION OF REMARKS
OF

HON. JAMES W. TRIMBLE

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 26, 1949

Mr. TRIMBLE. Mr. Speaker, a few days ago I received the report of the Newton County, Ark., triple-A program for 1948 from Mr. William J. Nanney. I think this is one of the outstanding reports of our section, and I insert it in the RECORD as part of my remarks:

NINETEEN FORTY-EIGHT ANNUAL REPORT OF THE NEWTON COUNTY AAA FARM PROGRAM

INTRODUCTION

This report, on the accomplishments of the Newton County Production and Marketing Administration (better known as the AAA program) for 1948, has been prepared to give the nonfarm group and the farmer himself a better understanding of the aims and accomplishments of the triple-A program.

Since all of our people's health, strength, and prosperity comes from the soil, it is the feeling of this committee that the public's responsibility in conserving our soil is just as great or even greater than their responsibility for building and maintaining our roads and schools. Still we have some who feel that the farmer should bear all the cost in conserving the soil upon which we all depend for our health and prosperity.

In Newton County last year there were 714 farms with a total of 29,962 acres of cropland that reported one or more conservation practices for assistance through the AAA program.

In carrying out these various conservation practices the farmers invested in the neighborhood of $37,500 or about two-thirds of the total cost. The other one-third was contributed by the public in the form of conservation materials or services and payments.

ALBERT H. RANEY, *Chairman.*
OSCAR VILLINES, *Vice Chairman.*
J. T. SEXTON, *Member.*

THE AGRICULTURE CONSERVATION PROGRAM

The agricultural conservation (triple-A) program has been established by Congress to assist the farmers in the tremendous job of conserving our Nation's soil.

The triple-A program is open to every farmer in the country, regardless of the size or location of his farm. Congress appropriates money each year to be paid out to farmers for conservation practices in the form of conservation materials or services and payments. The money allocated to Newton County in 1948 was prorated to each farm on the bases of 25 cents per acre for cropland, 4 cents per acre for fenced noncrop open pasture, and 25 cents per acre for commercial orchards.

This program is under the direct supervision of a county committee which consists of 3 members. The county committee is assisted in its duties by 30 community committeemen. Then committeemen are elected each year during the month of November and December and any farmer participating in the program is eligible to vote in the election of community committeemen and delegates to the convention. Before a committeeman is eligible to serve, he must have reported one or more conservation practices during the year in which he was elected and derives a substantial part of his income directly from the farm. Any person holding a major office filled by an election held pursuant to law, or any person that has been a candidate during the current year or becomes a candidate for such office is not eligible to serve as committeeman.

Minerals

One of our leading practices in the county is the restoration of minerals in our soils. In applying such minerals to our farm land as superphosphate, potash, and limestone we not only conserve our soil and water resources, but at the same time we improve our national health standard by adding to the plant growth the necessary minerals that are so important to the health of our people.

In 1948 farmers in Newton County applied 774,364 pounds of superphosphate to an estimated 3,871 acres of eligible crops. The supply of potash and limestone available for farmers in this county in 1948 was very small and only 2,671 pounds of potash and 584 tons of limestone were used as conservation materials.

Engineering

Last year there were 33 ponds constructed and five springs developed in Newton County to provide a more plentiful supply of livestock water.

These are two of the outstanding practices in the county. Since stock ponds have been constructed in Newton County through AAA assistance, a great number of our farmers have developed permanent pasture on land that had been of little or no benefit to them before the ponds were constructed.

Pasture development

In Newton County last year farmers improved or established permanent pasture by seeding 57,875 pounds of pasture grass or legume seed. The seed used in improving or establishing the above-mentioned pasture were those grasses and legumes the county committee and representatives from the other agricultural agencies believed to be best adapted to this county.

In 1948 farmers established 214 acres of permanent pasture by sodding Bermuda grass and controlled noxious weeds on 2,689 acres by mowing.

GREEN MANURE AND COVER CROPS

In Newton County last year farmers seeded 72,573 pounds of legume seed on an estimated 3,936 acres to be used as a protective cover. Annual lespedeza, cowpeas, and soybeans were the seeds used most as a cover summer legume while hairy vetch was the leading winter legume used.

Price supports

The price-support program has been established to give the farmer a fair price for commodities he has to sell in relation to the things he buys. The following commodities produced in Newton County are protected by price support: Cotton, corn, wheat, chickens, eggs, milk, butterfat, potatoes (Irish), wool, and others.

Marketing quotas

Cotton and wheat are the only commodities produced in Newton County affected. Allotments are worked out on the basis of cropland and past history of the crop on the farm. The program is administered through the county AAA office.

Financial report

In 1948 Newton County was allocated $13,628 to help the farmer with the cost in their efforts to conserve the soil. The farmers actually earned $18,842.58. With the farmers paying two-thirds of the cost of the conservation, there was an estimated total of $57,000 spent on soil conservation practices in Newton County last year. The total administrative expense for the program in 1948 was $6,191.12.

County committee: Albert H. Raney, chairman; Oscar Villines, vice chairman; Garland Smith member; J. T. Sexton, first alternate; Troy Fowler, second alternate; C. D. Lentz, ex officio member.

Duties of the county committee

The county committee is responsible for the carrying out of the purposes of the program in the county. In so doing the committee shall:

(A) Determine farm acreage allotments, goals, normal yields and other agricultural facts required under the program.

(B) Select the secretary and the treasurer of the county committee, provide for the employment of necessary personnel in the county office and fix the rate of pay for such personnel.

(C) Supervise and direct the activities of the community committees established in the county.

(C) Recommend to the State committee needed changes in boundaries of communities and perform such duties as shall be assigned to them by the State committee or Secretary of Agriculture.

Community committeemen

The following community committeemen were elected in the fall of 1947 by farmer neighbors to serve during the 1948 program year:

"A" Lurton: Andrew Smith, Andrew Freeman, Lurton, Ark.

"B" Bass: Verble Manns, Cave Creek, Ark.; Ira Dodson, Bass, Ark.

"C" Mount Judea: J. T. Sexton, Frank Cheatham, Mount Judea, Ark.

"D" Vendor: W. H. Flood, Claude Smith, Vendor.

"E" Hasty: Bryan Gibson, Will Gregory, Hasty, Ark.

"F" Yardelle: J. Veatle Waters, Haskell Jones, Yardelle, Ark.

"G" Marble Falls: Mirl Neighbors, Marble Falls, Ark.; Doyle Harp, Erbie, Ark.

"H" Limestone: J. Alfred Curtis, O. M. Ogden, Limestone, Ark.

"I" Deer: Joe Wylie, H. R. Heydenrich, Deer, Ark.

"J" Parthenon: W. J. Brasel, Lawrence Vaughn, Parthenon, Ark.

"K": J. A. Harrison, Chester Carter, Jasper, Ark.

"L": J. H. McFerrin, G. D. Stamps, Compton, Ark.

"M": Arthur Sutherlan, Joe Cowan, Fallsville, Ark.

"N": Troy Fowler, George Petree, Boxley, Ark.

"O" Swain: Lon Lee, Cecil Ramsey, Swain, Ark.

Duties of the community committees

(A) Assist the county committee in determining acreage allotments, goals, normal yields, and other agricultural facts under the program.

(B) Inform farmers concerning the purposes and provisions of programs being ad-

ministered in the county through the association.

(C) Assist in arranging for and conducting the necessary community meeting of the association; and

(D) Perform such other duties as shall be assigned to them by the State or county committees.

County office personnel

William J. Nanney, county administrative officer; Mary Jo Spencer, principal clark.

Theral D. Gattis was county administrative officer and Waldo E. Fowler was employed as veteran field officer trainee until the middle of May in 1948. Mr. Gattis was trainsferred to Franklin County and is now county administrative officer of that county, with headquarters in Ozark. Mr. Fowler is now employed as county administrative officer of Searcy County, with headquarters in Marshall.

United States Faces Curbs on New Ideas

EXTENSION OF REMARKS
OF
HON. GEORGE G. SADOWSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 26, 1949

Mr. SADOWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following article by Edwin A. Lahey that appeared in Detroit Free Press of Friday, April 22, 1949:

UNITED STATES FACES CURBS ON NEW IDEAS

(By Edwin A. Lahey)

WASHINGTON.—The national atmosphere in which the Taft-Hartley law was passed in 1947 was mainly influenced by the reconversion strikes and the aimlessness of the Truman administration.

But it had been built up carefully for 2 years out in the State legislatures, where lobbying groups with the naked intention of destroying unions pushed through restrictive labor laws in one State after another.

New ripples of State legislation are beginning to appear, this time aimed at subversion. Maybe some of the organizations promoting this legislation are motivated only by patriotism.

And maybe some people's idea of patriotism in these times of international tension is the punitive suppression of every unorthodox political thought, whether expressed in a pulpit, in a classroom, or in a throw-away pamphlet.

One thing seems clear. The clouds now forming in many State capitals will sooner or later gather into a storm that will leave us with the rawest form of thought police, unless citizens and legislators at the local level stop long enough for a look at our history.

That look would show how shabby our periods of repression now appear, from the Alien and Sedition law period of the late 1790's right down to Commissioner Harry Toy's ukase that reporters should sign loyalty affidavits to qualify for the privilege of talking to a desk sergeant in Detroit.

My own State of Illinois, which has produced some great civil libertarians, like John Peter Altgeld, and also some high-class burglars, who shall be nameless, is the latest to be caught in the witch-hunt hysteria.

A senate commission headed by Senator Paul Broyles is investigating subversive activities at Roosevelt College and the University of Chicago.

Unless Broyles and his investigators are an awful pack of slobs, they will find sensational material which will then be offered in the legislature as evidence for the need of a flock of proposed antisubversive bills.

The gimmick in these political investigations of subversive activities in college is that there is no college or seminary worthy of the name where a politician cannot find the type of exploratory thinking and discussion that answers his definition of subversive.

The real mischief will come when this college classroom and campus subversion is used to frighten the Illinois Legislature into the acceptance of a group of bills.

These, in the name of protecting the foundations of government, would turn the process of education into a farce that would drive any self-respecting teacher out of his profession, into a nice clean, cool ditch, with a pick and shovel.

Under the terms of one of the "patriotic" measures proposed by the Broyles commission in Illinois, they could throw a lecturer into the pokey for advocating the unicameral legislature, or for proposing that members of the State assembly meet certain I. Q. tests.

This would be an attempt to undermine the form of government in Illinois.

Illinois GOP Bought Favor of Newspapers With Public Funds

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 26, 1949

Mr. PRICE. Mr. Speaker, I have always held in high esteem the majority of the members of the Fourth Estate in America. It was, therefore, a very shocking thing to me when I read the disclosures in the St. Louis Post-Dispatch of how far the Republican administration in the State of Illinois went in purchasing favors from the publishers and editors of at least 32 newspapers.

These publishers and editors collected more than $300,000 from the State treasury.

Is it any wonder that the GOP received such a favorable press in last November's election? Is it any wonder that readers of newspapers saw so many editorials praising the Illinois Republican administration and booming the head of that since repudiated regime, Dwight H. Green, for the Republican nomination for President?

The canned editorials and news stories colored to praise Governor Green's corrupt administration cost Illinois taxpayers a pretty penny, but they failed in their objective to reelect the Republican treasury raiders.

For the information of the members of the House, under leave to do so, I include with my remarks the disclosures made by the Post-Dispatch as reprinted in the Washington Post yesterday, Monday, April 25, 1949.

PRESS "GRAVY TRAIN" JOLTS ILLINOIS

SPRINGFIELD, ILL., April 24.—Political Illinois still seethed today with the revelation that editors and publishers of at least 32 newspapers had been on the State pay roll.

The story, uncovered April 14 by Roy J. Harris, of the St. Louis Post-Dispatch and George Thiem, of the Chicago Daily News, revealed that the editors and publishers had collected more than $300,000 from the State between January 1943 and November 1948. In some cases it was shown that the editors actually did more or less work at the statehouse. But, wrote Harris:

"Chief function of many of the others was to print canned editorials and news stories lauding the Republican State administration.

"GRAVY TRAIN" JOBS

Most of the editors, Green reported, held "gravy train" jobs such as field investigators and messenger clerks. Since the defeat of Republican Gov. Dwight H. Green by Adlai E. Stephenson last November, the majority have been eliminated from the State pay roll, Harris wrote. He added that those still there were presumably being weeded out.

In addition, Harris reported, 10 relatives of Illinois editors and publishers drew $100,000 in pay from State jobs. He said most of these apparently worked for their pay.

The revelations followed 2 weeks of diligent checking by Harris and Thiem over State pay rolls and comparing what they found with lists of Illinois editors and publishers. They found 33 names connected with 32 newspapers, chiefly down-State weeklies and small-town dailies.

ALSO GOT EXPENSE ACCOUNT

Harris wrote that the largest collector in the investigator-messenger-clerk class was William R. McCauley, copublisher of the Olney Daily Mail, who got $41,281 between 1941 and 1949. As an investigator for the State auditor he also had use of a State-owned automobile and a generous expense account.

The St. Louis reporter quoted McCauley as explaining that he made frequent trips as part of his assignment in connection with school funds and real-estate matters.

In one case, Harris wrote, both the editor and publisher of a newspaper held investigator jobs. He named these as Paul W. Gibson, editor, and Charles H. Clifton, publisher of the Clay County Republican, who received totals of $11,567 and $3,660, respectively.

OTHERS NAMED

Other editors and publishers named by Harris, with the jobs they held and amounts they received were:

George B. Shaw, editor of the Dixon Evening Telegraph; assistant commerce commissioner, $21,399.

Walter E. Smith, publisher of the weekly Freeburg Tribune; agriculture department investigator, $1,628.

Harold J. Cruger, publisher of the Elmhurst Leader and Press; former State printing superintendent, at about $5,500 a year.

Herschel J. Blazer, editor of the Aledo Times-Record; former superintendnt of multigraphing in the printing division, at about $5,000 a year.

Victor L. Smith, editor, Robinson Argus; revenue department investigator, $17,539.

Frederick E. Mueller, publisher, Port Byron Globe; revenue investigator, $14,552.

J. Norris Vallow, publisher, Kinmundy Express; revenue oil inspector, $14,378.

H. K. Pike, publisher, Patoka Register; chief clerk at Vandalia State Farm, $11,211.

H. B. Smith, editor, Newman Independent; highway division investigator, $12,372.

PUBLISHER GOT $10,833

Verle V. Kramer, publisher, Warsaw Bulletin; commerce commission investigator, $10,833.

Sam Little, publisher, Hillsboro Journal; highway division investigator, $10,747.

Charles E. Feirich, publisher, Metropolis News; education department investigator, $9,225.

Richard M. Feingeld, publisher, Henry News-Republic; highway investigator, $8,976.

George W. Miller, editor, Columbia Star; clerk in auditor's office, $6,300.

MESSENGER-CLERK

Lewis A. Randolph, editor, Macomb Journal; highway messenger-clerk, $5,500.

Orville Ryan, publisher, Ashkum Journal; field representative, public instruction, $5,025.

M. A. Curley, publisher, Zeigler News; highway messenger-clerk, $4,950.

Aaron E. Vandever, editor, Nokomis Free Press; highway messenger-clerk, no total shown.

John O. Denson, publisher, Minonk News-Dispatch, veterans' commission messenger-clerk, no total shown.

Bernard L. White, editor, Watseka Republican; auditor's clerk, $3,850.

LABOR INVESTIGATOR

William D. Magill, publisher, Dewitt County Observer; labor department investigator, $3,760.

Steve Choisser, editor, Benton Evening News; highway messenger-clerk, $2,800.

William E. Beck, Jr., publisher, Whiteside Sentinel; auditor's clerk, $2,250.

Lyman E. Smith, publisher, New Berlin Bee and Pleasant Plains Press; treasurer's investigator, $975.

PUBLIC WORKS LABORER

Werner F. Hamilton, publisher, McLeansboro March of Progress, public works laborer, $850.

In a few cases, Harris reported, State payments constituted only pin money.

In 1947, Harris said, Arthur R. Lorch, editor of the Ogle County Reporter, got $50 as a treasurer's investigator; Harry J. Wible, publisher of the Mount Pulaski Times-News was paid $100 by the treasurer, and W. H. Thomas, of the Mount Morris Index, collected $150 from the same office.

Two other newspapermen, Harris wrote, had previously been disclosed as having drawn State pay. He said they were Robert L. Stubbs, managing editor of the Illinois State Register of Springfield, who received $5,620 as a highway messenger-clerk, and Gomer Bath, Peoria Star columnist, who collected $5,800 as a labor department investigator.

Israel and the Americans of Jewish Extraction

EXTENSION OF REMARKS

OF

HON. GEORGE G. SADOWSKI

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 26, 1949

Mr. SADOWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an article that I have written for the American European Israeli Recorder:

I have read your first issue of the American European Israeli Recorder, and I particularly enjoyed the article written by Rabbi Gliksman on the Significance of Israel. Especially do I like the paragraph which referred to the love and patriotism which an American Jew must feel for the United States of America, and how this new sensation that he feels in the creation of the State of Israel might affect his loyalty and love by creating a double allegiance. It seems to me that any Jew who was not thrilled, who did not sense a feeling of great joy and ecstasy, who could not hear and feel those rusted chains of bondage thousands of years old—yes, if he could not feel and hear those shackles being broken and removed from his ancestors, he couldn't be a decent Jew—he wouldn't even be a decent human being. This is a sensation which only people that have been held in slavery and bondage and have regained their freedom can enjoy. It is a sensation that is hard to express to those people who have never had the experience.

I was born in Detroit, Mich., of Polish immigrant parents. I was but 15 years of age when Poland was reborn primarily due to the great efforts of our beloved President Woodrow Wilson. Yes; it was the United States of America and President Woodrow Wilson who gave birth to the new Poland after many years of slavery and bondage. It was a great day for Americans of Polish extraction when Poland regained her freedom and liberty. Would the Americans of Polish extraction return to Poland now that Poland was free? Oh, no—after all we were Americans—we were happy because our ancestors had finally broken their chains of bondage and had regained their liberty and freedom. Did this new freedom for Poland mean a lessening of love and loyalty on the part of Americans of Polish extraction toward the United States? No; on the contrary, their love and loyalty for their adopted country was greater than ever.

During the First World War thousands of Americans of Polish extraction, many who could hardly speak Polish, enlisted in the Polish Army under General Haller that was recruited in Canada. They wanted to fight for the restoration of Poland. After the war did they emigrate to Poland? Oh, no; they were Americans, they only fought to rectify an old wrong. They wanted to restore the honor of their forefathers.

Now, let us take the case of the Americans of Irish extraction. The Irish, the Jews, and the Poles have much in common. The Irish suffered starvation and subjugation under the hands of the British; thousands of Irish immigrants came to the United States because of the intolerable conditions in the old country. The torch for the freedom of Ireland was carried highly and with great pride by every American of Irish extraction until finally Ireland regained her freedom. Did the Americans of Irish extraction lose any of their love and patriotism for the United States because of the struggle that they had carried on for many years for the freedom of Ireland? Oh, no; their love for the United States was intensified because the United States was the friend of Ireland and the Irish people.

So today, a new Israel is born. Yes, a new Israel is born because of the fight and the struggle that was put forward by the Americans of Jewish extraction. Again it was the United States of America and the great humanitarian and the great President Harry S. Truman who led the fight to restore freedom and liberty for the Jewish people and to break those chains of bondage. Many Americans of Jewish extraction traveled thousands of miles to join the fight for freedom and to restore the honor of their forefathers. Will the loyalty, patriotism, and love for the United States be lessened because Israel is free? Oh, no. Every American of Jewish extraction will feel an intensification of his love and loyalty for America.

The Jews, Irish, and the Poles in the United States have had the privilege of enjoying a great sensation. The feeling that wrongs centuries old inflicted upon their forefathers have been righted and that they, the sons and grandsons, have enjoyed the privilege of victory in this centuries-old struggle for freedom and liberty. Yes, they will never be confused as to their loyalty to America. What they cherish to the old country is a sentiment, a sense of respect for their forefathers, a desire to shout from the housetops and tell their fellow Americans that they too are sons of freemen. Yes, and to shout with pride that they helped to break and shatter those old chains of bondage and to free their forefathers from slavery.

Freedom for Israel means that America has gone up another rung on the ladder in our fight for freedom and liberty for all of the downtrodden people of the world. America is the land of the persecuted, of the refugee, of the poor pioneer. It was a puny handful of these and their sons who revolted under the gallant George Washington to sever themselves from the oppressions of Europe and to here gain a new birth of freedom. This hardy lot met every obstacle and every challenge, and here created a continent which became a blessing to millions of refugees from all over the world. Our American heritage has taught us to cherish independence, freedom, liberty, brotherhood, and peace for all the people of the world. The new state of Israel will be our friend forever, and the American of Jewish extraction will enjoy a new and greater dignity among his fellow men.

Bills Introduced by Hon. Gordon L. McDonough, of California, Eighty-first Congress

EXTENSION OF REMARKS

OF

HON. GORDON L. McDONOUGH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 26, 1949

Mr. McDONOUGH. Mr. Speaker, in the belief that the people of the Fifteenth Congressional District in California which I represent will be interested in the legislation which I have sponsored in the Eighty-first Congress, I have prepared a brief listing of some of the general bills which I have introduced to date.

Under unanimous consent, I include the text of this list in the Appendix of the CONGRESSIONAL RECORD for the information of my constituents:

LIST OF PROPOSED LEGISLATION INTRODUCED TO DATE IN THE EIGHTY-FIRST CONGRESS BY THE HONORABLE GORDON L. McDONOUGH, OF CALIFORNIA

TAX REDUCTION

H. R. 204, to repeal the wartime excise tax on toilet preparations and on luggage, purses, and similar articles.

H. R. 205, to repeal the wartime tax on transportation of property.

H. R. 206, to terminate the war excise tax rate on theater tickets and other types of amusement.

H. R. 207, to repeal the tax on telephone, telegraph, radio, and cable facilities.

H. R. 208, to repeal the wartime tax on transportation of persons.

FLOOD CONTROL

H. R. 871, to authorize the appropriation of $100,000,000 for the Los Angeles County Drainage Area project for flood control.

WATER SUPPLY

H. R. 3650, to authorize the construction of one or more demonstration plants to produce potable water from sea water with all facilities and accessories for the manufacture, purification, storage, and distribution of the product.

VETERANS

H. R. 1238, to prohibit the deduction of any part of a veteran's pension while he is hospitalized in any Federal or State institution.

POSTAL SERVICE

House Joint Resolution 80, to authorize the preliminary study necessary for the mechanization of the postal delivery service.

H. R. 2192, to establish definite minimum space requirements for post offices.

FEDERAL BUILDING

H. R. 864, to authorize the construction of a new Federal office building in the Los Angeles civic center.

H. R. 863, to authorize the construction of a customhouse building in the Los Angeles civic center.

H. R. 862, to authorize the construction of a post office parcel post building at Los Angeles.

H. R. 861, to authorize the construction of a post office garage building at Los Angeles.

H. R. 1154, to authorize an additional $900,000 for the completion and equipment of the additional story and the extension and remodeling now in progress on the terminal annex of the Los Angeles post office.

TITLE TO TIDELANDS

H. R. 860, to establish the titles of the States to lands and resources in and beneath navigable waters within State boundaries and to provide for the use and control of said lands and resources.

NATIONAL DEFENSE

H. R. 80, to establish a United States Air Force Academy to be located in the southern district of the State of California.

H. R. 81, to provide for an additional Military Academy in southern California.

H. R. 82, to provide for an additional Naval Academy in southern California.

CONSUMER CREDIT

H. R. 1552, to amend regulation W with respect to consumer-credit control on the purchase of automobiles so that no down payment shall be required of more than 25 percent and maximum maturity shall not be limited to a period of less than 24 months.

PAYMENT TO STATE FOR FEDERAL OWNED LAND

H. R. 865, to authorize annual payments to States, Territories, and insular governments, for the benefit of their local political subdivisions, based on the fair value of the national-forest lands situated therein.

LABOR

H. R. 203, to guarantee that the civil liberties of labor shall not be abridged.

H. R. 209, to amend the Labor-Management Relations Act of 1947 to equalize legal responsibilities of labor organizations and employers.

COLORADO RIVER

House Joint Resolution 55, to grant the consent of Congress to joinder of the United States in suit in the United States Supreme Court for adjudication of claims to waters of the Colorado River system.

PUBLIC WORKS

H. R. 869, to provide for the acquisition of sites and preparation of plans for Federal public buildings outside the District of Columbia.

HAWAII

H. R. 866, to enable the people of Hawaii to form a constitution and State government and to be admitted into the Union on an equal footing with the Original States.

Naval Carriers Seen Still Needed Despite Experts' Statements

EXTENSION OF REMARKS

OF

HON. W. STERLING COLE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 26, 1949

Mr. COLE of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by David Lawrence appearing in the Washington Evening Star on Monday, April 18, 1949, entitled "Naval Carriers Seen Still Needed Despite Experts' Statements":

NAVAL CARRIERS SEEN STILL NEEDED DESPITE EXPERTS' STATEMENTS—WRITER HITS INACCURATE VIEWS, SAYS FLEET CAN DELIVER ATOMIC BOMB

(By David Lawrence)

As long as a few Air Force enthusiasts say it, there is no danger, but when the chairman of the House Appropriations Committee declares that the United States doesn't need naval carriers any more and that they cannot deliver the atom bomb, it becomes important to present certain facts that show how inaccurate such statements can be.

In the first place, the Navy can deliver the atom bomb from certain vantage points from a carrier fleet. This has already been officially revealed by the Navy.

In the second place, the Navy doesn't send out carriers alone but protects them with light cruisers and destroyers equipped with antiaircraft weapons so effective that in the last war no suicide planes sank a carrier.

In the third place, Representative CANNON says: "With the signing of the Atlantic treaty we've got the bases." But who will assure that those bases will remain always in allied hands?

CONSTANT HAZARDS

If a Communist government some day infiltrates the Scandinavian countries and seizes the bases, the United States will be lucky to have a big carrier fleet handy to retaliate and to protect the landing of our troops in attempting to recover those bases. As long as the safety of the United States is dependent on the political ups-and-downs of certain countries in Europe, there will be hazards.

Conceivably also, as long as the United States has no other way of protecting itself in waters adjacent to the European continent, the American Government will be constantly importuned to furnish more and more protection and perhaps more and more economic aid lest communism sweep those countries.

The fact that a carrier fleet will be available to send out naval air power is the best assurance against mishandling of this question of land bases by European politicians.

Representative CANNON'S views are not novel. They have been expressed by others who have no real knowledge of the sustained bombing that can be done from the decks of carriers. It will cost the United States only about $9,000,000 next year to carry on certain work on the new supercarrier. Inasmuch as vessels of this kind cannot be built overnight, the carrying forward over the next 3 or 4 years of supercarrier construction is probably the cheapest form of insurance America can take out against the possibility of losing land bases.

There is a school of thought, moreover, which believes that if rockets are developed as predicted, England may not be a safe base for American land planes. Hence it is not good strategy to rule out any important means of hitting at a potential enemy. The carrier fleets, of course, are vulnerable but so are land-based planes, which can be and have been intercepted by enemy planes.

DIFFICULT TARGETS

It is not likely that the enemy would risk the dropping of expensive atom bombs while looking around the north Atlantic Ocean to find a carrier fleet. The very fact that naval ships can disperse makes them difficult targets for plane attacks, especially since the proximity fuse and other inventions have made it possible to ward off attack from the air and from submarines.

In the war with Japan, the carriers fought land-based planes off the Philippines and from the mainland of Japan and neither the submarines nor the Japanese planes sank any American carriers.

Air power launched from carriers is still air power, and there is nothing old-fashioned about using the lessons that won the war in 1945, especially when there is no certainty that in the next 5 years the United States will be able to carry out precision bombing with planes starting from this continent.

If the bases to be obtained from the countries signing the North Atlantic Pact could be absolutely guaranteed—as if anything can be these days—and if they could be held against seizure by the largest land army in the world, there would be less need for the added protection of carriers. But in warfare, it is always best to have as much insurance against possible contingencies as can be obtained.

The win-the-war-in-30-days exponents could be wrong, and then all the weapons of land, sea, and air would be needed to intercept the enemy's atom bombs as they were flown toward American cities. It wouldn't console the American people to learn that the air forces, using land-based planes, could hit 70 targets in Russia while New York or Boston or some other seacoast cities were devastated by atom bombs carried by planes that got through without being intercepted on their way across the ocean.

Pollution of Public Waters

EXTENSION OF REMARKS

OF

HON. THOMAS H BURKE

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 26, 1949

Mr. BURKE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from Charles L. Appt, mayor of the village of Rossford, Ohio, dated April 8, 1949:

VILLAGE OF ROSSFORD,
WOOD COUNTY, OHIO,
April 8, 1949.

Hon. THOMAS H. BURKE,
House of Representatives,
Washington, D. C.

DEAR SIR: I am writing this letter especially to you, Mr. BURKE, because I realize that you, of all people in Congress, especially understand our local problem. In fact, thus far, you were instrumental in helping to arrive at a possible solution. Now that you are in a further improved position, and with your thorough knowledge of this problem, I am sure that you will do your utmost to help complete the solution of our pollution-abatement problem, not only here but throughout the State.

A strong movement to eliminate the pollution of public waters is rapidly gaining momentum in Ohio. This movement has made enough headway to show itself in a bill offered in the Ohio Senate. This bill, known as Senate bill 60, presented by Senator Ragan, would make it "unlawful for any city, village, county, or other political subdivision, public institution, corporation, or officer or employee thereof, or other persons, to maintain or permit to be maintained sewers for the discharge of sewage, or industrial waste, into any public waters of the State, unless works or means, satisfactory to the director of health, shall have been installed for treating or otherwise disposing of such sewage or industrial waste."

The feeling that prompted the presentation of this bill to the Ohio Senate was a mere

reflection of the will of the people of Rossford. Their efforts to combat stream pollution date back to 1940, when they incorporated their community in a special effort to promote the construction of proper sewage-disposal facilities.

The plans for a proposed sewage system were drawn up and approved by village officials and the Health Department of the State of Ohio. The cost of the proposed construction was estimated at $240,730. This seems like a large price to pay, until we look at the cost of not putting in the sewage-disposal system. We find that it is costing the village of Rossford, Wood County, the surrounding territory, the State of Ohio, and the Nation, a very high price to continue polluting our public waters. That is why we feel that Congress itself should take action to help local governments correct this condition.

Philip B. Fleming, Federal Works Administrator, in a published statement, estimated the cost of waging a successful fight against stream pollution, on a national scale at $3,000,000,000. Legislation to abate pollution was passed by Congress and signed by the President in 1948. This is the kind of action that it takes to get things started. However, this good start has already been made ineffective by the administrative processes incident to such matters. Let us not wait for stench, filth, disease, and death to hand us the bill for 1949. Let us take the future bill we would receive for these inroads on our health, well-being, natural resources, and recreation, and convert the threatened loss into an investment in a healthier, better, cleaner America.

It isn't too much of a price to pay. Every day we are sending money and supplies overseas to help less fortunate nations. The European Recovery Program is costing us over $5,000,000,000. The Berlin Air Lift alone is eating up our money to the tune of $500,000 a day. The results we get for our money in these seem obscure to most of us, but though we do not say that the expense is not necessary, we do ask if it is more necessary than expenditure to protect the health and welfare of our people right here at home.

Repeated efforts by the village of Rossford to eliminate unsanitary conditions arising from improper sewage disposal means have been stymied by the lack of funds alone. The setbacks in the construction of these facilities have cost the village of Rossford, Wood County, the State of Ohio, and the people of the United States, more than is visible to a casual observer.

Every day that sewage disposal facilities are delayed, the health of the Nation is more seriously threatened. The rivers and streams have been polluted to such an extent that to use them for recreational purposes is an open invitation to sickness, paralysis, and death. In 1948, there were three cases of polio in the village of Rossford, 28 in Wood County, 1,169 in the State of Ohio, and 27,658 in the Nation. For the country at large, this represented an increase of 16,601 cases over the previous year. Let us take the liberty to point out that these were only the positively diagnosed, recorded cases, and do not include the total probable cases of polio which claimed their victims without having been identified as polio. On the basis that it costs an average of $185 to hospitalize a victim to check the spread of the disease, and an estimated average of $1,350 to rehabilitate him, the total cost to the Nation of this pollution-aggravated disease reached the stupendous total of $42,455,000 for the year 1948. This cost, measured in dollars, does not even approach the cost in suffering by those who died of the ravages of this disease or have been left as cripples for life.

The loss to the Nation is not limited to the ravages of disease alone. Although no definite figures are available, it is a fact known to all that the fish and wild-life resources of the State and of the Nation have been dealt a blow so severe that it is a matter of speculation as to whether they will ever be able to recover from their set back. The loss to the people, though it might be measured in dollars that they must now spend to seek their recreation and sport in uncontaminated waters, is best measured in the curtailment of their recreational facilities necessary for good health and well being. Again, it is a matter of speculation as to how many nervous and mental disorders can be directly attributed to the curtailment of recreational facilities available to the people on a daily basis near home.

The people of Rossford were cognizant of these conditions when they took the liberty of writing to Congressman MACGREGOR, chairman of the Committee on Public Works, asking for Federal aid. In his reply, Mr. MACGREGOR stated that no Federal aid for a public-works program could be given unless an emergency existed. Since the village of Rossford has passed a resolution condemning pollution, the State of Ohio is in the process of curbing pollution by law, and the Federal Government passed legislation to abate pollution, the conditions described would appear to warrant a declaration of emergency.

We feel that we have a right to expect State and Federal aid in the construction of sewage disposal facilities, and that Congress should adopt a plan of immediate action to help us and others like us, who are striving to cut the cost in human efficiency, health, and life.

Yours truly,

CHAS. L. APPT, *Mayor*.

Naturalization Session, April 4, 1949

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 26, 1949

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks, I include remarks made by Hon. William T. McCarthy, United States district court judge for Massachusetts, on the occasion recently on the admission to citizenship of a number of persons:

Now, ladies and gentlemen, I want to congratulate you, many of you coming from persecuted lands where freedom had an empty meaning, all of you having become a part of the golden treasury of an American civilization, the perpetuation of which is so necessary for the maintenance of the supernatural in a world that is torn apart by strife, dissension, and strange ideologies.

On July 4 we will celebrate the birth of a great document which is truly the Bible of our democratic way of life. Those great men representing the 13 States, soldiers, statesmen, and warriors, signers of this Declaration of Independence, said in discussing the relationship between the laws of nature and the laws of God: "We hold these truths to be self-evident, that all men are created equal, that they are endowed by their Creator with certain unalienable rights, that among these are life, liberty and the pursuit of happiness. That to secure these rights, Governments are instituted among men, deriving their just powers from the consent of the governed." The spirit and purpose of this great document beacon-lights the manner in which representatives of our form of Government shall remain or leave according to the will of the people. In the very final paragraph of this famous document which was really the preamble to the Constitution they again used the following words: "We, therefore, the representatives of the United States of America, in general Congress, assembled, appealing to the Supreme Judge of the world for the rectitude of our intentions, do, in the name, and by authority of the good people of these colonies, solemnly publish and declare, That these United Colonies are, and of right ought to be free and independent States." Then after the expression of moral thoughts they close this memorable document with the following sentence: "And for the support of this declaration, with a firm reliance on the protection of Divine Providence, we mutually pledge to each other our lives, our fortunes, and our sacred honor." In these words, ladies and gentlemen, did our forefathers give our philosophy of life to serve as a milestone and which our representatives duly elected to public office should use as norms of conduct. Their purpose and object was to lay out an American way of life. Their purpose and object was to have all authority flow from the sanctity of the home. Their purpose and object was to have these things done under the aegis of Divine Providence. Their purpose and object was to have these things done within the framework of a Constitution which they saw to it should have some elasticity because of what they conceived would be the growth and development of our American civilization.

Totalitarianism, communism, and all other "isms" are first cousins to the poisons that would destroy our national life. Please remember that they offer the direct antithesis to what a person receives under our system of government. They offer absolutism, despotism, and above all things extermination of human liberty. Under our form of government a man's right to life, liberty, and the pursuit of happiness is held sacred and inalienable. In the form of government of communism man becomes a machine of a state controlled by racketeers, because man's rights under communism are subordinated to the state rather than to the family. Every organ of his body and every attribute of his soul is controlled by this weak force.

Ladies and gentlemen, this is the challenge you are facing today. You see evidence of it all over this country. You see manifestations of it in universities, yes, in some places where they with devilish cunning classify themselves as churchmen. They are paid hirelings of the devil who see in their conception of world domination nothing but personal power. Hitler, Mussolini, and Tojo eloquently approved this. We were warned by our forefathers to be eternally vigilant because they said that vigilance was the price of liberty. New horsemen are riding continuously. Their badges are dishonor and social disintegration and slavery. They tread the highways of the cities and towns of these great United States. Their economic theories, their philosophies of life, and their method of thought challenge the foundation of our form of government. Moral law has little or no place in their society. Man has no wisdom which comes from anything else except personal and scientific achievements. They expel God and all his philosophies, and all his thoughts. Their thoughts are the result of vile conclusions concerning the rights and liberty of men. They continuously foster ideologies by educational systems that reach the hearts of many of the youth of our country. They hold out a beautiful picture of happiness when in truth and in fact they lie and they develop a philosophy of hate and destruction and their secularistic ideas serve as fungus growths for disunity, frustration, and fear. Many of our economic and social troubles are directly traceable to the insidious concept of their philosophy. We should see to it that there be no room in this Nation of ours for these mouthings.

Ladies and gentlemen, this is a challenge that cannot be disregarded. You have taken

an oath which obliges you to preserve our Constitution, our rights, and our liberties against any despot who would attempt to destroy us for his own selfish ends. General Douglas MacArthur said, "The problem is physically theological. It involves a spiritual recrudescence and improvement of human character."

Let me say to you, ladies and gentlemen, in conclusion that these foundamental philosophies of life which have come down to us through the corridors of time represent attributes which should be near and dear to the hearts of all of us. If we are to save ourselves, we must preserve them against insidious, Godless attacks.

Proposed New Postal Rates

EXTENSION OF REMARKS
OF
HON. WALTER NORBLAD
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 26, 1949

Mr. NORBLAD. Mr. Speaker, under leave to extend my remarks, I include herewith an excellent editorial on the subject of proposed new postal rates, written by Mr. Thomas W. Gerber of the Canby (Oreg.) Herald:

PROPOSED NEW POSTAL RATES

Did you every think of the Post Office Department as an educational institution? Or as a living, moving force to unify a nation?

Thomas Jefferson did when he and the other founders of the United States of America were putting the new country together. Jefferson clung tenaciously to two ideas which he regarded as fundamentally important to the growth of a nation founded upon the new principles of freedom. These were a public-school system (this was considered rank heresy by many in those days), and a postal service designed and conducted to convey information to the entire population.

He believed that a democracy can endure as such only if supported by a well-informed population. Seeds of distrust and insurrection sprout from misinformation or lack of information, in his opinion, which is as sound today as it was then.

Following out this line of reasoning the adherents of the Jeffersonian theory established what are known as second-class postal rates for publications. They are, of course, much lower than any other rates. They were made so not as a subsidy to encourage publication of newspapers and magazines, but to enable the people of the country to have access to information at the lowest possible cost.

Establishment of second-class rates was a matter of public policy, just as was the inauguration of the Department of Agriculture. Nobody expects the Department of Agriculture to be a direct money-making institution, or even to pay its own way, any more than they expect the school systems to pay their own way by charging tuitions.

Now there is a measure before Congress (H. R. 2945) which would impose drastic rate increases in various categories of postal service, notably in second-class mailings. Those who have studied it declare it would put out of business most of the newspapers and magazines which depend upon postal service for the greater part of their distribution. This might be somewhat exaggerated, but the rates proposed certainly would make it necessary for publications to double or quadruple their subscription rates. This step would result inevitably in wholesale cancellation of subscriptions, and a consequent stoppage of information sources. It would directly contravene the original public policy of second-class rate schedules.

Two magazines, the Farm Journal and Pathfinder have figured that the proposed new rates would cost them $1,701,000 the first year and $2,920,000 the second year and thereafter, which would be, says Pathfinder, "an unsurmountable increase in our cost of doing business."

There have been and will be postal rate increases, and second-class rates can stand some upping. But the solons who drew up the present measure evidently had not heard of the fundamental reason for second-class rates, and the scale now under consideration by the congressional committees on post offices and post roads is not only confiscatory but contrary to public policy.

The Federal Government Should Pay Taxes for Land Owned by the United States in the Several States

EXTENSION OF REMARKS
OF
HON. GORDON L. McDONOUGH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 26, 1949

Mr. McDONOUGH. Mr. Speaker, the acquisition by the Federal Government of vast land holdings in national-forest land and military and naval bases and for the use of other agencies is creating a serious problem in many of our States. The curtailment in tax revenue to the States and local governments due to these Government holdings which are tax free deprives them of revenue which would be paid on the land if it were under private ownership.

At the same time both State and local governments must spend thousands of dollars annually for the protection of life and property in many of the areas owned by the Government, and must maintain roads and other facilities for the use of people living and working on property owned by the Federal Government.

The loss of this tax revenue presents a serious situation because the property owners in our States must pay higher taxes on their land to compensate for the loss of tax revenue to the State and county on Federal Government owned lands. This results in curtailment of expenditure for improvements in local communities and in the counties and deprives the State of a legitimate source of revenue.

In the State of California alone, the accumulation of land by the Federal Government has increased in 10 years from 37 percent to 47 percent of all land within the State. Federal acquisition has extended to 50 percent of all the land in 17 California counties. In 11 Western States it has extended to 47 percent, and in excess of 24 percent of the total land area of the United States is owned by the Federal Government.

I believe it is time for the Federal Government to accept its responsibility to compensate the States at least in part for the loss of tax revenue on lands that are owned by the Federal Government.

I have introduced H. R. 865 to authorize annual payments to the States, Territories, and insular governments by the Federal Government based on the fair value of national-forest lands situated therein for the benefit of the local political subdivisions where such lands are situated. Such payment will avert embarrassing fluctuations of income to many counties to which a stable income is essential to the efficient conduct of local functions of government. It will also remedy inadequacies of contributions to costs of local government in localities where national-forest lands yield little or no revenue.

I believe legislation to reimburse the States and counties for the loss of revenue caused by Federal ownership of land should receive consideration by the Congress. The California State Legislature has recently adopted a joint resolution requesting such action which I submit to your attention herewith:

Assembly Joint Resolution 22

Joint resolution relative to reimbursing counties for the loss of revenue caused by Federal ownership of lands within the counties

Whereas the Federal Government owns in excess of 46 percent of the total land area of the State of California and in excess of 47 percent of the total land area of the 11 Western States and in excess of 24 percent of the total land area of the United States; and

Whereas these federally owned lands occupy a substantial part of the total land area of many of the counties of the United States; and

Whereas the counties in the United States wherein federally owned lands are located furnish many services for such land for which there is no adequate return of revenue for such services; and

Whereas Federal contributions to county government are uncertain, because the Federal Government is not under a duty to create any revenue in which local government can share; and

Whereas such revenues being unpredictable in time and amount make it difficult to operate within the provisions of State constitutions and statutes regulating fluctuations in the budgets of local government; and

Whereas there is an increasing demand for a critical reexamination of the Federal fiscal responsibility to local governments because of the ownership of Federal properties within the boundaries of such local governments; and

Whereas lands in private ownership in the counties within the boundaries of which federally owned lands are located are required to assume an extra burden for the cost of services rendered by local government because of the location of such Federal lands in such counties: Now, therefore, be it

Resolved by the Assembly and the Senate of the State of California (jointly), That the Legislature of the State of California respectfully memorializes the President and Congress of the United States to enact legislation to reimburse the counties for the loss of revenue caused by Federal ownership of land within such counties; and be it further

Resolved, That the chief clerk of the assembly be hereby directed to transmit copies of this resolution to the President and Vice President of the United States, to the Speaker of the House of Representatives, and to each Senator and Representative from California in the Congress of the United States.

Views of Mr. Herbert Hoover on Social Security

EXTENSION OF REMARKS
OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 26, 1949

Mr. REED of New York. Mr. Speaker, a statement by Mr. Herbert Hoover relating to H. R. 2892 and H. R. 2893, upon which hearings are now being held by the Ways and Means Committee, was read before the full committee today. These two bills relate to revision and expansion of Federal old-age assistance and survivors insurance and the Federal-State public assistance programs.

Under leave to extend, heretofore granted, I am inserting Mr. Hoover's views as expressed by him in his statement and read and made a part of the Ways and Means Committee record of the hearings on these two bills:

NEW YORK, N. Y., *April 25, 1949.*

The Honorable ROBERT L. DOUGHTON,
Chairman of the Ways and Means Committee, House of Representatives, Washington, D. C.

DEAR MR. CONGRESSMAN: I beg to acknowledge your request that I make some comment on H. R. 2893 and H. R. 2892 which relate to revision and expansion of Federal Old-Age and Survivors' Insurance and the Federal-State public assistance programs.

The following notes relating to the systems existing at present are based upon data collected by the Commission on Organization of the Executive Branch. That Commission did not deal with policy question to be determined by Congress. The views on policy expressed herein, therefore, are solely my own.

I wish to say at once that I strongly favor governmental provision for protection of the aged and their dependents.

The problem before the Nation is to obtain a workable system, with a minimum of administrative cost, a minimum of bureaucracy, adjusted to the economic strength of the country which gives an assurance of security to this group. In my view, we have not yet found that system.

I should like to make two general observations:

1. There is an illusion about the whole Federal Old-Age and Survivors' Insurance. Because the taxes on pay rolls are paid into a trust fund and paid out without appropriation by Congress, there is an idea that these are neither taxes nor Federal expenditures. They are just as much a burden upon our national economy as any other tax or any other Government expenditure. Also, pay-roll taxes, however justifiable, are, like all other taxes, a burden on the standard of living of the whole Nation. A considerable part of the pay-roll taxes paid by employers in the long run is passed to the people as a whole in prices, and a considerable part of the taxes paid by wage earners is passed on by demands for increased wages.

2. There are many desirable things that every American home would like to have, but its income compels it to deny itself, at least temporarily. It is similar with the Nation.

Since this legislation was originally passed in 1935, we have increased the total burden of Federal expenditures from about $9,700,000,000 a year to a prospective $45,000,000,000 a year, included in which are about $23,000,000,000 for defense and European aid—most of which constitutes the cost of the cold war.

Already our economy is up to the limit of endurance under this load. I believe we should go slow and hold further additions to this burden to the absolute minimum. When the cold war is over, we can afford many more domestic improvements.

I can find no satisfactory estimates of the cost of these two proposals if enacted into law. There would be, however, a huge increase in the tax burden on our economy from this legislation. I make some tentative estimates later on.

THE PRESENT SYSTEM

1. The old-age problem has been thrust upon the Federal Government largely by the great increase in longevity. Its dimensions are indicated by the fact that there will be by 1950 about 11,000,000 persons over 65 years of age. They will increase in numbers absolutely and relatively, both with the increase in population and with the constantly advancing protections to health.

2. The Nation today is undertaking to solve the problem from three different directions:

First is the joint Federal-State assistance to which I shall refer as "State systems." Forty-eight of the States and three other jurisdictions, with Federal aid, give old-age assistance, dependency, children's benefits, and other social services, based upon individual needs. The variations in the needs requirement are considerable, and in a few States are so liberally interpreted as to be practically universal old-age pensions. The total number of persons given assistance by the State systems is about 2,300,000.

The average amount of payments to the aged in need in all 48 States is $42.02 per month per person. In the 46 most typical States based on need, the average payment is about $39.50 per month per person. These monthly payments vary greatly among the States—ranging from a low of about $20 to a high of about $78 a month in one State. The annual cost averages about $1,200,000,000—about one-half of which is paid by the States and about one-half by the Federal Government.

Second is the Federal old-age and survivors' insurance, based upon pay-roll taxes, to which I shall refer as the "Federal Insurance System." Benefits are now being paid out to about 2,260,000 persons at an annual cost of about $556,000,000, and averaging about $25 per person per month, including their dependents. The payments being insufficient for the needy, many must be supplemented by the State systems.

Third is a multitude of old-age pension and retirement systems in the country to which I shall refer as the "independent systems." They are in the main Federal veteran and military pensions and disability systems of this group which extend into the 65-year-age group: Federal civil-service retirement systems; the Railroad Retirement System; the old-age or retirement systems of the States and local governments; the old-age or retirement systems of universities, hospitals, fraternal organizations and other benevolent institutions, insurance companies, businesses, and industries. There is now a new form of old-age and retirement system emerging in particular industries as the result of collective bargaining. These systems together with pensions to veterans, bid fair to be further extended.

The number of persons now receiving pensions or aid from these independent services is estimated at about 2,300,000. The monthly payments under these systems are much higher, on the average, than the other two systems.

Theoretically, there are about 7,000,000 persons now receiving benefits from all three systems. This, however, includes dependents less than 65 years old and there are duplications because in many cases the benefits from the Federal insurance system are inadequate and must be supplemented by the State systems.

FAULTS IN THE PRESENT FEDERAL INSURANCE SYSTEM

3. There are serious faults in the Federal insurance system.

(a) The original concepts, as embodied in the Social Security Act of 1935, were that the money to pay for the benefits would come from employees and employers by a tax on pay rolls, and that the system would be self-sustaining. The original actuarial basis of the system was faulty and was made worse by the legislation of 1939.

One of the methods of this system contemplated building up a reserve fund in the early years to compensate the subsequent increased benefits. The moneys collected from the pay rolls have been, and are at present, in excess of the payments to beneficiaries, and the trust fund of about $10,000,000,000 has been accumulated and invested in Government bonds. The growth of expenditures for benefits under the present act apparently will exhaust this reserve in from 5 to 10 years, and the general taxpayer will be forced to make up the annual deficit. This deficit, it is estimated, will rise ultimately to about $1,700,000,000 per annum.

(b) An additional burden, however, is thrust on the general taxpayer. Under the present system the Federal Government has used the surplus income of the trust fund (amounting to the $10,000,000,000) for its current expenses and placed its I O U (in the shape of Government bonds) in the trust fund for the money thus used. It is estimated that the benefits paid out will begin to exceed the receipts (upon the present basis of the pay-roll tax and benefits) in a few years. When this occurs, the Government must redeem its I O U's from the trust fund. The money to redeem them must come from the general taxpayer. Even if the bonds were sold to the public, ultimately they must be redeemed by the taxpayer. As those who have already paid the pay-roll deductions are also taxpayers, they will, to some extent, be paying for their insurance twice over.

I cannot agree with the economic arguments before your committee which are to the contrary. The simple fact is that the money has been raised by a tax, and except for benefits already paid, has been used as current expenditures by the Government, and must be replaced from somewhere—the taxpayer.

THE PROPOSED NEW LEGISLATION

4. I do not have the technical staff to analyze in detail the effect of the amendments to previous legislation implied in these two bills (H. R. 2893 and 2892). However, I make some over-all observations which may be worthy of consideration by your committee.

(a) I suggest that the committee consider abandoning the whole reserve fund concept and that the Federal Insurance System be put on a pay-as-you-go basis. It should be no more difficult to calculate for a year ahead the amount of pay-roll taxes required to meet the outgo than any other taxes. The present reserve fund of $10,000,000,000 could remain as a balance wheel. It could be drawn upon temporarily when advance calculations of the tax prove inadequate and then could be restored the following year. This procedure would enable the Congress to fix the tax as needed and to appropriate the budget annually. In the latter matter, it has no voice at all at present. Such a method of pay and collect as you go would avoid the faults pointed out in the paragraphs 3 (a) and (b) above.

I am aware it will be contended that this course would deprive the scheme of its purported actuarial basis. As a matter of fact, it has been abandoned under the present system. But more important, the basic fault of double payment by beneficiaries (3 (b) above) destroys all such actuarial contentions anyway. And the same situation will apply to the new legislation as it again proposes to increase reserves, and spend the increased money for current expenses of the Government, with ultimate replacement by the taxpayer.

(b) To visualize what the plans under H. R. 2893 and 2892 mean, it is necessary to reduce them to some sort of figures. It is proposed in H. R. 2893 (Federal insurance system) to increase the taxes on pay rolls, which now amount to about $1,700,000,000 per annum, to about $4,800,000,000. Obviously, this is an increase in tax burdens by about $3,100,000,000 per annum at once.

As I have said, I can find no adequate estimates of the annual expenditures under these two bills. Some estimates of the costs of adopting H. R. 2893 (Federal insurance system) are given, but apparently they do not include all of the features in the bill. I have found no estimates of the cost of the additional grants-in-aid to the State systems under H. R. 2892, or of the other direct expenditures implied in that bill. They are, apparently, large.

The estimated Federal insurance system expenditures under H. R. 2893 alone are:

Present expenditures	$556,000,000
1950	1,750,000,000
1955	3,400,000,000
1960	5,900,000,000

(These figures as to H. R. 2893 are about halfway between the high and low estimates furnished to the committee.)

The very large increase in Federal expenditures is obvious. Moreover, it is also obvious that the reserve fund, in the next 10 years, would be greatly increased. This surplus of pay-roll taxes over the benefits paid out again is to be represented by more bonds and used for current expenses—and ultimately the general taxpayer will pay a large part of the bill.

As a method of increasing Government revenues, it is a tax on the lowest incomes in the country—provided they do not secure an increase in wages to compensate. In such case, however, it falls on the consumer, of which these beneficiaries are the largest group.

The answer to all these dilemmas is to abandon further building of the reserve fund and to put the whole business on a collect-and-pay-as-you-go basis. If my proposal were adopted, even the present pay roll tax burden could be reduced during the next critical years.

(c) Aside from the faults inherent in the Federal insurance system, the ultimate result of this new legislation will be to absorb or extinguish much of the independent systems. The independent systems should be maintained and encouraged. They represent a flowering of American freedom and of moral growth. They have more efficient administration and usually provide greater benefits to their members than do either the Federal insurance system or State systems. In the few instances where, by a change of jobs, a small number of beneficiaries under the independent systems might lose all or part of their rights under these systems, they can be picked up by the State systems.

(d) Another point worth noting is that the powers vested in the Federal Administrator under these two bills could go a long way to extinguish the independence of the States in welfare activities. This can also result in an enormous increase in the number of State, Federal and other public officials necessary for administration. There are probably 30,000 State and Federal officials already engaged in administration even now.

A COURSE OF ACTION

5. My own opinion, having regard for our obligations to prevent suffering by the aged and their dependents due to the increased cost of living, together with the difficult economic situation we face from the cold war, is that we should go slowly and proceed as follows:

(a) The further expansion of reserve funds should be abandoned, and the system should be placed on a pay-as-you-go basis.

(b) Increase the coverage of the Federal Insurance System but, for the present, undertake none of the other expansions proposed in H. R. 2893 and thus greatly reduce the expenditures required.

(c) Develop the State systems based on need by further Federal grants to provide more adequately for the aged and dependents actually in need (the average now being only $42.02 per person per month, with some States as low as about $20 per month), and to enact none of the expansions in H. R. 2892.

The real and urgent problem is the need group. It is not solved now, nor can it be solved for many years, by the Federal insurance system—even if that system can be made to work efficiently.

Whatever increased cost may be thus required in taking care of our needy and aged, it could be covered many times over by adopting the recommendations for better organization of the executive branch proposed by the Commission.

SEARCH FOR A SIMPLER SYSTEM

6. The committee, in my opinion, should undertake to establish an independent research body to provide analyses of other possible systems. It should be given a year for study.

The reasons are:

(a) On the organizational side both the State systems and the Federal insurance system maintain expensive administrations of the same general problem. The administrative cost of the Federal insurance system is likely, under this bill, to rise eventually to over $100,000,000 per annum. The independent systems do not overlap so extensively in the administration field, and usually are managed more economically.

(b) In the financial support of these three systems the overlap is very great. Many of the independent systems and the Federal insurance system are based upon pay-roll contributions, and thus many contributors are in both systems, are being twice insured, and will receive benefits from both systems. The people do not need to be provided for twice over, and where they are in both systems their deduction burdens are very great and a menace to their families' standard of living.

(c) It is obvious that the State systems must be maintained for many years to come. It would be many, many years before complete and adequate coverage and benefits could be attained by the Federal insurance system. Its benefits, even under the new bill, are inadequate in many instances, and must, in any event, be supplemented by the State systems based upon need.

(d) A careful inquiry might disclose an entirely different system which would avoid the huge costs of administration and the duplication, which would substitute some other form of taxation, more simple and more direct for its support, and which would give more positive security to the aged than this complicated system.

It is worth looking into.

I attach hereto the pages of the Report of the Commission on Organization of the Executive Branch of the Government, and those of our task force (the Brookings Institution), which relate to some parts of this subject.

Yours faithfully,

HERBERT HOOVER.

Our Rising Social Welfare State

EXTENSION OF REMARKS
OF
HON. GORDON L. McDONOUGH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 26, 1949

Mr. McDONOUGH. Mr. Speaker, the United States is fast approaching a crossroad, a point which history must mark as the turning point, the place where the American people swing down the road to the socialist state, or the high-water mark of socialistic progress where the tide is turned back to perpetuate the American principles of private ownership and free enterprise.

The ultimate decision must rest in the people's elected representatives, the Congress of the United States. Upon us rests the responsibility not only to our constituents but to all posterity—to generations of Americans yet unborn.

The American people so far have rejected the European brand of socialism which advocates Government ownership of industry and property. But we have been accepting other forms of socialism equally dangerous to the fundamental structure of our democracy, but less obvious.

While private property in America remains under private ownership, the profits of private property and even of personal services are being forcibly shared among nonowners, a practice which if carried far enough will result in the gradual leveling of individual incomes.

In Britain today we see the results of such socialistic encroachments on democracy in process of reaching their ultimate end, and we must decide how far we can proceed toward the Socialist state, and yet check this trend short of the point already reached by the British.

Emerson P. Schmidt surveys our present position and outlines 10 ways in which we are drifting toward the Socialist state in his article. Our Rising Welfare State, which appeared in the April issue of the Nation's Business. This is a comprehensive analysis of the situation, and should receive serious consideration as a warning we may well heed as the hour of decision is upon us.

The article is as follows:

OUR RISING WELFARE STATE

(By Emerson P. Schmidt)

In the November elections Norman Thomas and his Socialist Party mustered a little more than 100,000 votes, a mere quarter of 1 percent of the total cast.

Certainly this is not a very impressive showing for a political organization which has campaigned in every national election since 1900 and whose doctrines have been preached for more than 100 years.

Standing alone, this record would seem to imply that socialism had little political future in the United States.

Such an assumption would be premature.

It is true that almost nobody votes for candidates who call themselves Socialists. Few voted for candidates who called themselves Prohibitionists either, but the country attained prohibition, nevertheless.

It is stretching definitions only a little to say that we have also attained socialism.

Unlike prohibition which raises only the question wet or dry, socialism has complexities which make it possible for a people to have a very extensive brand of it without knowing that they have it. It doesn't go into effect at some designated midnight, it just creeps up by day and by night. Indeed, it is not uncommon, as in our own case, for people to demand some of socialism's subtler enticements while denouncing its more obvious forms.

The European brand of socialism, government ownership of industry, has never had much appeal to Americans. Private property is deeply respected by custom and by law.

But, while we have been warning, and warned, against this brand of collectivism, we have been accepting a comprehensive, thoroughgoing and well-integrated program which is equally but less obviously socialistic. We even forge new arguments to justify this program on moral and economic grounds.

Thus, although private property, for the time being remains in private hands, its fruits are being forcibly and compulsorily shared among nonowners. Simultaneously, the fruits of the personal services of the higher income groups are likewise being forcibly shared. Whether the higher income groups have an inalienable right to the rewards for their endeavor is a question rarely even raised.

The process cuts deeply and, unless stopped and reversed, will cut ever more deeply. Whether it will dry up the incentives to invest in rental housing, machinery, and equipment and in other job-making facilities and thus pave the way for socializing all property and industry, as it seems to be doing in Europe, it is too early to say.

It is not too early, however, to examine the road we are following and the distance we have come. How, then, is this American version of socialism—the welfare state being brought about?

Here are 10 ways:

1. The income tax: Under the progressive income tax, incomes after taxes are undergoing a powerful leveling process. During the New Deal there was much talk of putting an upper limit of $25,000 on individual incomes. The idea is not dead. The figure may be lowered.

Under the ability-to-pay theory of taxation, so long as Smith has more income left after taxes than Jones, Smith has still further ability to pay more taxes. There is no logical stopping place. The logical end of this tax philosophy is the final equalization of all incomes. This final position may be avoided, however, because the tax policy makers themselves are likely to continue to have above-average incomes and might not deem it morally or economically wise to go thus far.

Many salaries in the United Nations and in its various subsidiary organizations are made tax-free. We have just given the President another $50,000 annual income free from all taxes (besides an increase in salary). Perhaps we have just seen the beginning of this wrinkle in the income-socializers' bag of tricks.

The corporation income tax likewise takes a larger toll from the bigger corporate income than from the smaller. After $50,000 of annual net income all corporations pay 38 percent, but the smaller incomes begin at a modest figure and only gradually work up to 38 cents out of every dollar. There is constant pressure for an excess-profits tax to soak the rich although the poorer citizen is just as likely to own a few shares in a profitable corporation as in one which is less profitable.

2. Social security: Employees, generally, pay 1 percent of the pay roll to finance social security while employers pay 3 to 6 percent or more, depending on how you figure it—covering workmen's compensation, old-age, and unemployment compensation. To some extent, social security is a device for spreading income more evenly over a period of time—collecting the premiums during employment and paying out benefits when hazard hits. But, the benefit formulas are generally loaded in favor of the low-income groups. Nearly all social-security programs also have the effect of transferring income from the more productive, more efficient or more fortunate people to those less favorably disposed. The proposed expansion of social security suggests that this method of leveling income may be still in its infancy. We have covered only part of the distance between the cradle and the grave.

3. Federal variable grants-in-aid: In the hospital construction law, the amount of Federal grants to the different States is based in part on average per capita incomes within the State, the bigger slice going to those States where incomes are lowest. The people in the rich States thus pay the hospital construction costs of the people in the poor States. In earlier years Federal grants as for the aged, the blind, and dependent children, were based on some uniform or equal-matching principle. Today it is rare for a Federal grant-in-aid bill to be introduced in Congress without a so-called variable grant-in-aid, the amount of the grant varying inversely with the per capita income among the different States. The pending bill to put the Federal Government back into the direct relief business, and to revise the program for the aged, blind, and children adopts the same variable grant idea.

4. Food allotment: During the depression, with a view both to relief and to transferring more income to farm groups, the "orange and blue" food stamp allotment program was adopted. The extra stamps were the equivalent of good cash to those who got them. A bill recently introduced in Congress would revive this program. Clearly, this opens far-reaching avenues for the further redistribution of income and greater equalization. The law, or more likely the administrative bureau, could decide that all persons with less than so much annual income would get so many stamps entitling them to so much free goods.

5. Rent control: Rent control is a device for transferring income from people who supply housing to people who do not. New York State did not abolish the rent control growing out of the World War I until 1927. The hold which rent control has on the American people today suggests that this method of redistributing income is likely to be difficult to remove even though all the evidence shows that it accentuates the desire for housing and diminishes the supply of new construction, especially in the face of the threat of extending rent controls to new construction.

6. Public housing: Again and again it is argued that private effort cannot provide adequate housing for the lowest-income group. The Government must tax the people with more income so that the low-income groups can live in new housing.

7. Driving down the interest rate: Thrift and savings formerly were rewarded by annual interest earnings of about 5 percent. Insurance premiums earned the same interest accumulations.

Today, interest rates have been cut in half by means of what is called monetary and fiscal policy, a subject a little complicated and subtle, but something we should study a little more.

In the past, periods of prosperity and especially war periods always entailed rising interest rates to help check excessive demand for borrowings and to stimulate the supply of savings. World War II was financed with a constant and low or falling interest rate. This was indeed a stupendous and far-reaching achievement.

Lord Keynes was the father of the engineered, artificially low interest rate which reduces the earning power of capital and savings. This transfers a greater portion of the earnings of capital to low-income groups.

Keynes spoke frequently of the "euthanasia of the rentier" and the "functionless investor." This was an erudite way of saying that there is really no point in paying anybody to save; adequate capital should and could be made available without anyone seemingly having to pay for it.

While he had some misgivings about his own brilliance on this point, his followers adhere rigidly to policies designed to make borrowing cheaper even though the policy reflects itself in a steady dilution of the money supply and a steady deterioration in the value of the dollar. Perhaps Keynes, and especially his followers, did not notice that driving down the interest rate also creates a new problem (or should we say, opportunity?) for the Government, in the form of more old-age dependence, now that, with artificially low interest rates, the capacity of the individual to save for his old age is made more difficult.

This low-interest-rate policy puts the Government in competition with all private lenders, forcing down interest rates all around—a leveling process affecting everyone.

There is a growing conviction among thoughtful people, however, that a society of personal and political freedom and a free enterprise market economy are integral parts of each other.

And it is just beginning to dawn on these same people that a free money market—one in which the interest rate performs its historic functions of determining where to invest, and governing the demand and supply of capital—is also an integral part of the free society.

Government spending and lending for housing, for agriculture, and for innumerable other purposes are all tied in with this further effort of leveling incomes.

8. Minimum-wage legislation: Minimum-wage law bars any worker from a job unless he can find an employer who is willing to pay at least 75 cents, $1, or whatever the fixed hourly rate may be. Whenever the minimum is raised, all the wage rates above the minimum also receive an upward thrust to maintain the historical differentials of the wage structure.

Minimum-wage law has become a device for hoisting the whole general wage level. Here is another way of passing money from one group to another.

9. The labor movement: If one examines the President's economic reports and programs submitted to the Congress as well as the several reports of the Council of Economic Advisers, one discerns a clear-cut policy of utilizing the labor movement to cut down the earnings from job-making to the benefit of the job-holder. While things are said on all sides of this complicated issue, again and again there is much talk of a deficiency of purchasing power. There is much discussion of encouraging wage increases (sometimes with the limitation where they will not cause price increases).

While economists generally agree that deficiency of mass purchasing power is not the cause but the result of depressions, much pressure is generated in Washington in support of the unorthodox and generally unaccepted "underconsumption" theory of boom-bust which is so often utilized to justify the upward wage thrust.

By building up the labor movement through Wagner Act and pulling the teeth of Taft-Hartley the labor unions are encouraged to strive more aggressively for a

larger slice of the national income. The employers are deprived of their natural resistance to encroachments by the unions. Extending the areas of collective bargaining to include numerous fringe and other benefits is another attempt to get for labor a larger and larger slice of the national pie. By reducing the prerogative of management and enlarging labor's voice in management, the earnings of investors are steadily reduced.

As investors become more skeptical of future earnings and the security of investment, the way is paved for "Government going into business" because, it is alleged, private capital won't come forth for investment.

10. Estimate and inheritance taxes: What the Government can't get during your lifetime the Government can get when rigor mortis sets in and your executors begin to look over what's left.

There you have 10 ways by which income is being equalized.

This makes a pattern that is hard for the politicians to resist. Why should the voters not vote themselves a slice of other people's income every 2 years, or at least every 4 years? Why should the politician not lend his hand to this business of taking from the limited number of A's and handing it over to the more numberous B's, even though privately he would not take a tire off A's car or lift a pumpkin from his garden.

It is not hard to find some moral justification and perhaps historical precedents for such a program.

Throughout our Anglo-Saxon history and traditions there has always run a pronounced equalitarian strain.

The Declaration of Independence emphasizes that we are all created equal. The Constitution prohibits class distinction based on hereditary or other titles. We reacted strongly against the feudal caste system. Early in our history we supported universal compulsory common-school education. We were committed to the doctrine of the equal start.

Later this same set of ideas was commonly referred to as equality of opportunity. We felt that if every child were educated, and there were no legal or other artificial discriminations, we would all have this equal start. Then each should be entitled to keep whatever he could earn.

It was the function of Government to create conditions favorable to this equal start.

In 1862 we passed the Homestead Act, for example, under which any citizen, or even a resident alien intending citizenship, could carve out for himself a 160-acre homestead, a place to get a start, a place where he could be himself and make his own living in his own way. In 1890 we passed the Sherman Antitrust Act, designed to prevent monopoly and to give any and all, who had the desire, the means, and the ability, the opportunity to set up in business for themselves.

EQUALIZATION CONTINUES

Our present program, of course, goes far beyond these earlier ideas of equal opportunity, an equal start, and preventing monopoly. The battle against inequalities, it is said, now needs additional weapons.

The economic sanction placed behind this drive toward the equalization of income runs in terms of the boom-bust problem and full employment. Although this rests on tenuous ground, let's take a look at it.

It is said that business profits and individual incomes above the consumption levels are spent more slowly than wage, social security, and similar types of mass income. The worker and social-security beneficiary spend their incomes promptly, thereby returning the money to the income stream. It then can become income promptly to others and helps keep the economic machine rolling.

Savings, whether earned by a business or an individual, tend to lie around in "stagnant pools" in the banks or the treasuries of insurance companies for a time. So it is argued. When the business outlook is dim, these funds are hoarded, thereby deepening depression. So, if we are to assure full employment, full purchasing power and full production, we should shave off the big incomes and a good slice of profits.

This argument has some support among some economists. But nearly all, if not all, would agree that business depressions are caused and influenced by far more complicated factors and that this is altogether too simply a view, a too facile rationale, of a highly technical and interdepartment economic process.

Nevertheless, both on moral and economic grounds, the drive for leveling incomes has support, or as the logician would say a rationale has been found.

Those who would develop some stopping point to the socialization process need equally good or more potent counterarguments and weapons. There are plenty of them but they don't get themselves publicized very well.

These income-leveling weapons are capable of further sharpening and intensifying. For the most part, they are relatively new.

Taken together, they constitute a formidable battery—a powerful engine with 10 cylinders. Add a few more cylinders and enlarge the bore and stroke of each, then we will have a different America. Whether the fuel and lubricants to keep the engine going will dry up remains to be seen, but the experience of other lands that have tried this same type of experiment for some decades suggests that it is easier and more popular to redistribute wealth and income than it is to add to the total supply.

SOCIALISM WILL GROW

The processes of the rising American welfare state are now easily recognized. There is no direct action against them under our established political and social institutions.

Men and women who foresaw the end in the beginning, now nearly a generation ago, see little chance to stop short of the British, who traveled a similar road.

Socialism establishes its own need by forestalling the natural forces of capitalism. The mass of the people develop a psychosis of economic security which destroys independence, risk, and ambition. The politician who is personally opposed to socialism seeks to stay in office by rationalizing that he should remain in power to temper the wilder ideas of the opposition. The middle class, the savers and investors, by their caution and fright, create the very conditions which the Socialist then proceeds to cure.

Underneath it all is a 200-year-old struggle in America—a struggle for democracy to restrain itself against its own destruction.

Undivided Loyalty to United States, Devotion to American Way of Life, and Opposition to Communism Asserted by Students of Kaimuki High School of Honolulu

---

EXTENSION OF REMARKS

OF

HON. JOSEPH R. FARRINGTON

DELEGATE FROM HAWAII

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 26, 1949

Mr. FARRINGTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to present a letter addressed to me by the students of the Kaimuki High School, of Honolulu, with which they have forwarded a declaration bearing the signatures of the leaders of the student body. This declaration is prompted by the presentation for publication in the CONGRESSIONAL RECORD some weeks ago of a pro-Communist essay by one of the students of this school.

The declaration which follows shows clearly that this individual essay in no way represents the sentiments of the student body of this school and on the contrary expresses a point of view for which they have no sympathy whatsoever.

The letter and declaration follow:

KAIMUKI HIGH SCHOOL,
Honolulu 14, Hawaii, April 9, 1949.

The Honorable JOSEPH R. FARRINGTON,
Delegate to Congress from Hawaii,
Washington, D. C.

DEAR DELEGATE FARRINGTON: Enclosed is a revised copy of a declaration which was presented at a student representative assembly meeting held on April 5, 1949, attended by 33 students and 2 advisers, at Kaimuki High School.

In another student representative assembly meeting held on April 7, 1949, attended by 44 students and 3 advisers, a motion was unanimously passed that copies of the revised declaration be prepared and mailed to each of the persons listed on the declaration, provided that at least a majority of the members would sign the declaration on Friday, April 8, 1949.

We are therefore sending you this attached copy of the signed declaration.

Respectfully yours,

HENRY AU HOY,
President Student Body.
NANCY OYAMA,
Secretary Student Body.

Approved:

DALLAS C. MCLAREN,
Principal.

KAIMUKI HIGH SCHOOL
STUDENT GOVERNMENT,
Honolulu, T. H., April 8, 1949.

DECLARATION

Because we are students of Kaimuki High School and loyal American citizens devoted to the American way of life;

Because there appears to be some damage to our school reputation because of a student speech given in a school assembly in November 1948, which speech did not and does not represent our school or our beliefs and attitudes;

Because the ideas of communism play no part in our lives, and any assumption to the contrary is unfair, unjust, and with no basis in fact;

Because Kaimuki High School has been on record since 1947–48 as favoring statehood;

Because the speech and publicity given to it may have injured the cause of statehood for Hawaii;

Therefore, we the undersigned representatives of the student body of Kaimuki High School respectfully submit the following declaration:

We resent and we reject all implications that communism has any hold whatsoever on the students of Kaimuki High School, and we reaffirm our undivided loyalty to the United States of America and our devotion to the American way of life.

And we therefore are sending copies of this declaration to the following:

The Honorable Ingram M. Stainback, Governor of Hawaii.

The Honorable Wilfred C. Tsukiyama, president of the senate, Territory of Hawaii.

The Honorable Hiram L. Fong, speaker of the house of representatives, Territory of Hawaii.

The Honorable ALBEN W. BARKLEY, Vice President of the United States of America and President of the Senate of the United States of America.

The Honorable SAMUEL RAYBURN, Speaker of the House of Representatives of the United States of America.

The Honorable JOSEPH R. FARRINGTON, Delegate to Congress from Hawaii.

Dr. W. Harold Loper, superintendent of public instruction, Territory of Hawaii.

Mr. Edward N. Sylva, chairman, board of commissioners of public instruction, Territory of Hawaii.

Mr. Julius Krug, Secretary, Department of Interior of the United States of America.

Mr. Robert M. Faulkner, supervising principal of Honolulu schools, Territory of Hawaii.

Henry Au Hoy, Student Government President; Walter Ito, Student Government Vice President; Nancy Oyama, Student Government Secretary; James Noharn, Student Government Treasurer; Robert Sasaki, Sergeant at Arms; Fiyiko Zukeran, Interschool Council Chairman; Yuriko Hisano, Room 7 Representative; Alice Sakai, Room 19 Representative; Helen Hiza, Room 38 Representative; Thelma Kaneshiro, Room 9 Representative; Dorothy Haitsuka, Room 15 Representative; Lillian Okuhara, Room 14B Representative; Sadie Ono, Chairman, Archives Committee; Edna Yamamato, Chairman, Assembly Board Committee; Helen Fuchise, Room 4 Representative; Robert Freitas, Chief Police; William Kaneshiro, Representative Library; Feighton Anderson, Representative Room 7; Gaspen George, Cafe Representative; Joyce Matsuda, Room 11 Representative; Lattie Kabayashi, Room 9 Representative; James Hera, Room 26 Representative; Dickey Hamasorki, Junior Class President; Herman Ching, Room 34 Representative; Jean Kashiwamura, Cafe K Representative; Patsy Minatodani, Room 21 Representative; Jane Jo, Annual Editor; Gail Omura, Identification Bureau Chairman; Mabel L. Kam, Handbook Committee Chairman; Nancy Onaga, Newspaper Editor; Harold Abe, Room 31 Representative; M. Freitas, Room 16 Representative; Aswim Young, Room 21 Representative; Katherine Niaus, Room 18 Home Room Representative; Violet Oki, Room 17 Home Room Representative; James Kurashige, Room 24 Representative; Veronica Lim, Room 24 Representative; Grace Oshima, Room 24 Representative; Rebecca Goodaus, Room 34 Junior Adviser; Cathupide Irvine, Senior Class Adviser.

Whereas the United Nations is an organization in being and its Charter is capable of amendment so as to make it an effective instrument for the maintenance of world order; and

Whereas disarmament and world peace can only be achieved by world order and world law, guaranteed by a world government: Be it

Resolved by the House of Representatives of the State of Oregon (the senate jointly concurring therein), That the President of the United States be requested to direct our delegates to the United Nations to propose or support amendments to its Charter which will strengthen the United Nations and make it a limited world federal government able to prevent war; and be it further

Resolved, That in the preparation of such amendments our delegates should advocate:

1. Delegation to the United Nations of limited but adequate legislative, executive, and judicial powers:

(a) To maintain such world inspection, police, and military forces as are necessary to enforce world law and to provide world security;

(b) Gradually and progressively to eliminate national armaments (other than those necessary for internal policing);

(c) To provide for dependable revenue to enable the United Nations to carry out its proper functions.

2. Balanced representation of each nation in the General Assembly upon a just formula which will recognize influence in the world, natural and industrial resources, literacy, population, and other relevant factors; each representative to vote as an individual.

3. Adoption of a bill of rights assuring fair trial and other adequate protection of persons affected by the Charter and laws enacted thereunder.

4. Reservation to the member nations and their peoples of all powers not expressly delegated to the United Nations, in order to guarantee to each nation its right to maintain its own domestic, political, economic, social, and religious institutions; be it further

Resolved, That the Congress of the United States be requested to urge the calling of a general conference under article 109 of the United Nations Charter to review the Charter and to recommend appropriate amendments thereto; and be it further

Resolved, That this memorial shall not be construed to advocate unilateral disarmament by the United States; and be it further

Resolved, That copies of this memorial be sent to the President of the United States, to the Secretary of State, to the Senators and Representatives in the Congress, and to the delegates of the United States to the United Nations.

Strengthening the United Nations

EXTENSION OF REMARKS

OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 26, 1949

Mr. ANGELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following memorial of the Legislative Assembly of the State of Oregon:

House Joint Memorial 3

To His Excellency, the Honorable PRESIDENT OF THE UNITED STATES:

We, your memorialists, the Forty-fifth Legislative Assembly of the State of Oregon, in regular session assembled, respectfully represent as follows:

Mining Assessment Work

EXTENSION OF REMARKS

OF

HON. E. L. BARTLETT

DELEGATE FROM ALASKA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 26, 1949

Mr. BARTLETT. Mr. Speaker, an interesting suggestion has been made by the Fairbanks Chamber of Commerce in reference to annual assessment work on mining claims located on the public domain. Under existing law, which has been temporarily waived, it is required that $100 worth of work be done on every mining claim every year. The Fairbanks Chamber of Commerce has an alternative proposal. It suggests that the holders of mining claims be permitted to do the assessment work required by existing law or alternatively that they be allowed to make an annual cash payment of $17 for each claim. It is proposed that $15 of the $17 be placed in a special road fund which would be used to build roads, trails, and airfields of assistance to the mining industry.

In the resolution the Fairbanks Chamber of Commerce has this to say:

The Fairbanks Chamber of Commerce hereby presents to the Public Lands Committees of the House and Senate of the Congress of the United States a resolution on certain changes in the mining laws as applied to the Territory of Alaska, as follows:

"Whereas the yearly assessment work of $100 valuation which is required on every 20 acres or fraction thereof of all unpatented mineral locations in Alaska, was originally designed to force development and use of the mineral lands of the public domain; and

"Whereas as such aforesaid assessment work may have accomplished its purpose in the early days of mining, it now, in the very great majority of cases, just causes the performance of useless labor by the holder of an unpatented mineral location which neither develops his particular location nor furthers the development of the mineral lands on the public domain; and

"Whereas rich bonanza mines, both lode and placer, have been worked out since the early gold-rush days in Alaska, so that it is now necessary in order to mine profitably, to hold many mineral locations, to make outlays of large amounts of capital for large and costly machinery, and to employ highly skilled and expensive labor; and

"Whereas due to the present high costs of machinery, supplies, and labor in Alaska, very few, if any, new mining operations are being undertaken, and such operations as have reopened since the last war and consequent shut-down, are now working on a limited and critical basis which bodes ill for Alaskan economy after the present flurry of Government military expenditures are finished; and

"Whereas the Alaskan Territorial Legislature has found it necessary, due to the greatly increased cost of the Territorial government to place a tax on every 20 acres, or fraction thereof, of unpatented mineral location, thereby increasing the burden on an already overburdened industry: Now, therefore, be it

"*Resolved*, That the following suggestions for the relief of the mining industry in Alaska be presented to the Congress of the United States, to wit:

"1. That the present moritorium on assessment work in the Territory of Alaska be continued for 1 more year, or until July 1, 1950.

"2. That thereafter the owner of any unpatented mineral location be given the choice of either (a) performing the annual assessment work as prescribed by Federal and Territorial laws, rules, and regulations; or (b) paying on or before July 1 of each calendar year an annual fee of $17 in lieu of every $100 of the aforesaid annual assessment work into the office of the recorder of the recording district or precinct wherein the said unpatented mineral location is located.
